
Fassotte teaches nothing as to the amount of heat which is extracted in his heat exchanger, and, so far as we can discern, he may very well extract as much as do appellants.

In any event, we can see no difference in principle between the two methods, and it is our view that the naming of specific degrees by appellants does not lend patentability over the reference.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

BLODGETT AND HANSON v. RICHTER

No. 3,541. Decided November 27, 1935

INTERFERENCE—PRIORITY—PATENTABILITY OF COUNTS NOT DETERMINED.

Where the application of R., the senior party, discloses the use of "sodium sulphide" in a method for treatment of cellulosic materials, and the counts of the interference, which are taken from a patent to B. and H., the junior party, recite "a reactive compound of sulphur" *Held* that the disclosure of R. literally and fully supports the counts, that the question raised by the interference is solely one of priority, that the court is not called upon to determine the matter of patentability of the counts to R. and that, no testimony having been taken, priority was properly awarded to R.

APPEAL from the Patent Office. Affirmed.

Messrs. Roberts, Cushman & Woodberry, Mr. Herman T. Gammons and *Mr. Harold R. Savage* for Blodgett and Hanson.

Messrs. Wright, Brown, Quinby & May and *Mr. Nathaniel P. Wharton* for Richter.

GARRETT, *J.*:

On December 4, 1925, Richter filed an application for patent in the United States Patent Office entitled, "For Cyclic Process of Treating Alkaline Pulps," which was duly prosecuted until a number of claims reached the stage of allowance. It is said in the brief for appellants that this stage was reached April 11, 1930. Richter, however, it is further said in the brief, did not pay the final fee and take the patent, but, on September 26, 1930, filed a "renewal application" in which additional claims were inserted with the statement that they were intended to dominate claims of another patent not here involved. These statements of the brief are acquiesced in by appellee, so far as we can determine, and we accept them as correct, although not fully detailed in the record.

Appellants, Blodgett and Hanson, on June 3, 1926, filed application entitled, "For Method for the Preparation of Strong, Bleached Sulfate Pulp." This culminated in Patent No. 1,881,486, issued November 10, 1931.

On November 27, 1931, Richter copied two of the claims of the foregoing patent into his pending ap-

plication and these became the two counts of the involved interference which was declared January 30, 1932.

Count 1, which is typical, reads:

1. A method for the treatment of cellulosic materials which comprises reducing the same to the condition of pulp, by cooking with an aqueous solution containing an alkaline sulphide, removing resulting solution from the remaining pulp, and treating the latter with an aqueous alkaline solution of a reactive compound of sulpher.

After the preliminary statements of the parties had been opened, Blodgett and Hanson moved to dissolve on the ground that Richter was not entitled to make the claims. This motion was denied by the Examiner of Interferences February 9, 1933, and times set for the taking of testimony.

Neither party offered testimony. In due course the Examiner of Interferences rendered decision awarding priority to Richter. This decision was affirmed by the Board of Appeals, and appeal to this court followed.

The specific feature about which the controversy may be said to revolve is expressed in the last clause of count 1, supra, reciting the treatment of pulp "with an aqueous alkaline solution of a reactive compound of sulphur."

No actual reduction to practice was shown with respect to either application. So both are dependent upon the constructive reduction to practice incident to filing application.

It is conceded that, as found by the tribunals of the Patent Office, the specification of Richter's original application filed December 4, 1925, discloses and definitely teaches the availability for use with an aqueous alkaline solution of one reactive compound of sulphur, namely, sodium sulphide, but it insisted that he discloses *only one* such reactive compound, while appellants disclose the utility of members of a class of such compounds.

It is accordingly argued on behalf of appellants that Richter's disclosure is not sufficient to support claims as broad as the counts, and the brief asks:

• • • an adjudication and determination of the patent law generally with reference to the respective priority rights; of one who discloses the use of a single chemical reagent for the conduct of a chemical process, and *nothing more;* and one who discovers, defines and discloses that novel and unique class of reagent materials which are suitable for the conduct of said chemical process. [Italics quoted].

We are cited to a line of *ex parte* cases decided by this and other courts wherein there was application of the principle that, in cases involving chemicals and chemical compounds and cases involving the properties of materials, claims broad enough to cover a class of reagents or properties are not allowable upon a disclosure of only a single reagent or property. *Vide In re Longmuir*, 20 C. C. P. A. (Patents) 733, 62 F.(2d) 93, 427 O. G. 780 and *In re Welker*, 21 C. C. P. A. (Patents) 1121, 70 F.(2d) 1008, 447 O. G. 761, with their citations.

It is urged that to sustain the award of priority to appellee in this case would amount to overruling and abandoning the doctrine relative to chemical equivalents followed in the foregoing cases.

We are unable to concur in the soundness of such contention. After all, the question here is solely one of priority and we are not called upon to determine the matter of patentability to Richter.

When the counts are looked to in the effort to ascertain their breadth, it is observed that they do not require a construction which necessarily embraces a class of reactive compounds of sulphur. The expression is "a reactive compound of sulphur." [Italics ours.]

The Board of Appeals, it seems to us, covered the material issues of the controversy quite fully and succinctly in the following language:

It seems to us that both parties, while operating on a somewhat different theory, are striving for the same end and in case of sodium sulphide, at least, propose the use of the same purifying agent. Under the circumstances, the question of priority arises. The counts which are drawn in generic form will read on the Richter disclosure. In our opinion the right of Richter to have a patent granted with claims of the scope which he now has involved is a matter of patentability which is not material to appellants' right to a patent and hence cannot be properly raised under Rule 139 nor on appeal from a decision on priority. It seems to us that it is like any other possible bar to the grant of a patent to a prior party, which in no way affects the right of the junior party to a patent if he cannot prove priority.

The qualms raised with respect to Richter's renewal application also in our opinion falls in the same class. It is not seen how appellant's right to a patent or the validity of claims in a patent already granted can be in any way affected because of the existence of some bar to the allowance of claims to another party who may in fact be prior to the patentee and whose activities thus anticipate the generic claim involved. We know of no reason why a renewal applicant cannot present claims in a renewal application which are supported by his original disclosure, in the absence of elements of estoppel and, even if estopped, it is not seen how it can inure to the benefit of the patentee except under such special circumstances as make the estoppel especially available to him. The issue counts were copied from the Blodgett and Hanson patent within a very few days of its issue. There was clearly no such delay as would estop Richter from making the claims.

It is not meant to intimate that the counts expressed as claims in appellants' patent are not so supported by the disclosure there, as that there is any question of their validity as to a class of compounds, nor is it meant to suggest what the rights of appellee may be under his disclosure upon any question except the single one of priority. All other questions, we think, must be determined in some proceeding other than the one now at bar.

Literally and fairly appellee's disclosure supports the counts for "a reactive compound of sulphur." He was the first to reduce to practice by filing application, and we are unable to see wherein the tribunals of the Patent Office erred in granting him the award of priority.

The decision of the Board of Appeals is affirmed.

Affirmed.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,205,678, H. Stendel, Folding paper box; 1,428,272, same, Foldable carton; 1,940,426, O. E. Andrews, Bread band, D. C. Mass., Doc. E 3212, *O. E. Andrews Co. v. Packard Paper Box Co. et al.* Consent decree for injunction Oct. 25, 1935.

2,013,126, G. F. Cordman, Table top; 1,835,272, Burlin & Cordman, Table, filed Nov. 8, 1935, D. C., Mass., Doc. E 4255, *Cordman Mfg. Co. v. Hampden Specialty Products.*

Re. 16,577, R. V. Crowell, Gas-emergency control for flowing oil or gas wells, filed Dec. 13, 1935, D. C., N. D. Okla. (Tulsa), Doc. E 1063, *The Guiberson Corp.* v. *Robinson Packer Co.*

Re. 18,464 (of 1,764,794), Johnson & Leach, Fuel oil burner, D. C. Mass., Doc. E 2735, *Lynn Products Co.* v. *Penn Oil Burner Co.* Consent decree dismissing bill without prejudice Jan. 28, 1936.

Des. 54,682. Des. 86,746, C. J. Root, Bottle, T. M. 240,934, NuGrape Co. of America, Soft drinks, extracts, concentrates, etc., D. C., E. D. Tex. (Tyler), Doc. E 917, *National NuGrape Co.* v. *S. H. Reed (East Texas Bottling Co.).* Injunction Sept. 15, 1935.

Des. 86,746. (See Des. 54,682.)

Des. 91,181, N. Sloane, Lady's handbag, D. C., S. D. N. Y., Doc. E 77/111, *Sloane Bags, Inc.*, v. *Princess Handbag, Inc., et al.* Consent order of discontinuance (notice Dec. 12, 1935).

Des. 92,865, Morrill & Webster, Shoe or article of analogous nature, D. C. Mass., Doc. E 4126, *Morrill & Webster, Inc.*, v. *Bancroft Walker Co.* Dismissed June 18, 1935.

T. M. 240,934. (See Des. 54,682.)

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,863,362, E. A. Geiselman, Regulator system, decided January 14, 1936, claim 2.

Pat. 1,913,049, G. S. Dunham, Process for the conversion of hydrocarbons, decided January 24, 1936, claims 2 and 5.

Pat. 1,927,734, C. G. Boone, Pump, decided December 21, 1935, claims 2 and 5.

Pat. 1,963,546, H. A. Depew, Process for making pigments, decided January 28, 1936, claims 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, and 14.

Pat. 1,969,206, W. P. Carr and R. W. Tracy, Material discharge gun, decided January 21, 1936, claims 1, 2, 3, 4, 5, 6, 21, and 22.

Pat. 1,974,065, Mathias Frankl, Process and apparatus for the separation of gaseous mixtures, decided January 21, 1936, claims 1, 2, and 5.

Pat. 2,011,189, O. M. Anderson, Oven rack, decided January 28, 1936, claims 1, 2, 3, and 4.

Changes in Classification

Order No. 3,341, January 23, 1936, directs:

In *class 33, Force Measuring* (Division 33), establish the following subclasses and definitions:

1.4 Gravitational determination
1.5 Torsion balances.
1.6 Deflection tensiometers.

1.4. Apparatus and methods for determining the force of gravity by direct measurement or by comparison or for determining acceleration caused by gravity.

Note.—For apparatus for demonstrating gravitational force but wherein no measurement is taken, see class 35, EDUCATION, subclass 19.

1.5. Torsion balances wherein masses mounted upon a beam transmit a force to a wire supporting the beam to produce a torque in said wire proportional to the gravitational force. These are frequently called Eötvös type balances.

1.6. Devices for measuring the tension in a belt, web, fiber or like member by measuring the deflection produced in the member by a known force or the force necessary to produce a definite deflection.

The patents contained in these subclasses have been taken for the most part from class 265, Force Measuring, subclass 1.

In *class 35, Education* (Division 33), add to the class definition the following note:

Note.—For apparatus which makes a force measurement and is not limited by use to mere teaching or demonstrating, see class 265, FORCE MEASURING.

Changes in Classification

Order No. 3,342, January 23, 1936, directs:

In *class 308, Machine Elements—Bearings and Guides* (Division 45), abolish the following subclass, with its definition:

Rotary
Plain
Radial
Lubricating
124 With mud guards.

The patents formerly contained in this subclass have been placed for the most part in class 308, subclasses 36.1–36.4, established in this order, and in various subclasses in class 285, Packed Shaft or Rod Joints.

In *class 308, Machine Elements—Bearings and Guides* (Division 45), establish the following subclasses and definitions:

Rotary
Plain
Combined with seals
36.1
36.2 Mechanically actuated.
36.3 Fluid or fluid-actuated.
36.4 Centrifugal.

36.1. Rotary bearings in combination with means for preventing matter from entering into, passing through, or escaping from the bearing. Either a bearing and sealing means are integral (the bearing constructed to act as a seal or the seal constructed to act as a bearing) or the bearing is modified to receive or otherwise cooperate with a sealing means.

Note.—If, however, the device is no more than a plain, stuffing-box sleeve or the like, serving to some extent as a bearing, which may or may not be conventionally recessed for the seal involved, it should be classified in class 285, PACKED SHAFT OR ROD JOINTS, with the sealing means per se.

Note.—Of the lubricating and the sealing subclasses, the sealing subclasses are dominant. Of the plain bearing and seal subclasses and the antifriction bearing and seal subclass (class 308, subclass 187), the plain bearing subclasses are dominant. Combined bearings and seals peculiarly adapted for use in antifriction bearing units are put in class 308, subclass 187. All others, irrespective of whether an antifriction or its equivalent plain bearing is claimed, are put in the plain bearing and seal subclasses.

36.2. The sealing means is actuated by a nut, resilient means, or the like.

36.3. The seal comprises oil, water, air, steam, or the like, or the sealing means is actuated by a fluid. Includes centrifugal means to pump the sealing fluid.

Note.—Hydraulic screws acting as seals are placed in this class, subclass 36.3.

36.4. Seals functioning by utilization of centrifugal force.

Note.—Centrifugal means to pump a sealing fluid are placed in this class, subclass 36.3.

The patents contained in these subclasses have been taken for the most part from class 308, Machine Elements, Bearings and Guides, subclass 124, abolished in this order, and from various subclasses in class 285, Packed Shafts or Rod Joints.

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 11, 1936

[VOL. 463. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 369,248. SAFE-O COMPANY, Pittsfield, Mass. Filed Sept. 12, 1935.

SAFE-O

For Granular Anti-Slip Material Consisting Particularly of Sand Put Up in Packages for Sprinkling on the Ground.

Claims use since Aug. 17, 1935.

Ser. No. 369,290. SKINOW FUR COMPANY, Chicago, Ill. Filed Sept. 13, 1935.

The words "The Stamp of Quality" are disclaimed apart from the mark.

For Fur Skins.

Claims use since Aug. 1, 1933.

Ser. No. 372,519. JULIUS LOEWITH, INC., New York, N. Y. Filed Dec. 11, 1935.

For Uncolored (Natural) Raffia and Colored Raffia.

Claims use since March, 1926.

Ser. No. 372,539. ACCOS LEATHER COMPANIES, INC., Boston, Mass. Filed Dec. 12, 1935.

VOBUK

For Leather.

Claims use since October, 1933.

Ser. No. 372,696. VAN-DYE-WAY CORPORATION, Paterson, N. J. Filed Dec. 16, 1935.

For Furs and Fur Skins, Dressed and Dyed.

Claims use since June, 1921.

Ser. No. 372,714. WOOD & HYDE COMPANY, Gloversville, N. Y. Filed Dec. 17, 1935.

MONOTAN

For Leather.

Claims use since June, 1934.

CLASS 2

Receptacles

Ser. No. 357,862. KENSINGTON, INCORPORATED, New Kensington, Pa. Filed Nov. 3, 1934.

47,022.—*Title:* GUEST DECANTER, OLD MR. BOSTON. For Sloe Gin. BEN-BURK, INC., Boston, Mass. Published November 19, 1935.

47,023.—*Title:* BRADWAY CHOCOLATE SYRUP. For Chocolate Sirup. BRADWAY CHOCOLATE CO., INC., New Castle, Ind. Published October 7, 1935.

47,024.—*Title:* GOLDEN MIST. For Wines. GOLDEN MIST WINE CO., Chicago, Ill. Published December 3, 1935.

47,025.—*Title:* HITSCHLER'S TOP CREAMERIES. For Butter. JOHN J. HITSCHLER & SON, Philadelphia, Pa. Published December 9, 1935.

47,026.—*Title:* JOHNSON'S GLO-COAT. For No Rubbing Floor Polish. S. C. JOHNSON & SON, INC., Racine, Wis. Published December 2, 1935.

47,027.—*Title:* JOHNSON'S PREPARED PASTE WAX. For Prepared Paste Wax. S. C. JOHNSON & SON, INC., Racine, Wis. Published November 15, 1935.

47,028.—*Title:* JOHNSON'S POWDERED DANCE WAX. For Powdered Dance Wax. S. C. JOHNSON & SON, INC., Racine, Wis. Published November 15, 1935.

47,029.—*Title:* KEMP'S THIN MINTS. For mint Candies. E. F. KEMP, INC., Somerville, Mass. Published December 16, 1935.

47,030.—*Title:* TABLE-TESTED BREAD. For Bread. LLOYD V. KOLBY, doing business as Uni-Dale Bakery, St. Paul, Minn. Published October 17, 1935.

47,031.—*Title:* ORIENTAL RINGS. For A Solid, Annular Ring Product of Compressed, Vaporized Product for Killing Moths. THE LEWY CHEMICAL CO., New York, N. Y. Published December 6, 1935.

47,032.—*Title:* EXTRUDED ROLLER-FORGED ENGINEERING TUBE. For Engineering Tubes. REVERE COPPER AND BRASS INCORPORATED, New York, N. Y. Published June 7, 1935.

PRINTS

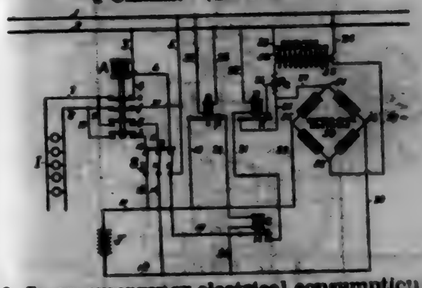
REGISTERED FEBRUARY 11, 1936

15,570.—*Title:* KITCHEN KLENZER THRIFTEE BANK. For Thrift and Savings Banks. FITZPATRICK BROS., INC., Chicago, Ill. Published December 17, 1935.

15,571.—*Title:* TAPS KILLS SNAILS. For a Preparation for Killing Snails. PACIFIC GUANO COMPANY, San Francisco, Calif. Published October 25, 1935.

15,572.—*Title:* NOTHING OVER 18¢. For Heel Lifts and Rubber Heels. THE RED STAR SHOE REPAIRING COMPANY, INC., Philadelphia, Pa. Published December 2, 1935.

REISSUES



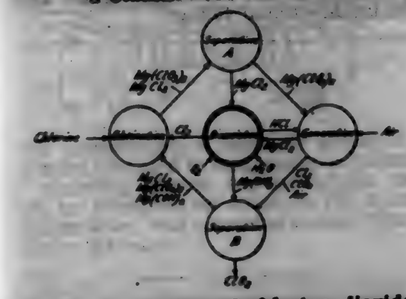
FEBRUARY 11, 1936

19,846
EMERGENCY LIGHTING SYSTEM

Frank G. Beetem, Philadelphia, Pa., assignor to The Electric Storage Battery Company, Philadelphia, Pa., a corporation of New Jersey

Original No. 1,882,472, dated October 11, 1932, Serial No. 531,502, April 20, 1931. Application for reissue July 31, 1934, Serial No. 737,360

4 Claims. (Cl. 171—97)



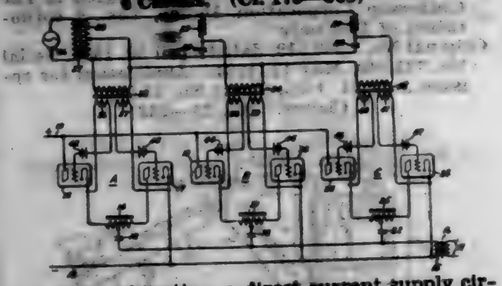
3. In an emergency electrical consumption system, in combination, a load circuit, a normal source of current, a storage battery, means responsive to the voltage of the normal source for selectively connecting the load circuit either to the said source or to the battery, means for charging the battery selectively at either a higher or a lower rate, means responsive to the voltage of the battery for reducing the charging rate from the higher to the lower, and voltage responsive means for resetting the battery voltage responsive means for the higher rate.

19,848
PROCESS FOR THE PRODUCTION OF CHLORINE DIOXIDE

George Lewis Cunningham, Niagara Falls, N. Y., assignor to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia

Original No. 2,008,288, dated July 16, 1935, Serial No. 702,482, February 1, 1934. Application for reissue December 7, 1935, Serial No. 53,435

3 Claims. (Cl. 23—205)



1. In the production of chlorine dioxide, the process which comprises separating magnesium chlorate and magnesium chloride from a mixture of the same, dissociating the separated magnesium chloride in the presence of free oxygen to form magnesium oxide, chlorine and hydrochloric acid, generating a gas mixture including chlorine and chlorine dioxide from the magnesium chlorate from the first-mentioned separation by reacting said magnesium chlorate with hydrochloric acid from said dissociation, separating chlorine from said gas mixture by reacting said gas mixture with magnesium hydroxide formed by hydration of magnesium oxide from said dissociation, chlorinating magnesium hydroxide formed by hydration of magnesium oxide from said dissociation together with magnesium chloride and magnesium chlorate formed in the second-mentioned separation to form a mixture of magnesium chlorate and magnesium chloride and supplying that mixture to the first-mentioned separation.

19,850
ELECTRIC POWER CONVERTING APPARATUS

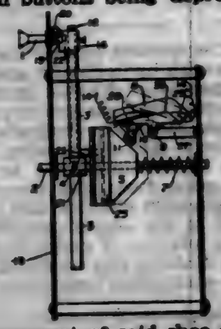
Frederick W. Frink, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Original No. 1,961,924, dated December 27, 1932, Serial No. 497,501, December 22, 1930. Application for reissue October 9, 1934, Serial No. 747,649

6 Claims. (Cl. 175—363)

1. In combination, a direct current supply circuit, a plurality of resonant circuits, each including a capacitor, a pair of electric valves, a charging circuit for said capacitor including one of said valves, and a discharging circuit for said capacitor including the other of said electric valves, means for periodically and alternately rendering the valves included in each resonant circuit conductive, means for producing a phase displacement between the conductivity cycle of the valves included in the several resonant circuits, the natural frequency of said resonant circuits being substantially an integral multiple of that of said conductivity controlling means, and a load circuit associated with the several capacitor charging and discharging circuits.

19,851
RADIO PROGRAM SELECTING APPARATUS



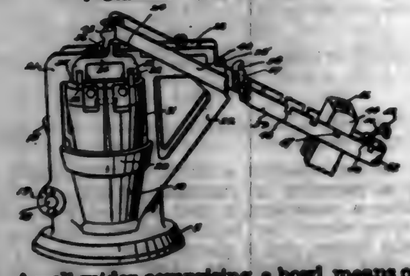
Edward A. Kinney, Watertown, and Joseph W. Galligan, Jamaica Plain, Boston, Mass.

Original No. 1,939,267, dated December 12, 1933, Serial No. 674,670, June 7, 1933. Application for reissue December 13, 1935, Serial No. 54,200

7 Claims. (Cl. 200—38)

1. Time-controlled mechanism for closing an electrical circuit for predetermined intervals during a time period, comprising a shaft rotatable once during said period, a switch in said circuit, a movable actuator for operating said switch, a

member connected to and rotatable with said shaft for moving the actuator, said member having a shoe portion and a series of control buttons corresponding in number to said time intervals, said buttons being depressible into the



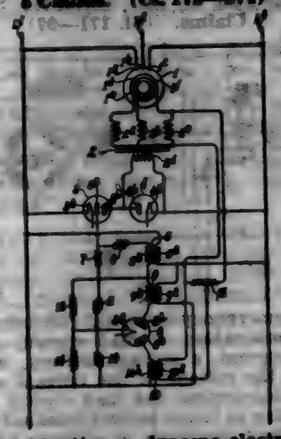
path of movement of said shoe so that engagement of the shoe with a depressed button will operate said member to move the actuator and close the switch, and spring means for restoring the actuator to inoperative position after the shoe has passed the depressed button.

19,238
WELL SPIDER

Harvey R. Standfiss, Tulsa, Okla., assignor to The Gulfsteam Corporation, Dallas, Tex., a corporation of Delaware

Original No. 1,969,519, dated April 26, 1935, Serial No. 725,240, May 12, 1934. Application for reissue July 22, 1935, Serial No. 32,650

7 Claims. (Cl. 24—263)



1. A well spider comprising, a bowl, means overhanging the bowl for entering a tubing string in said bowl, gripping slips engaging in said bowl, means for moving said slips upwardly and downwardly in said bowl below said centering means, and a latch for locking said slips in their lowered position.

19,333
MOTOR CONTROLLER

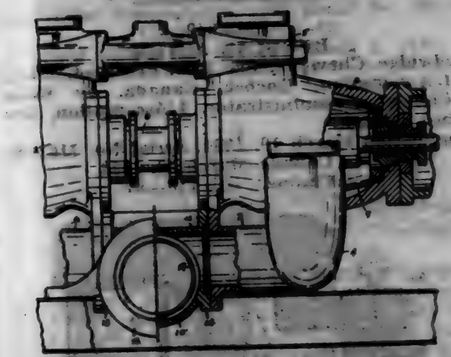
Carroll Stansbury, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware

Original No. 2,013,221, dated September 3, 1935, Serial No. 727,313, May 24, 1934. Application for reissue October 24, 1935, Serial No. 46,590

8 Claims. (Cl. 172—274)

1. In combination, a dynamo electric machine, a saturable reactor in circuit with a winding of said machine and having a control winding, an alternating current supply, an electron tube connected in circuit with said supply and said control winding and having a grid, and means to control the current in said control winding in accordance with a characteristic of said machine, said means comprising means to supply a unidirectional reference voltage to said grid, also means to supply a second unidirectional voltage to said grid which is a function of said characteristic of said machine and which is opposed to said reference voltage, and also means connected to said alternating current supply to superimpose an alternating voltage of a given phase relative to the voltage of said supply upon the resultant of said reference voltage and said second unidirectional voltage.

PATENTS



GRANTED FEBRUARY 11, 1936

2,030,861
PUMP

Herbert Allen, Houston, Tex., assignor, by mesne assignments, to Stephens Pump Company, Round Rock, Tex., a corporation of Delaware

Application May 14, 1934, Serial No. 725,570

6 Claims. (Cl. 103—220)

1. A pump having a suction manifold, said manifold having an elongated substantially cylindrical body with staggered manifold outlet ports between its ends and an entrance opening at one end; a strainer in said manifold having a substantially cylindrical body concentric and coextensive with and radially spaced from the body of said manifold, perforated, and communicating with said entrance opening; said manifold having on one end a removable cover, and said strainer being insertable in and removable thru said end when said cover is removed.

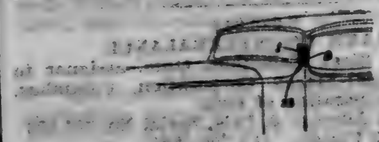
2,030,942
APPARATUS FOR DECORATING OBJECTS

Osias Austin, Brooklyn, N. Y.

Application December 10, 1934, Serial No. 756,884

3 Claims. (Cl. 41—1)

1. In combination, a turnably mounted base, receptacles mounted in said base in a desired pattern, clamping means which include packing means, for clamping an object to the mouths of said receptacles, said clamping means being connected to the base.



2,030,943
DIRECTION SIGNAL FOR VEHICLES

William G. Beadle, Woodland, Calif., assignor of one-third to C. C. McDonald and one-third to J. A. Murray, Woodland, Calif.

Application March 4, 1935, Serial No. 9,237

6 Claims. (Cl. 116—40)

1. A direction signal comprising a horizontally extensible arm in the form of a lazy tongs unit having crossing pairs of pivoted links pivoted together, a signal member disposed in a vertical plane and pivotally mounted on the outermost pair of links in common with the pivot thereof, an element about said pivot between the signal member and the adjacent links, an extension on one of the links of the pair adjacent said outermost pair projecting to a termination substantially in vertical alinement with said common pivot, a finger pivoted on said extension and pro-

jecting behind and normally engaging the element, a pin on said finger intermediate its ends, the signal member having a guide slot extending lengthwise thereof from the hub in the direction of the extension when the signal member is vertical and in which said pin moves and is guided, and an element engaging cam formed on the finger arranged to cause the pin to impart a rotative movement to the signal member when the pin arrives at the element end of the slot.

2,030,944
PRINTING STAMP

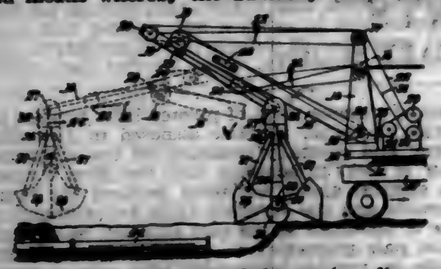
Peter Beghetti, San Francisco, Calif.

Application October 1, 1932, Serial No. 635,719

11 Claims. (Cl. 101—331)

1. In a hand stamp, a holder, detachable type therefor, each of said type comprising an elongated body portion provided with a printing face on one end, said body portion provided with an opening extending transversely thereof and the holder provided with a horizontally disposed bar adapted to extend through the opening in each type for forming a row of aligned type and means adapted to engage the bar and end type of the row independently of the holder for securing the type against movement on the bar with their printing faces arranged for simultaneous printing.

2,030,945
TRENCH DIGGER AND BACK-FILLING MACHINE



Wilfred A. Billings, Shrewsbury, Mass.

Application August 22, 1934, Serial No. 740,286

2 Claims. (Cl. 212—42.5)

1. In a trench digging machine, the combination of a boom pivotally mounted at its lower end, an auxiliary boom swingingly connected with the end of the first named boom, a clam shell bucket pivoted at the free end of the auxiliary boom and supported solely thereby, means for

swinging the auxiliary boom about its pivot, and means whereby the auxiliary boom can be

fixed to the first named boom in alignment therewith to extend beyond it.

2,030,046

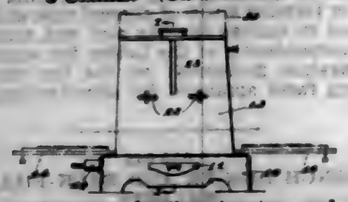
CRANK COUNTERBALANCE

Richard R. Bloss, Columbus, Ohio, assignor to International-Stacey Corporation, Columbus, Ohio, a corporation of Ohio

Application January 2, 1934, Serial No. 704,890

9 Claims. (Cl. 74—591)

8. An attachment for the crank arm of well-pumping mechanism comprising a counterbalance weight structure adapted to be disposed in cooperative relation with said crank arm, a plurality of lugs disposed on said weight structure and being slidable bodily and laterally along said weight structure into and out of gripping relation with the crank arm, means for maintaining said lugs in gripping relation to the crank arm, said means comprising wedge members each of which fits between one of said lug members and an abutment formed on said weight structure.



2,030,047

COMBINATION BROILER AND TOASTER

Leo A. Bonnagni, Brookline, and Auguste Gevord, Somerville, Mass.

Application May 17, 1934, Serial No. 726,118

3 Claims. (Cl. 219—19)

1. A combination broiler, toaster and heater comprising in combination, a base, end frames attached to said base, pivoted toaster side frames attached to said end frames, heater coils mounted on transversally adjustable frames, said coil frames being transversally slidable on said end frames, a grill top hinged on one of said end frames, and a broiler grid slot located in the upper portion of each of said end frames.

2,030,048

PRODUCTION OF OXYGENATED ORGANIC COMPOUNDS

Ralph Lyman Brown, Syracuse, N. Y., assignor to Atmospheric Nitrogen Corporation, New York, N. Y., a corporation of New York

No Drawing. Application June 20, 1931, Serial No. 545,247

16 Claims. (Cl. 260—116)

1. A process for the synthesis of oxygenated organic compounds which comprises reacting a gas containing carbon monoxide with an alcohol in the presence of a silica-phosphoric acid catalyst.

2,030,049

BURGLAR ALARM

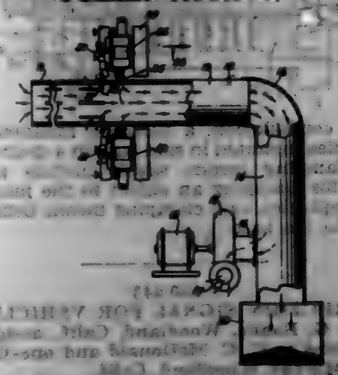
Hedwidge Chevigny, née Roy, deceased, late of L'Assomption, Quebec, Canada, by Robert Chevigny, administrator, L'Assomption, Quebec, Canada

Application March 19, 1934, Serial No. 716,329½

In Canada March 25, 1933

5 Claims. (Cl. 116—67)

1. A burglar alarm comprising, in combination with a wall and closure member movable therein, a cartridge support carried by said wall, a striking lever pivoted to said wall and adapted to fire the cartridge in said support, a tension spring joining said lever to said wall, a trigger carried by said closure member and adapted to swing said lever and then release it on opening of said closure member, and manual means for moving said trigger out of contact with said lever.



2,030,050

PROCESS OF CUTTING SLOTS

Clarence J. Coberly, Los Angeles, Calif., assignor to Kobe, Inc., Huntington Park, Calif., a corporation of California

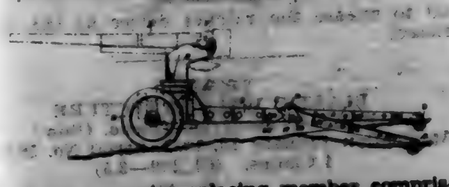
Application March 6, 1933, Serial No. 659,661

9 Claims. (Cl. 148—8)

6. A method of cutting openings in a length of pipe, which method includes the steps of: successively cutting openings in said pipe; and continuously exhausting a stream of gas through the

yet solid and internally unobstructed portion of said pipe during the cutting of said openings, said gas entering said pipe through said openings as they are successively formed, said stream of gas removing through said solid and internally unobstructed portion of said pipe the material formed by the cutting operation.

2,030,051



EMPLACING MEMBER FOR GUN CARRIAGES AND MOUNTS

Gladeon M. Barnes, United States Army, Hastings, Mich.

Application September 5, 1933, Serial No. 688,139

3 Claims. (Cl. 89—40)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A gun mount emplacing member comprising an inner part connected to the gun mount and having spaced plates with horizontally disposed slots, an outer part having spaced plates with vertically disposed slots and adapted to fit between the plates of the inner part, a horizontally disposed hinge pin passing through all of the spaced plates, a floor plate on the outer part, spaced blocks fixed to the floor plate and having vertically disposed slots in alignment with the vertical slots in the plates, a screw shaft mounted in the inner part and having an end disposed between the fixed blocks, a pin passing through said end and the slots in the blocks and plates, a nut on the screw shaft, means for constraining the nut against translational movement, and means for rotating the nut.

2,030,052

APPARATUS FOR RIDDING TREES OF INSECTS

Ernest Bernitz, Sr., La Mesa, Calif., assignor of one-half to William A. Smith, Vista, Calif.

Application September 23, 1933, Serial No. 690,689

3 Claims. (Cl. 47—24)

1. A barrier for protecting trees from crawling insects consisting of a wrapping having a substantially flat but irregular and pliable surface in the form of a tangled mass adapted to be applied directly about the trunk of the tree and conform to the irregularities thereof so as to confront insects with a labyrinth barrier, said wrapping also including an extended parallel labyrinth surfaced flanging portion at its underside, and a protecting skirt applied around the wrapping.

2,030,053

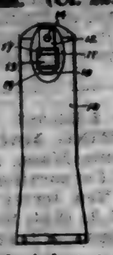
SPLICING METHOD

James W. Channell, Southgate, Calif.

Application April 24, 1934, Serial No. 725,064

5 Claims. (Cl. 22—203)

1. A method of splicing metal-sheathed cables comprising; fitting metallic disks upon the ends of the cable sheaths; fitting a metallic sleeve over said disks; and casting metal in such a manner as to embrace and coalesce with the respective ends of said sleeve, the exposed surfaces of said disks, and the cable sheaths adjacent the disks.



2,030,054

CLOSURE DEVICE

George Deeson, Jr., Huntington, N. Y.

Application November 16, 1934, Serial No. 753,281

2 Claims. (Cl. 221—69)

2. In a collapsible tube; a raised and tapered slide formed integral with the body of the tube and having its opposite sides dove-tailed; an aperture formed in the large end of the slide and communicating with the interior of the tube; a cap, having downwardly extending and dove-tailed side members for straddling said slide, slidingly mounted on the slide; and the slide located on an angularly-disposed face formed on the side of the tube near the end thereof; said face so located that the slide and the cap will not extend outside the circumference of the tube nor outside its end.

2,030,055

NONSLIPPERY FLOOR WAX

Ted G. Dixon, Brooklyn, N. Y.

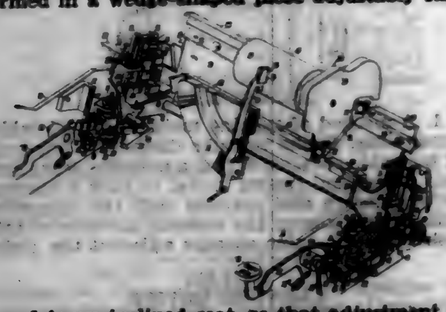
No Drawing. Application January 27, 1934, Serial No. 708,696

5 Claims. (Cl. 134—24)

5. In the production of polishable wax coatings on floors and woodwork the improvement which comprises applying to the surface thereof a fluent wax composition containing the usual ingredients of floor waxes and containing in addition thereto a minor proportion of incorporated rubber, the amount being insufficient to impair any property of the wax as a floor wax, including its waxiness, polishability and pore filling characteristics but being sufficient to impart a substantially increased coefficient of friction to the waxed surface.

2,030,056

TYPEWRITING MACHINE



William A. Dobson, Wethersfield, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware

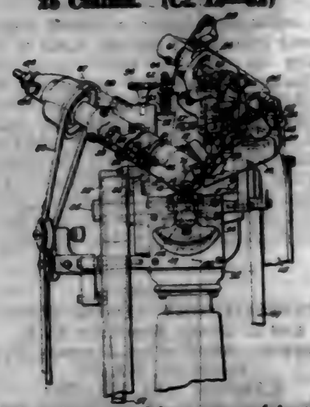
Application June 21, 1933, Serial No. 676,900

10 Claims. (Cl. 197—78)

1. In a typewriting machine, a case-shifting platen-frame, side members spaced from the ends

of said frame, and anti-friction rollers coacting with said side members to guide said frame in case-shifting direction, each frame-end having a roller-raceway facing a companion raceway in the side member, one of the raceways being formed in a wedge-shaped piece adjustably fas-

tened to an inclined seat, so that adjustment of said piece in the direction of its raceway determines the spacing of the latter from the companion raceway, said adjustment being effective to take up play in the anti-friction bearings formed by the raceways and rollers.



2,030,057

TRIMMING MACHINE

Andrew Eppler, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application April 9, 1934, Serial No. 719,679

25 Claims. (Cl. 12—62)

1. A trimming machine comprising a rotary tubular cutter having an annular cutting edge arranged to sever a flange of surplus material projecting from the bottom of a lasted shoe, driven means arranged to feed the shoe past said cutter, and driven means arranged to operate said cutter, the axis of the cutter being so skewed relatively to the direction of the work-feeding movement as to place the inboard segment of the cutting edge in a position less advanced to meet the work than the segment at the point of operation.

2,030,058

LIP STICK BOX

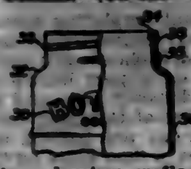
William S. Erbele, Krum, N. Dak.

Application January 14, 1933, Serial No. 1,885

3 Claims. (Cl. 206—56)

1. A lipstick holder comprising a box, a hinged lid therefor, a follower in the box, means for feeding the follower upward, a ratchet device engaging the follower to prevent upward movement thereof, and means on the hinge of the

lid to release the ratchet device as the lid is closed.



2,030,059

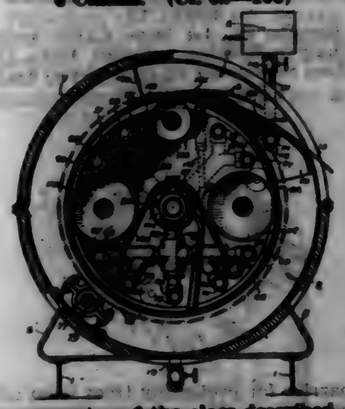
PLASTIC WALL STRUCTURE

Enoch T. Faragren, Toledo, Ohio

Application January 19, 1932, Serial No. 587,535

4 Claims. (Cl. 52—2.5)

1. A container having walls of a moldable flexible cellulosic plastic material and having molded therein a reinforcing softer fibrous section as an integral molded in section of its wall structure.



2,030,060

HEAT EXCHANGE APPARATUS

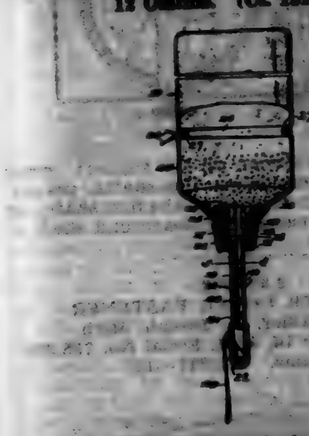
Crosby Field, Brooklyn, N. Y., assignor to Finlay Corporation, Wilmington, Del., a corporation of Delaware

Application December 8, 1931, Serial No. 579,841

6 Claims. (Cl. 62—106)

1. In apparatus of the class described, in combination, a freezing surface comprising a rotating flexible cylindrical surface, means for spraying a liquid onto the outside of said rotating cylindrical surface as it passes a predetermined line, whereby said liquid is substantially instantaneously cooled to a temperature below its freezing point, means for deflecting said rotating surface uniformly across its entire width as it passes

another predetermined line, whereby said frozen liquid is removed from said surface at said latter point in long strips, and means to supply a refrigerating medium inside said freezing cylinder to cool said freezing surface.



2,030,061

DEVICE FOR MAKING CIGARETTES

Frank T. Gracey, Eddyville, Ky.

Application February 23, 1932, Serial No. 594,631

12 Claims. (Cl. 131—5)

1. A cigarette-making device comprising a tobacco guide and means for directing loose tobacco from a container to said guide comprising a smooth surfaced member of an extent reaching a substantial distance at an incline between the side walls of a tobacco container and the receiving end of said guide, a collar of rigid material substantially wholly external of the bag and said member, means connecting both bag and said member and said collar adjacent one end of the collar, said end projecting slightly within the bag and said member, said collar at its outer end being connected with said tobacco guide.

2,030,062

CLOSURES FOR BOTTLES AND JARS

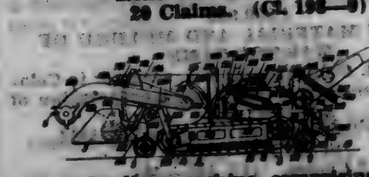
Michael A. Greene and Daniel M. Gray, Wheeling, W. Va., assignors to Hazel-Atlas Glass Co., Wheeling, W. Va., a corporation of West Virginia

Application April 15, 1933, Serial No. 666,574

2 Claims. (Cl. 215—40)

1. In combination with a jar having a side-seal finish, an annular ledge spaced slightly below the finish, a preformed closure including a top portion, a skirt depending therefrom, a gasket mounted on the inner face of the skirt, a bead formed on the lower edge of the skirt, said bead being partially flattened and having portions extending inwardly and outwardly from the skirt, the inwardly extending portion of the bead serving as a support for the gasket and the inwardly and outwardly extending portions in co-operative relation with and spaced from the ledge to facilitate removal of the closure.

2,030,063



LOADING MACHINE

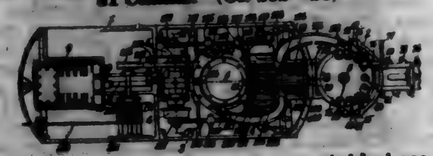
Frank A. Hallock, Chicago, Ill., assignor to Sullivan Machinery Company, a corporation of Massachusetts

Application January 11, 1927, Serial No. 160,186

Renewed February 15, 1933

29 Claims. (Cl. 198—9)

1. A loading machine comprising a portable body, a tractor mounting for said body, the latter being movably mounted thereon, a shovel member mounted on said body, means for supporting said body with said tractor mounting out of contact with the mine floor comprising truck wheels carried by said body and shovel member, said wheels being adapted to run along a trackway, a rotary raking device pivotally mounted on said body and cooperating with said shovel member for moving the material to be loaded thereon, and means for connecting said tractor mounting to said raking device for movement therewith in such manner as to permit contact of the tracklaying treads of said tractor mounting with the track rails to effect propulsion of the loading machine while supported on said truck wheels.



2,030,064

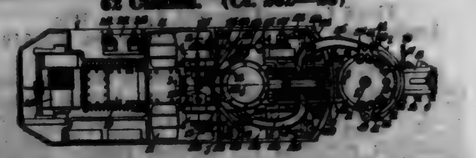
MINING APPARATUS

Merrit P. Holmes, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts

Application December 29, 1932, Serial No. 649,247

31 Claims. (Cl. 262—23)

7. In a mining apparatus, a portable base, an arm swingably mounted on and overlying said base and at its forward extremity overhanging said base, a kerf cutter pivotally mounted on the overhanging extremity of said arm, motor operated screw and nut devices for independently swinging said arm and kerf cutter about their respective pivots, and a motor for actuating both of said devices.



2,030,065

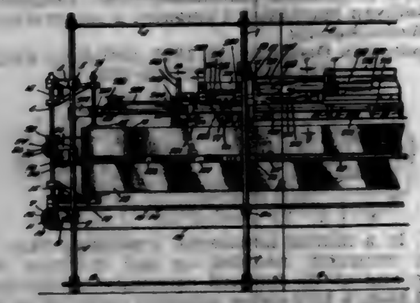
MINING APPARATUS

Merrit P. Holmes, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts

Application February 27, 1932, Serial No. 595,992

62 Claims. (Cl. 262—23)

1. In a mining apparatus, a portable base, a frame mounted on said base to swing relative thereto, a kerf cutter pivotally mounted on said

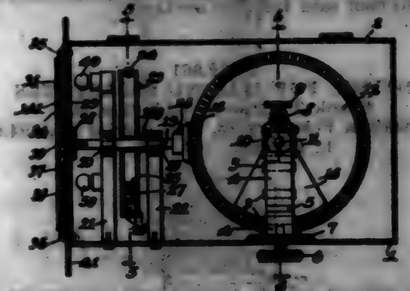


frame to swing relative thereto, a motor for actuating said kerf cutter, and a separate variable speed motor for swinging said frame and kerf cutter about their respective pivots, purely by motor control, through a wide range of cutting speeds.

2,030,005
PLASTIC MATERIAL AND METHOD OF MAKING SAME
Henry Jenett, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application June 29, 1934, Serial No. 733,996
12 Claims. (Cl. 101—32)

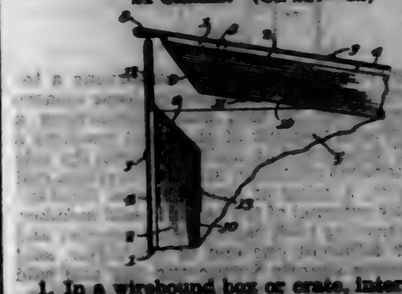
1. Method of producing embossed composite material, containing a thermoplastic composition as a surface, which comprises the steps of heating the material and embossing the heated material between cool surfaces.

7. Method of producing embossed sheet composite material comprising a base material bonded to a sheet of thermoplastic composition which comprises drawing the composite material across a heated liquid to raise the temperature of the material and embossing the heated material.



2,030,067
BAG SEALING MACHINERY
Isaac W. Litchfield, Smithfield, Mass., assignor, by mesne assignments, to Sarnaac Machine Company, Benton Harbor, Mich., a corporation of Michigan
Application November 23, 1931, Serial No. 576,206
76 Claims. (Cl. 93—6)

1. In bag closing machinery for sealing filled bags by a double fold in the mouth portion of the bag, the combination of a single set of folding blades operable to produce the double fold, having means to grip one fold while the final folding is in process, and means for causing relative movement of said blades, whereby the single set of blades is operative by successive relative movements of the same blades to produce the entire double fold in the mouth portion of the bag.



2,030,068
INCLINOMETER
Floyd Leonard Martin, Leona, Wis.
Application July 18, 1933, Serial No. 681,619
3 Claims. (Cl. 33—224)

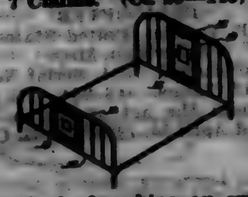
1. An inclinometer comprising a box-like support including sides and a bottom, guides mounted on the sides of the support, brackets mounted on the sides of the support, above the guides, standards mounted for vertical sliding adjustment in the guides, compression springs interposed between the brackets and the upper ends of the standards, adjusting devices movable in the bottom and engaging the lower ends of the standards to raise and lower them, a first shaft carried for rotation on the standards, a second shaft disposed at right angles to the first shaft

and carried for rotation on the support, means for operatively connecting the shafts, gravity-actuating means for operating the first shaft, and indicating means carried by the second shaft.

2,030,069
CONTAINER COVER FASTENER
Julius J. Miller, St. Joseph, Mich.
Application July 16, 1934, Serial No. 735,206
21 Claims. (Cl. 217—12)

1. In a wirebound box or crate, inter-engaging loops formed on the opposite ends of one or more of the binding wires, on the cover and the side wall of the box, and means for anchoring the end portions of the wire on the under side of the cover and the inner side of the wall by means obviating the necessity of inserting the ends of the binding wires in the material of the box or crate, to prevent the ends of the wire from injuring the hands of those who handle the box or crate.

2,030,070
MANUFACTURE OF ACETYLENE
Jacque C. Morrell, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application May 10, 1934, Serial No. 724,919
15 Claims. (Cl. 260—170)



1. A process for the production of acetylene and liquid hydrocarbons from hydrocarbon gases, which comprises subjecting said gases to an elevated temperature in the range of 900° to 1200° C. to produce high yields of olefin hydrocarbons, comprising ethylene, separating from the resulting product olefins higher in molecular weight than ethylene by conversion thereof into liquid hydrocarbons and separating the resulting liquid product, and thereafter subjecting the residual gases containing ethylene to a temperature above 1100° C. to convert the same into substantial yields of acetylene.

2,030,071
MACHINERY FOR MAKING RECEPTACLES
Walter F. Newhouse and Leslie M. Hile, Benton Harbor, Mich.
Application March 28, 1932, Serial No. 601,544
60 Claims. (Cl. 93—47)

1. In the general organization of a machine for making and folding paper blanks and inserting wire bails therein to form receptacles having handles, the combination with means for feeding a strip of paper, of means for printing on said paper, means for applying a paraffin coating or the like to both the printed and unprinted sides of said paper, means for delivering the paper straight from the printing means to the paraffining means, by a straight line feed of the paper horizontally to and through the paraffining means, so that the paraffining is done while the paper is stretched straight and horizontal in the line of feed thereof, means for cutting a blank from said paper, with said paraffined printing thereon, means for delivering the paper by jump feed from the paraffining means to the blank-forming means, and means for folding and creasing said blank to form said receptacle with said printing thus waterproofed on the outer surface thereof.

2,030,072
METHOD OF MAKING METAL PANELS
Joseph K. Pezdek, Bradley, Ill.
Application June 20, 1932, Serial No. 618,123
7 Claims. (Cl. 29—148)

2. The method of making an embossed sheet metal panel which consists in embossing a sheet of thin metal; in longitudinally slotting frame parts; in setting opposite edges of the embossed metal sheet between the slotted edges of frame parts of a supporting frame; and in securing the edges of the sheet to the said frame parts.

2,030,073
ADHESIVE COMPOSITION AND PROCESS FOR MAKING SAME
Gordon G. Pierson, Lansdale, Pa., assignor to Perkins Glue Company, a corporation of Delaware
No Drawing. Application March 23, 1933, Serial No. 662,044. Renewed March 16, 1936
12 Claims. (Cl. 92—13)

12. A process for preparing glue which comprises mixing as a chief constituent dry raw cassava starch having a viscosity greater than 45,000 poise when tested as herein described with a small amount of dry copper sulphate, combining the starch and copper sulphate with water and caustic alkali in the proportion of about 2½ times the weight of the starch as water and about 3% of caustic soda, heating the mass to about 150° F. and stirring for 1½ to 3½ hours, whereby a glue having a viscosity of about 44,000–48,000 poise is obtained.

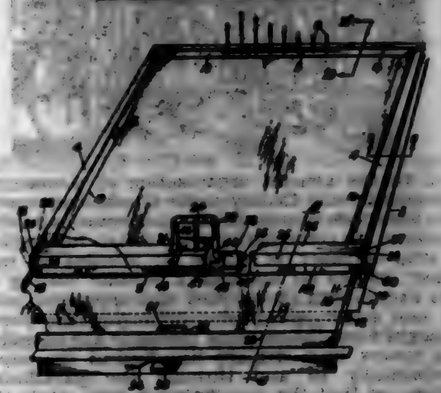
2,030,074
UNIVERSAL JOINT
Roy B. Poole, Dayton, Ohio
Application October 7, 1935, Serial No. 43,839½
3 Claims. (Cl. 64—16)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A joint structure comprising, two hollow tubes having their axes in the same plane but movable so that they are not in the same line, said tubes having keyways extending transversely across the walls at adjacent ends, a ball, held snugly between said adjacent ends, said ball having four keyways having axially parallel bottoms, two opposite bottoms being always parallel to the axis of one tube and the other two bottoms being always parallel to the axis of the other tube, and grooves having arcuate bottoms connecting the ends of opposite keyways together, two one-piece U-shaped keys having arcuate contours on their inner edges as the closed end fitted snugly to arcuate bottoms of the grooves and having parallel sides extending through said keyways, one key being at right angles to the other and their open ends extending oppositely, the parallel sides of said keys being offset inwardly midway of their length whereby the more widely spaced portion of the key sides extends into said transverse keyways and the offset portion extends into the hollow of said tubes, a spacing member within the hollow of said tubes grooved to receive the offset ends of said keys, and means to hold said spacing member and said keys in position in said tubes.

2,030,075
VAPORIZER DEVICE
Joseph Robinson, New York, N. Y.
Application September 19, 1928, Serial No. 306,967
Renewed March 20, 1934
9 Claims. (Cl. 128—192)

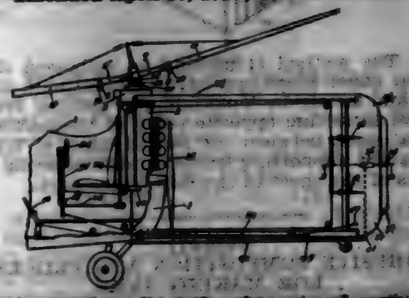
1. A pocket vaporizer unit comprising in combination a discardable medicament unit including a shallow receptacle adapted to contain a medicament substance therein vaporizable by application of heat to said receptacle, a flat cover secured to said receptacle, said cover having a

central aperture therein and a plurality of air inlets arranged about said central aperture, and an applicator for conveying the vapors to the parts to be treated, said applicator comprising a tubular body having a nozzle at one end, the opposite end of said tubular body being adapted to frictionally engage the central aperture in said cover to discardably support the medicament unit.



2. In combination a medicament holder having therein a supply of vaporizable substance, an applicator having a stem to detachably support the holder, and ejector means separate from the holder and slidably carried by said stem to throw the holder from the applicator.

2,029,776
WHEEL
Claude Saunedde, Detroit, Mich., assignor to Detroit Hydrostatic Brake Corporation, a corporation of Michigan
Application September 30, 1929, Serial No. 396,165
10 Claims. (Cl. 301—55)

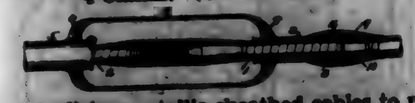


1. In tension wheels and in combination, a hollow hub formation, a rim, and spokes connecting the hub and rim, said hub formation having its walls symmetrical relative to the mid-plane of the wheel and having its zone of greatest diameter at such mid-plane and with the diameter decreasing progressively away from such plane, said hub formation having two annular series of spoke-anchoring devices on each side of such mid-plane with the spoke-anchoring devices of each series located on a plane individual to the series and with the several planes extending substantially parallel with and spaced from such mid-plane and relative to each other to thereby locate the respective planes of the two series of spoke-anchoring devices located at each side of such mid-plane as differing in remoteness from such mid-plane, an anchoring device of the more remote series being spaced from the axis of the hub a less distance radially than a similar device of the adjacent series of such side, a spoke-anchoring device of each series located at one side of the mid-plane being positioned on approximately the same radial plane of the wheel as a spoke-anchoring device of the other series on the same side of the mid-plane to provide a pair of devices on said approximate radial plane at one side of such mid-plane, said rim having its spoke connections arranged in two annular series symmetrical to and on opposite sides of such mid-plane with the spoke connections positioned to place a spoke connection of one series opposite the spoke connection of a spoke of the other series on a common radial plane of the wheel, a pair of spokes having such opposite connection relation with the rim leading from radially-aligned anchoring devices of the hub at one side of the wheel mid-plane.

2,029,977
REFUSE CATCHING AND REMOVING DEVICE FOR FLOORS
Ira T. Hiller, Pasadena, Calif.
Application January 30, 1933, Serial No. 654,134
11 Claims. (Cl. 15—17)

1. In combination, a slidable tray adapted to be manually reciprocated, a continuous sheet having a plurality of folds which overlie each other and withdrawable one at a time to form a covering for said tray, the uppermost fold of said sheet having a free edge which is accessible at one edge of said tray, and a yielding retractable straight-edge stationed at that edge of said tray in position to have said upper fold of the sheet extended thereunder and then thereby severed from the remainder of the sheet by manually lifting said extended fold after said tray has been moved forwardly together with said fold, thereby placing said fold in a position to be severed.

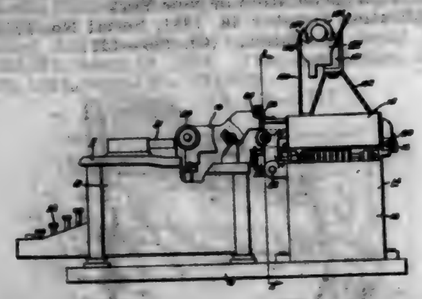
2,029,978
HELICOPTER
Sidney P. Vaughn, United States Navy, Ackerman, Miss.
Application April 6, 1934, Serial No. 719,909
12 Claims. (Cl. 245—19)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an aircraft of the character described, a supporting rotatable shaft bent to form two oblique intersecting axes, means for rotatably mounting one axis in the aircraft parallel with the vertical axis of the aircraft and arranged to support the body of said aircraft, a sustaining aircrew rotatably mounted on the upper inclined portion of said shaft so that its torque axis will be oblique to the vertical axis of the aircraft, means for turning said shaft in its mounting to effect a change in direction of said torque axis and the plane of rotation of said sustaining air screw for control purposes, and means for driving said sustaining air screw.

2,029,979
RECEPTACLE FOR ATTACHMENT PLUG CAPS
Charles Theodore Von Helts, Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a corporation of Connecticut
Application November 25, 1933, Serial No. 699,766
10 Claims. (Cl. 173—332)

1. In a receptacle, a body of insulating material having a socket opening through one of its ends, a contact in said socket, said contact adapted to be introduced into the socket by being pushed through the open end thereof, said body including a pair of grooves opening through the walls of said socket at spaced points, said contact including a rigid portion having edge portions received in said grooves, said contact including a resilient contact element at one side of said portion and between which and said portion a contact blade is to be received, and said contact including means at the opposite side of said portion from the resilient element cooperating with a wall of the socket to prevent the contact being pulled out of the socket and held in such co-operating relation by said rigid portion engaging in the grooves.

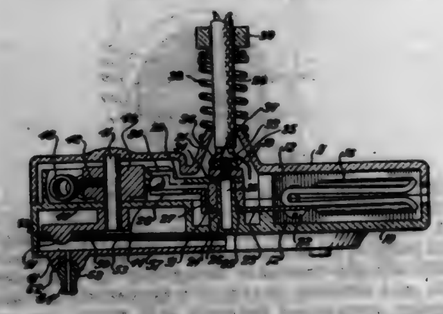


2,029,980
CABLE SPLICE
Richard C. Waldron, Clifton, N. J., assignor to The Okonite Company, Passaic, N. J., a corporation of New Jersey
Application June 8, 1934, Serial No. 729,586
4 Claims. (Cl. 173—268)

1. In splicing metallic sheathed cables to non-metallic sheathed cables the method which comprises vulcanizing a rubber compound to one end of a metallic casing, applying this casing to the cables to be joined, wiping the end of said casing, remote from the rubber compound, to the sheath of the metallic-sheathed cable, and at the end of the casing to which the rubber compound is vulcanized making up a moisture proof seal between the rubber compound and the non-metallic sheathed cable.

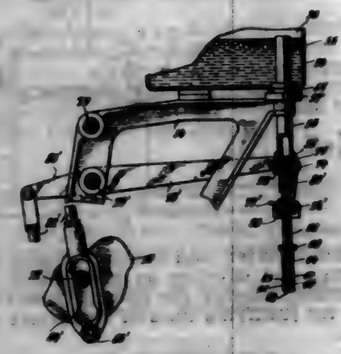
2,029,981
IMPRINTING APPARATUS
Edward C. Wells, Dayton, Ohio, assignor to Platt Iron Works, Inc., Dayton, Ohio, a corporation of New York
Application May 17, 1924, Serial No. 713,939
17 Claims. (Cl. 178—35)

1. In a printing telegraph system, a transmitter for selecting type characters and a receiver operated by said transmitter for grouping type characters in space relationship, adjustably variable character spacing means on said receiver, a control circuit connecting the trans-



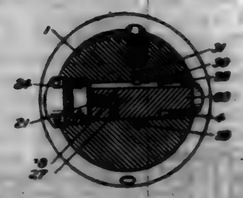
mitter and receiver, and means operable at the transmitter and effective on the control circuit for adjustably varying the spacing means at the receiver for justifying lines of characters at the receiver.

2,030,032
MAKING POTASH
Erich Wiedbranck and Karl Büche, Essen-Ruhr, Germany, assignors to the firm of Th. Goldschmit A.-G., Essen-Ruhr, Germany
No Drawing. Application April 13, 1932, Serial No. 605,117. In Germany April 20, 1931
14 Claims. (Cl. 23—63)



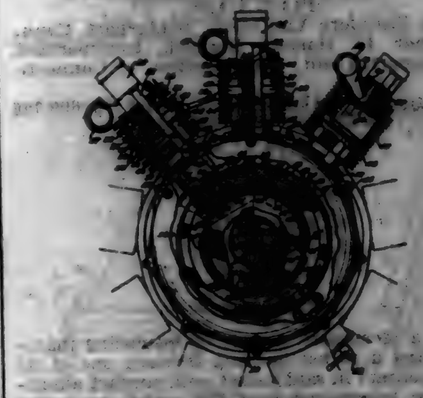
13. A process of making potassium carbonate which comprises treating potassium sulfate with gas-containing CO in the presence of water and caustic lime so as to form potassium formate and calcium sulfate, separating potassium formate in solid form and burning it in air to potassium carbonate.

2,030,083
STEAM OPERATED AUTOMATIC ELECTRIC SWITCH PLUG
Albert C. Wilcox, Massillon, Ohio, assignor to The Enterprise Aluminum Company, Massillon, Ohio, a corporation of Ohio
Application September 29, 1933, Serial No. 691,525
9 Claims. (Cl. 200—138)



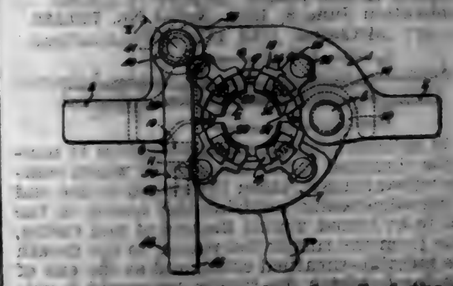
1. An automatic electric switch plug including a housing, a movable switch member within the housing, means for normally urging said switch member to open position, a bimetal strip within the housing and having an opening therein, a locking knob carried by the switch member and adapted to engage in said opening to lock the switch member in closed position, and means for directing steam into the housing and into contact with the bimetal strip.

2,030,004
APPARATUS FOR FILLING RECEPTACLES
Lewis B. Winton, Greenwich, Conn., assignor to American Seamless Corporation, New York, N. Y., a corporation of New York
Application October 26, 1931, Serial No. 571,965
21 Claims. (Cl. 226—102)



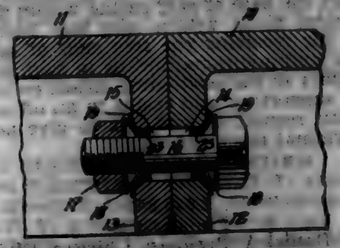
1. In apparatus for filling receptacles, an air tight material carrying tank, means to receive and discharge the material from the tank in successive predetermined measured quantities into receptacles adapted to seal the tank from the atmosphere and prevent entrance of air through said discharge means into the tank by the material discharged into a receptacle and the trapping of a portion of the material therein, and an inert gas supply under pressure connected with the tank to displace the material discharged from the tank and fill the space above the material in the tank.

2,030,035
POINT-DETONATING FUSE FOR PROJECTILES
David L. Woodberry, Edgewood Arsenal, Md.
Application February 7, 1934, Serial No. 710,004
7 Claims. (Cl. 102—39)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



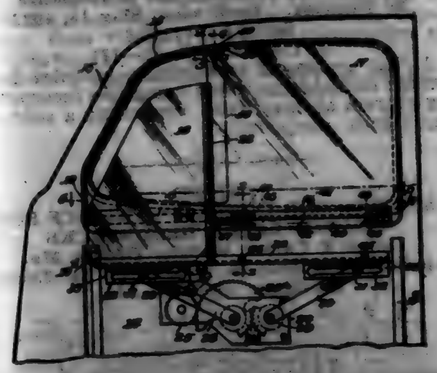
1. An impact fuse for projectiles comprising a fuse body, a bursting charge mounted thereon, a longitudinally movable firing pin in alignment with said bursting charge, a transversely movable member interposed between said firing pin and bursting charge, a detonator charge carried by said member, a shear member locking said firing pin into engagement with the transversely movable member and holding the detonator charge out of alignment with the firing pin, means operable by initial acceleration of the shell when fired to break said shear member and release said firing pin, and means operable upon a predetermined decrease in acceleration to move said firing pin to release said transversely movable member.

2,030,056
INTERNAL COMBUSTION ENGINE
Lionel M. Woolson, deceased, late of Detroit, Mich., by Emma F. Woolson, executrix, Bloomfield, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 12, 1931, Serial No. 574,792
14 Claims. (Cl. 123—140)



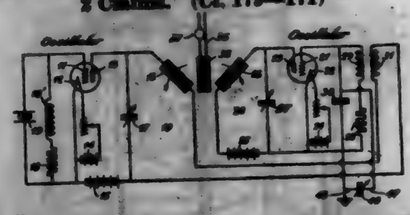
1. In a compression-ignition engine, a cylinder, a pair of fuel injection devices opening into the cylinder and each comprising a plunger and a nozzle, said nozzles having spring pressed valves opened under different pressures, and an actuating member selectively engageable with either of said devices.

2,030,067
DOOR TYPE SLIP ELEVATOR
Ferrest Joseph Young, Los Angeles, Spencer William Long, Redondo Beach, and John Shelby Morgan, Jr., Inglewood, Calif., assignors, by mesne assignments, to The National Superior Company, Toledo, Ohio, a corporation of Delaware
Original application June 28, 1931, Serial No. 547,276. Divided and this application May 8, 1933, Serial No. 670,944
7 Claims. (Cl. 294—99)



1. In a device of the class described, the combination of a body, a gate pivotally supported to one side of the body, a latch yoke pivotally supported by the body to pass over the free end of the gate to hold the gate in closed position, a latch means carried by the latch yoke, the latch yoke being provided with a handle, means mounted within the handle for actuating the latch means, and the latch means including a latch pin adapted to pass into a latch pin bore formed in the gate to hold the latch yoke from swinging away from the free end of the gate and adapted to project outwardly from the handle when held from passing into the latch pin bore.

2,030,063
GROMMET
William A. Young, Astoria, N. Y.
Application April 18, 1934, Serial No. 721,090
3 Claims. (Cl. 85—1)



1. In combination with plates having a bored hole to be held together, a bolt of substantially smaller diameter than the bored holes for securing the same, an expansion member having a flange the inner face thereof engaging the outer walls of one of said plates and providing an inwardly directed flaring portion with a collar to be approximately midway between the outside diameter of the bolt and the inside wall of the bored hole, a grommet of relatively and uniformly thin structure between the bolt-head and the expansion member, said grommet providing means extending beyond and around the said collar for sealing the openings between the bolt and the walls of the hole in the plate.

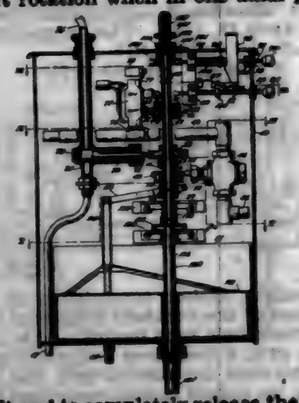
2,030,085
WINDOW FOR VEHICLES
Roy F. Anderson, Auburn, Ind., assignor, by mesne assignments, to Indianapolis Corporation, Indianapolis, Ind., a corporation of Delaware
Application December 13, 1933, Serial No. 702,895
5 Claims. (Cl. 296—44)

1. The combination with a vehicle comprising a structure having a window-opening therein and a window-well below the opening, of a composite window for closing the window-opening comprising front and rear substantially coplanar panels mounted in slide vertically in the door from window-closing position into the well and vice versa, raising and lowering mechanism to which the front panel is directly connected, means for optionally connecting the rear panel to said mechanism so that it is conjointly shiftable with the front panel, and means for locking the rear panel to the structure after disconnection therefrom of the raising and lowering mechanism in order that said front panel may be shifted by the mechanism independently of the rear panel.

2,030,095
PHASE CONTROLLED OSCILLATING SYSTEM
Sydney N. Barnes, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Refiled for abandoned application Serial No. 333,901, April 18, 1929. This application June 22, 1934, Serial No. 731,819
2 Claims. (Cl. 179—171)

1. A signalling system comprising, an oscillation generator of the constant frequency type including a thermionic tube having anode, cathode and control grid, a frequency determining circuit connected between the control grid and cathode of said tube, an output circuit connected between the anode and cathode of said tube, a second oscillation generator comprising a second thermionic tube having anode, cathode and control grid, a circuit including reactances coupled between the control grid and cathode of said second named tube, one of said reactances being variable at signal frequency, an output circuit connected between the anode and cathode of said last named tube, a load circuit variably coupled to both of said output circuits, and a reactance coupling the output circuit of said first named tube to the control grid cathode circuit of said second named tube.

2,030,091
INFANT'S GARMENT
Frances Behringer, New York, N. Y.
Application February 27, 1935, Serial No. 8,456
2 Claims. (Cl. 2—114)

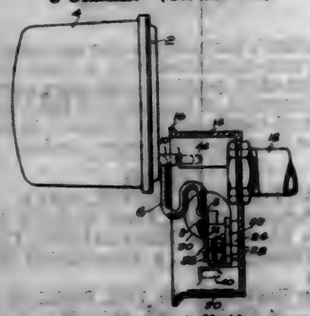


1. An infant's garment having an upper formed blouse portion connected with a lower unformed foldable flat skirt portion, said skirt portion being a continuation of the front of the blouse portion only and elastic means disposed in the lower edge in the back of said blouse portion.

2,030,092
AUTOMATIC DISHWASHER
Ralph L. Benson, Toledo, Iowa, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 28, 1932, Serial No. 635,504
1 Claim. (Cl. 141—9)

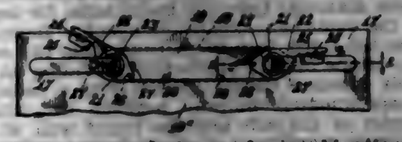
In a dishwasher comprising a container, and a self-closing water-inlet valve therefor, the com-

bination of control means for said valve comprising a shaft adapted to be slowly rotated, a cam mounted on said shaft to rotate therewith but to be free to axially slide thereon, said cam being so shaped as to open said valve during a portion of the shaft rotation when in one axial position on



the shaft and to completely release the valve when in a second position on the shaft, and a float responsive to the level of the water in the container for shifting the said cam from the first-named axial position on the shaft to the second-named position when the water level rises to a given height in the container.

2,030,093
PARASITICIDES
Euclid W. Bousquet, George D. Graves, and Paul L. Salzberg, Wilmington, Del., assignors, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application December 29, 1932, Serial No. 648,448
7 Claims. (Cl. 167—22)



1. A parasiticidal composition comprising as the active parasiticidal ingredient a substance selected from the group of substances consisting of lauryl alcohol, lauryl esters and lauryl amines.

2,030,094
METER MOUNTING
William M. Bradshaw and Walter G. Myllus, Summit, N. J., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 13, 1934, Serial No. 743,864
3 Claims. (Cl. 247—2)

1. An electric meter installation comprising in combination, a terminal box substantially of cup-shape adapted to be secured to a support, a casing for a meter element proportioned to constitute a closure for said terminal chamber, positioning means on said casing and complementary means in said box for maintaining the casing and box in operative position, conductors extending from the base of said casing within said box, a terminal block within said box having terminals for receiving the free ends of said conductors, and additional means in said box complementary to the positioning means on said casing for supporting said casing in an off-set position with respect to said box to give access to said terminal block.

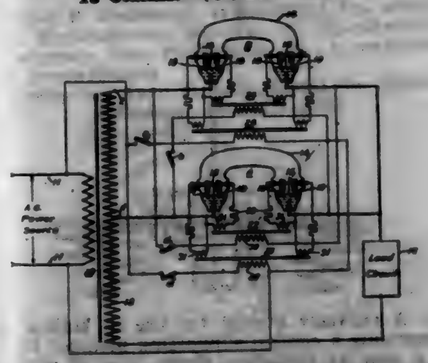
2,030,095
FASTENER
Daniel A. Brennan, Chicago, Ill.
Application January 2, 1931, Serial No. 506,039
27 Claims. (Cl. 24—153)

1. In a paper fastener, in combination, an elongated member having an opening at each end adapted to each receive a prong, latches mounted one in each opening for movement one over each of said prongs, a lip on each lock, and a flared portion on each lip adapted to facilitate movement of said latches into position over the respective prong.

2,030,096
BLACK POWDER COMPOSITION
Clarence W. Brooks, Jr., Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 18, 1932, Serial No. 611,709
12 Claims. (Cl. 52—17)

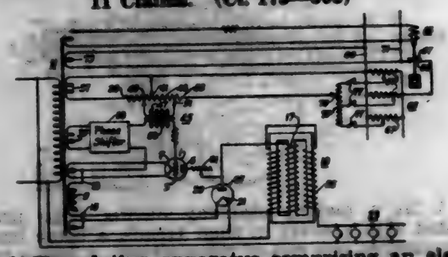
1. The process of stabilizing a modified black powder composition which comprises incorporating therein an ingredient comprising a solid organic basic compound.

2,030,097
SETTING AND INDICATING DEVICE FOR GEARED LATHE HEADSTOCKS
Lionel A. Carter, Webster Groves, Mo.
Application August 10, 1934, Serial No. 739,295
8 Claims. (Cl. 116—124)



2. In a change speed driving mechanism for a lathe spindle, a control member for said mechanism, and a setting and indicating device for said control member and operated solely thereby, said device comprising a plate mounted for sliding movement on said lathe and having a scale marked thereon with numbered graduations designating the different spindle speeds, an operative connection between said control member and said slidable plate for sliding the latter when the former is actuated, and a cover fixed to said lathe and covering said slide plate, said cover plate being provided opposite said scale with an opening of a size adapted to uncover the numbered graduation corresponding to the spindle speed for which the transmission control member is set.

2,030,098
SOUND PICTURE RECORD
Theodore Willard Case, Auburn, N. Y., assignor to Case Research Laboratory, Incorporated, Auburn, N. Y., a corporation of New York
Application June 27, 1928, Serial No. 288,676
26 Claims. (Cl. 274—41.6)



1. The combination with a spliced film having a sound record thereon, of means for gradually decreasing light rays passing through the film from a point forward of the splice up to the splice, and means for gradually increasing light rays passing through the film rearwardly of the splice to a normal condition of the sound record.

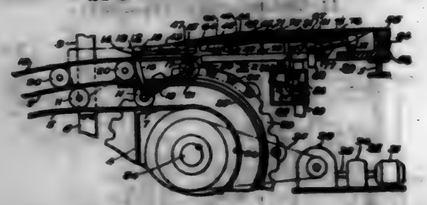
2,030,099
ELECTRICAL APPARATUS
John W. Dawson, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 6, 1933, Serial No. 650,419
13 Claims. (Cl. 171—119)

1. The combination with an electrical winding having a plurality of taps, a circuit disposed for connection therewith, and a source of alternating-current voltage disposed to circulate current through said winding and circuit, of a vapor-arc device, which is capable of conduction when excited, disposed intermediate the circuit and each of the winding taps, means for selectively exciting each of said devices from said alternating-current voltage, and means for additionally exciting each of said devices from a characteristic of any one of said remaining devices when non-conductive.

2,030,100
ELECTRIC DISCHARGE APPARATUS
John W. Dawson, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 11, 1934, Serial No. 725,167
11 Claims. (Cl. 175—363)

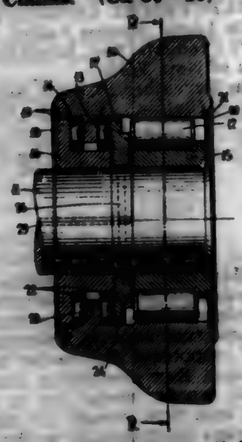
1. Translating apparatus comprising an electric discharge device having a control electrode and a plurality of principal electrodes, means for applying a periodic principal potential on said electric discharge device, means for applying a periodic control potential on said electric discharge device that is composed of a component which may be represented by a vector parallel to the vector representing the principal potential and a component which may be represented by a vector at an angle less than 180° to the vector representing the principal potential and means for varying the first said component continuously from a predetermined magnitude in opposite phase to the principal potential to a predetermined magnitude in phase with the principal potential.

2,030,101
MEANS FOR DETECTING FLAWS IN ELECTRICAL CONDUCTORS
Loren J. De Lanty, Spring Valley, N. Y., assignor to Sperry Products, Inc., Brooklyn, N. Y., a corporation of New York
Application November 10, 1933, Serial No. 697,463
8 Claims. (Cl. 175—183)



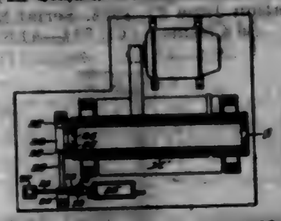
1. In a flaw detector mechanism for electrical conductors comprising an indicator and means for passing current through the conductor to establish an electromagnetic field surrounding the same, flaw responsive means for actuating said indicator, said flaw responsive means comprising metallic means whose size is responsive to the flux in said field, means for supporting said metallic means substantially in the plane of said field and means for moving said metallic means through said field in constant relation to said conductor.

2,030,102
TEXTILE OPERATIONS
William Alexander Dickie and Alexander Henderson Gentle, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application August 20, 1932, Serial No. 629,059. In Great Britain October 13, 1931
10 Claims. (Cl. 28—1)



1. In the manufacture of pile fabrics, the steps of impregnating pile yarns of cellulose acetate with a solution of a weak alkali, drying the pile yarns, and thereafter cutting the same.

2,030,162
MOVING STAIRWAY
James Dunlop, Park Ridge, Ill., assignor to Westinghouse Electric Elevator Company, Chicago, Ill., a corporation of Illinois
Application September 13, 1934, Serial No. 743,859
21 Claims. (Cl. 198—16)

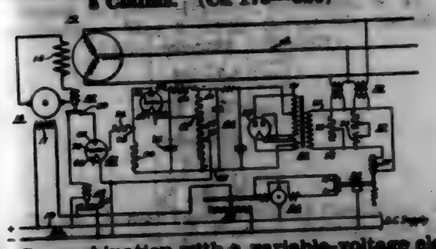


1. In a moving stairway having steps provided with grooves in their treads, a comb base disposed at one end of the stairway, a frame for supporting said comb base and preventing downward movement of any portion thereof but permitting upward movement thereof, and a plurality of comb teeth rigidly mounted on the comb base in position to enter the grooves in the treads of the steps as the steps pass under the comb, said comb base being sufficiently heavier than the comb teeth to more than overbalance the weight of the comb teeth and loading thereon of stairway passengers.

2,030,164
ROLLER BEARING FOR ROLLING MILLS
Caroline L. Ekergian, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 6, 1931, Serial No. 567,153
5 Claims. (Cl. 80—16)

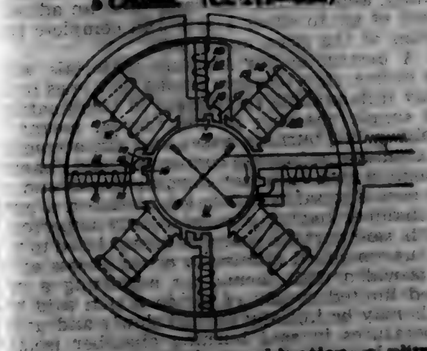
1. A roll assembly for the radial rolling of wheel discs comprising, in combination, a shaft, a tread ring mounted upon said shaft through a plurality of sets of anti-friction rollers interiorly thereof and intermediate said shaft and ring, a radially inwardly extending web portion interiorly of said ring, a plurality of sets of axial thrust bearings being arranged at either side of said web each to carry axial thrusts, and a set of bearings arranged symmetrically with the load plane of the roll and arranged to carry radial thrusts, means providing retaining wall and race-way portions for said radial thrust bearings, means comprising an annular member of L-shaped cross-section providing race-way and retaining wall portions for one set of said axial thrust bearings, and means intermediate said afore-mentioned retaining wall and raceway means having a retaining portion for said radial thrust bearings and a race-way portion for the second of said axial thrust bearings.

2,030,165
STOP-OFF FOR CENTRIFUGAL CASTING MOLDS
Richard H. Emrich and Benjamin F. Anthony, Youngstown, Ohio, assignors to The Youngstown Sheet and Tube Company, Youngstown, Ohio, a corporation of Ohio
Application November 8, 1932, Serial No. 697,994
12 Claims. (Cl. 18—55)



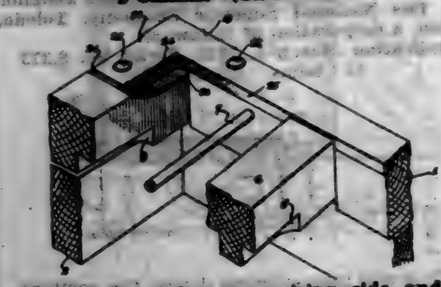
11. In combination with a centrifugal mold having a cylindrical bore open at one end, an annular sheet metal disk seated in and peripherally engaging the mold bore for contact by the fluid metal when poured into the mold, and means for resisting longitudinal thrust of the metal against the disk including a metallic body of substantial thickness engaging the face of the disk remote from that contacted by the metal throughout an area approximately coextensive with the area of contact of the metal with the opposite face of the disk.

2,030,166
EGG HOLDER
James A. Ferico, St. Louis, Mo.
Application June 13, 1935, Serial No. 26,500
6 Claims. (Cl. 53—1)



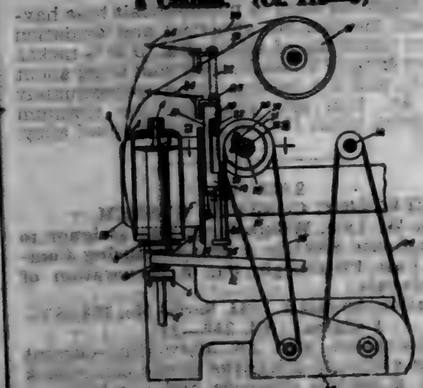
1. A culinary utensil for use in boiling eggs comprising a central supporting member formed of a pair of clamping plates, one of which is provided with a series of stamped circular recesses, each recess having a communicating radial recess extending to the edge of the clamping plate, a series of egg holders each of which is provided with an outwardly extending arm seated in one of said radial recesses and an eye on the end of said arm seated in a circular recess, said clamping plates being secured together to rigidly hold said arms and eyes in position between them, and a handle member secured on said supporting member and projecting above the same.

2,030,167
ELECTRONIC RELAY
Finn H. Gulliksen, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 5, 1932, Serial No. 641,425
8 Claims. (Cl. 175—329)



1. In combination with a variable-voltage electrical circuit and a relay influenced thereby, means for causing the relay to respond to voltage-change impulses, comprising an electronic tube having an anode, a cathode, and a grid element, a circuit including said anode and cathode elements for controlling the actuation of said relay, a circuit including said grid and cathode elements for controlling the current in said anode circuit, means for energizing said anode and grid circuits in accordance with potentials derived from said electrical circuit in such manner that the anode-circuit current remains substantially constant and of an appreciable magnitude during gradual changes in the electrical circuit voltage, a resistor connected in said grid circuit, and a capacitor connected through said resistor to said electrical circuit for energization in accordance with the voltage thereof, the effect of said connection being to modify the tube grid potential in such manner that when the said electrical-circuit voltage changes at a rapid rate in the voltage-decreasing direction an actuation of the above-mentioned relay will result.

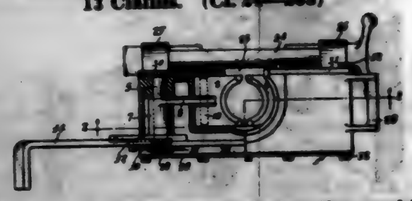
2,030,168
GENERATOR
Clarence B. Hathaway, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 14, 1934, Serial No. 720,605
5 Claims. (Cl. 171—321)



1. In a generator in combination, a plurality of field poles for producing a magnetic field flux, commutating poles disposed between the field poles, an auxiliary pole disposed between the commutating poles and the field poles, means for conducting magnetic flux associated with the commutating and auxiliary poles to cooperate in building up the field flux, the auxiliary pole receiving the flux it delivers from the commutating pole and the means for conducting the magnetic flux serving to limit the flux delivered through the auxiliary pole.

2,030,169
DELIVERY BOX
John A. Hopwood, Great Neck, N. Y.
Application August 16, 1935, Serial No. 36,480
9 Claims. (Cl. 217—32)

1. A delivery box comprising side and end walls, each composed of superimposed slats and the bottom side slats of which comprise the runners of the box and are thicker than the corresponding top side slats, said runners being of full thickness throughout their length and having their opposite ends cut sheer with said ends abutting the inner faces of the bottom end slats, corner irons at the four corners of the box, means for securing the contiguous ends of the side and end slats to said corner irons to maintain the slats in assembled relation, and a stacking iron at each of the upper corners of the box, each runner being provided therein at its inner lower edge with recesses located at the corners of the box to receive the stacking irons of another box of the same kind when a plurality of such boxes are stacked with respect to one another.

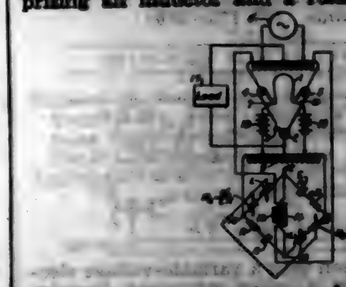


2,030,170
APPARATUS FOR MANUFACTURING TWISTED ARTIFICIAL YARNS OR THREADS
Albert W. Knight, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
Application October 19, 1932, Serial No. 638,490
6 Claims. (Cl. 112—9)

1. In apparatus for the production of packages of textile material, the combination with a device for twisting and winding textile material and a guide for said material, of means for mov-

ing said guide with respect to said device, said means comprising a vertically reciprocating rod on which said guide is carried, a shaft, a wheel journaled thereon, a flexible member connecting said rod and said wheel, means for preventing the free downward movement of said rod and means for rotating said shaft.

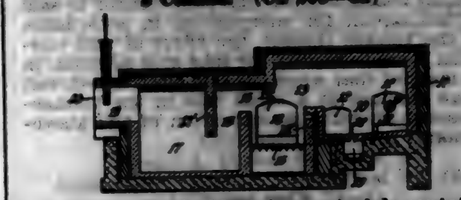
2,030,111
SPIDER
Spencer W. Lang, Redondo Beach, Calif., assignor to The National Superior Company, Toledo, Ohio, a corporation of Delaware
Application March 5, 1935, Serial No. 9,373
13 Claims. (Cl. 24—263)



1. In a well tube gripping device, the combination of a body having a tapered opening providing a slip-engaging seat, slips mounted within the body on the tapered seat to engage a well tube, means including a pivotedly mounted member having an oscillating movement for actuating said slips from gripping position to a retrieved position and vice versa, means including a yieldable element secured to the body and connected with said member eccentrically of its axis of rotation, said means acting to normally urge the rotation of said member in one direction to maintain the slips in engagement with the well tube when the slips are moved to the gripping position, and acting to normally urge the rotation of said member in a counter direction to hold the slips in the retrieved position when the slips are moved to said latter position.

2,030,112
ALLOY
Erwin F. Lowry, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
No Drawing. Application October 30, 1929, Serial No. 403,664
4 Claims. (Cl. 75—1)

1. An improved alloy of nickel-cobalt base having a high mechanical, electrical and oxidation resistance consisting of about 40% to 85% nickel, and about 40 to 10% cobalt, their sum being about 80 to 95%, and the balance being approximately 20% to 5% iron plus titanium, the titanium ranging from about 10% to 1% of the total alloy.



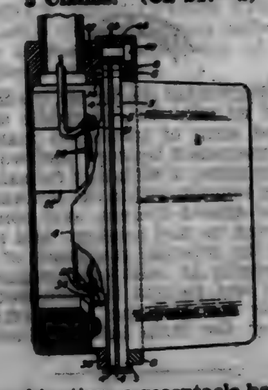
2,030,113
ELECTRIC CONTROL SYSTEM
Frederick W. Lyle, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 8, 1934, Serial No. 738,983
1 Claim. (Cl. 250—27)

In combination with an alternating-current source, an electrical discharge device comprising an anode, a control electrode and a cathode, a four-armed network of the bridge type having one pair of diagonally opposite corners energized by alternating current by said source, and its other pair of diagonally opposite corners connected to impress a voltage between said control electrode and said cathode, one pair of opposite arms of said network each comprising a resistor and a capacitor in series, the ratio of resistance to reactance being the same for both arms, and the other pair of opposite arms of said network comprising an inductor and a resistance in series,

the product of the resistances of any two adjacent arms plus the product of their reactances being equal to zero, the quotient of the impedances of pairs of opposite arms being the same, and means to vary the impedances of a pair of opposite arms without varying the quotient of their impedances.

2,030,114
DESTRUCTOR
Arthur H. Mann, Nyack, N. Y., assignor to Mann Bonjer Destructor Company, Inc., New York, N. Y., a corporation of Delaware
Application October 5, 1931, Serial No. 566,155
5 Claims. (Cl. 263—53)

1. The method of burning materials containing recoverable metal which is characterized by initially burning the materials with a restricted amount of air to convert the combustible contents into smoke and gas at low temperatures so as not to injure the metal, then conducting said smoke and gases away from the point of initial burning, and heating the same with an adequate supply of air to effect a safe and complete combustion of the gases and smoke.

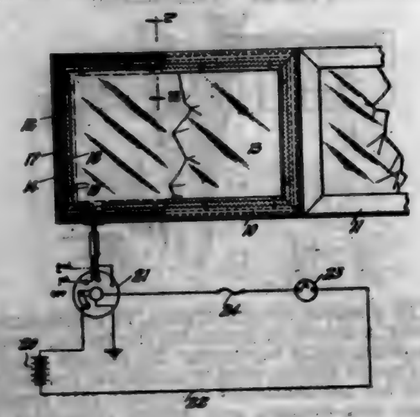


5. A destructor for burning materials which may evolve objectionable smoke or fumes or are highly inflammable comprising in combination a heat supply chamber having therein means for supplying hot burning gases and air, a combustion chamber, a passage connecting said chamber through which said hot burning gases and air may pass into said combustion chamber, a burning chamber having a substantially imperforate hearth, said burning chamber being closed to prevent uncontrolled admission of an excess of air but provided with means for admitting a controlled limited supply of air in which said materials may be initially burned slowly and at low temperatures in said burning chamber isolated from the heating effect of said heat supply chamber, said burning chamber being spaced from the path of said hot burning gases so that said materials are not subjected to the direct heating action thereof, said burning chamber connected with said passage at a point remote from said materials so that the latter do not lie in the path of said hot gases, and an insulating wall for shielding said materials from the heat of said heat supply chamber.

2,030,115
ELECTRIC PLUG
Bernard F. Muldoon, Mountain View, N. J., assignor to Henry Hyman, Brooklyn, N. Y.
Application May 4, 1929, Serial No. 360,566
2 Claims. (Cl. 173—361)

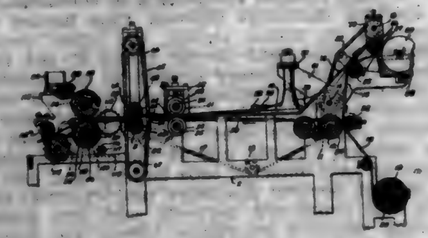
1. In an electric plug, a cap of insulating material having a single opening through the center thereof, parallel blade terminals extending from the face of said cap, electric wires extending through said opening and connected to said blade terminals, and a ring of insulating material integrally connected to said cap in two places opposite said blade terminals and lying in a plane parallel to said terminals, the insulating material of which said ring is made being solid in cross section and also being enlarged where it is connected to said cap said single opening being located between the places where said ring is connected to said cap.

2,030,116
DETACHABLE WATT HOUR METER
William C. Nein, White Plains, N. Y., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 27, 1934, Serial No. 750,283
5 Claims. (Cl. 247—8)



1. In combination, a receptacle having an open side and electrical contact surfaces disposed therein extending in a plane substantially parallel to the plane defined by said open side, an encased electrical instrument having a base portion proportioned to close said open side, contacts on said base spaced in accordance with the spacing of said receptacle contact surfaces and extending in substantially the same plane therewith when said base portion is in receptacle-closing position.

2,030,117
WINDSHIELD HEATER
Luther T. Page, Richmond, Va.
Application July 14, 1934, Serial No. 735,121
2 Claims. (Cl. 219—19)

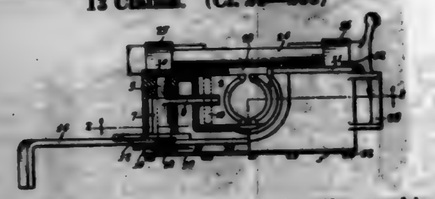


1. A heated windshield as characterized comprising a plurality of layers of transparent glass,

said layers at their outer edges being turned inwardly and toward each other thereby providing a peripherally continuous seat at said outer edges and an open space between the other parts of the layers for providing a clear vision, each of said layers having inwardly projecting posts with respect to each other extending substantially the distance of the open space and being integral

parts of said layers and retaining the layers in constant spaced relation, a plurality of heating elements extending peripherally adjacent the inside of the several peripheral edges of the layers, said elements providing each a plurality of sections and each section being parallel to the next adjacent peripheral edge of the layers, and passing next to the posts said sections being held in spaced relation by the said integral posts.

2,030,118
PROCESS AND MACHINE FOR LONG LIP BAGS
George W. Peppe, Brooklyn, N. Y., assignor to Equitable Paper Bag Co. Inc., Brooklyn, N. Y., a corporation of New York
Application August 8, 1931, Serial No. 555,893
15 Claims. (Cl. 93—18)

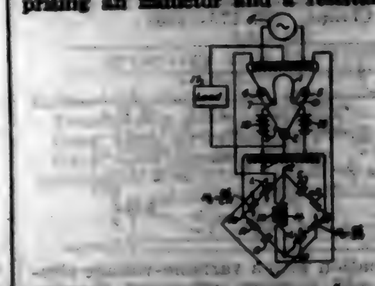


1. The process of making a paper bag which consists in making successive transverse cuts in the respective wall of a bag tube creating a slack in the tube prior to making the first transverse cut and creating a further slack between the time of making the first and second cuts.

5. In a machine for making paper bags having mechanism for forming a bag tube and having opposed transverse cutting edges for severing the walls of the tube to form individual bags; the combination with means for severing one wall of the bag tube, means for feeding the bag tube and means for subsequently severing the other wall thereof.

ing said guide with respect to said device, said means comprising a vertically reciprocating rod on which said guide is carried, a shaft, a wheel journaled thereon, a flexible member connecting said rod and said wheel, means for preventing the free downward movement of said rod and means for rotating said shaft.

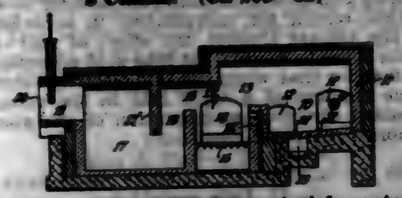
2,030,111
SPIDER
Spencer W. Long, Redondo Beach, Calif., assignor to The National Superior Company, Toledo, Ohio, a corporation of Delaware
Application March 5, 1935, Serial No. 9,373
13 Claims. (Cl. 24—263)



1. In a well tube gripping device, the combination of a body having a tapered opening providing a slip-engaging seat, slips mounted within the body on the tapered seat to engage a well tube, means including a pivotedly mounted member having an oscillating movement for actuating said slips from gripping position to a retrieved position and vice versa, means including a yieldable element secured to the body and connected with said member eccentrically of its axis of rotation, said means acting to normally urge the rotation of said member in one direction to maintain the slips in engagement with the well tube when the slips are moved to the gripping position, and acting to normally urge the rotation of said member in a counter direction to hold the slips in the retrieved position when the slips are moved to said latter position.

2,030,112
ALLOY
Erwin F. Lowry, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
No Drawing. Application October 29, 1932, Serial No. 643,854
4 Claims. (Cl. 75—1)

1. An improved alloy of nickel-cobalt base having a high mechanical, electrical and oxidation resistance consisting of about 40% to 85% nickel, and about 40 to 10% cobalt, their sum being about 80 to 95%, and the balance being approximately 20% to 5% iron plus titanium, the titanium ranging from about 10% to 1% of the total alloy.



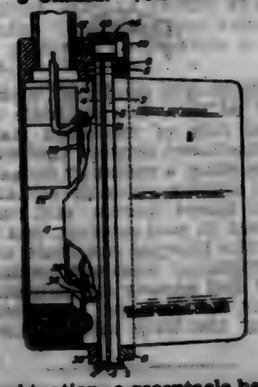
2,030,113
ELECTRIC CONTROL SYSTEM
Frederick W. Lyle, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 8, 1934, Serial No. 738,983
1 Claim. (Cl. 250—27)

In combination with an alternating-current source, an electrical discharge device comprising an anode, a control electrode and a cathode, a four-armed network of the bridge type having one pair of diagonally opposite corners energized by alternating current by said source, and its other pair of diagonally opposite corners connected to impress a voltage between said control electrode and said cathode, one pair of opposite arms of said network each comprising a resistor and a capacitor in series, the ratio of resistance to reactance being the same for both arms, and the other pair of opposite arms of said network comprising an inductor and a resistance in series,

the product of the resistances of any two adjacent arms plus the product of their reactances being equal to zero, the quotient of the impedances of pairs of opposite arms being the same, and means to vary the impedances of a pair of opposite arms without varying the quotient of their impedances.

2,030,114
DESTRUCTOR
Arthur H. Mann, Nyack, N. Y., assignor to Morse Boulger Destructor Company, Inc., New York, N. Y., a corporation of Delaware
Application October 5, 1931, Serial No. 566,986
5 Claims. (Cl. 262—52)

1. The method of burning materials containing recoverable metal which is characterized by initially burning the materials with a restricted amount of air to convert the combustible contents into smoke and gas at low temperatures so as not to injure the metal, then conducting said smoke and gases away from the point of initial burning, and heating the same with an adequate supply of air to effect a safe and complete combustion of the gases and smoke.

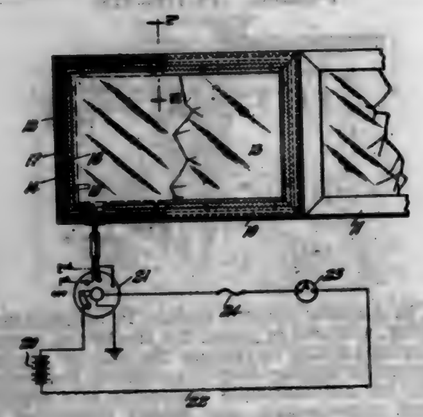


5. A destructor for burning materials which may evolve objectionable smoke or fumes or are highly inflammable comprising in combination a heat supply chamber having therein means for supplying hot burning gases and air, a combustion chamber, a passage connecting said chamber through which said hot burning gases and air may pass into said combustion chamber, a burning chamber having a substantially imperforate hearth, said burning chamber being closed to prevent uncontrolled admission of an excess of air but provided with means for admitting a controlled limited supply of air in which said materials may be initially burned slowly and at low temperatures in said burning chamber isolated from the heating effect of said heat supply chamber, said burning chamber being spaced from the path of said hot burning gases so that said materials are not subjected to the direct heating action thereof, said burning chamber connected with said passage at a point remote from said materials so that the latter do not lie in the path of said hot gases, and an insulating wall for shielding said materials from the heat of said heat supply chamber.

2,030,115
ELECTRIC PLUG
Bernard F. Muldoon, Mountain View, N. J., assignor to Henry Hyman, Brooklyn, N. Y.
Application May 4, 1929, Serial No. 360,566
2 Claims. (Cl. 173—361)

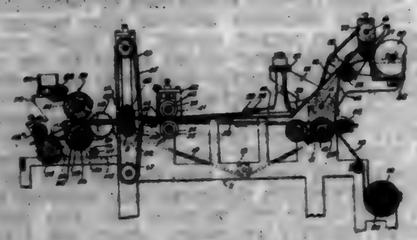
1. In an electric plug, a cap of insulating material having a single opening through the center thereof, parallel blade terminals extending from the face of said cap, electric wires extending through said opening and connected to said blade terminals, and a ring of insulating material integrally connected to said cap in two places opposite said blade terminals and lying in a plane parallel to said terminals, the insulating material of which said ring is made being solid in cross section and also being enlarged where it is connected to said cap said single opening being located between the places where said ring is connected to said cap.

2,030,116
DETACHABLE WATT HOUR METER
William C. Nein, White Plains, N. Y., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 27, 1934, Serial No. 750,283
5 Claims. (Cl. 247—8)



1. In combination, a receptacle having an open side and electrical contact surfaces disposed therein extending in a plane substantially parallel to the plane defined by said open side, an encased electrical instrument having a base portion proportioned to close said open side, contacts on said base spaced in accordance with the spacing of said receptacle contact surfaces and extending in substantially the same plane therewith when said base portion is in receptacle-closing position.

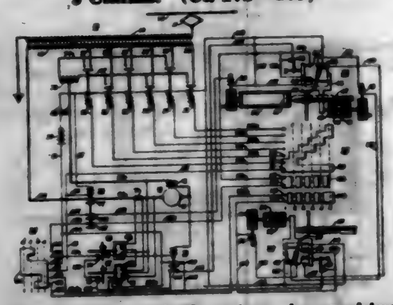
2,030,117
WINDSHIELD HEATER
Luther T. Page, Richmond, Va.
Application July 14, 1934, Serial No. 735,121
3 Claims. (Cl. 219—19)



1. A heated windshield as characterized comprising a plurality of layers of transparent glass,

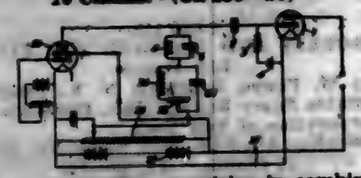
said layers at their outer edges being turned inwardly and toward each other thereby providing a peripherally continuous seat at said outer edges and an open space between the other parts of the layers for providing a clear vision, each of said layers having inwardly projecting posts with respect to each other extending substantially the distance of the open space and being integral

parts of said layers and retaining the layers in constant spaced relation, a plurality of heating elements extending peripherally adjacent the inside of the several peripheral edges of the layers, said elements providing each a plurality of sections and each section being parallel to the next adjacent peripheral edge of the layers, and passing next to the posts said sections being held in spaced relation by the said integral posts.



2,030,118
PROCESS AND MACHINE FOR LONG LIP BAGS
George W. Poppe, Brooklyn, N. Y., assignor to Equitable Paper Bag Co. Inc., Brooklyn, N. Y., a corporation of New York
Application August 8, 1931, Serial No. 555,893
15 Claims. (Cl. 93—18)

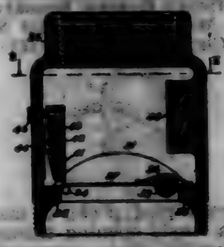
1. The process of making a paper bag which consists in making successive transverse cuts in the respective wall of a bag tube creating a slack in the tube prior to making the first transverse cut and creating a further slack between the time of making the first and second cuts.



5. In a machine for making paper bags having mechanism for forming a bag tube and having spaced transverse cutting edges for severing the walls of the tube to form individual bags; the combination with means for severing one wall of the bag tube, means for feeding the bag tube and means for subsequently severing the other wall thereof.

2,030,119
CONTROL SYSTEM
Frank B. Powers, Forest Hills, and Charles C. Whittaker, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 9, 1934, Serial No. 729,868
9 Claims. (Cl. 172—179)

1. In a motor control system, in combination, a motor, a source of power for the motor, means for automatically increasing the voltage applied to the motor step-by-step to accelerate the motor, means for automatically decreasing said applied voltage step-by-step, and means responsive to the power supplied to the motor for controlling the operation of said voltage applying means.



2,030,136
SUPERREGENERATIVE RECEIVING SYSTEM
Neil Mayer East and Robert Francis O'Neill, Chelmsford, England, assignors to Radio Corporation of America, a corporation of Delaware
Application April 18, 1933, Serial No. 666,866
In Great Britain April 22, 1932
10 Claims. (Cl. 250—20)

1. A radio receiver comprising in combination, an electron discharge detector tube having an input and an output circuit, the input circuit including a resonant circuit tuned to the frequency of signal energy desired to be received, a second electron discharge tube provided with external circuits connected so as to produce a negative resistance effect across two points of said external circuits, circuit elements common to one of said detector tube circuits and one of the second electron discharge tube external circuits and connected between said two points whereby negative resistance effects are transferred to the detector tube and means connected with said external circuits for periodically rendering the second discharge tube inoperative to produce any negative resistance effects across said terminals.

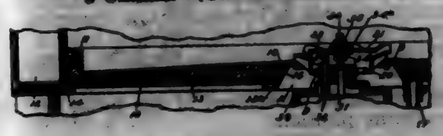
2,030,131
PRESSURE RELIEF VALVE
Thomas G. A. Silsby, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application December 19, 1932, Serial No. 647,930
11 Claims. (Cl. 251—115)

5. In a pressure relief valve, a casing having a passageway therethrough, pins extending through said casing, a flexible valve rotatably mounted on one of said pins, a pin extending into the casing forming an abutment for said valve in one position thereof, a spring associated with said valve and tending to retain the same against said abutment pin, a latch pivotally mounted on another of said first mentioned pins and operative under

normal conditions to retain said valve against said abutment pin, said latch being inoperative under abnormal conditions to retain said valve in said position, a spring associated with said latch and tending to retain the same in a predetermined position, and adjustable means acting against said spring to permit variation of the position of said latch.

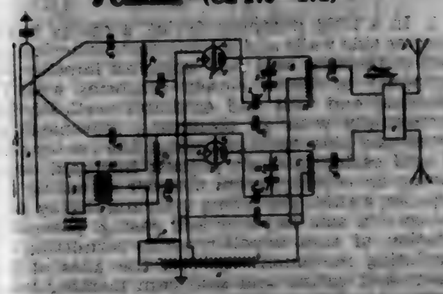
2,030,132
ELECTROLYTIC CONDENSER
Willem Frederik Straub and Hendricus Johannes Lemmens, Eindhoven, Netherlands, assignors to Radio Corporation of America, a corporation of Delaware
Application February 11, 1933, Serial No. 656,252
In Germany February 12, 1931
3 Claims. (Cl. 175—315)

1. In an electrolytic condenser, a compact roll composed of at least two electrode sheets and an undulated strip of insulation material, said strip being interposed between the two sheets so as to separate same, a container for said roll and an electrolyte solution within the container adapted to fill the spaces therein, said compact roll being immersed in said solution, and means for determining the internal resistance of the condenser comprising at least one conducting strip supported by and passing through said strip at several points for bringing the electrolyte on either side of the strip into conductive relationship.



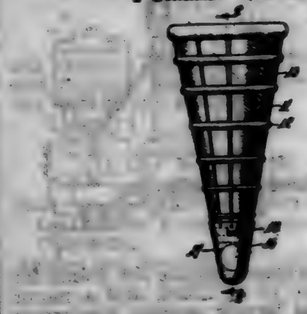
2,030,133
ROTARY PROJECTOR HEAD FOR OIL BURNERS
Homer A. Tiffany, Clifton, N. J.
Application April 17, 1930, Serial No. 445,069
15 Claims. (Cl. 158—97)

1. Apparatus of the class described, including a firebox, a hearth closing in the bottom thereof, an upstanding impact wall adjacent the periphery of the hearth, and a power driven centrifugal head discharging air and spraying oil in such



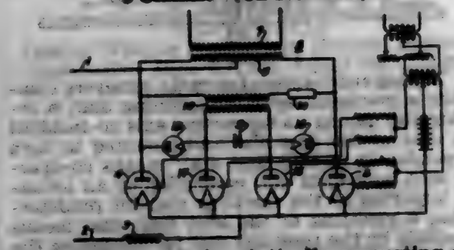
relation that combustion is initiated by impact upon and disturbance thereof, by said peripheral upstanding wall; said head including means for projecting substantially radial layers of oil and air radially against said wall, the oil projecting means including horizontally disposed discharge spouts projecting above the level of the top of the head and communicating with a supply trough within the hollow head, the air projecting means including a fan for creating an air draft under the oil.

2,030,134
METHOD FOR BURNING LIQUID FUELS
Homer A. Tiffany, Glen Rock, N. J.
Original application April 17, 1930, Serial No. 445,068. Divided and this application March 11, 1935, Serial No. 10,546
5 Claims. (Cl. 158—117.5)



2. The method of effecting combustion in a chamber having a surface to be heated, which comprises impinging individual liquid fuel streams against said surface; passing a stream of air in the general direction of the fuel streams toward said surface in sufficient quantity to support combustion of the fuel streams; mixing said air and fuel streams substantially solely closely adjacent the locus of fuel impingement on said surface; and burning the mixture at said surface.

2,030,135
FREQUENCY MODULATION APPARATUS
George Lindley Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application September 25, 1933, Serial No. 690,905
9 Claims. (Cl. 179—171)

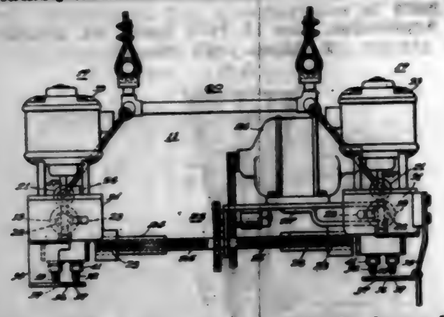


1. A frequency modulation system comprising a pair of thermionic oscillation generators each having input and output electrodes connected in circuits adjusted so as to normally operate on opposite sides of a mean operating frequency, a U-shaped frequency controlling transmission line, circuits coupling a control electrode of each of said oscillation generators to said line whereby said generators both operate at said mean operating frequency, a common output circuit, separate tuned tank circuits connected in the output electrodes of each tube for feeding energy from each of said generators to said common output circuit, and means for varying the relative strengths of oscillations generated by each of said oscillation generators whereby the frequency of energy in said common output circuit is varied.

2,030,126
FAVOR-CARRYING ICE CREAM CONE
Clarence W. Vogt, Louisville, Ky., assignor, by mesne assignments, to Vogt Processes, Incorporated, Louisville, Ky., a corporation of Delaware
Application June 13, 1933, Serial No. 675,549
4 Claims. (Cl. 99—16)

1. A truncated ice cream cone and a tapered favor-carrying thimble fitted over the truncated end of the cone and reinforcing the latter, said thimble including inwardly presented spring tongues, and said cone being shaped for engagement by said tongues.

2,030,127
GRID-CONTROLLED ELECTRIC VACUUM DISCHARGE APPARATUS
Jürgen von Issendorff, Berlin-Siemensstadt, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 1, 1933, Serial No. 663,933
In Germany April 8, 1932
5 Claims. (Cl. 175—363)



1. An apparatus for statically converting electrical power into alternating current of any frequency having in combination a direct-current source, a transformer, a plurality of main grid-controlled arc valves, a commutating condenser interconnected between the conductors of the primary winding of said transformer so as to be impressed with frequency of the produced alternating current, noncontrolled auxiliary electric valves connected between the conductors of the primary winding of said transformer and the condenser, other grid-controlled valves connected between the direct-current source and each side of the condenser and an auxiliary transformer connected across the condenser to charge the same independently of said auxiliary valves.

2,030,128
HOISTING APPARATUS
John E. Webster, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 11, 1935, Serial No. 570,454
7 Claims. (Cl. 294—67)

1. A grab for use in lifting wooden crates or

the like comprising, in combination, a main frame, and a plurality of grab heads carried by the main frame, each of the grab heads comprising a frame, a plurality of operating members rotatably mounted on the frame, threaded means

on the operating members outside the frame for engaging the article to be lifted, and a motor for each grab head having driving connection with the operating members for rotating the threaded means into or out of engagement with the wooden crate.

2,030,129

TUNING MECHANISM

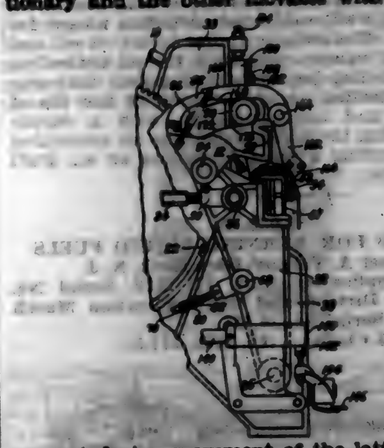
Alfred G. Wheller, Los Angeles, Calif.

Application August 22, 1933, Serial No. 686,288

9 Claims. (Cl. 250—20)

1. Tuning mechanism for radio receivers comprising a manually actuatable tuning dial; a resetting dial having its supporting axis co-incident with that of the first dial and mounted to turn independently of said first dial; means co-operable with both dials and controlled by an actuation imparted to the resetting dial for predetermining a resetting of the first dial; and means actuatable by the resetting dial for rendering the co-operable means active for a resetting of said first dial at the expiration of a predetermined period of time.

2,030,130



MACHINE FOR OPERATING UPON HIDES, SKINS, AND LEATHER

Robert F. Whitney, Winchester, Mass., assignor to The Turner Tanning Machinery Company, Portland, Maine, a corporation of Maine

Application July 7, 1934, Serial No. 734,117

20 Claims. (Cl. 149—14)

1. In a machine for operating upon hides, skins and leather, a tool for treating the work, a work support movable between work receiving and work presenting positions with respect to said tool, said work support being stationary in its work presenting position while said tool is operating on a piece of work, a member for clamping the work on the work support just before the work is pressed against the tool, and co-operating cam members arranged to move the work clamping member to operative position as the work support moves to present the work to said tool, one of said cam members being stationary and the other movable with the work

support during movement of the latter to work presenting position.

2,030,131

LIQUID AND FLUID ACTUATING DEVICE

Alois Wicha, Dresden, Germany, assignor to Kreuphe, Inc., Brooklyn, N. Y., a corporation of New York

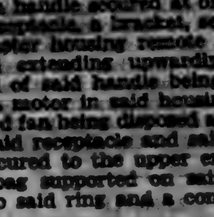
Application May 27, 1932, Serial No. 613,245

In Germany January 17, 1932

14 Claims. (Cl. 103—123)

1. In a fluid pumping device, a casing having interior side walls and a continuous spherical end wall connecting said side walls, an impeller, the periphery of which closely conforms with the spherical end wall and oscillates vertically and horizontally with an oscillating movement between said side walls and about the center point of said casing, a shaft passing into said casing having an eccentric cam member actuating said impeller, a guide key fitting into, and sliding within, slots in said impeller and casing, preventing rotation of said impeller while permitting the oscillating movement thereof, the axes of said shaft, said casing and said cam member intersecting at said center point, the intersection of said slots crossing the axis of said shaft during said oscillating movement.

2,030,132



MOLD FOR MAKING COMMUTATORS

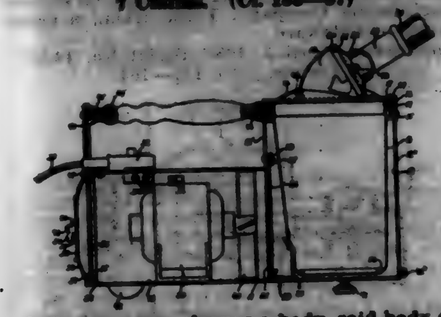
Vincent G. Apple, deceased, late of Dayton, Ohio, by Herbert F. Apple, Edward M. Apple, and Geerley Darroch, executors, Dayton, Ohio

Original application May 16, 1929, Serial No. 362,469. Divided and this application January 24, 1933, Serial No. 652,725

3 Claims. (Cl. 18—43)

1. For making commutators from a series of separate segments each of which has an outwardly turned anchor at the one end and an inwardly turned anchor at the other end, a mold comprising a hollow body in the form of a cup having a smooth interior equal to the diameter of the commutator to be made, means on the upper edge of said cup for engaging said risers and means in the bottom of the cup for engaging said anchors, both said engaging means holding

said segments against radially inward movement in circumferentially spaced apart relation around the periphery of the interior of the cup to compose of said segments a hollow cylinder having the spaces between adjacent segments entirely vacant, and means to mold a single mass of insulation into the said hollow cylinder and the said vacant spaces.



2,030,133

VACUUM CLEANER

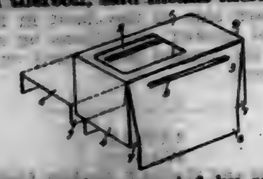
Berry A. Baxter, Altadena, Calif., assignor to Gladys C. Baxter, Altadena, Calif.

Application February 14, 1934, Serial No. 711,145

7 Claims. (Cl. 183—57)

2. In a vacuum cleaner a body, said body comprising a motor housing at one end and a receptacle at the other end, the axis of said motor housing being at an angle to the axis of said receptacle, a handle secured at one end to the top of said receptacle, a bracket, secured to the end of said motor housing remote from said receptacle and extending upwardly therefrom, the other end of said handle being secured to said bracket, a motor in said housing, a fan on said motor, said fan being disposed adjacent the juncture of said receptacle and said motor housing, a ring secured to the upper end of said receptacle, a bag supported on said ring, a closure secured to said ring and a conduit on said closure.

2,030,134



COVERING DEVICE

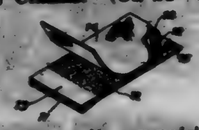
John A. Bergmeier, Hinsdale, Ill.

Application April 7, 1934, Serial No. 719,525

7 Claims. (Cl. 220—7)

1. A sheet metal top cover for food packages and the like made of cardboard and intended to be opened by rupturing the top of the package, said cover comprising a top wall substantially conforming in size to the top of the package to which the cover is to be applied, and means depending from said top wall and frictionally engageable with the walls of the package to retain the cover in position thereon, said means including exter-

nal gripping members carried by said top wall and movable relative to each other so as to grip the sides of the package.



2,030,135

ADHESIVE UNIT

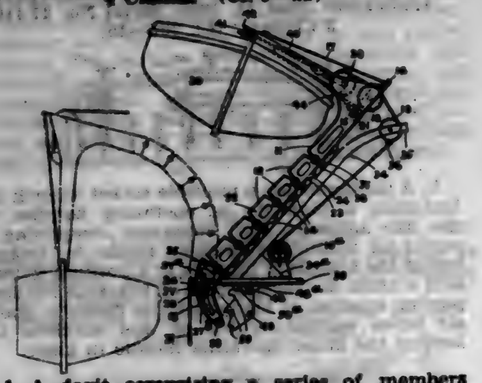
Harry E. Carpenter, Los Angeles, Calif., assignor to Ad-Here Paper Company, a corporation of California

Application November 1, 1932, Serial No. 640,623

7 Claims. (Cl. 24—67)

7. An adhesive unit comprising an adhesive strip having both sides coated with pressure sensitive adhesive material, and a detachable non-adhesive cover strip on one side of said adhesive strip, said adhesive strip comprising a single thickness of material which is of substantially uniform thickness throughout its entire area, the uncovered side of said adhesive strip being attachable to a surface by pressure on the cover strip.

2,030,136



SHIP'S DAVIT

George William Carr, North Shields, England

Application June 6, 1934, Serial No. 729,281

In Great Britain June 14, 1933

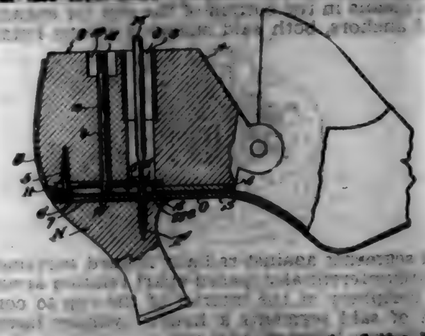
4 Claims. (Cl. 9—22)

1. A davit comprising a series of members hinged together in succession, coacting faces on said davit members limiting their relative movements, a transverse pivot permanently connecting the lowermost of said davit members to the ship's deck or side, boat supporting tackle coacting with the uppermost of said davit members, means for controlling the outboard swing of said davit members and for returning them to their inboard position, individual means associated with each of said davit members for ensuring that said davit members pivot in correct succession comprising hooked projections on the

lower inboard edges of said davit members, a rigid girder on the ship immediately adjacent to the inboard side of the davit in its inboard position, and hooked projections on said girder with which the hooked projections on the davit members coact.

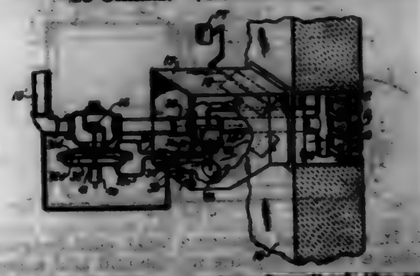
2,030,137
WAGON
Roy E. Cheate and Waldo E. Redler, Cedar Rapids, Iowa, assignors to La Plant-Cheate Mfg. Co. Inc., Cedar Rapids, Iowa, a corporation of Delaware
Application February 27, 1932, Serial No. 595,578
4 Claims. (Cl. 298—35)

1. In a door opening and closing mechanism for a dump wagon, a winch mounted on one end of the wagon, the winch being disposed so that its axis of rotation is horizontal and parallel to the end of the wagon and means for operating the winch hydraulically comprising a hydraulic jack, a cable leading from the hydraulic jack, a shaft disposed to be removably connected to the shaft of the winch and means for rotating the last-named shaft by means of the cable from the hydraulic jack.



2,030,138
TOOL SET AND CONTAINER THEREFOR
William F. Castelle, New Britain, Conn., assignor to The New Britain Machine Company, New Britain, Conn., a corporation of Connecticut
Application June 19, 1935, Serial No. 27,410
6 Claims. (Cl. 206—16)

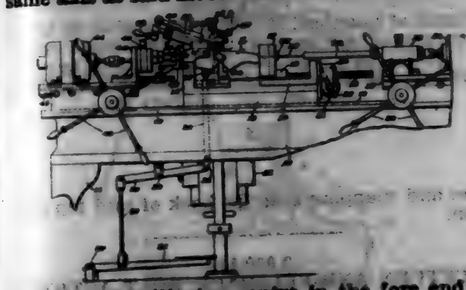
1. A container for a multiple socket wrench set including a plurality of operating handles or the like adjuncts, said container comprising a casing for holding the sockets, means for locking one of the operating handles in a position to hold said sockets in place, a pair of brackets for supporting another of said operating handles, and a set screw carried by one of said brackets for locking the latter operating handle in place.



2,030,139
METHOD OF AND APPARATUS FOR ATTACHING SHOE HEELS
Michele Cuzzone, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application January 10, 1934, Serial No. 706,600
23 Claims. (Cl. 12—147)

1. That method of attaching heels to shoes which comprises as steps applying a heel to the heel-seat surface of a shoe mounted on a last, inserting a fastener element from the interior of the shoe through the shoe bottom and into the heel, causing the fastener to react against a part of the last, thereby to draw the heel toward the last and to press the heel firmly into engagement with the heel-seat surface of the shoe bottom,

thus maintaining such engagement of the heel and heel-seat while performing subsequent operations on the shoe, and employing said fastener as a means for permanently uniting the heel to the shoe bottom.



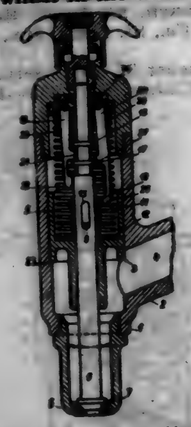
2,030,140
APPARATUS FOR PROPORTIONING THE FLOW OF GASES
Luther F. Day, Tulsa, Okla., assignor to Webster Engineering Company, Tulsa, Okla., a corporation of Delaware
Application April 3, 1935, Serial No. 14,297
15 Claims. (Cl. 137—154)

1. In apparatus of the class described, the combination comprising two conduits, a turnable member provided with two vanes that severally extend within the two said conduits and athwart the streams flowing therein, the areas of the vanes being severally less than the cross-sectional areas of the conduits, whereby the streams flow in continuous courses through the conduits and around the vanes and variation in the dynamic forces effects turning of the said member.

2,030,141
METHOD OF AND MACHINE FOR REFORMING LASTS
Jeremiah Fitzpatrick, East Weymouth, Mass.
Application July 7, 1934, Serial No. 734,126
13 Claims. (Cl. 144—209)

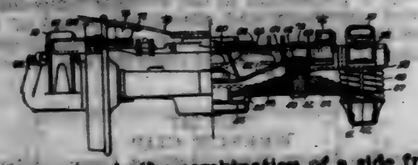
6. The method of reforming lasts in conformity with a model last which includes the steps of fixedly supporting a model last in a determinate position for defining the axis of said last, replacing with a fore block the fore part of each of the lasts to be reformed, fixing the heel portion only of each of the lasts to be reformed fitted with a new fore block as aforesaid in the same determinate position as the heel portion of said model last was fixed whereby it will have the same axis as said model last and while thus fixed

forming a positioning centre in the fore end of its fore block.



2,030,142
CHUCK
William F. Greene and George W. Lansing, Cincinnati, Ohio, assignors to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Delaware
Application December 10, 1934, Serial No. 756,727
15 Claims. (Cl. 82—40)

1. In a chuck, means presenting surfaces equidistant from the chuck axis at one side thereof, to receive a cylindrical part of a work piece and hold it coaxial with the chuck, said chuck having arcuate guides at opposite sides of said means, arcuate jaws guided in said guides, each to present an end to an area of the cylindrical part of the work, which areas are spaced apart along a line beyond the axis of the chuck from said surfaces, a single cam means acting against the opposite ends of both of said jaws to force them against said part of the work, and means on said chuck to engage another part of the work to cause the work piece to rotate with the chuck.

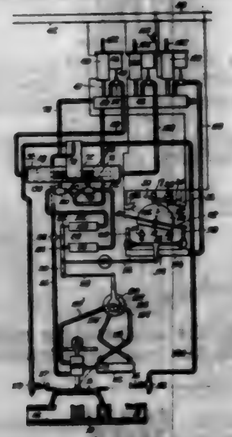


2,030,143
VALVE
Ernst Giger-Kaiser, Zurich-Hongg, Switzerland
Application August 1, 1934, Serial No. 737,579
In Germany August 16, 1933
7 Claims. (Cl. 251—84)

1. A valve for the purpose specified comprising a valve casing, a valve body in said casing, a pressure actuated element movably mounted in said casing, a cam member carried by said element, a spring operatively associated with said valve body, said spring normally tending to hold said body in its closed position, a second spring operatively associated with said pressure actuated element, two spring-actuated pawls pivotally mounted in said casing, said pawls co-operating with said cam member, teeth on said pawls, said teeth relatively spaced on said pawls, and means on said valve body for co-operation with said teeth, the arrangement being such that in one end position of the valve body the co-operating means thereon are engaged by the tooth of one of the pawls, whilst in the other end position of

the valve body the co-operating means thereon are engaged by the tooth of the other pawl.

2,030,144
TRUCK
John A. Lamont, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application July 21, 1931, Serial No. 552,158
26 Claims. (Cl. 105—186)



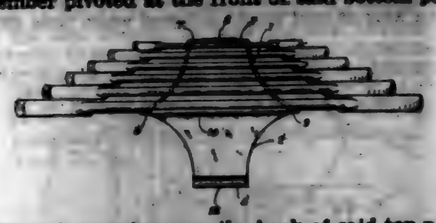
1. In a truck, the combination of a side frame including tension and compression members and spaced column guides integrally connecting said tension and compression members, a transom extending into the opening formed by said guides, spaced coil springs resiliently supporting said transom on said tension member, a spring seat on said transom, a bolster disposed adjacent said transom, and a leaf spring supporting said bolster and engaging said tension member between said coil springs and engaging said spring seat.

2,030,145
LOADING APPARATUS
Timothy F. McCarthy, Indiana, Pa., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application April 24, 1933, Serial No. 667,583
14 Claims. (Cl. 198—220)

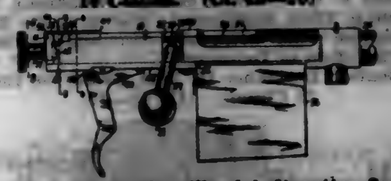
1. In a loading apparatus, a shaker conveyor, a pan on the forward end of said shaker conveyor extending forwardly therefrom and being adapted to rest on the kerf bottom and be inserted in a kerf cut in a coal face, said pan having an open advance side and forward and substantially parallel to the kerf bottom and a retaining member on the retreating side thereof and being adapted to load while buried in the coal by feeding movement across the coal face while being reciprocated by said shaker conveyor.

2,030,146
AUTOMATIC CONTROL APPARATUS
Paul J. McCullough, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a corporation of Delaware
Application August 31, 1931, Serial No. 560,388
10 Claims. (Cl. 236—1)

1. The method of controlling regenerative furnaces having regenerative chambers and valve mechanism for controlling the flow of combustion materials, which comprises producing a stream of fluid, the magnitude of which varies approximately in proportion to the average temperature in said chambers, and effecting reversal of the valve mechanism periodically, whenever a given volume of fluid has flowed since the last reversal.



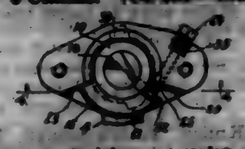
2,030,147
WRENCH CLIP
Walter Roy Moore, West Hartford, Conn., assignor to The Billings & Spencer Company, a corporation of Connecticut
Application January 16, 1932, Serial No. 587,885
12 Claims. (Cl. 206—16)



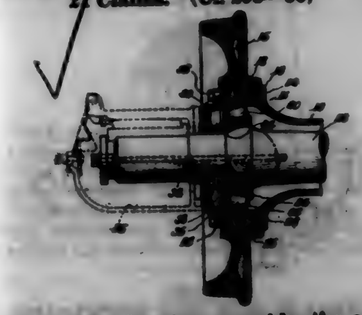
3. A clip for wrench sets comprising a holding member having spaced overlying wrench shank engaging portions on its opposite edges resiliently pressing the wrenches together, and a co-operating member pivoted on the free edge of one portion and having a resiliently mounted hood overlying the other portion and engageable with the connected edge of the same diagonally opposite said pivot.

2,030,148
WRENCH CLIP
John H. Coyle, Hartford, Conn., assignor to The Billings & Spencer Company, a corporation of Connecticut
Application July 5, 1932, Serial No. 620,793
14 Claims. (Cl. 206—16)

1. In a clip for wrench sets, a holding member having overlying wire holding portions projecting laterally therefrom in the same direction on its top and bottom, and a co-operating connecting member pivoted at the front of said bottom portion and snapping over the back of said top portion.

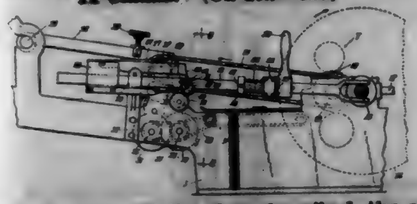


2,030,149
UPTURN-AND-PULLBACK BOLT-ACTION FIREARM
Oscar F. Mossberg, New Haven, Conn., assignor to O. F. Mossberg & Sons, Inc., New Haven, Conn., a corporation
Application May 5, 1933, Serial No. 669,565
10 Claims. (Cl. 42—16)



1. An upturn-and-pullback bolt-action firearm, including: a receiver provided with a safety-abutment; a bolt mounted in said receiver with capacity for both oscillating and reciprocating movement therein and having a safety-abutment; an operating-handle offsetting from the said bolt; a firing member having oscillating and reciprocating movement in the said bolt; and a pair of safety-abutments carried by the said firing-member and simultaneously movable therewith into longitudinal alignment—one with the safety-abutment of the said bolt and the other with the safety-abutment of the said receiver, when the operating-handle of the said bolt is in its upturned position.

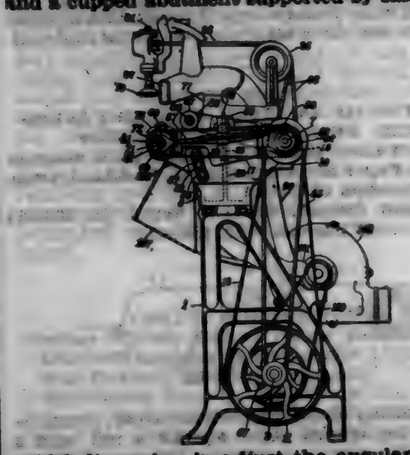
2,030,150
VALVE
Erwin H. Mueller, Detroit, Mich.
Application December 2, 1934, Serial No. 755,755
6 Claims. (Cl. 251—163)



1. A valve comprising, a valve body with a valve seat therein and having a port, a valve member rotatable on the seat and having a port arranged to be brought into and out of alignment with the port in the valve body, fixed stops for limiting rotary movement of the valve member, one for limiting the movement when the ports are disaligned and one for limiting the movement when the ports are partially aligned, and a shiftable stop intermediate to fixed stops and past which the valve may be moved in either direction of rotary movement having a quick lift cam face on one side and a slow lift cam face on its opposite side, by means of which the said stop is shiftable, said shiftable stop being positioned to stop movement of the valve when the valve is in an intermediate position with the ports in substantially full alignment.

2,030,151
ANTIFRICTION WHEEL AND AXLE ASSEMBLY
Alfred H. Oelkers, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application January 28, 1929, Serial No. 335,648
27 Claims. (Cl. 295—36)

18. In a roller bearing assembly, the combination of race rings, rollers disposed therebetween, the inner of said race rings being in a plurality of parts having curved cooperating surfaces.

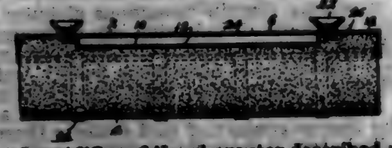


2,030,152
FEEDING DEVICE
Claude L. Peet, Chicago, Ill.
Application July 23, 1934, Serial No. 735,536
11 Claims. (Cl. 192—126)

1. In a device of the class described, the combination with paper feeding mechanism and driving means therefor having a driving connection therewith, of a shipper bar operatively related to said driving connection, a detector operatively related to said feeding mechanism and adapted to be actuated by paper of more than predetermined thickness fed thereby, a pawl and ratchet connected, respectively, to said shipper bar and detector and adapted to be actuated by the detector, and a continuously operated dog engageable with said pawl for actuating the shipper bar to disconnect the driving connection when said detector is actuated.

2,030,153
ABRADING MACHINE
Fred Bicke, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application January 22, 1932, Serial No. 588,967
In Great Britain February 4, 1933
1 Claim. (Cl. 51—102)

A shoe buffing machine comprising a frame, a pair of bearings supported by said frame, a substantially horizontal shaft journaled in said bearings, a pair of sleeves secured in said frame concentrically with said shaft, the internal diameters of said sleeves being greater than the diameter of said shaft, a bracket pivotally mounted on said sleeves, a buffing tool carried by said bracket, driving means between said shaft and said buffing tool, a swivel pin mounted in said bracket, a bolt threaded through said swivel pin, and a cupped abutment supported by said frame



said bolt serving to adjust the angular position of said bracket about the axis of said shaft and thereby to determine the level of said buffing tool.

2,030,154
METHOD OF MAINTAINING THE FRESHNESS OF BREAD AND THE LIKE, AND APPARATUS USED IN THE PRACTICE OF THE METHOD
Robert W. Ritsert, Dayton, Ohio
Application January 8, 1932, Serial No. 585,433
3 Claims. (Cl. 99—19)

1. The method of maintaining the freshness of bread, which comprises depositing the bread in a closed container approximately the size of the mass of the bread, depositing said container in a second container enough larger than the first to leave a space therebetween, providing for evaporation of liquid in said space whereby to maintain an atmosphere therein more humid than the atmosphere in the bread container, and providing for producing an excessive evaporation of liquid when bread is first deposited in the container.

2,030,155
HUMIDIFIER
Louis V. Roberts and David Chalmers, Kansas City, Mo.
Application July 8, 1935, Serial No. 30,264
4 Claims. (Cl. 239—20)

1. A humidifier of the character described comprising a hollow rectangular holder open at its

bottom portion, porous material having a portion thereof fitting within said open bottom portion, and a reservoir arranged within the holder and provided with perforations through which water may flow and thus saturate the porous material.

2,030,156

PROCESS OF COATING CREPED PAPERS AND THE PRODUCT THEREOF

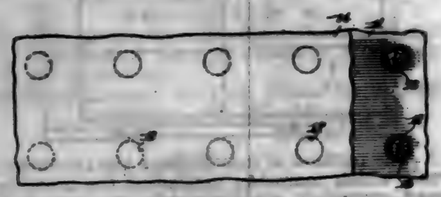
William Wallace Rowe, Cincinnati, Ohio, assignor to The Paper Service Company, Leckland, Ohio, a corporation of Ohio

Application January 16, 1931, Serial No. 509,163

17 Claims. (Cl. 154—33)

1. A process of coating creped paper, comprising bringing creped paper against a roll with a layer of the coating substance interposed therebetween and removing the paper from the roll by a doctor.

5. A process of coating stretchable paper which comprises stretching said paper to remove a portion of the residual stretch, coating said paper, and after said coating, re-creping said paper.



2,030,157

ACOUSTIC CONSTRUCTION

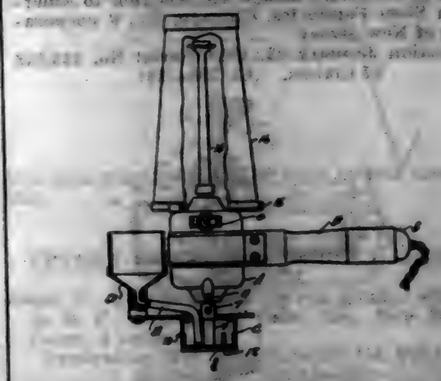
Vesper A. Schlesker, Orange, N. J., assignor of one-half to Edward H. Cunpeton, Brighton, N. Y.

Application February 2, 1931, Serial No. 512,921

15 Claims. (Cl. 181—30)

1. A selective sound-absorbing construction for absorbing a greater proportion of sound waves longer than a selected wave-length than of sound waves shorter than said selected wave-length, said construction comprising means forming a wall having areas of relatively high sound-absorbing capacity with spaces between them approximately equal to half of said selected wave-length.

2,030,158



DEVICE FOR MAKING CREAM

Oscar Schwimmer, Los Angeles, Calif.

Application December 28, 1931, Serial No. 583,429

4 Claims. (Cl. 259—10)

1. A device for emulsifying an aqueous liquid and dispersing therein oleaginous globules comprising a rotary disk having an uninterrupted flat upper face, means to rotate said disk, means to feed a mixture of oleaginous matter and said liquid to a small area of said face whereby the disk centrifugally impels the mixture in a film by the viscous contact of said mixture therewith and discharges it from its periphery, and a shell encompassing and closely adjacent the periphery of said disk for impact of the impelled mixture thereagainst and its collection, the faces of said disk being free of any proximate confronting surfaces, the peripheral space between said disk and wall constituting an unimpeded discharge opening for immediate discharge of the emulsion.

2,030,159

AUTOMATIC CONTROL SYSTEM FOR ATOMIZING AND LIFTING OIL WITH GAS

Bernard E. Scott, Glendale, Calif.

Application October 1, 1934, Serial No. 746,290

10 Claims. (Cl. 166—228)

1. In an oil well, in combination with the well casing and the inner pipe for the upflow of oil, of an intermediate tube within said well casing and around said inner pipe, whereby to form an outer passageway, an intermediate passageway and an inner passageway, said well casing having openings therethrough for the admission of oil and gas from said well, means for preventing the upflow of oil and gas outside of said well casing, means entrapping said gas and directing it downwardly in said intermediate passageway, means for directing said gas from the lower end of said intermediate passageway into said inner oil pipe for atomizing and lifting said oil therein to the surface, means for controlling the flow of gas into said intermediate passageway, rotary means for controlling the admission of oil to said inner oil pipe to be lifted by said gas, and means for delivering said oil and gas mixture at the surface.

2,030,160

METHOD OF COVERING ARTICLES

William A. Wescomb, Andover, Mass., assignor to Shaw Lace Company, Boston, Mass., a corporation of Maine

Application April 4, 1934, Serial No. 719,830

2 Claims. (Cl. 36—36)

1. That improvement in methods of covering a rod-like article which consists in first coating an article with a cellulose derivative dissolved in a volatile solvent, and then, before the solvent has evaporated, applying to the article a fabric covering comprising strands of a cellulose derivative which are soluble in the solvent employed.

2,030,161

SHARPENER FOR THE BLADES OF EDGED TOOLS

Paul von der Lippen, Ohligs, Germany, assignor to Gerda von der Lippen, Highland Park, Ill.

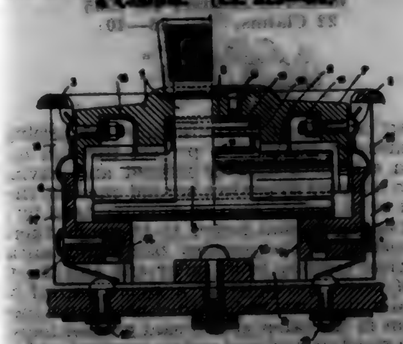
Application June 2, 1933, Serial No. 674,611

In Germany May 3, 1933

2 Claims. (Cl. 76—36)

2. A sharpener comprising a peripherally grooved base provided with a blade guiding slot communicating with the periphery thereof and a metal rod, the ends whereof are roughened and hardened, disposed in said groove with said roughened and hardened ends projecting and crossing opposite the opening in said slot.

2,030,162



HEATING BLOCK FOR THE TREATMENT OF HAIR

Julien Warck, Vincennes, France

Application June 9, 1933, Serial No. 675,469

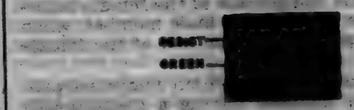
In France January 23, 1933

4 Claims. (Cl. 219—34)

3. A device for the treatment of hair which comprises a heat accumulator and a separate

junction box, said heat accumulator comprising pliers, an inner electrical resistance and conducting means connected with said resistance; said junction box comprising an insulating socket having the form of a hollow container, a support situated within said socket for carrying said pliers, and conducting means carried by said socket and contacting the first-mentioned conducting means, the second-mentioned conducting means receiving an electrical current and transmitting it to the first-mentioned conducting means and said resistance, said junction box receiving said heat accumulator and closely surrounding the same, whereby the loss of heat generated by said resistance is substantially reduced.

2,030,163



COLOR PHOTOGRAPHY

Thomas Thorne Baker, Hatch End, Middlesex, England, assignor to Dufaycolor Limited, London, England, a British company

Application May 28, 1934, Serial No. 728,631

In Great Britain June 5, 1933

5 Claims. (Cl. 95—31.5)

1. The process of making a multi-color screen for color photography which comprises applying one color to the surface of a suitable base, applying a pattern of inky resist to the colored surface by means of a printing surface having mercurial ink-repelling areas, bleaching the color from the portions of the colored surface unprotected by the resist, dyeing the bleached portions a second color and removing the resist.

2,030,164

FLUID RELEASE PACKER HEAD

James A. Crumley, Charleston, W. Va.

Application May 15, 1934, Serial No. 725,511

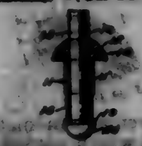
5 Claims. (Cl. 166—12)

1. In combination with well tubing and a packer, a member of tubular construction seated on the packer and having a passage therein extending through a side wall thereof and a tube rotatably arranged in said member and connected with the tubing and having a hole therein for registering with the passage when the tube has been rotated to a certain position.

2,030,145
RIVET AND METHOD OF SETTING THE SAME
Louis C. Huck, Grosse Pointe Village, Mich., assignor to Huxon Holding Corporation, Detroit, Mich., a corporation of Michigan
Application June 17, 1931, Serial No. 545,004
48 Claims. (Cl. 218—39)

2. A rivet comprising a tubular female member, a male member extending through the female member and having a head engaging one end of the latter, and means comprising a recess in one of the members for allowing radial contraction of the end portion of the female member adjacent the head on the male member, when such head is urged against the end of the female member.

6. The method of riveting which comprises providing a tubular member having a continuously annular body portion and a shank extending through the member and which projects beyond one end thereof and has a head for applying axially compressive forces against the outer end of the body portion, which comprises holding the end of the body portion adjacent the projecting end of the shank, pulling the latter end of the shank and applying axially compressive forces to the outer end of the body portion through said head while simultaneously causing the forces applied to said outer end of the body portion to be directed at an angle to and towards the axis of the rivet, and continuing the pull to form an annular outwardly bulbed head from said body portion between the ends and inwardly of the outer end of the latter.



2,030,166
RIVET AND METHOD OF SETTING THE SAME
Louis C. Huck, Grosse Pointe, Mich., assignor to Huxon Holding Corporation, Detroit, Mich., a corporation of Michigan
Application March 31, 1932, Serial No. 602,170
32 Claims. (Cl. 218—29)

1. The method of riveting which comprises providing a tubular member, forming a reinforcing head on one end of the member and then applying axial forces through such head and in such manner as to stress the outer fibers of another part of the member to a greater extent than the inner fibers, and to bulb out said part.

5. A rivet comprising a tubular member in which portions thereof have different resistances to outward expansion, and means including a member extending through the first member for stressing the outer fibers of the latter, to an extent greater than the inner fibers are stressed.

2,030,167
RIVET
Ralph A. Miller, Detroit, Mich., assignor, by mesne assignments, to Huxon Holding Corporation, Detroit, Mich., a corporation of Michigan
Application August 28, 1931, Serial No. 560,826
17 Claims. (Cl. 85—37)

1. A rivet comprising a tubular body having a continuously annular wall, said wall having a portion intermediate its ends progressively varying in thickness, and portions at opposite sides of the first portion which are substantially of equal thickness.

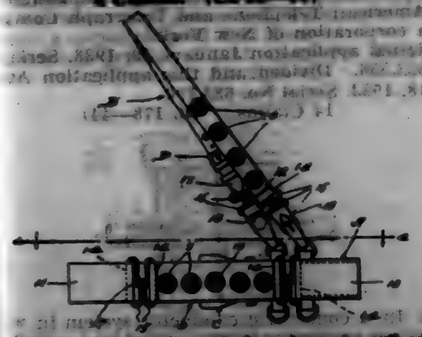
2,030,168
RIVET
Ralph A. Miller, Detroit, Mich., assignor to Huxon Holding Corporation, a corporation of Michigan
Original application August 28, 1931, Serial No. 559,826. Divided and this application July 12, 1935, Serial No. 31,647
13 Claims. (Cl. 85—37)

1. A rivet comprising a tubular member, a pin extending through the tubular member and having a head at one end for applying axial forces to the adjacent end of the tubular member when the pin is moved relative to the latter and spreader means for enlarging the effective diameter of the head during application of axial forces against the end of the tubular member through the head.

2,030,169
RIVET
Louis C. Huck, Grosse Pointe, Mich., assignor to Huxon Holding Corporation, Detroit, Mich., a corporation of Michigan
Application April 22, 1932, Serial No. 606,750
Renewed January 12, 1935
22 Claims. (Cl. 85—40)

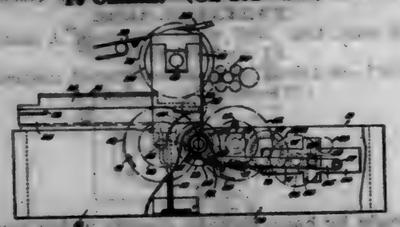
1. An article of manufacture comprising a rivet member adapted to project through openings in a structure to be riveted and having a portion adapted to project beyond one side thereof and to be bulbed into an annular head by applying opposed axial forces to the ends thereof, said portion of the member being substantially cylindrical entirely to its outer end and the wall thereof being continuously annular and of substantially uniform radial thickness, and means inherent in the outer end of said portion increasing the resistance of said end to bursting and substantially preventing its expansion when the bulbed head is to be formed.

2,030,170
RIVET
Louis C. Huck, Grosse Pointe, Mich., assignor to Huxon Holding Corporation, Detroit, Mich., a corporation of Michigan
Application June 7, 1932, Serial No. 615,864
26 Claims. (Cl. 85—40)



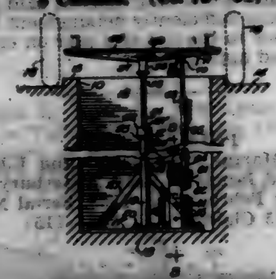
1. The method of manufacturing a rivet, which comprises forming a member with a tubular portion, forming a shank for extending into the tubular portion, forming an enlarged head on the shank, assembling the members, and prior to riveting flanging a part of the head over an end of the tubular member, to provide a substantial, axially directed, interlocking arrangement.

2,030,171
METHOD OF MANUFACTURING RIVETS
Louis C. Huck, Detroit, Mich., assignor to Huxon Holding Corporation, a corporation of Michigan
Original application April 12, 1932, Serial No. 604,753. Divided and this application January 24, 1935, Serial No. 2,262
11 Claims. (Cl. 10—27)



1. The method of manufacturing a rivet, which comprises forming a tubular member, forming a shank for extending through the tubular member, forming an annular surface recess in a part of one member, assembling the parts, and then rolling a part of such member not having said recess, into the latter, to lock parts of the member together.

2,030,172
SAFETY BELT
Carl Christian Kauffman, Conshohocken, Pa.
Application March 14, 1935, Serial No. 11,122
4 Claims. (Cl. 24—84)

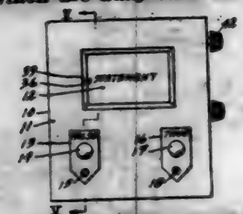


1. In a construction of the class described, a body encircling belt provided with an adjusting and retaining buckle, a predetermined section of said belt being separated from the adjacent end portions of the body of the belt, swivel coupling means joining the ends of said section to the adjacent ends of the body portion to render said section turnable, said section being provided on one face with a row of safety reflectors.

2,030,173
PRINTING PRESS
William H. Kelly, Westfield, N. J., assignor to American Type Founders Company, Elizabeth, N. J., a corporation of New Jersey
Application July 7, 1933, Serial No. 679,429
10 Claims. (Cl. 101—232)

1. A bed motion for a printing press of the two-revolution type provided with a frame and a reciprocating bed thereon adapted to execute a forward printing stroke and a reverse idle stroke, including, in combination, a pair of gear segments of at least 240° extent rotatively mounted adjacent each other on the frame, the axes of said segments being in the same horizontal plane, one segment being located next to the frame and the other one gear width therefrom, means for rotating said segments in opposite directions at the same constant angular velocity at the rate of two revolutions for each complete cycle of reciprocation of said bed, and means alternately driven by said segments and operatively connected with said bed for effecting reciprocation of the same at a uniform velocity for more than one-half of each stroke.

2,030,174
VEHICLE ROCKING MACHINE
Philip J. Kroll, Tulsa, Okla.
Application July 11, 1934, Serial No. 734,646
8 Claims. (Cl. 72—51)



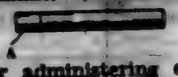
1. Apparatus of the character described comprising an elongated rocker adapted for arrangement beneath a motor vehicle and engageable against the bottom of the side frame members of the vehicle transversely thereof, a jack shaft pivotally connected at its upper end to said rocker substantially centrally of the length thereof, means for effecting vertical movement of said jack shaft to elevate the vehicle body, and means for oscillating said rocker about its pivotal connection with said jack shaft.

2,030,175
EDUCATIONAL DEVICE
George L. Le Fevre, Clarendon, Va., assignor of one-half to George S. Clark, Washington, D. C.
Application December 11, 1934, Serial No. 757,643
12 Claims. (Cl. 35—9)

1. In an educational device, a tape carrying true and false statements with one row of aper-

tures formed therein opposite the "true" statements and another row formed therein opposite the false statements, means to manipulate the tape, electrical circuits comprising signal switches adapted to be closed when in register with said apertures, switches marked respectively "true" and "false" which are adapted to be closed se-

lectively by hand signals, circuits which connect said tape controlled switches and signals in multiple to said manual switches, and a source of current connected to said circuits whereby the operation of either selective switch will pass current through the closed signal switch to its respective signal.



2,030,176

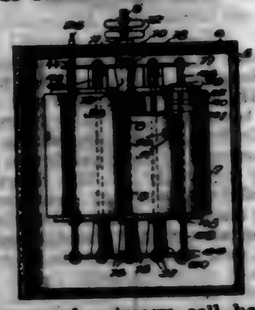
APPLICATOR FOR POWDERED MEDICAMENTS

Henry Hall Marshall, Jr., Garden City, N. Y., assignor to Hannath Co., Inc., New York, N. Y., a corporation of New York

Application June 24, 1935, Serial No. 732,061

2 Claims. (Cl. 128—260)

2. Means for administering extremely small doses of a powdered medicine on repeated applications of said means, comprising an applicator in the form of a cigarette and a coating of powdered medicine lightly adhered to the exterior surface adjacent one end thereof, said powdered medicine being sufficiently deliquescent to adhere in small doses to the lips of a user on each application of said applicator.



2,030,177

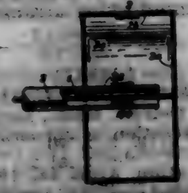
PRIMARY CELL

Martin L. Martus, Woodbury, and Edmund H. Becker and James G. Rose, Waterbury, Conn.

Application February 26, 1935, Serial No. 8,196

15 Claims. (Cl. 136—115)

1. An improved primary cell having a high capacity, great structural strength and regular discharge characteristics, said cell comprising an anode combination comprising a plurality of cylindrical zinc anode members joined in electrical union in parallel and a plurality of rod-like cathodes disposed within the cylindrical zinc members, suspension means extending the height of the electrodes, a supporting spider for all the electrodes attached to the upper portion of the suspension means and a similar spider attached to the bottom portion thereof, means for supporting the cathodes and the anode combination from the spiders and insulating the anodes from the cathodes, the cathodes being connected in parallel, electrical connections for the anodes and cathodes, a cell jar and means for positioning in the jar, the suspension means and elements attached thereto.



2,030,178

ELECTRICAL CIRCUIT ARRANGEMENT

Ralph K. Potter, Madison, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York

Application January 19, 1932, Serial No. 652,556

39 Claims. (Cl. 178—44)

1. In a concentric conductor system in which an inner conductor is surrounded by a cylindrical conductor concentric therewith and acting as a return therefor, an electrical arrangement for association therewith and having the electrical properties of an inductance, said arrangement including a conductive enclosure surrounding at least one of the conductors and concentric therewith, the outer conductor extending into said enclosure a substantial part of its length said enclosure having a diameter large as compared with the conductor it surrounds and having a length independent of the wave length of the alternating current transmitted, and the interior conductive surface of said enclosure forming a conductive part of the path for the transfer of wave energy from one conductor to the other.

2,030,179

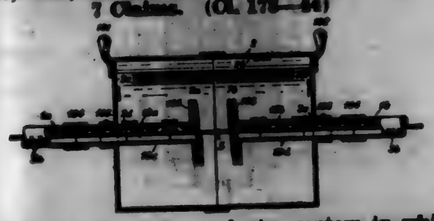
ELECTRICAL CIRCUIT ARRANGEMENT

Ralph Kimball Potter, Madison, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York

Original application January 19, 1932, Serial No. 652,556. Divided and this application August 18, 1932, Serial No. 629,790

14 Claims. (Cl. 178—44)

1. In a concentric conductor system in which an inner conductor is surrounded by a cylindrical conductor concentric therewith and acting as a return therefor, an electrical arrangement for association therewith and having inductive properties, said arrangement including a closed vessel enclosing said concentric conductor system, the outer conductor of said concentric conductor system being divided into two parts entering the enclosing vessel at different points, the inner concentric conductor being electrically continuous through the vessel, the length of the tank being substantially independent of the length of the electric waves.



2,030,180

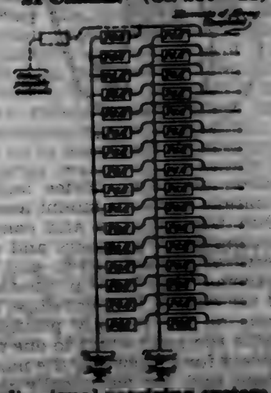
ELECTRICAL CIRCUIT ARRANGEMENT

Ralph Kimball Potter, Madison, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York

Original application January 19, 1932, Serial No. 652,556. Divided and this application August 18, 1932, Serial No. 629,791

7 Claims. (Cl. 178—44)

1. In a concentric conductor system in which an inner conductor is surrounded by a cylindrical conductor concentric therewith and acting as a return therefor, an electrical arrangement associated therewith and having the properties of a pi network including series inductance in one side of the line and impedances bridged across the line on each side of said inductance, said arrangement including a closed vessel enclosing said concentric conductor system, the outer conductor of said concentric conductor system being divided into two parts entering the enclosing vessel at different points, the inner concentric conductor being electrically continuous through the vessel, the inner conductive surface of said vessel forming a conductive part of the path for the transfer of wave energy from one part of said outer concentric conductor to the other and thereby creating an inductance in series with said outer conductor, and lumped impedances electrically connected in effect between said inner conductor and said outer conductor on each side of said inductance.



2,030,181

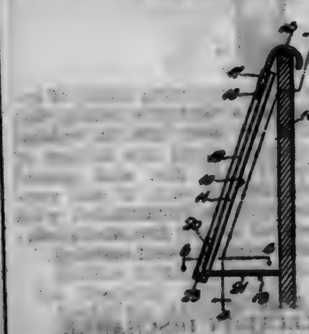
DIRECTIONAL RADIO SIGNALING

Ralph Kimball Potter, Madison, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York

Application October 6, 1933, Serial No. 692,530

21 Claims. (Cl. 250—11)

1. A radio signal receiving system consisting of an array of more than two antenna elements and a plurality of receiving devices responsive to radio signals, separate means for unilaterally connecting each of said antenna elements to each of said receiving devices.



2,030,182

SOAP SHREDDER

Vernon J. Richards, Gary, Ind., and John M. Werner, Aurora, Ill.

Application December 14, 1934, Serial No. 757,578

1 Claim. (Cl. 146—177)

A spacer for the lower end of a suspensible member having tubular inclined beads along its edges; said spacer comprising a single length of wire having a substantially straight horizontal intermediate portion to abut a wall from which said member is suspended, two substantially straight and horizontal arm portions bent laterally in the same direction from the ends of said intermediate portion, said arm portions converging from said intermediate portion to the lower ends of said tubular beads, and two inclined shank portions bent upwardly at acute angles from the ends of said arm portions, said shank portions being secured in said lower ends of said tubular beads.

2,030,183

RAKE

Wenceslaus G. Rocquin, New Orleans, La., assignor to Valley Manufacturing Corporation, a corporation of Louisiana

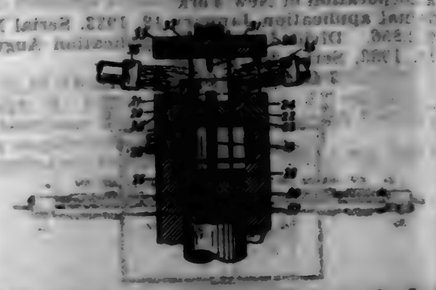
Application February 24, 1933, Serial No. 658,392

8 Claims. (Cl. 55—114)

6. In a rake, the combination of a cross frame member having its front edge portion bent over and provided with a plurality of tine-receiving openings and having its rear edge portion return-bent inwardly and facing towards said front edge portion, the frame member being curved in transverse cross section; and a plurality of tines passing through said openings and having their rear ends disposed between the return-bent rear edge portion of said frame member and the frame member proper, the tines being curved in longitudinal cross section correspondingly to the curvature in the frame member whereby to resist displacement of the tines from the frame.

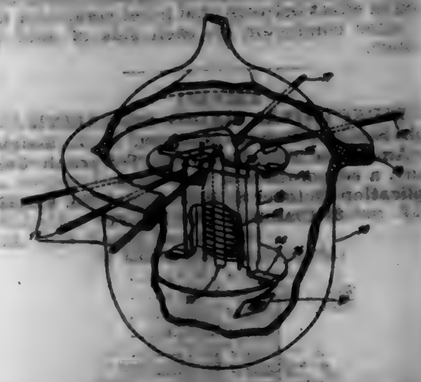
2,030,124
TUBE BASE
George M. Rose, Jr., Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 27, 1933, Serial No. 677,777
7 Claims. (Cl. 250—27.5)

1. A vacuum tube base comprising a disc of insulating material having a central opening, flat contact fins mounted on said disc to extend radially from said opening along one surface of and perpendicularly to said disc and spaced around the periphery thereof, each of said contact fins having one edge in engagement with and mechanically secured to said disc, and a connecting lug on its edge adjacent said opening.



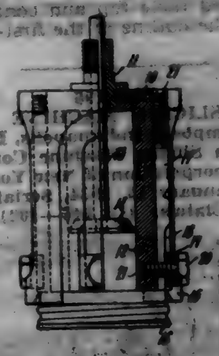
2,030,125
STEM FOR ELECTRON DISCHARGE DEVICES
George M. Rose, Jr., Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 29, 1933, Serial No. 704,416
3 Claims. (Cl. 49—75)

1. The method of making stems for electron discharge and other evacuated devices which consists in assembling an exhaust tube with its end within a tubular glass member and extending leading-in wires between and longitudinally of said exhaust tube and tubular glass member, heating the tubular member until it becomes plastic and flows around said leading-in wire and the exhaust tube, forming the heated mass into a rough disc perpendicular to the exhaust tube, reheating said rough disc to relieve strains and render said disc plastic, compressing said reheated mass into a finished disc-like press perpendicular to said leading-in wires and the exhaust tube, and forming an opening through said press communicating with the exhaust tube while the press around the end of said exhaust tube is plastic.



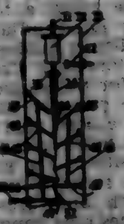
2,030,126
STEM MAKING APPARATUS
George M. Rose, Orange, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application December 29, 1933, Serial No. 704,416. Divided and this application October 25, 1934, Serial No. 749,955
3 Claims. (Cl. 49—2)

5. A stem forming apparatus including a die plate having a circular flat bottomed pocket for receiving a tubular glass member, apertures extending from said depression thru said plate for receiving an exhaust tube and leading-in wires within said tubular member, a movable member cooperating with said die plate for positioning the end of said exhaust tube within said tubular member and the leading-in wires to extend thru said tubular member, devices for heating said tubular member to cause said tubular member to become plastic and flow around said leading-in wire and



exhaust tube, a press block movable with respect to and cooperating with said die plate to compress the heated material into a flat disc perpendicular to the end of said exhaust tube and to seal in the leading-in wires, and a member on said press block in registry with the opening in said exhaust tube and cooperating with said exhaust tube for providing an exhaust opening thru said press when said press block and die plate are moved to press forming position.

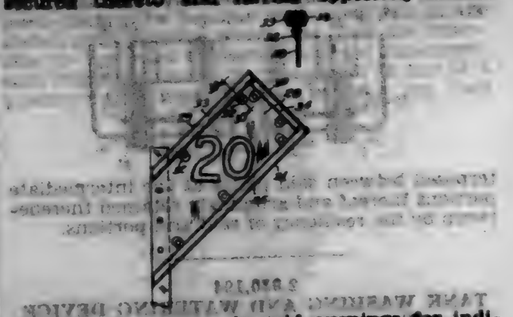
2,030,127
SHORT WAVE TUBE
Bernard Salzberg, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application June 23, 1934, Serial No. 732,928
7 Claims. (Cl. 250—27.5)



1. An electron discharge device including an envelope, a unitary electrode mount assembly positioned within the envelope and comprising a pair of insulating plate members and electrodes positioned between and secured to said members, radially positioned stiff lead-in conductors extending thru the wall of said envelope, means on the inner ends of the radially positioned conductors securing the conductors to one of said insulating members for supporting the mount within the envelope and for electrically connecting the conductors to the electrodes positioned between the insulating plate members.

2,030,128
MAGNETIC CAPPING CHUCK
Harry D. Smith, Buffalo, N. Y., assignor to Consolidated Packaging Machinery Corporation, a corporation of New York
Application December 8, 1934, Serial No. 756,578
3 Claims. (Cl. 226—38)

1. A capping chuck comprising a body and a plurality of magnets carried by said body, said magnets being seated upon the outer surface of said body, each of said magnets being vertically adjustable with relation to said body.



2,030,129
PRODUCTION OF ARTIFICIAL MATERIALS
William Ivan Taylor, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application January 21, 1933, Serial No. 652,257
In Great Britain February 18, 1933
9 Claims. (Cl. 18—8)

7. Apparatus for the production of artificial filaments, said apparatus comprising, in combination, means for extruding the filaments, means for drawing the filaments away from the point of extrusion, a plurality of interposed retarding means disposed on each side of the path of the filaments each adapted to determine a point at which tension in the filaments is increased, and actuating means for bringing said retarding means successively into operation, during spinning, so as to move said tension point away from the drawing means and towards the extruding means.

2,030,130
RAILROAD SIGNAL
Arnold H. Told, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application January 12, 1934, Serial No. 706,715
6 Claims. (Cl. 40—135)

4. A compact indicator device for application to a signal plate irrespective of the thickness of the material therein comprising a casing adapted to be disposed transversely of the plate and secured thereto and having oppositely facing

openings, and lenses in said openings for indication on both sides of the plate at night.

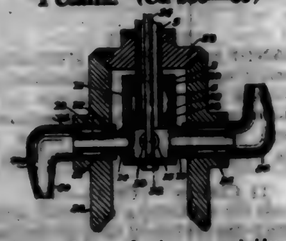
2,030,131
MANUFACTURE OF RUBBER
Ralph Morris Ungar, London, England, assignor, by direct and mesne assignments, to Softened Rubber Limited, Manchester, England
No Drawing. Application November 17, 1931, Serial No. 575,630. In Great Britain January 9, 1931
11 Claims. (Cl. 18—50)

1. A process for softening and de-nerving crude rubber so that the softened and de-nerved condition is permanent until the rubber is vulcanised, which consists in exposing the rubber, in substantially water-free condition and in extended-surface form, to air substantially between 230°–347° F., the rubber being thereafter submitted to cooling in air, the period of oxidation exposure of the rubber at the temperature stated and the rate of subsequent cooling being so controlled as to result in an increase in weight of the rubber between approximately 0.5% and 2%.

2,030,132
PROCESS OF MAKING UREA RESIN MOLDING POWDERS
Philip Bickford Watson, New York, N. Y., assignor, by mesne assignments, to American Cyanamid Company, a corporation of Maine
No Drawing. Application February 12, 1931, Serial No. 515,299. Renewed October 12, 1934
6 Claims. (Cl. 260—3)

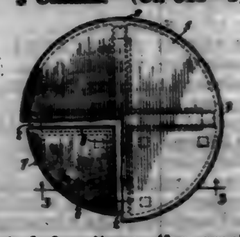
4. A process of producing a urea resin molding material which comprises reacting formaldehyde with an urea to form a soluble, fusible condensation product, admixing said product with a fibrous filler material, drying the mixture and grinding the dried material while simultaneously maintaining a temperature not exceeding 40° C. in order to prevent irregularities in subsequent curing.

2,030,133
BEARING STRUCTURE
Arthur A. Arnold, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application November 2, 1933, Serial No. 640,807
10 Claims. (Cl. 308—26)



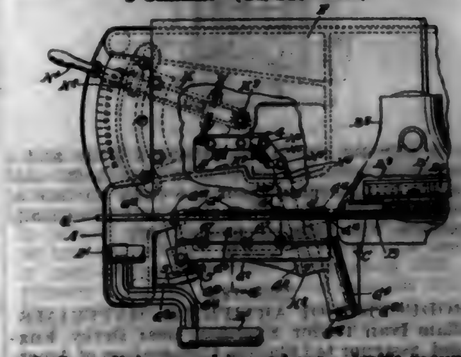
1. The combination of a frame having spaced apart members, a rotatable shaft disposed between said members, a pair of elongated plates each having end portions and an intermediate portion, each portion being connected to the other by resilient arm portions, said plates being clamped together and to one of said frame mem-

bers at each of the end portions of said plates, a bearing sleeve adapted to receive said shaft in-



terposed between said plates at the intermediate portions thereof and grippingly retained therebetween by the resiliency of said arm portions.

2,030,194
TANK WASHING AND WATERING DEVICE
Walter Holt Bell, New York, N. Y.
Application March 24, 1934, Serial No. 717,257
1 Claim. (Cl. 299—69)

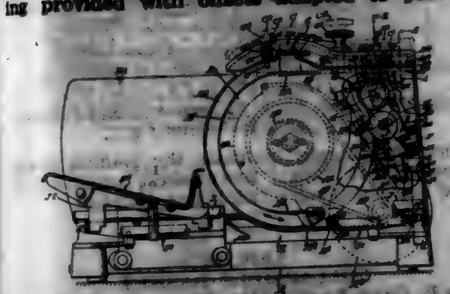


The tank washing device consisting of a supporting pipe, means for clamping the same adjacent to the opening of a tank to support the pipe inwardly of the tank, means for supplying water to the pipe, a rod extending through the pipe and outwardly of both ends thereof, a beveled gear mounted on the pipe above the lower end thereof, a member mounted to rotate on the pipe below the gear, tubular shafts mounted on said member at right angles thereto, L-shaped water jet nozzles mounted to rotate on said tubular shafts and having their outer ends arranged to project jets in angular relations to said shafts, said tubular shafts communicating with the supporting pipe and arranged to discharge water to the nozzles, a beveled gear on each nozzle having meshing engagement with the first beveled gear, said member having a bearing located below the tubular shafts, a friction element mounted on the lower end of the rod to engage said bearing and means on the upper end of the rod for varying the pressure on said friction element against the bearing to regulate the speed of rotative movement of said nozzles and gears.

2,030,195
NESTED TABLES AND CHAIRS
Edmund L. Breese, Beverly Hills, Calif.
Application February 5, 1934, Serial No. 709,740
3 Claims. (Cl. 311—1)

1. In nested furniture, the combination of a table having a circular top and having a plurality of radial cleats attached to the under side of the top and extending outwardly from the vertical central axis of the table and forming angles with each other; and a plurality of nested tables having tops fitting into said angles and engaging said cleats to support the nested tables off the floor, the outer edges of said nested tables being located along an arc struck from the center of the first-named table top and conforming substantially to the outline of the first-named table top.

2,030,196
SLICING MACHINE
William J. Campbell, Indianapolis, Ind., assignor to American Slicing Machine Company, Chicago, Ill., a corporation of New York
Application January 15, 1934, Serial No. 706,713
5 Claims. (Cl. 146—103)



1. In a slicing machine, a base, a knife mounted on the base and means for actuating it, a slice receiver mounted upon said base, a gauge plate, a carriage and means for guiding the carriage across the face of the gauge plate and past the cutting edge of the knife, a forward flange for said slice receiver lying adjacent the cutting plane, and a plurality of guides fixed in relation to and extending forwardly from the base and supporting means for the gauge plate, lying forwardly of the slice receiver flange and slidable in relation to said guides, and actuating means for the gauge plate positioned on the side of the cutting plane opposite to the guides, said guides being cylindrical in form, the supporting means being provided with apertures through which said cylindrical guides may penetrate, there being a relatively tight fit between one of said guides and one of said apertures and a relatively loose fit between the other of said guides and the other of said apertures.

2,030,197
SLICING MACHINE
William J. Campbell, Indianapolis, Ind., assignor to American Slicing Machine Company, Chicago, Ill., a corporation of New York
Application January 15, 1934, Serial No. 706,714
2 Claims. (Cl. 146—103)

1. In a slicing machine having a base, a knife rotatably mounted on said base and means for actuating it, a housing extending upwardly from said base and about said knife, a guard plate closing the front of the housing and overlying a substantial portion of the face of the knife, a cover for said housing, mounted upon the upper portion thereof, guiding elements for said cover, interposed between cover and housing, yielding means tending normally to lift said cover, said guiding elements including limit means adapted normally to limit the upward movement of said cover in

response to said yielding means, said cover thereby being maintained in a position upwardly spaced from the top of the housing, and locking means adapted to move said cover downwardly into locked position, said guard plate being formed with locking portions adapted to penetrate between housing and cover when the cover is raised by said yielding means, said locking portions being provided with offsets adapted to prevent

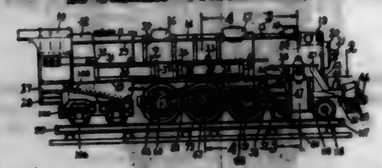
movement of said guard plate when the cover is in closed position, and locking springs positioned upon the housing and located within the cover, when the cover is in closed position, said springs having free ends adapted for a cramping engagement with the inside of the cover whereby, when the cover is in closed position, the springs are positively held by the cover in locking relationship with said offsets.

2,030,198
ELECTRICAL DENITRATION OF OILS
Marcel E. Cerf, San Francisco, Calif., assignor to L. Blake Smith, San Francisco, Calif.
Application April 3, 1933, Serial No. 664,224
5 Claims. (Cl. 204—24)

1. In the resolution in a static electrical field of an emulsion in which water is the dispersed phase, the method of maintaining the dielectric value of said field which comprises: passing preferentially water-wettable, insoluble, solid granules through said field at a velocity materially exceeding that of the passage of emulsion therethrough; collecting said granules on one side of the body of emulsion in which said field is maintained, and returning said granules to the opposite side of said body to be again passed through said field.

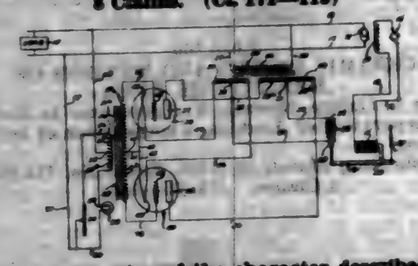
2,030,199
MOLD EXTENSION FOR INGOT MOLDS
Walter M. Charman, Cleveland Heights, Ohio
Application May 25, 1933, Serial No. 672,069
3 Claims. (Cl. 22—147)

1. In apparatus for casting undeoxidized or semi-deoxidized steel ingots, an ingot mold, a heat dissipating mold extension adapted to be temporarily supported upon the upper end of the mold during the teeming and solidifying of the metal, and frangible means for tying the extension to the mold to prevent upward movement, said frangible means being adapted to fail at a predetermined internal mold pressure less than



bursting pressure, said mold extension having an average internal cross-sectional area less than that of the upper end of the mold, and having a lower end wall engaging the metal of the ingot adjacent the inner wall of the mold, whereby the extension has the capacity to resist the tendency of the ingot to grow at the rim.

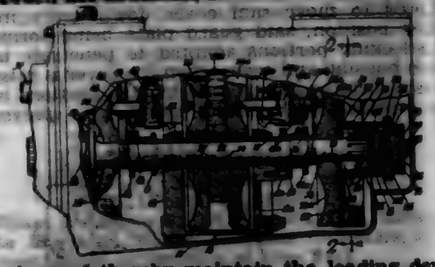
2,030,200
CERAMIC OBJECT AND METHOD OF MAKING THE SAME
John L. Gallup, Newark, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 20, 1934, Serial No. 716,163
5 Claims. (Cl. 25—156)



1. The method of making a substantially pure alumina object which is substantially unchanged at about 1600° centigrade which comprises making a mixture consisting of 70% to 90% of substantially pure alumina particles measuring about 75 to 100 microns across and the remainder of substantially pure alumina particles measuring from 2 to 8 microns across, adding water to make a slip just thin enough to pour and casting the slip into the desired object and firing the shaped object at from 1450° to 1600° centigrade to make it coherent and strong.

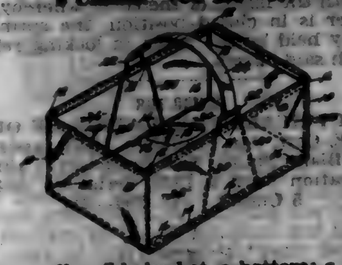
2,030,281
TOY LOCOMOTIVE
Alfred C. Gilbert, North Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland
Application August 20, 1931, Serial No. 560,656
20 Claims. (Cl. 105—37)

2. In a toy locomotive, a plurality of cylindrical boiler parts detachably secured together, a frame member disposed below said boiler parts and having supporting wheels journaled thereon, said frame member being detachably secured directly to and supporting said cylindrical boiler parts, an inverted U-shaped rear boiler part, a rear truck detachably secured to said rear boiler part and laterally swingable relatively thereto, and a front truck detachably secured directly to the front end of said frame and laterally swingable relatively thereto.



2,030,282
APPARATUS FOR ELECTRICAL CONTROL
Frank W. Godsey, Jr., New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a corporation of New Jersey
Application December 4, 1931, Serial No. 578,946
8 Claims. (Cl. 171—119)

1. In apparatus of the character described, in combination, a source of alternating current, a circuit control coil, a balanced rectifier comprising electronic conduction tubes in opposed relation, each tube having anode, cathode and control electrodes, means including a transformer having two opposed windings for energizing said control electrodes from said source, and means interposed between each of said windings and said source for rendering them differentially effective upon a change in the function of said source.



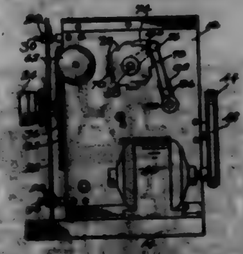
2,030,283
TORQUE LOADING LASH ADJUSTING DEVICE FOR FRICTION ROLLER TRANSMISSIONS
Winfield D. Gove, Detroit, and John Dolza, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 21, 1934, Serial No. 726,294
6 Claims. (Cl. 74—200)

1. In friction race and roller transmission mechanism, a torque loading device unyielding abutment means to receive the reaction force thereof, an adjustable gap element arranged to transmit the reaction force of the torque loading device to the abutment means, and means for exerting a continuous yielding force upon the gap element to cause it to take up and fill the space between the abutment means and torque loading

device and thereby maintain the loading device in position to impart the greatest amplitude of axial movement for which it was designed.

2,030,304
COLLAPSIBLE BASKET
Dale B. Gray, Kansas City, Mo., assignor to Gray & Terry Manufacturing Co., Kansas City, Mo., a firm composed of Dale B. Gray and Warren Terry
Application November 13, 1931, Serial No. 575,577
5 Claims. (Cl. 150—39)

1. In a collapsible basket, a bottom; a collapsible framework; a flexible covering for said framework, the framework comprising a rim, a pair of side members swingably mounted on said rim having a portion above the rim and a portion below the rim when the basket is open; and a handle joining the side members at the upwardly extending portion thereof whereby when the basket is carried the portions below the rim are forced outwardly against the said flexible covering.

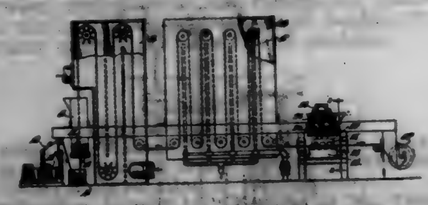


2,030,305
DRAFT CONTROLLER
Say M. Green, Cleveland, Ohio
Application June 6, 1935, Serial No. 25,991
7 Claims. (Cl. 126—307)

1. A draft controller comprising an inner pipe section having ports in the sides thereof, an outer bell shaped shell spaced around said pipe section

and adapted for connection to a stack at its upper end, and an intermediate bell shaped shell spaced between the pipe section and the first-mentioned bell shaped shell and forming an air passage between said shells, said passage being open at its lower end, the said intermediate section depending from the upper end of the pipe section and the outer bell shaped shell being supported upon the intermediate shell.

2,030,306
CAMERA
Lawrence Hanley and William C. Anderson, Kansas City, Mo.
Application January 18, 1933, Serial No. 651,528
9 Claims. (Cl. 88—18.2)



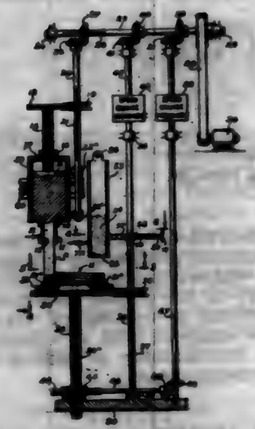
1. A camera of the character described comprising a motor driven shutter; a sensitized strip behind the shutter; a knife to sever said strip; apparatus for periodically advancing said strip past said knife; common means movable to mechanically lock said advancing apparatus and to simultaneously actuate the knife to sever said strip after a predetermined length of the same has moved past said knife; and a switch having connection with said means for opening the motor circuit when said means moves to actuate the knife and lock the advancing apparatus.

2,030,307
EDUCATIONAL TEST CHECKING MACHINE
Samuel R. Harding, Aberdeen, S. Dak.
Application March 27, 1933, Serial No. 662,856
24 Claims. (Cl. 101—102)

1. In a device of the class described, a plurality of type bars, a plurality of selectors for operating the type bars, means for operating the selectors, means for individually intercepting the selectors when operated to actuate the type bars, a sheet having areas in the same general relation as the selectors, and means for holding the sheet with its areas in predetermined relation to the selectors and in their paths of movement when operated to actuate the type bars, said sheet in certain of its areas being pierced, whereby when the selectors are operated to actuate the type bars certain thereof will pass through pierced areas of the sheet and certain other of the selectors will be stopped by the sheet or the intercepting means.

2,030,308
METHOD OF MAKING ELASTIC THREAD AND RETICULATED SHEETS OF RUBBER OR SIMILAR MATERIAL
Marion M. Harrison, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 29, 1932, Serial No. 638,772
10 Claims. (Cl. 18—54)

1. The method of making an elastic structure which comprises providing a substantially non-extensible support of substantially the same extent as that of the elastic structure to be produced, forming a coating of elastic material around the support, and so disintegrating the support as substantially to destroy its effectiveness as a tension element.



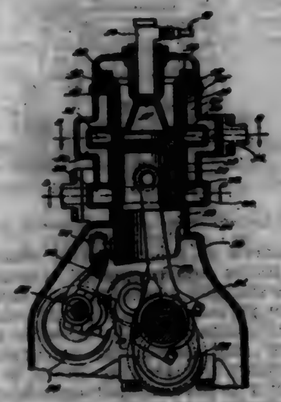
2,030,309
ISOLATION AND PURIFICATION OF HORMONES
Frederick L. Hisaw and Harry L. Fevold, Madison, Wis., assignors to Wisconsin Alumni Research Foundation, Madison, Wis., a corporation of Wisconsin
No Drawing. Application November 16, 1931, Serial No. 575,480. Renewed September 15, 1934
3 Claims. (Cl. 167—74)

2. The method of producing luteinizing hormones from the pituitary gland of animals which consists in comminuting and drying said gland matter, subjecting said dried matter to aqueous pyridine to extract the portions of said gland matter soluble in aqueous pyridine, drying said extract, and separating from said extract the water soluble impurities by subjecting said extract to water, to leave a residue having the properties of luteinizing the follicles and prolonging the life of corpora lutea.

2,030,310
ISOLATION AND PURIFICATION OF THE GONAD STIMULATING HORMONE
Frederick L. Hisaw and Harry L. Fevold, Madison, Wis., assignors to Wisconsin Alumni Research Foundation, Madison, Wis., a corporation of Wisconsin
No Drawing. Application November 16, 1931, Serial No. 575,481. Renewed September 15, 1934
1 Claim. (Cl. 167—74)

The method of producing a gonad stimulator hormone from the pituitary gland of animals, which consists in comminuting and drying said gland matter, subjecting said dried matter to aqueous pyridine to extract the portions of said gland matter soluble in said aqueous pyridine, drying said extract, leaching the residue with water and precipitating by alcohol from said water solution, the substance which has the property of stimulating the growth and development of follicles in the ovary and enlargement of the testicles.

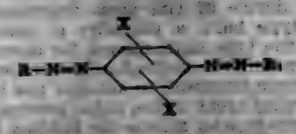
2,030,211
APPARATUS FOR MAKING HELICAL CARBON FILES
George E. Huise, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a corporation of New Jersey
Application January 20, 1932, Serial No. 587,727
10 Claims. (Cl. 18—12)



1. In apparatus of the character described, in combination, a container having an opening in the bottom portion thereof and adapted to hold a plastic substance, means adapted to feed said substance at a constant rate from said opening, a rotatable support below said opening in said container and positioned to receive said plastic substance, means adapted to rotate said support at a predetermined constant rate, means adapted to lower said support at a predetermined constant rate, and means operatively connecting all of said means to proportion the operative speeds thereof whereby the interaction of all of said means forms a helix on said support having uniform registering convolutions.

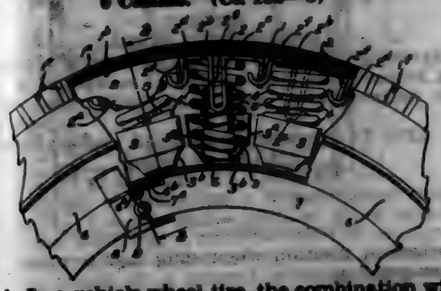
2,030,212
PRODUCTION OF ARTIFICIAL MATERIALS
Edward Kinsella and Reginald Henry John Riley, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application January 27, 1932, Serial No. 653,885
In Great Britain February 10, 1932
7 Claims. (Cl. 18—8)

4. Apparatus for the production of artificial filaments by the evaporative method, said apparatus comprising a spinning cell, a spinning jet therein for the extrusion of artificial filaments and means for directing at least two streams of evaporative medium on to the filaments in the neighbourhood of the jet from different sides of the filaments and at different distances from the jet.



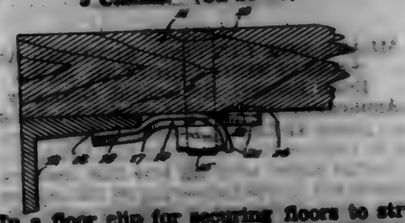
2,030,213
ENGINE
James W. Kinnucan and James O. Fink, Detroit, Mich., assignors to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application October 26, 1931, Serial No. 571,976
10 Claims. (Cl. 123—81)

1. In an engine of the sleeve valve type having a cylinder ported for intake and exhaust, sleeve valve means controlling said ports and having a combined reciprocating and oscillating motion, and means cooperating with said sleeve valve means for ending the engine intake period prior to the closing of the cylinder intake port and prior to the time said sleeve valve means attains its maximum reciprocating motion.



2,030,214
AZO DYES AND METHODS FOR THEIR PREPARATION
Arthur Howard Knight, Ashton-on-Mersey, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application September 21, 1932, Serial No. 634,199. In Great Britain September 30, 1931
13 Claims. (Cl. 260—81)

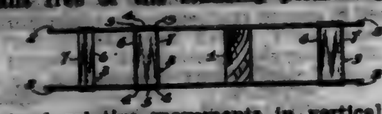
7. Azo dyes having the following general formula:



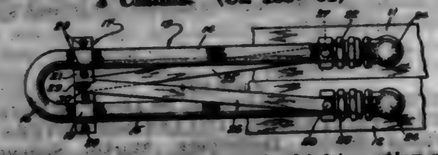
wherein R represents a nitro-aniline or nitro-naphthylamine radical, which may have substituted thereon members selected from the class consisting of halogen and nitro groups, X represents an alkoxy group, and R₁ represents an amino-benzene or amino-naphthalene radical which may have substituted thereon members selected from the class consisting of halogen, alkyl, amino and dialkyl-amino groups.

2,030,215
VEHICLE WHEEL TIRE
Frank Krone Krouts, San Diego, Calif.
Application October 12, 1934, Serial No. 748,231
6 Claims. (Cl. 152—8)

1. In a vehicle wheel tire, the combination with a casing of a plurality of substantially flat pressure plates positioned in overlapped and interlocked relation to each other and each provided centrally with a spring supporting lug with shoulders adapted to receive a spring and support it inwardly some distance from said plate, a spring supported on said shoulders on said spring supporting lug and extending inwardly therefrom in said casing, and another larger spring surrounding said first mentioned spring supported on said plate and extending inwardly therefrom in said casing around said first mentioned spring.



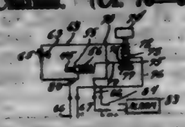
2,030,216
FLOOR CLIP
John A. MacLean, Chicago, Ill., assignor to MacLean-Fogg Lock Nut Company, Chicago, Ill., a corporation of Illinois
Application April 4, 1935, Serial No. 14,575
5 Claims. (Cl. 20—6)



1. In a floor clip for securing floors to structural frame members, an integral metal member having an attaching flange provided with an aperture for receiving a securing bolt to secure said member, a frame engaging flange carried by said clip, and an offset in said clip adjoining said attaching flange and frame engaging flange and bringing said frame engaging flange into a different plane whereby the flooring may be located on one side of the frame and the clip may engage the opposite side of the frame, said clip having an integral extension located on the side nearest the flooring and said extension being of reduced thickness whereby a portion of said extension may be bent downward to lock the nut of the bolt and the balance of said extension may be utilized for bearing against the wood of the flooring.

2,030,217
WALL CONSTRUCTION
Herbert R. Marks, Sewickley, Pa.
Application October 22, 1934, Serial No. 749,584
6 Claims. (Cl. 72—45)

1. A wall comprising vertical studding spaced apart horizontally, vertically superimposed slabs forming two wall-facings positioned on the opposite sides of and enclosing said studding, and means free of the studding permitting unrestrained relative movements in vertical planes between said studding and facings for connecting the facings to each other and holding them upright against the sides of the studding.



2,030,218
FLEXIBLE HOSE SUPPORT
James C. G. Maxwell, Waterbury, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
Application August 11, 1934, Serial No. 739,411
2 Claims. (Cl. 138—61)

1. Means for supporting the bight portion of a substantially horizontally disposed flexible U-shaped tube having its ends connected to upper and lower relatively movable parts, comprising means bridging the U adjacent the bight, and a pair of arms pivotally secured to the bridging means and each to one of the relatively movable parts to support the bight portion against sagging below the connection to the lower part.

2,030,219
PROTECTIVE RECEPTACLE
Charles F. McBlair, Toledo, Ohio
Application May 17, 1934, Serial No. 726,079
8 Claims. (Cl. 70—62)

1. In a lock for a repository, a bolt, a bolt operating circuit, an electro-magnet for operating said bolt, a switch in the bolt operating circuit, a switch operating circuit having time-delayed electrical actuating means therein for operating said switch including resetting mechanism responsive to failure of current in the switch operating circuit, and a lock controlled switch in the switch operating circuit, the closing of which will initiate the operation of said time-delayed electrical actuating means to complete the bolt operating circuit and the opening of the lock controlled switch will permit the resetting of the time delayed electrical means for further operation.

2,030,220
MUTE FOR STRINGED MUSICAL INSTRUMENTS
Francisco Quintana Miranda, Cordoba, Argentina
Application September 18, 1934, Serial No. 744,504
15 Claims. (Cl. 84—311)

1. In a mute for stringed musical instruments having a string supporting bridge, a resilient member adjustably mounted at one end on the instrument to have adjustment about an axis extending transversely of the member to position

the free end of the member toward and away from the instrument, a saddle member carried by the free end of the resilient member to be normally positioned in spaced relation to the upper portion

of the bridge of the instrument, and means connected to the resilient member adapted to be actuated to flex said resilient member and position the saddle member in contact with the bridge with varying pressure.

2,030,231

METHOD OF PRODUCING PLASTIC MASSES, ETC., CONTAINING CELLULOSE ESTERS

Richard Müller, Heidelberg, Martin Schenck, Mannheim, and Wilhelm Wirbatz, Mannheim-Waldhof, Germany, assignors to C. F. Boehringer & Soehne G. m. b. H., Mannheim-Waldhof, Germany

No Drawing. Application January 13, 1932, Serial No. 651,681. In Germany January 20, 1932.

12 Claims. (Cl. 18—58)

1. The method of treating cellulose products for the manufacture of shaped articles, which comprises esterifying a cellulose product to form a triester with an esterification mixture free of catalysts partly remaining in linked form in the non-saponified product and causing instability thereof, treating the isolated cellulose triester thus obtained with a saponifying agent of acid reaction in such manner as to reduce its acid content by 5% at the utmost, to leave the solubility characteristics of the said triester practically unchanged, dissolving the product in a solvent, shaping the solution and removing the solvent.

2,030,232

STABLE AQUEOUS DISPERSION

Edwin B. Newton, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application December 21, 1932, Serial No. 648,220

20 Claims. (Cl. 134—17)

1. The method of stabilizing an aqueous dispersion comprising finely divided solid particles of water-insoluble material which comprises adding to the dispersion a quantity of a salt formed by the reaction of shellac with a volatile strong nitrogenous base.

2,030,233

OVEN DOOR CONSTRUCTION

Thomas O'Brien, Chicago, Ill., assignor to Middleby-Marshall Oven Co., Chicago, Ill., a corporation of Illinois

Application April 4, 1935, Serial No. 14,555

8 Claims. (Cl. 107—65)

1. The combination with a bake oven having a loading door-opening in a wall thereof, of a door mounted on the oven wall for vertical movement to open or close said opening, and a peel rest pivoted to the oven structure within said opening and arranged for movement by gravity to

horizontal position when said door is moved to open position.

2,030,234

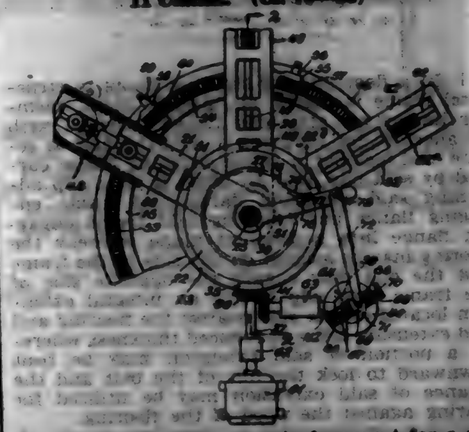
HYPOGASTRIC SUPPORTER

Benjamin F. Pease, Silver Lake, Ohio

Application February 3, 1933, Serial No. 654,612

3 Claims. (Cl. 128—94)

1. In a device of the character described, a padded, rigid plate, two frame members, a flexible rubber block secured to each frame member and projecting beyond the forward end thereof and means securing the forwardly projecting portion of each of said blocks to said plate.



2,030,235

MEANS FOR CUTTING, SETTING, AND SHARPENING CIRCULAR SAWS

Erich Pesgel, Remscheid, Germany

Application July 2, 1934, Serial No. 733,469

11 Claims. (Cl. 76—95)

1. In combination, a central support for a circular saw, a toothed wheel connected with said support, means meshing with teeth of said wheel for intermittently rotating the same, whereby said circular saw is revolved, radial tracks connected with said central support, movable cutting, setting and sharpening devices carried by said tracks, said cutting, setting and sharpening devices being adjustable along said tracks, and means for adjusting said radial tracks on which said setting and sharpening devices are mounted relatively to said radial track on which said cutting device is mounted.

2,030,236

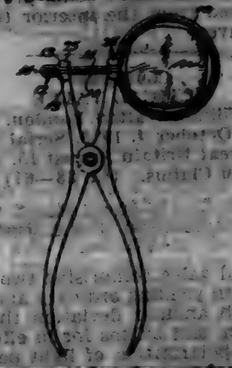
CASEIN DISPERSION

Donald A. Rumbaugh and Frank G. Ulmer, Newburgh, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application February 27, 1932, Serial No. 595,613

17 Claims. (Cl. 134—78)

1. Method of preparing a homogeneous fluid dispersion of casein and a cellulose ether which comprises dispersing a cellulose ether in an alcohol and blending said dispersion with a dispersion of casein in a solvent mixture composed essentially of organic solvents and comprising a sulphonated fixed oil and an alcohol.



2,030,237

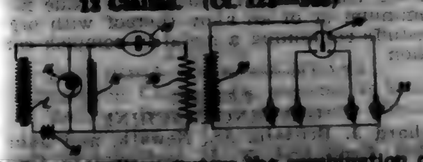
MOLAR BAND

Annie Richardson, Los Angeles, Calif.

Application April 13, 1934, Serial No. 721,011

7 Claims. (Cl. 32—14)

1. As a new article of manufacture, a molar band comprising a strip of ribbonlike metal having straight flat end portions, that portion of the band between said end portions being curved in cross section, the terminal portions of the straight flat ends being integrally secured to each other and there being shoulders formed on the outer faces of the straight flat end portions of the band to form abutments for one of the jaws of the pliers used in fitting the band to the tooth.



2,030,238

SPARK GENERATING SYSTEM

Donald W. Randolph, Flint, and Ora S. Duffendack and Ralph A. Wolfe, Ann Arbor, Mich.

Application May 1, 1933, Serial No. 668,754

13 Claims. (Cl. 123—148)

1. In an ignition system the combination of a condenser, means for applying a charge to the condenser, a discharge circuit including the condenser and a gaseous discharge tube having electrodes between which current passes when the charge on the condenser reaches the desired voltage, and a circuit including an ignition device inductively coupled to the discharge circuit.

2,030,239

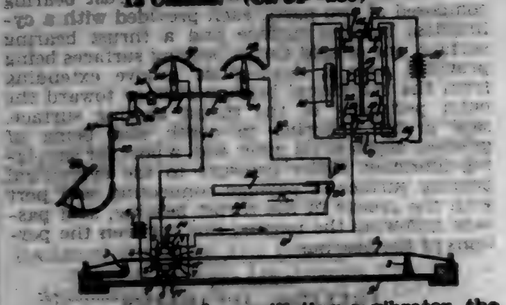
PROCESS OF MAKING COMPOUND STRUCTURAL MATERIAL AND SHAPED ARTICLES THEREOF

Paul Schwarzkopf, Reutte/Tyrol, Austria

No Drawing. Application February 19, 1932, Serial No. 594,164. In Germany November 29, 1931

5 Claims. (Cl. 75—1)

1. A process for making an agglomerated structural material and shaped bodies thereof, containing at least one metal selected from a first group consisting of tungsten, molybdenum, and tantalum, and at least one metal selected from a second group, consisting of silver, nickel, cobalt, iron, said process consisting in first subjecting metal of the first group in the powdered form in which it is obtained from its compounds or ores, to a heat treatment at temperatures at least as high as sintering temperature, thereupon powdering the so compacted metal, thereupon mixing this powder with metal taken from the second group and consolidating this mixture by heat treatment at temperatures below the sintering temperature of the metal of the first group.



2,030,240

SPLIT PHASE IMPULSER FOR MUSICAL INSTRUMENTS

Victor H. Severy, Los Angeles, Calif., assignor, by mesne assignments, to Creative Industries, Inc., a corporation of Nevada

Application July 19, 1933, Serial No. 681,166

13 Claims. (Cl. 84—239)

1. In apparatus for oscillating a vibrator, the combination of magnetic means having a pole located on one side of the vibrator and having a pole located on the other side of the vibrator, a coil corresponding to each pole, and means for passing a sine-wave pulsating current of definite frequency through said coils in a direction to energize said poles alternately.

2,030,241

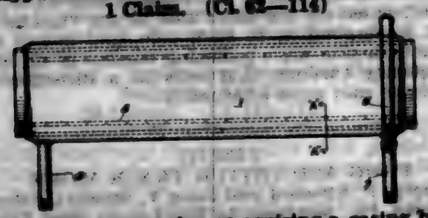
FROG AND SWITCH TRACK WORK

Dewing P. Steward and John V. Stewart, Johnstown, Pa., assignors to The Lorain Steel Company, Johnstown, Pa., a corporation of Pennsylvania

Application April 4, 1933, Serial No. 664,412

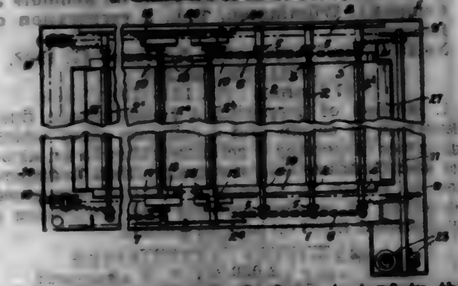
3 Claims. (Cl. 246—435)

1. A switch point rail formed from rolled rail stock originally of uniform cross sectional area



throughout its length and comprising a head, a web and a base flange and having a point and and a pivotal heel portion at the opposite end at which said rail swings, the rail having a uniform vertical dimension and uniform thickness of web from said point end to said heel portion and having its web stamped and thus thinned and widened at said heel portion only to increase the vertical dimension of said rail at said heel portion thereby to lower the supporting surface at said heel portion.

2,029,232
BEARING LUBRICATION
Donald D. Stone, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 21, 1933, Serial No. 686,046
2 Claims. (Cl. 308—168)



1. A combined cylindrical and thrust bearing composed of two parts, each provided with a cylindrical bearing surface and a thrust bearing surface, one of said thrust bearing surfaces being provided with a dead-ended groove extending from the cylindrical bearing surface toward the outer periphery of the thrust bearing surface, said groove tapering in depth and being of greatest depth at its inner end, a port for supplying lubricant under pressure to the cylindrical bearing surface, a passage connecting said port with the groove in the thrust bearing, said passage following the parting line between the portions of the bearing.

2,029,233
FREEZING APPARATUS
Gerald F. Thoma, Canton, Ohio
Application May 19, 1933, Serial No. 671,919
1 Claim. (Cl. 62—114)

A freezing apparatus comprising a casing having spaced concentrically arranged inner and outer cylinders, the inner cylinder being of greater length than the outer cylinder and open at opposite ends, the outer cylinder at its ends being rendered closed against the inner cylinder, rod-like bars extending longitudinally of and between the cylinders and arranged equally distant from each other and having spaced perforations to allow flow of fluid circumferentially between said cylinders, a pipe opening through the outer cylinder into the space between said cylinders and close to one end of said outer cylinder, and a pipe half-encircling the outer cylinder near its other end and communicating with the space between said cylinders at diametrically opposite points thereof.

2,029,234
BLIND
Julio Villalobos, Buenos Aires, Argentina
Application May 26, 1934, Serial No. 727,554
2 Claims. (Cl. 160—17)

1. A new type of blind characterized in that it is constituted by two series of rigid opaque leaves mounted in a rotary manner and in vertical position, said blinds being provided with a device operated from the interior to rotate and move said leaves.

2,029,235
OPTICAL VALVE
George William Walton, London, England
Application October 4, 1932, Serial No. 632,198
In Great Britain August 19, 1932
10 Claims. (Cl. 88—61)

1. An optical valve comprising two double image prisms each yielding ordinary and extraordinary rays with angular deviation therebetween, means between said prisms for in effect rotating the planes of polarization of light passed therethrough in accordance with an applied influence and means for causing said ordinary and extraordinary rays to produce substantially superimposed images.

2,029,236
COLORED OXIDE FILM OF ALUMINIUM
Walter Anderau, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application February 8, 1934, Serial No. 710,576. In Switzerland February 16, 1933
8 Claims. (Cl. 148—6)

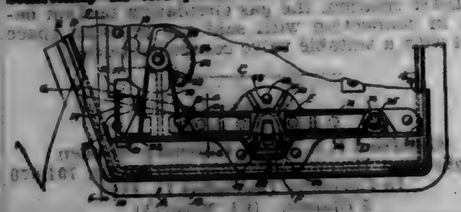
1. Process of coloring an electrolytically-produced oxide film of aluminium or of an alloy thereof, consisting in treating the oxide film of aluminium or of an alloy thereof with organic dyestuffs containing a metal in complex combination.

2,029,237
GAUGING MACHINE
Richard J. Brittain, Jr., Newark, and John C. Bell, Lyndhurst, N. J., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 2, 1928, Serial No. 289,313
Renewed July 12, 1933
27 Claims. (Cl. 33—147)

27. In a machine of the character indicated, a regulating wheel for engaging one surface of a hollow work-piece and rotatably driven to regulate the surface speed of the work-piece, an implement engaging the other surface thereof along that axial plane of the work-piece which includes

the place of engagement of said regulating wheel with the work-piece, and means for steadying the work-piece during the period the said implement is engaging it; substantially as described.

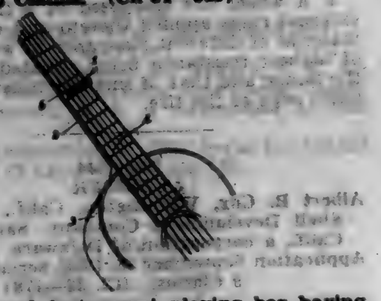
2,029,238
TORCH SUPPORT LADLE
Le Roy O. Brown, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application May 28, 1932, Serial No. 613,456
4 Claims. (Cl. 126—340)



1. A soldering device comprising a torch equipped with a heat projecting tube, a yoke rigidly secured to the discharge end portion of said tube and including a pair of parallel arms spaced laterally from each other a distance greater than the diameter of said tube and equi-distantly from the axis thereof, a ladle pivotally secured to said arms on an axis transverse to the longitudinal axis of said tube and adjacent its said axis for positioning said ladle so that it remains completely in the path of heat projected from said tube in all relative positions of said ladle and said tube, and a projection on the ladle disposed to cooperate with one of the arms of said yoke to limit the pivotal movement of said ladle relatively to the said yoke in one direction.

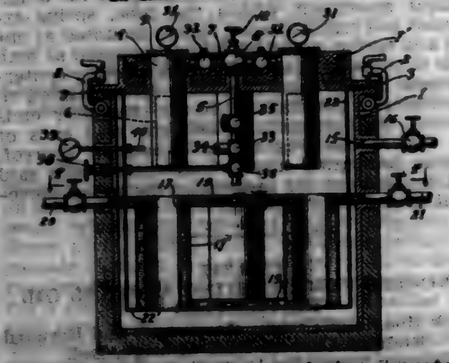
2,029,239
METHOD OF TREATING VERMICULITES
William Berthier Ryan, Kansas City, Mo.
No Drawing. Application July 17, 1933, Serial No. 680,767
16 Claims. (Cl. 252—1)

1. The method of dividing vermiculite material into fine plate-like particles which consists in heating said vermiculite in the presence of salts of alkaline earth metals to expand the vermiculite, and then mechanically separating the expanded granules into plate-like particles.



2,029,240
CAR DOOR LOCKING MEANS
Argyle Campbell, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a corporation of Illinois
Application June 23, 1932, Serial No. 617,239
7 Claims. (Cl. 105—368)

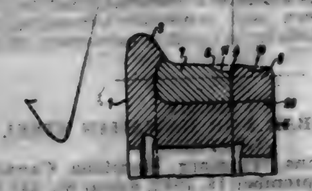
1. In a hopper door latching device, in combination with the car body and the door; keeper means carried by the car body; movable latching means carried by the door, having a portion adapted to engage with the keeper; a lateral extension formed on the latching means at an appreciable distance from the keeper; a guide wall overlying the latch adjacent said lateral extension; and a lateral extension on said guide wall disposed substantially in the plane of the extension on the



latching means whereby a removable bar may be inserted between said respective extensions for moving the latch by a turning movement of the bar.

2,029,241
PLAYING BAR FOR HAWAIIAN STEEL GUITARS
Stanley Cameron, Winnipeg, Manitoba, Canada
Application September 16, 1933, Serial No. 689,783
3 Claims. (Cl. 84—319)

3. A stringed instrument playing bar having the string contacting face thereof lengthwise channelled to provide spaced lengthwise extending teeth.



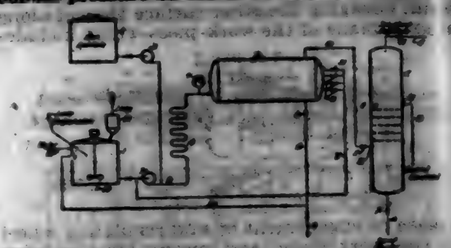
2,029,242
CARBON DIOXIDE ICE COOLING SYSTEM
Harry S. Cornish, Los Angeles, Calif.
Application May 14, 1930, Serial No. 452,243
12 Claims. (Cl. 62—61.5)

4. In a cooling device employing a material adapted to release gas as the refrigerant, a closed cooling chamber provided with a hermetically sealed pressure-proof gas holding space therein combined with means for supporting in said chamber a sealed metallic container for the ice or other cooling material adapted to release gas by transfer of heat from the contents of the

chamber, the gas pressure space of the container being in connection with the gas pressure space of the chamber and means for circulating liquid and gas through said gas pressure space in heat transfer relation, the gas circulating portion being in connection with said gas pressure space and with a suitable valve controlled outlet.

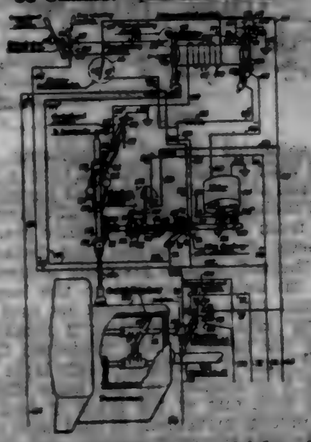
2,030,243
WHEEL TIRE
Gottfried F. A. Oeris, Goteborg, Sweden
Application December 8, 1933, Serial No. 701,970
In Germany December 14, 1933
5 Claims. (Cl. 295—31)

1. A wheel tire composed of a tire body and external rings applied thereto and consisting of material of different resistance to wear, the ring of highest resistance being situated adjacent to the flange and that of smallest resistance on the outer edge of the tire.



2,030,244
CALIPER
Albert B. Cox, Wilmington, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application September 28, 1928, Serial No. 295,974
9 Claims. (Cl. 33—178)

1. In a calipering device for detecting and measuring variations in the inside diameter of a relatively long cylindrical tube, the combination of an elongated member adapted for longitudinal movement within the tube, spring-expanded bell crank-shaped feelers mounted at one end and spring expanded guides mounted at both ends of the said member for continuously centering same in the tube, contact rollers mounted on the feelers at a distance from the outer ends thereof, link connections between said ends of the feelers allowing radial expansion thereof, and an indicating means cooperating with said link connections for measuring the radial movement of the feelers.

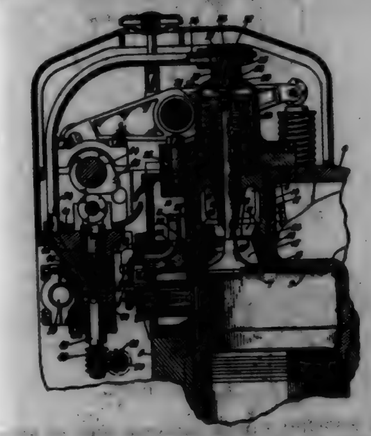


2,030,245
PROCESS FOR TREATING MINERAL OIL DISTILLATES
Ralph Heagland Crosby, Hammond, and Bernard Richard Carney, East Chicago, Ind.
Application November 18, 1933, Serial No. 697,828
6 Claims. (Cl. 196—32)

1. In the treatment of liquid mineral oil distillate with an aqueous lime suspension to remove acidic substances, the method of preventing emulsification comprising intimately contacting the liquid distillate with the aqueous lime suspension in the absence of a gas and under a superatmospheric pressure not less than the bubble pressure of the distillate, to maintain the

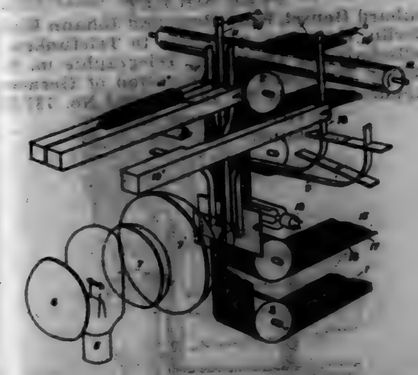
mixture resulting from the contacting entirely in the liquid form.

2,030,246
SIGNALING SYSTEM FOR AUTOMOBILES AND OTHER VEHICLES
Henry S. Davis, West Haven, Conn.
Application December 7, 1932, Serial No. 791,250
23 Claims. (Cl. 177—311)



1. A signaling system for vehicles, including two signal-lights; a source of electrical energy; conducting-means for interconnecting the said source of electrical energy and the said signal-lights; automatic flashing-switch means timed by a running part of a vehicle and acting to cause pulsations in the current-flow in the said conducting-means varying with the speed of the vehicle; and selecting-switch means constructed to selectively divert the said current-pulsations to the said signal-lights concurrently or alternately and operated by a speed-control member of the vehicle as an incident to the movement of such speed-control member.

2,030,247
OIL ENGINE
Richard M. Dilworth, Lakewood, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application February 28, 1933, Serial No. 657,501
5 Claims. (Cl. 123—32)



1. In an oil engine, a cylinder, an intake passage leading thereinto, and a valve at the end of said passage for controlling the flow of air and fuel into said cylinder, said passage being reduced in area to provide a venturi adjacent and anterior to said valve; a permanently open oil supply nozzle discharging into said air supply

passage at said venturi; an equalizing chamber from which oil may flow through said nozzle; a vent passage whereby said equalizing chamber is placed in communication with said air supply

passage; an oil supply reservoir; and an oil supply passage through which oil is supplied from said reservoir to said equalizing chamber and to said oil supply nozzle.

2,030,248
APPARATUS FOR PRODUCING SYNTHETIC ELECTRONIC SOUND
Ivan Eremeeff, Philadelphia, Pa.
Application November 10, 1932, Serial No. 642,458
17 Claims. (Cl. 84—1)

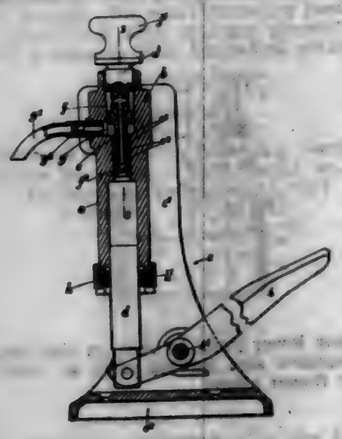
1. An electronic musical instrument comprising a plurality of light sources, objective means for focusing said plurality of light sources on a stationary bolt masking means, selective and independent keying means for controlling the passage of said light sources through predetermined portions of said bolt masking means, and adjustable means of a keyboard for raising and lowering the output of said electronic musical instrument.

2,030,249
PLANT SUPPORT
Lillian Goldsbro, Bloomfield, N. J.
Application March 24, 1934, Serial No. 717,287
4 Claims. (Cl. 47—44)

1. A plant support comprising a frame having radial arms provided with hooks to hang over the edge of a receptacle for supporting the frame in such receptacle, said frame having a plurality of eyes, and standards inserted through said eyes

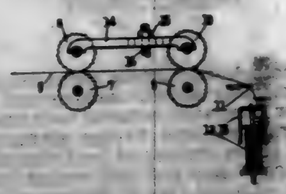
with their lower ends to rest on the bottom of the receptacle and having rests at their upper ends for flower stems.

2,030,250
LIGHT TARGET FOR ILLUMINATION METERS
William Nelson Goodwin, Jr., Newark, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application September 27, 1932, Serial No. 635,124
12 Claims. (Cl. 136—89)



1. A photoelectric device comprising a light-sensitive element having substantially the form of a hollow truncated pyramid with one end wall and a pyramidal wall flaring outwardly therefrom, the active surface of said element including one face of said end wall and at least a portion of the adjacent face of the pyramidal wall.

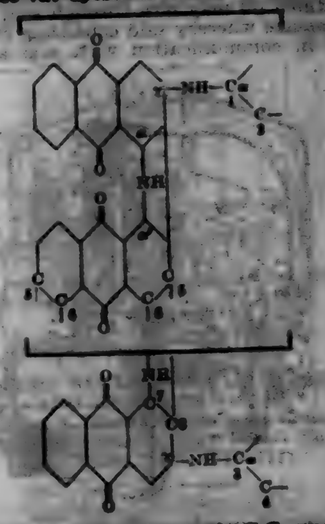
2,030,251
EMULSIFYING MACHINE
Charles Edward Greener, Birmingham, England
Application July 21, 1933, Serial No. 681,606
In Great Britain July 27, 1932
4 Claims. (Cl. 99—8)



1. An emulsifying machine comprising a pump cylinder, a piston operable within said cylinder, an emulsifying chamber communicating with the pump cylinder and provided with suction and delivery ports, a non-return valve controlling the passage through said delivery port, an emulsifying element within the emulsifying chamber having a passage therethrough communicating with said suction port and with the pump cylinder, a non-return valve controlling the passage through said emulsifying element permitting flow through said passage from the suction port to the pump cylinder but preventing flow from the pump cylinder to the suction port, and an external, manually-operable adjusting device connected to said emulsifying element for suspending said element within the emulsifying chamber, said emulsifying element and its adjusting device constituting a single removable unit, said adjusting device being

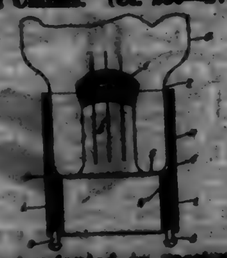
operable to vary the clearance between the emulsifying element and the walls defining the emul-

sifying chamber to control the degree of emulsification.



2,030,253
MANUFACTURE OF TEXTILE MATERIALS
Frank Corbyn Hale and George Crawford Tyas, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application November 2, 1932, Serial No. 636,274
In Great Britain November 15, 1933
4 Claims. (Cl. 19—1)

1. In a process for the production of yarns of fibrous character, the continuous and successive steps of gripping a plurality of continuous filaments at at least two points along the length of the filaments by associated pairs of toothed rollers adapted to cause the filaments to follow a smooth sinuous path under pressure, rotating said rollers in such a manner as to subject said filaments to a breaking load so as to break said filaments into associated fibres of a length corresponding to the distance between the pairs of rollers, and spinning said associated fibres into yarn.



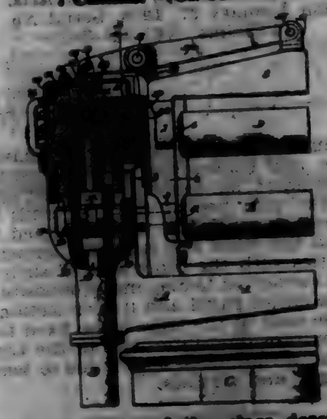
2,030,255
ANTHRAQUINONE DERIVATIVES
Hermann Hauser, Basel, and Max Bommer, Bichen, near Basel, Switzerland, assignors to firm Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Original application June 21, 1928, Serial No. 286,502. Divided and this application March 30, 1932, Serial No. 602,697. In Switzerland July 2, 1931
2 Claims. (Cl. 260—44)

1. 7.7'-dianthraquinonyldiamino-trianthrimid dicarbazole vat-dyestuffs of the general formula

wherein the carbon atom pair C_7C_8 and one of the carbon atom pairs C_9C_{10} are members of a carbazole ring whose NH-group links the carbon atoms C_6 and C_{11}, and wherein the carbon atom pairs C_1C_2 and C_5C_6 belong to anthraquinone radicals, which products form brown to dark powders which dissolve in concentrated sulfuric acid to blue to bluish solutions and dye cotton from the vat brown to olive shade of very good fastness.

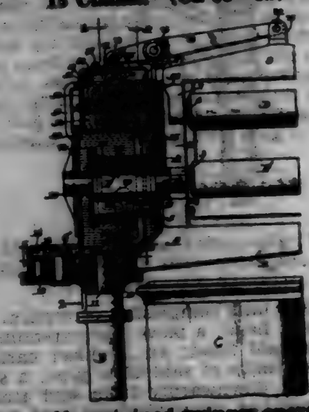
2,030,254
TUBE SOCKET
Bernhard Hensel, Kurt Hess, and Johann Richter, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application July 28, 1934, Serial No. 737,336
In Germany July 31, 1933
3 Claims. (Cl. 250—27.5)

1. A socket adapted to receive an electronic tube, comprising an upper hollow insulating portion, a lower flat circular portion having the same diameter as said upper portion, a plurality of metallic pins secured to said lower portion and arranged to project within said upper portion and screw means passing through said lower portion and into said upper portion for securing said upper and lower portions together.



2,030,255
BUMPER GUARD
Frank C. Howard, Chicago, Ill., assignor to American Automobile Devices Co., Chicago, Ill., a corporation of Illinois
Application June 30, 1933, Serial No. 678,894
5 Claims. (Cl. 293—55)

1. In a device of the type described, the combination of a metal bar having an opening therethrough, a cushioning member of yielding material secured on the front face of said bar and having a socket in its front face substantially

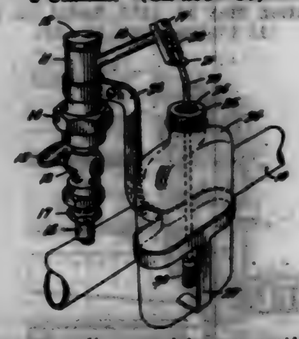


opposite to said opening, and a reflector secured in said socket so arranged as to be capable of yielding backwardly through said opening upon heavy backward pressure on said cushioning member or on said reflector.

2,030,256
HYDRAULIC ACTUATING MECHANISM FOR DOMESTIC LAUNDRY APPLIANCES
John T. Hume, Chicago, Ill., assignor to Electric Household Utilities Corporation, Chicago, Ill., a corporation of Illinois
Application May 16, 1932, Serial No. 676,263
7 Claims. (Cl. 68—23)

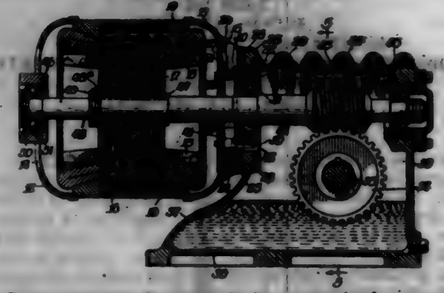
1. In a structure of the class described, the combination of a suitable frame, a pair of horizontally disposed pressure rolls mounted in said frame, a suitable support, a wringer head swingably mounted on said support and forming a housing to which said frame is attached, said housing forming a fluid reservoir and including a cylinder, a piston vertically movable in said cylinder, lever means pivotally mounted on said frame and connecting the piston with one of said pressure rolls for applying pressure thereto, a fluid pump positioned within said head beneath the piston for supplying fluid under pressure to said cylinder to actuate the piston therein, and a power shaft in said support for driving said pump.

2,030,257
HYDRAULIC ACTUATING MECHANISM FOR DOMESTIC LAUNDRY APPLIANCES
John T. Hume, Chicago, Ill., assignor to Electric Household Utilities Corporation, Chicago, Ill., a corporation of Illinois
Application May 16, 1932, Serial No. 676,264
15 Claims. (Cl. 68—23)



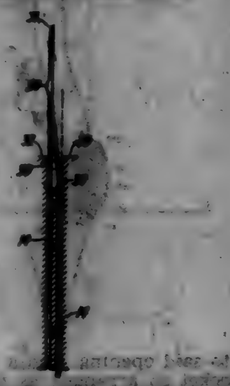
1. In a self-contained wringer operating mechanism of the class described, the combination of a swingable wringer head having a wringer frame, including wringer rolls mounted thereon, one of said members being rotatable and the other being separable therefrom for the passage of material therebetween, a fluid motor mounted within said head for rotating one of said rolls, a fluid actuated mechanism mounted within said head for applying pressure to said other roll, a pump within said head for supplying fluid under pressure independently to said motor and said fluid actuated mechanism, a support for the head, and a power shaft associated with said support for driving said pump.

2,030,258
WIND SCREEN
Albert Knechi, Wien, Switzerland
Application November 12, 1934, Serial No. 752,725
In Germany January 17, 1934
2 Claims. (Cl. 20—40.5)



1. A wind screen for motor vehicles comprising a windshield proper, a transparent section arranged inwardly of and spaced from the windshield proper, means for introducing heated air into said space, the space between the windshield proper and said transparent section being provided with an outlet at at least one vertical edge to direct the escaping heated air from the space between the windshield proper and the transparent section into flowing contact with at least one of the side panels of the car, whereby to utilize such heated air to maintain such side panel or panels substantially dry and free of condensation.

2,099,818
INSECTICIDE SPRAYER
Albert R. Lavitt and Homer L. Pearson, Denver, Colo.
Application May 15, 1934, Serial No. 725,602
3 Claims. (Cl. 299—87)



1. A sprayer unit comprising: a vertical cylindrical pressure head; a blow pipe extending outwardly from said head; an atomizer carried at the outer extremity of said blow pipe; a suction pipe extending downwardly from said atomizer; a bracket member clamped about said pressure head and extending outwardly and downwardly therefrom; a receiving socket formed in said bracket member; a liquid container supported in said socket about said suction tube, said socket comprising: a band surrounding said container; and a hook member extending downwardly from said band and beneath said container.

2,099,899
MOTORIZED REDUCTION GEAR ASSEMBLY
Otto L. Lewis, Chicago, Ill., assignor to Foote Bros. Gear & Machine Co., Chicago, Ill., a corporation of Illinois
Application December 31, 1932, Serial No. 648,189
5 Claims. (Cl. 172—36)

5. A motorized transmission gear train assembly comprising a motor housing and a gear housing arranged end to end with the motor shaft and the gear shaft rigidly coupled in axial alignment, that end plate of the motor housing adjacent the gear housing provided with an annular series of ventilating openings and within the annulus an extension neck with a radially extending flange disposed intermediate its length to provide an interspace giving access to the ventilating openings, the end plate of the gear housing having a central opening about the gear shaft to receive and center the neck end, the adjacent faces of the flange and gear housing end plate having fitted contact, and securing bolts transfixing said flange and gear housing end plate, that portion of the gear housing surrounding the drive shaft provided with heat-radiating convolutions.

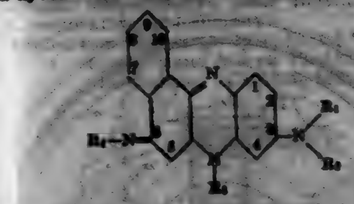
2,099,927
YARN CONTROLLING MEMBER
Vincent Lombardi, Garden City, N. Y., assignor to Lombardi Knitting Machine Co. Inc., New York, N. Y., a corporation of New York
Application July 11, 1935, Serial No. 633,751
Renewed March 4, 1933
15 Claims. (Cl. 66—131)

1. A knitting machine needle comprising a single unitary shank, a yarn receiving hook at only one end of said shank, and a cam operated butt on said shank projecting away from said shank in a direction at right angles to the plane of said hook, said butt being relatively close to said hook compared to a point on said shank halfway between the ends of said shank.

2,099,962
TRUSS OR BRIDGE
Thomas Maddock, Phoenix, Ariz.
Application January 27, 1936, Serial No. 425,772
5 Claims. (Cl. 14—16)

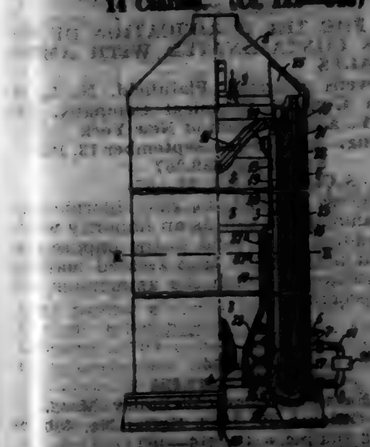
1. A continuous truss construction having an expanding and contracting panel consisting of crossed members, pin connected at their approximate center with two of the four ends of the crossed members directly pin connected to the chords and the other two ends pin connected to struts or ties with the other end of such struts or ties pin connected to diagonally opposite chord points, the entire panel and its connections permitting the ends of the truss to be fixed to their supports by providing internally in the truss for longitudinal variations in length due to temperature changes and stresses.

2,099,982
YIELDING SUPPORT FOR VEHICLES
George Anderson Mercer, Jr., Savannah, Ga.
Application December 12, 1932, Serial No. 647,521
5 Claims. (Cl. 280—124)



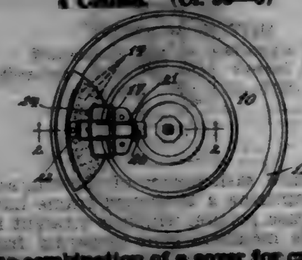
2. In a vehicular structure, the combination with an axle and a bolster above the same, said bolster comprising an H-beam having depending and upstanding flanges forming under and upper channels, of upward upstanding cylinders mounted on the axle, plunger sleeves telescoping the cylinders, springs housed by the sleeves and constituting yielding supports, connections between the plunger sleeves and the bolster engaged in the under channel of said bolster, and bearings against the underside of the web of the H-beam, means passing through the depending flanges

and securing the plunger sleeves to the bolster, and checks adjustably mounted in the upper bolster channel.



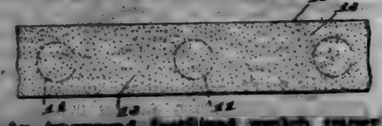
2,099,984
FAST COLORED LACQUER
Hans Neid and Wolfgang Jenck, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application November 17, 1931, Serial No. 575,632. In Switzerland November 25, 1930
3 Claims. (Cl. 134—79)

1. A fast-colored composition of matter consisting of a nitrocellulose lacquer which has been dyed with a sulfonic acid or an alkali salt thereof of a dyestuff of the general formula



wherein R_1=hydrogen, alkyl or aryl,
R_2=hydrogen, alkyl, aryl or aralkyl,
R_3=alkyl or aryl, and
R_4=aryl.

2,099,985
WATER TUBE BOILER
Johan Olsen Nygaard, Oslo, Norway
Application June 11, 1932, Serial No. 616,717
In Norway June 12, 1931
14 Claims. (Cl. 122—348)



1. A water tube boiler comprising a central combustion chamber formed inside a combustion chamber wall, a plurality of layers of boiler tubes surrounding the said wall and spaced therefrom to provide between the wall and the innermost tube layer a smoke gas passage connected with the outlet portion of the combustion chamber, collecting headers for the boiler tubes, the tubes of at least one tube layer being at an end mounted slidably in their headers, supports for the headers so arranged at either end of the tubes as to prevent the headers from being pressed apart from one another longitudinally of the tubes, and an exterior pulling member supporting in turn the said supports so as to receive as tensile stresses the forces tending to press apart from one another the headers at both ends of the boiler tubes.

2,099,986
VESSEL COVER
Harry L. Pollock, Wilkinsburg, Pa.
Application May 17, 1934, Serial No. 726,181
4 Claims. (Cl. 53—8)

1. The combination of a cover for culinary vessels having a perforated area adjacent its edge, of an auxiliary cover for normally closing the perforated area, a hinge joint, one leaf of the hinge being fixed to the main cover and its free end being bent to provide a hook, the other leaf of the hinge being fixed to the auxiliary cover, a spring member having one end pivotally connected to one leaf of the hinge joint and its other end being free and adapted to be held by the hook on the other leaf of the hinge joint when the auxiliary cover is in raised position.

2,099,987
FERTILIZED MULCH PAPER
Edward Ray Pratt, West Medford, Mass.
Application January 7, 1935, Serial No. 716
7 Claims. (Cl. 47—9)

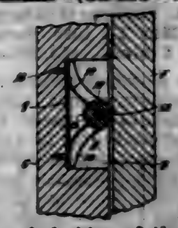
1. An improved fertilized mulch paper comprising in combination, a paper ribbon coated on one side with a prepared fertilizer, partially pierced disc members located at intervals along said ribbon.

2,099,988
SELF-WATERING SEED PAN
Fred T. Radley, Ceres, Calif.
Application September 27, 1934, Serial No. 745,747
3 Claims. (Cl. 47—33)

2. A self watering seed pan comprising as a unitary structure a seed pan, a water reservoir below the seed pan, and capillary columns extending from the seed pan to the reservoir, the upper edges of the body structure being flat and formed about three sides with an upstanding bead where-

by a flat ledge is left inwardly thereof and upon which a flat glass plate may be slid into support-

ing position on the ledge from the open side of the same and held in place by the beads.



2,030,269

WINDOW SASH HOLDER

Thomas T. Rocke, Hartford, Conn.

Application September 12, 1934, Serial No. 743,709

3 Claims. (Cl. 292—75)

1. A window sash holder of the character described comprising a U-shaped frame having an elongated base portion which is straight in cross section, side members bent upwardly from said base portion and integral therewith, a roller slidably mounted in said side members for holding the sash in frictional engagement with a window frame and single means consisting of a spring member having its ends slidable on the said base portion for applying both lateral yielding pressure to said roller and frictional resistance against rotation thereof.

2,030,270

LOOM FOR WEAVING

Rudolf Rossmann, Gauting, near Munich, Germany, assignor to firm Tefag Textil-Finanz A. G., Zurich, Switzerland

Application May 17, 1933, Serial No. 671,526

In Germany June 6, 1932

5 Claims. (Cl. 139—154)

1. A loom for weaving having a lay and shuttle boxes associated therewith, individual carriers for said shuttle boxes, a transverse support member mounted on said loom and supporting said carriers and having provisions adapted to render the position of said carriers adjustable with respect to said lay and in accordance with the width of the fabric to be woven.

2,030,271

RADIO APPARATUS

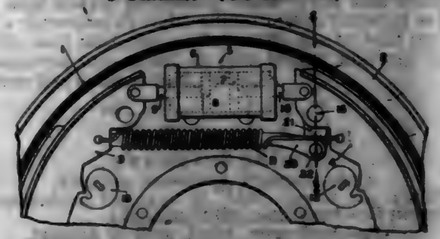
William A. Schaper, Chicago, Ill., assignor to Meissner Manufacturing Company, Chicago, Ill., a corporation of Illinois

Application March 6, 1933, Serial No. 659,710

9 Claims. (Cl. 175—41.5)

1. In a radio apparatus, a mounting base, a condenser mounted on each side of said base, each condenser having a plurality of plates, and a coaxial adjusting means for varying the axial distance between said plates to individually adjust said condensers.

4. A condenser unit comprising a base, a tubular stem mounted therein and projecting therefrom, said stem being internally and externally threaded, a condenser mounted on each side of said base, means engaging the internal threads of the stem for adjusting one of said condensers, and means engaging the external threads for adjusting the other condenser.



2,030,272

BRAKE ACTUATING MECHANISM

Steve Schnell, Overland, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware

Application January 26, 1934, Serial No. 708,241

3 Claims. (Cl. 188—78)

1. In braking apparatus, the combination of a drum, a friction element for engaging the drum and provided with a coiled spring connected to the friction element for retracting it from the drum, and means for moving the latter into engagement with the drum, said means comprising a rod extending through the coils of said spring.

2,030,273

PROCESS FOR THE PURIFICATION OF MATERIALS CONTAMINATED WITH AMMONIUM SALTS

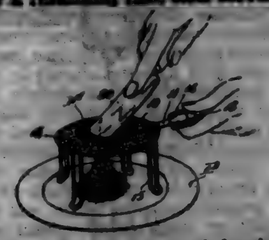
George Stevens Simpson, Plainfield, N. J., assignor to General Chemical Company, New York, N. Y., a corporation of New York

No Drawing. Application September 12, 1933, Serial No. 689,367

5 Claims. (Cl. 23—67)

1. The process of purifying zinc chloride containing an ammonium salt as an impurity which comprises adding nitric acid to the impure zinc chloride and heating the thus treated material at a temperature at which the ammonium salt therein is decomposed.

2,030,274



FOOD STRAINER

Marion Savage Stewart, Wellesley, Mass.

Application October 30, 1933, Serial No. 695,393

2 Claims. (Cl. 210—161)

1. A food strainer comprising a heavy piece of wire shaped to provide an annular support and a handle extending radially therefrom, spaced supporting legs comprising U-shaped pieces of wire having the ends welded to said annular support, and screening material welded to the lower edge of said annular support and providing a substantially flat and unobstructed screening surface surrounded by a retaining rim, said screening mate-

rial, legs and annular support having a heavy coating of a non-ferrous metal which fills in all crevices and recesses at the crossing points of the strands of the screening and at the junctions of the legs, support, and screening, thereby providing a smooth, continuous, rustproof surface free from recesses and food-collecting irregularities.

2,030,275

SHIELDING DEVICE

Paul Strehmel, Berlin-Steglitz, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany

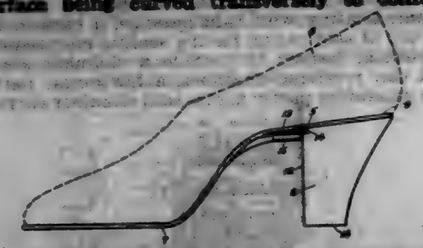
Application March 12, 1935, Serial No. 10,639

In Germany March 10, 1934

14 Claims. (Cl. 123—169)

1. A shielding device for attachment to spark plugs having a hexagon comprising, an outer cylindrical metal sleeve the diameter of which is less than the otherwise diameter of the hexagon of said spark plug, one end of said sleeve forming a hexagon arranged for placing said sleeve over the hexagon of said spark plug, parts in said hexagon on said sleeve for receiving the edges of said spark plug hexagon upon rotating said sleeve thereon, an inner sleeve disposed in said outer sleeve, and a screw joint at the other end of said outer sleeve for clamping said device onto said spark plug hexagon by means of said inner sleeve.

2,030,276



SHOE CONSTRUCTION

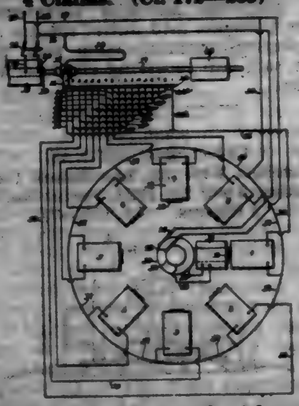
Ernst J. Story and John M. Delaney, Cincinnati, Ohio

Application October 24, 1932, Serial No. 639,506

1 Claim. (Cl. 36—34)

A one-piece wooden high heel comprising a body having a dished upper face and including a high substantially flat and vertical breast bounded at its upper end by a curved slot cut horizontally into the body of the heel, the opposite ends of said slot terminating in the sides of the body below the top edges thereof, at a higher elevation than the lowest point on the dished upper face, an extension on the heel body, forming part of the dished upper face of the body, and extending forwardly substantially at right angles to the plane of the breast, said extension having a curved under surface which is a straight-forward continuation of one wall of the slot, said surface being curved transversely to conform

substantially with the curvature of both the slot and the dished upper face, to provide substantially a curved knife-edge on the extension, all points of which edge are located in a plane substantially parallel to the plane of the breast.



2,030,277

TORQUE MOTOR

Eugene S. Taylor, Chicago, Ill.

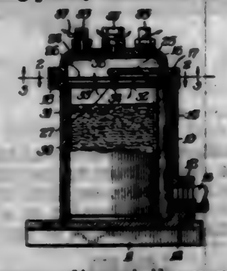
Application April 8, 1935, Serial No. 15,143

4 Claims. (Cl. 172—239)

3. A machine for doing work at low speed and high torque, comprising relatively movable members of which a member comprises a series of electrically energizable elements all having the same polarity when energized, another member having an electrically energizable element so arranged as to have a polarity when energized opposite to the polarity of the first mentioned elements when energized, said element being so constructed and arranged as to have a continuous supply of electric current independent of the supply of current in the said other elements, a circuit control means comprising a series of circuit closing contacts and circuits so arranged and connected as to correspond with the said other elements, and a circuit closing means so constructed and arranged as to successively contact said contacts for successively energizing the said other elements in either direction of the series thereof and for effecting relative and regular movement of said members with torque serially of the said other elements in accordance with the energizing thereof.

2,030,278

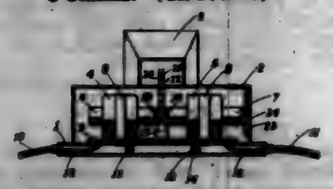
FERTILIZER MIXER AND SPREADER



Ward Thorne, Chicago, Ill.

Application September 9, 1932, Serial No. 632,746

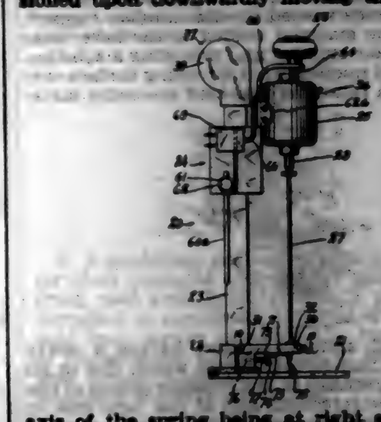
3 Claims. (Cl. 259—24)



2. A fertilizer mixing device comprising a casing having bottom and side walls defining a

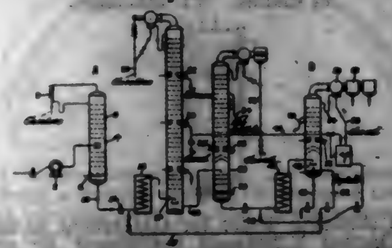
central can receiving chamber, an upwardly extending fluid passage formed in the wall of said casing, externally of said chamber, and an inlet opening in said casing at the bottom thereof communicating with said passage, a closure for the top of said casing having sealing engagement therewith, formed to provide a chamber above said can receiving chamber, a horizontal partition extending partly across said chamber carried

by said closure adjacent the upper end of said upwardly extending passage and defining a transverse passage communicating with said upwardly extending passage, a downwardly extending baffle on said partition partially interrupting said transverse passage, and outlet means in the top of said closure communicating with the chamber above said can receiving chamber formed by said closure.



2,030,279
ELECTRIC SIGNAL
Francisco Toscano, Las Banos, Calif.
Application April 23, 1934, Serial No. 721,968
3 Claims. (Cl. 177—7)

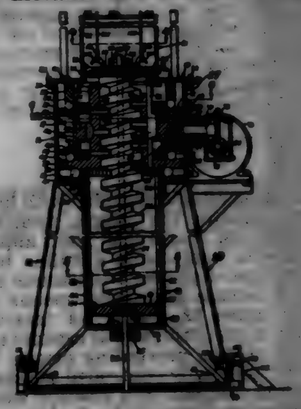
1. An electric signal comprising an electromagnet, a resilient arm of non-magnetic material extending radially of the magnet in overlapping but spaced relation to one end of the core of the magnet, means anchoring the end of the arm farthest from the magnet, an armature of magnetic material mounted on the arm and projecting radially of the magnet at right angles to the arm from the side thereof opposite the magnet core and normally spaced from the arm, and a horn having an opening adjacent its throat and through which the outer portion of the armature freely projects.



2,030,280
CLOTH DRILLING MACHINE
Joseph Vigliano, New York, N. Y.
Application November 19, 1935, Serial No. 50,529
14 Claims. (Cl. 164—86)

1. A cloth drilling machine, including a portable base, a standard secured on the base at one side thereof, a head movable along the standard, said head including a motor and a drill, the latter being disposed substantially centrally over the base, the base having an opening for the passage of the drill, manual means adjacent to the axis of the drill for exerting a downward pressure on said head for downwardly moving the drill, motor and drill, and means for automatically elevating said head, including a wound spring tensioned upon downwardly moving the head, the

axis of the spring being at right angles to the standard, as and for the purpose set forth.

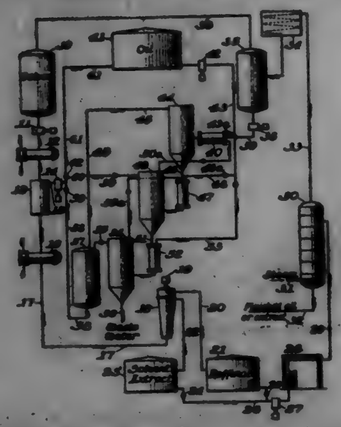


2,030,281
METHOD FOR FRACTIONATING PETROLEUM MIXTURES
George B. Coubrough, Long Beach, Calif., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware
Application December 23, 1933, Serial No. 703,592
11 Claims. (Cl. 196—94)

1. The method of fractionating a petroleum mixture containing gasoline and heavier materials which consists in adding to the mixture a quantity of unvaporizable asphaltic heat storage residuum, heating the entire mixture under pressure, passing the heated mixture into a column at substantially atmospheric pressure, the ratio of pressures on the mixture in the heater and in the column being small whereby the presence of the asphalt retards vaporization and prevents excessive reduction of temperature, vaporizing the more volatile constituents in said column and withdrawing a residue, passing the residue without further heating to a second column in which the pressure on the oil is greatly reduced with respect to the pressure in the first column whereby the presence of the asphalt residuum facilitates vaporization of oils as volatile as wax distillate, and withdrawing a mixture of heavy lubricating stock and asphalt as residue.

2,030,282
PUMP JACK
Walter E. Cunningham, Boulder City, Nev.
Application August 6, 1934, Serial No. 738,678
11 Claims. (Cl. 74—56)

1. In a pump jack, a supporting frame, a well on said frame, a bowl arranged above and communicating with said well, a cover on said bowl, a guard on said cover, said guard being hollow and said cover having a hole affording communication between the guard and the bowl, a sleeve in said bowl, anti-friction means to support said sleeve for rotation, a bevel gear mounted to rotate on said sleeve and having upwardly directed teeth thereon, a second bevel gear spaced from said first bevel gear and mounted to rotate on said sleeve and having downwardly directed teeth thereon, anti-friction means to support said bevel gears, a clutch housing between said bevel gears, said clutch housing including a portion keyed to said sleeve, a drive gear in constant mesh with both of said bevel gears, a pair of clutch members in said clutch housing, one of said clutch members coacting with said lower bevel gear to clutch said lower bevel gear to the sleeve and the other clutch member serving to clutch the upper bevel gear to the sleeve, a threaded stem disposed in said well and said bowl and movable into and out of said cover,



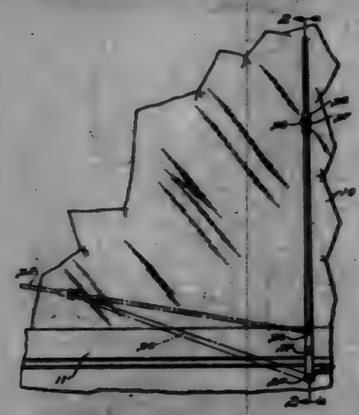
thread members in said sleeve engaging the threads of said threaded stem, said threaded stem having a disk thereon at the lower end thereof movable in said well, means to prevent rotation of said disk and said threaded member, said last mentioned means being disposed in said well, a cap on the upper end of said threaded member, a counter-weight attached to said cap, a clutch actuating member slidably mounted in said clutch housing, said clutch actuating member projecting beyond the clutch housing at each end thereof and having a roller at each end, said clutch operating member when in raised position being adapted to clutch said upper bevel gear to said sleeve and when in lowered position being adapted to clutch the lower bevel gear to said sleeve, the upper roller of said clutch actuating member when in upper position engaging said cap to shift the clutch actuating member and the lower roller on said clutch actuating member when in lowered position engaging said disk to shift the clutch actuating member.

2,030,283
CATALYST AND PROCESS FOR THE DECOMPOSITION OF HYDROCARBONS
Frank J. De Rosset, Caldwell, N. J., assignor to Atmospheric Nitrogen Corporation, New York, N. Y., a corporation of New York
No Drawing. Application April 13, 1931, Serial No. 530,797
17 Claims. (Cl. 23—212)

1. A catalyst active in promoting the reaction of methane and steam and comprising palladium, magnesium oxide and an oxide of cerium.

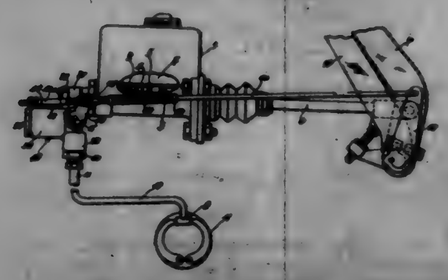
2,030,284
SOLVENT RECOVERY IN OIL EXTRACTION PROCESSES
Sterling H. Biggs, Casper, Wyo., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application February 23, 1933, Serial No. 658,037
8 Claims. (Cl. 196—13)

1. In a process for separating a petroleum oil into a plurality of components by the selective solvent action of beta beta dichlorethyl ether wherein the oil is intimately mixed with said ether, and the dichlorethyl ether phase is separated from the oil phase, the method of removing the dichlorethyl ether from one of said phases, which comprises heating said phase to a temperature of about 300–325° F., stripping said heated phase with steam for removing practically all of the dichlorethyl ether therefrom, condensing said steam, mixing said steam with oil which is to be extracted, and separating final waste water from oil which has absorbed the dichlorethyl ether from the water.



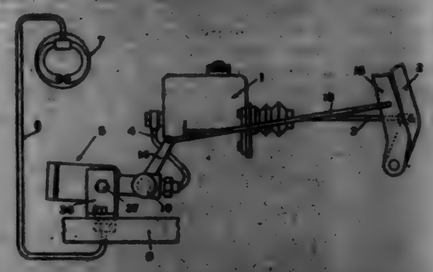
3. In apparatus of the class described, means for extracting oil with dichlorethyl ether and for separating a raffinate phase from an extract phase, means for steam distilling dichlorethyl ether from each phase, means for condensing said stripping steam, and means for contacting said condensed stripping steam with oil to be extracted, whereby said oil absorbs the dichlorethyl ether from the condensed stripping steam.

2,030,285
CAUTERIZING INSTRUMENT
George Dreyer, St. Louis, Mo.
Application October 26, 1934, Serial No. 749,720
1 Claim. (Cl. 219—31)



A cauterizing instrument comprising a handle, a tip secured in one end of said handle, a cauterizing point removably fixed in said tip, said point comprising a hollow metallic member, and a tubular heating coil disposed therein in contact with the inner wall of said member, and an auxiliary point disposed over and in contacting relation with said hollow metallic member, and suitable electric conductors connected to said coil and passing through the handle.

2,030,206
WINDSHIELD WIPER MECHANISM
Robert B. Evans, Grosse Pointe, Mich., assignor to E. H. Evans & Sons, a corporation of Michigan
Application April 23, 1934, Serial No. 721,882
5 Claims. (Cl. 15—255)

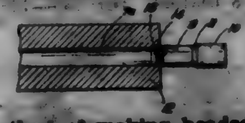


3. In combination, a windshield, a frame for said windshield, a support for said frame, a bearing sleeve mounted on said support adjacent said frame, a rock shaft journaled in said bearing sleeve, motor means operatively connected to one end of said rock shaft for rotatively oscillating said shaft, a resilient blade operating arm connected at one end to the remaining end of said rock shaft for oscillation thereby, a wiper blade, means for pivotally and loosely connecting one end of said blade directly to the frame of said windshield within the vertical limits of the adjacent portion of said frame, resilient means supported by said pivotal means for biasing the pivoted end of said wiper blade against said windshield and means for slidably connecting the outer end of said blade operating arm to said wiper blade.

2,030,227
BRAKE CONTROL MECHANISM
Walter R. Freeman, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application April 8, 1935, Serial No. 15,238
15 Claims. (Cl. 192—13)

1. In a motor vehicle provided with brakes and means for applying the brakes, means for preventing release of the brakes from applied position notwithstanding the applying means permits release thereof, said release preventing means comprising manually-controlled means and independently operable gravity controlled means, said gravity-controlled means being capable of assuming a position other than the position preventing release of the brakes wherein the brakes may be freely applied and released even though the manually-controlled means is in release preventing condition.

2,030,235
BRAKE CONTROL MECHANISM
Walter R. Freeman, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application June 13, 1935, Serial No. 26,077
11 Claims. (Cl. 192—13)



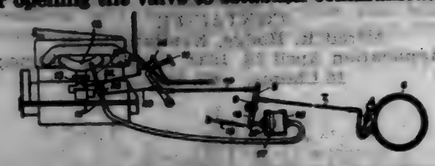
1. In a motor vehicle provided with brakes and means for actuating the brakes, means for preventing release of the brakes from applied position, said means comprising a rolling ball which under the action of gravity will assume a position causing said release preventing means to be effective and under the action of inertia during deceleration of the vehicle will assume a position causing said release preventing means to be ineffective, and manually controlled means for positively holding said ball in a position wherein the release preventing means is ineffective.

2,030,239
DRINKING FOUNTAIN APPARATUS
Alphons G. Haws, Berkeley, Calif.
Application May 10, 1933, Serial No. 670,223
4 Claims. (Cl. 299—15)

1. In a drinking fountain apparatus, a bowl, a head member with a liquid discharge passage therethrough and a by-pass with an outlet spaced from the outlet of the first passage, and a guard opposite the portion of the head containing the by-pass outlet and declining with the head a restricted space therebetween for the flow of liquid from the by-pass, the axis of the by-pass at its orifice being downwardly inclined with respect to the surface of the guard against which the liquid stream will impinge on discharging from the by-pass whereby the stream will be deflected from the guard for substantially direct flow to the bowl.

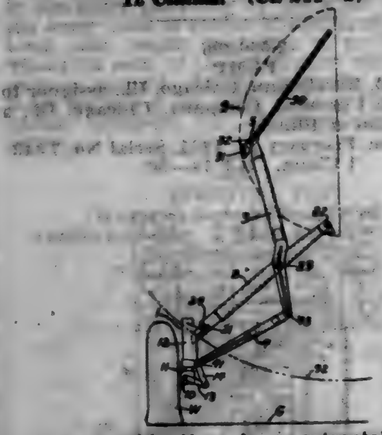
2,030,300
METHOD AND APPARATUS FOR MAKING HEADED BLANKS AND RESULTANT ARTICLE
John H. Friedmann, Tiffin, Ohio, assignor to The National Machinery Company, Tiffin, Ohio, a corporation of Ohio
Application July 11, 1932, Serial No. 622,963
22 Claims. (Cl. 10—27)

1. The method of making headed blanks for bolts and analogous screw-threaded articles which includes the following steps: extruding a portion of a length of stock to form a blank having a threading portion of reduced diameter and a head portion, the blank resulting from such extrusion having an annular portion at the joint between the head portion and said extruded portion, upsetting the head portion to form a head, and subjecting the headed blank to a further extrusion operation to reduce said annular portion to the diameter of the said extruded portion.



2,030,291
REFRIGERATOR CONSTRUCTION
Warren C. Fuller, Mansfield, Ohio
Application September 28, 1934, Serial No. 745,439
3 Claims. (Cl. 62—38)

1. In a refrigerator comprising a cold chamber, a compartment formed in a wall thereof, a reservoir of smaller size than the compartment mounted therein and having a surface thereof disposed in an opening in the compartment wall so as to be exposed to the cold chamber, said compartment wall being formed with a series of apertures disposed about the reservoir to permit convection currents to circulate therethrough, and means for withdrawing liquid from the reservoir to the exterior of the refrigerator.

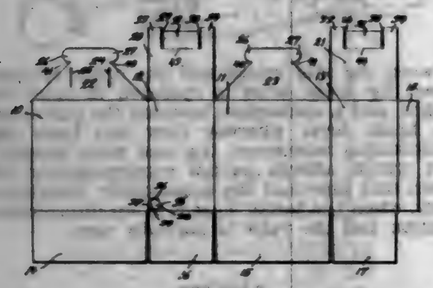


2,030,292
BRAKING APPARATUS
Martin Guglielmo, Dilliner, Pa.
Application November 21, 1934, Serial No. 754,188
2 Claims. (Cl. 188—153)

1. The combination with a vehicle having an internal combustion engine that is provided with a throttle-controlled intake, a vacuum cylinder having a piston, a pipe connecting the cylinder to the said intake, a valve controlling flow through said pipe, braking apparatus for a vehicle, a manually-operable brake lever for applying the brakes, an operative connection between said piston and the braking apparatus, a spring normally maintaining the said piston and apparatus in brake-release position, these parts being so proportioned that in the presence of a vacuum condition in the cylinder, the piston will hold said apparatus in a braking position that is dependent upon the degree of vacuum in the cylinder, a connection between the brake lever and said valve, for opening the valve to establish communication

between the said intake and the brake cylinder, when the brake lever is operated to apply the brakes, and a connection between the piston and the brake lever whereby they can have only synchronous movement, the said valve having a port which affords partial communication between said pipe and the atmosphere, simultaneously, when the brake lever is in an intermediate position and the valve is partially open.

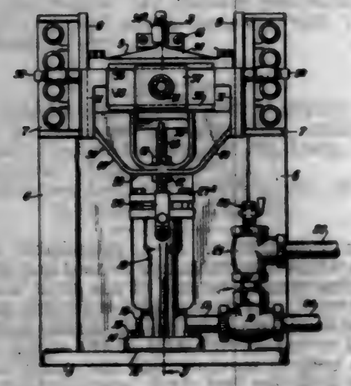
2,030,293
RETRACTABLE LANDING GEAR FOR GEARED PROPELLER AIRPLANES
John F. Haberlin, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash., a corporation of Washington
Application July 24, 1934, Serial No. 736,893
12 Claims. (Cl. 244—2)



1. In combination, in a retractable landing gear, a wheel mounting, two crossed and pivotally connected struts, one end of one strut being fixedly pivoted, and its opposite end being pivotally secured to the wheel mounting, means connecting an end of the second strut to the wheel mounting, to control movement of the latter in cooperation with the first strut, and means for moving the opposite end of the second strut away from the wheel mounting to swing the first strut and the wheel mounting upwardly.

2,030,294
STAIN COVER
Lee L. Hazel, Portland, Oreg.
No Drawing. Application January 15, 1935, Serial No. 1,953
1 Claim. (Cl. 134—79)

A composition adapted to form a permanent and non-crackable surface treatment particu-

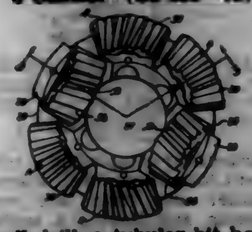


larly adapted to cover stains and to form a permanent cover thereover, comprising: peotiasak gum, resin, denatured alcohol, celluloid scrape, methyl acetone, benzol, castor oil, lithopone, and ultra-marine blue.

2,030,295
CONTAINER
Alfred R. Hedge, Kenilworth, Ill.
Application April 26, 1933, Serial No. 667,966
16 Claims. (Cl. 229—17)

16. A carton or box having a plurality of hinged flaps at one end to form a closure for the box, and extensible to form a tapered discharge spout with a restricted opening, the flaps having interengaging means to hold them together in forming the spout.

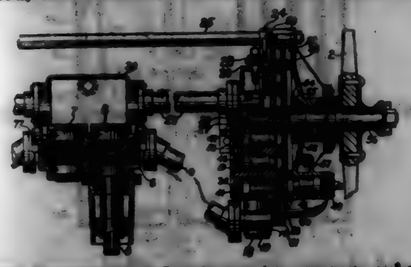
2,030,296
PUMP
Frederick B. Herstmann, Chicago, Ill., assignor to Dearborn Chemical Company, Chicago, Ill., a corporation of Illinois
Application February 28, 1935, Serial No. 7,343
1 Claim. (Cl. 74—59)



In a pump of the kind described, the combination of a cross head having top and bottom recesses separated by a rail member, shoes formed at either side of the cross head for sliding engagement with associated guide rails, a detachable cap closing the top end of the upper recess and formed to provide a rail member extending parallel with the first mentioned rail member, means for securing the cap to the shoes, and a bridge piece for closing the bottom of the lower recess, the ends of said bridge piece directed upwardly and outwardly and terminating at the lower ends of the associated shoes.

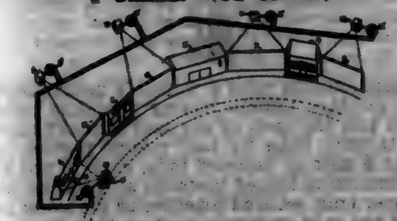
2,030,297
CORE CATCHER
John H. Howard, Huntington Park, and Alfred C. Catland, Alhambra, Calif., assignors to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Original application August 7, 1933, Serial No. 684,015. Divided and this application February 2, 1934, Serial No. 705,661
8 Claims. (Cl. 255—72)

8. A core catcher including a body having an opening for passing a core and a plurality of circumferentially spaced rigid dogs pivoted on the body in a common horizontal plane for engaging the core, some of the dogs being adapted to project a relatively short distance into the opening to bite into a core of large diameter, other dogs being adapted to project a greater distance into the opening to bite into a core of smaller diameter, the short dogs being spaced between the longer dogs.



2,030,298
CORE DRILL HEAD
John H. Howard, Huntington Park, and Alfred C. Catland, Alhambra, Calif.; said Catland assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Original application May 25, 1934, Serial No. 727,499. Divided and this application December 15, 1934, Serial No. 757,692
3 Claims. (Cl. 255—72)

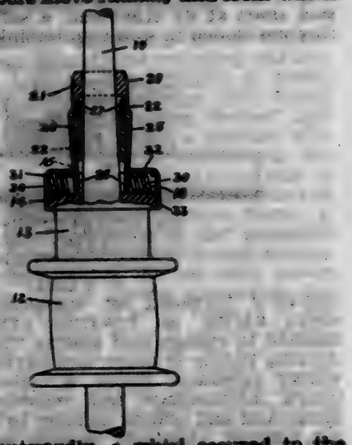
1. In a well drill, a tubular bit head, two substantially diametrically opposite cutters mounted on the lower end of the head to rotate about downwardly and outwardly inclined axes, spiralled cutting parts on the cutters, the cutting parts of one cutter being spiralled in one direction and the cutting parts of the other cutter being spiralled in the other direction, pairs of cutters mounted on the lower end of the head between said two cutters to rotate about downwardly and inwardly inclined axes, one cutter of each pair having straight axial cutting teeth, the other cutters of the said pairs having spiralled cutting parts.



2,030,299
HYDRAULIC TRANSMISSION
Robert K. Jack, Lansing, Mich.
Application March 6, 1934, Serial No. 714,223
5 Claims. (Cl. 60—52)

1. In a fluid pressure power transmitting apparatus, the combination with a force pump, of a rotor having eccentric circular grooves, a central shaft for the rotor, a rotor housing comprising separable members provided with shaft bearings, a tube valve, a tube valve casing carried by the rotor housing in radial position, means communicating with the pump and valve, means for operating said valve from a distance, said valve having spaced ports, a plurality of hollow drive plugs, one for each groove, arranged in said housing at different distances from the center and having springs normally holding said plugs retracted, said housing having driving ports lead-

ing from each drive plug to a rotor groove and said drive plugs having ports registering with the driving ports of said housing, said housing having passages for connecting the valve ports and driving ports, said drive plugs being adapted to be moved by fluid pressure into the said rotor grooves, a fixed power transmitting stop block located in each rotor groove and constructed to retract said plugs against pressure, said housing having exhaust ports communicating with said rotor grooves and an exhaust channel common to said ports and having an external opening.



2,030,300
COMPOSITE PHOTOGRAPHY
Fred W. Jackman, Beverly Hills, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y., a corporation of Delaware
Application October 25, 1933, Serial No. 695,118
4 Claims. (Cl. 88—16)

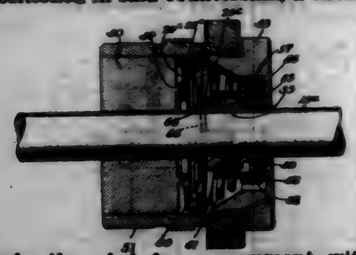
1. The method of photographically producing a composite picture which comprises simultaneously projecting motion pictures representing supplementary portions of a background scene onto a series of different translucent screens materially separated to provide spaces for correlated portions of actual scenery, said screen scenes and scenery forming a large background area for continuous foreground action and synchronously therewith photographing said screens and said portions of actual scenery sequentially while said foreground action takes place in front thereof.

2,030,301
BOBBIN CLUTCH FOR ROTATABLE SPINDLES
John Frederick Jackson, Pawtucket, R. I., assignor to H & B American Machine Company, Pawtucket, R. I., a corporation of Maine
Application January 11, 1935, Serial No. 2,542
4 Claims. (Cl. 242—54.7)

1. A rotatable spindle comprising a blade, a plurality of clutch members positioned symmetrically around the blade and extending longitudinally and angularly movable radially thereof, and presenting outer surfaces for engaging the bobbin and inner surfaces having fulcrumed engagement intermediate their ends with the blade, a sleeve concentric with the blade and secured at its upper end thereto and having a plurality of longitudinal slots fitting the bobbin clutching members and within which slots the bobbin clutching members move radially and from which

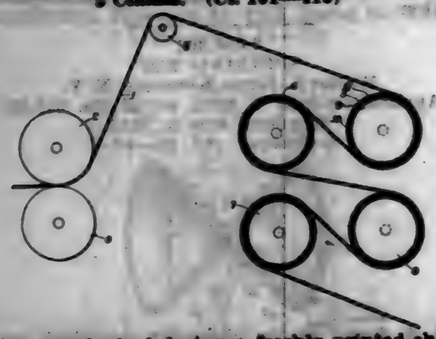
they project outwardly, a whirl secured to the blade having a plurality of slots in its upper face and extending radially outward from the blade to the outer periphery of the whirl into which the lower ends of bobbin clutching members extend, and means including a spring located wholly in each of the whirl slots whereby pressure is applied radially inwardly against the outer surface of the lower ends of the respective clutch members for effecting the clutching action.

2,030,302
SPINNING TOP
Walter L. Jones, Kenmore, N. Y.
Application May 9, 1933, Serial No. 670,080
Renewed July 6, 1935
5 Claims. (Cl. 46—69)



1. A device of the character described, comprising a rigid open-ended, spool-like body having openings therein, and hollow rubber heads applied to and enclosing the open ends of said body and having portions extending through and interlocking with said body-openings.

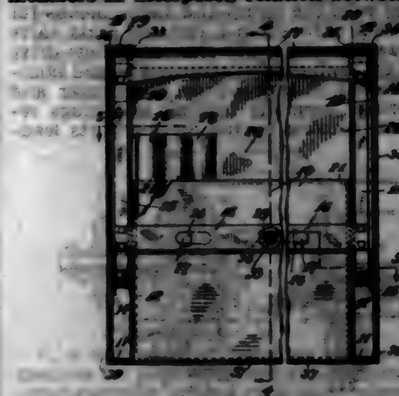
2,030,303
SEAL FOR ROTARY ENGINES
Herbert E. Kempton, Chicago, Ill., assignor to Tuthill Pump Company, Chicago, Ill., a corporation of Illinois
Application November 18, 1931, Serial No. 575,693
3 Claims. (Cl. 230—11)



1. In combination with a device of the character described comprising a casing having a hollow cylindrical portion and a shaft extending therethrough, a detachable tubular member adapted to be secured in said hollow portion a sleeve bearing positioned in the inner end of

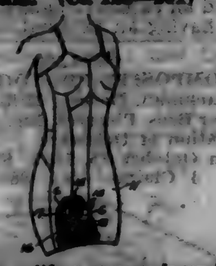
said tubular member through which the shaft extends, an annular sealing member surrounding said shaft within said tubular member and having a lapped surface engaging a correspondingly lapped surface on said bearing, an annular flexible diaphragm having its outer edge secured to the periphery of the sealing member, an externally threaded sleeve fitted tightly on said shaft and secured at one end to the inner edge of said diaphragm, said sleeve being countersunk around said shaft at its other end, a soft metal sealing ring positioned in said countersink, a tubular nut

interiorly threaded for engagement with said sleeve having an inwardly extending flange adapted to engage said sealing ring for securing the ring tightly in place, and having also an outwardly extending flange, a coiled spring positioned intermediate said outwardly extending flange and said sealing member to hold said sealing member yieldingly against said bearing, a felt ring surrounding said shaft adjacent said inwardly extending flange, and a cap member screw threaded into said tubular member and having an end wall engaging said felt ring.



2,039,264
PRINTING
Theodore R. Knowlton, New York, N. Y.
Application July 30, 1931, Serial No. 551,918
5 Claims. (Cl. 101—416)

3. A method of drying a freshly printed sheet comprising providing a cylinder having a perforated periphery, facing the cylinder with a foraminated layer having an irregular uneven surface, circumvolving the freshly printed sheet over the cylinder with the freshly printed side in contact with the foraminated layers, and ejecting a drying means through the perforated cylinder against the freshly printed sheet.

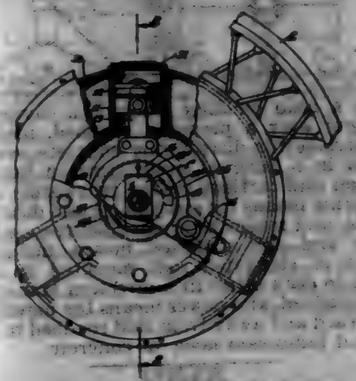


2,039,265
ACCESSORIES CONTAINER
Edwin H. Koehler, New York, N. Y.
Application December 19, 1929, Serial No. 765,629
17 Claims. (Cl. 220—41)

1. In a device of the character described, in combination, a casing having an open end and a closed end, a pair of spaced parallel endless flexible members guided within said casing for longitudinal traveling movement therein, a cover carried by said members capable of movement across the open end of said casing for opening and closing the latter, an article carrier carried by said members in interposed relation between the lat-

ter and capable of longitudinal movement within said casing, including movement beyond said flexible members toward the closed end of said casing, and exterior operating means capable of moving said members concomitantly.

2,039,266
ATTACHMENT FOR WOMEN'S GARMENTS
Mary Evelyn Lain, San Francisco, Calif.
Application June 9, 1934, Serial No. 729,786
1 Claim. (Cl. 128—291)



In combination with a woman's undergarment and a sanitary napkin having a middle padded portion and the ends of the said sanitary napkin being thinner than its said middle padded portion; of a pair of opposed tabs, each of the said tabs comprising looped material and having their two upper ends secured together to the lower portion of the said undergarment so that the lower end of the tabs hang freely therefrom and being of such length that the lower ends of said tabs are spaced from each other when bent toward the middle curvature of the crotch, eyelets so spaced from the free end of each tab to be overlapped by the respective thinner ends of the napkin and to accommodate pins extending through the overlapping ends of the napkin and the said eyelets to hold the tabs and the padded portion of the napkin as a contiguous unit conforming to said curvature of the crotch.

2,039,267
MANUFACTURE OF FOUR POINT DEPRESSORS
Frederick H. Maclaggan, Calumet City, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application April 19, 1935, Serial No. 16,998
16 Claims. (Cl. 87—9)

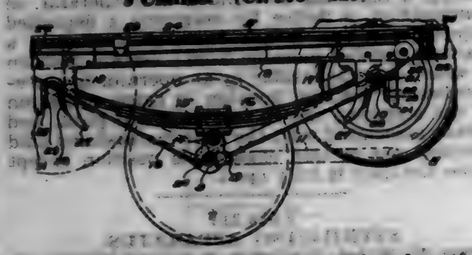
1. The improvement in the preparation of four point depressors of the condensation type pre-

pared by the chemical condensation of a chlorinated hydrocarbon with an aromatic hydrocarbon in the presence of aluminum chloride, which comprises separating the chlorinated hydrocarbon into a fraction comprising substantially monochloro derivatives of the chlorinated hydrocarbon, and a fraction comprising substantially dichloro derivatives of the chlorinated hydrocarbons and chemically condensing the latter with an aromatic hydrocarbon in the presence of aluminum chloride.

2,039,268
HYDRAULIC BRAKE
Howard E. Marsh, Ventura, Calif.
Application October 2, 1933, Serial No. 691,796
5 Claims. (Cl. 188—91)

1. In a mechanism of the class described, a revoluble member, a support therefor, a cylinder mounted on one of the former, a bearing mounted on the other of the former at the central portion of the revoluble member, a piston reciprocally mounted in the cylinder, means mounted on the bearing and operatively connected with the piston, reservoir means connected with said cylinder, a valve for controlling the flow of fluid between the reservoir means and the cylinder, and means for shifting said bearing transversely with respect to the axis of the revoluble member and also operating said valve, the latter means being so constructed and arranged that said bearing is shifted transversely to a large extent before said valve is materially operated.

2,039,269
CURTAIN FIXTURE
Marie Martinez, Memphis, Tenn.
Application January 22, 1934, Serial No. 707,891
4 Claims. (Cl. 156—23)



1. A curtain fixture consisting of a single piece of material formed U-shape, and terminating at each end in pivot eyes, and hooks formed on the parallel arms of said U-member.

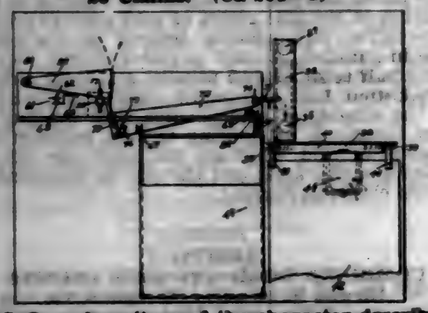
2,039,310
APPARATUS FOR DESTROYING INSECTS
Leigh B. McWilliams and Lyle V. McWilliams, Whittier, Calif.
Application November 21, 1933, Serial No. 699,000
2 Claims. (Cl. 43—112)

1. An apparatus for destroying insects including a positive sheet metal frame including end and side plates and adapted to be placed in direct circuit with a source of electricity, said frame having flanges on the end plates thereof and spaced notches in its side plates, a positive wire winding secured in the spaced notches so the strands thereof extend parallel and from side to side of said frame and arranged to be charged with electricity through said positive frame, a negative metal frame secured to but insulated from and normally out of circuit with said positive frame and having flanges on the side plates thereof and also having spaced notches in the side plates thereof that are offset relative to the notches in the side plates of said positive frame, a negative wire winding secured in the offset spaced notches of said negative frame so the strands thereof extend parallel and from side to side thereof and also parallel and offset relative to the strands of said positive wire winding so that insects in attempting to pass between the strands of said windings will close the circuit between said frames and thereby be electrocuted by the electrical current.

2,039,311
COMBINED ROAD AND RAIL VEHICLE
Kirwan Y. Messick, Clarendon, Va.
Application February 20, 1934, Serial No. 712,183
9 Claims. (Cl. 105—215)

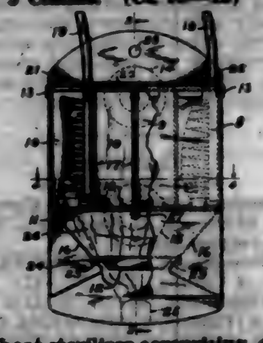
1. The combination with a vehicle, of a set of track wheels therefor and a set of ground wheels therefor, a frame by which all of said wheels are carried, and means for shifting said frame bodily longitudinally with respect to the vehicle body to thereby bring either of said sets of wheels to a common operative position, and means for supporting the vehicle body from the set of wheels moved to such operative position.

2,039,312
FIREARM SIGHT
Iver O. Mosberg, West Haven, Conn., assignor to O. F. Mosberg & Sons, Inc., New Haven, Conn., a corporation
Application May 5, 1933, Serial No. 669,564
2 Claims. (Cl. 33—47)



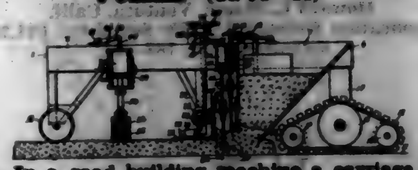
1. The combination with a firearm barrel provided with a transverse interlocking groove; of a key-member located within and interlocked with the said groove; a body-member having a trans-

versely-concaved under side resting upon the surface of the said barrel; and clamping-means extending between the said key-member and the said body-member and acting to bind the latter



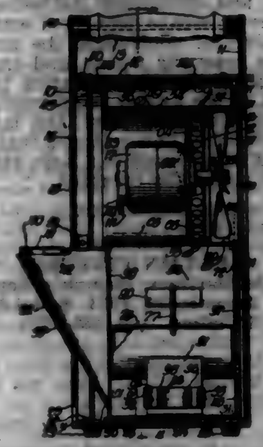
upon the periphery of the said barrel; the said body-member and key-member being formed to provide a coacting socket and projection for locating said body longitudinally and circumferentially of the barrel.

2,030,313
DEPOSITORY
John J. Murtaugh, Jr., Floral Park, N. Y., assignor to Mosler Safe Co., Hamilton, Ohio, a corporation of New York
Application October 3, 1934, Serial No. 746,645
20 Claims. (Cl. 234—1)



13. In a depository of the character described, having a receiving slot and a door therefor, in combination, a device for stamping a deposited object, operating means therefor, including a starting member movable from a certain position in which it is engageable by an operator to a predetermined starting position to cause operation of the stamping device to stamp a deposit, and means associated with the door maintaining said member out of said engageable position except when the door is fully open.

2,030,314
STERILIZING APPARATUS
James E. Myers, Whitefish Bay, and William F. Simonson, Milwaukee, Wis.
Application February 3, 1934, Serial No. 709,588
5 Claims. (Cl. 99—18)

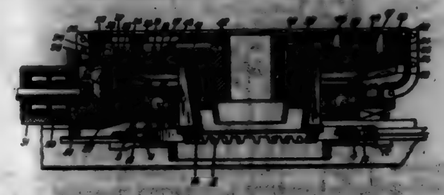


4. A dry-heat sterilizer comprising, a main casing having a lower heat distributing chamber and a series of segregated compartments extending upwardly from said chamber, a screen interposed between the top of said chamber and the lower ends of said compartments, a baffle plate at the bottom of said chamber spaced from the side walls thereof, and means for applying heat to said chamber around the edges of said plate remote from said screen.

2,030,315
RODDING AND TAMPING MACHINE FOR CONCRETE
Robert James Noble, Glendale, Calif.
Application February 20, 1933, Serial No. 657,499
6 Claims. (Cl. 94—44)

1. In a road building machine a carriage for movement over a prepared roadbed, means on said carriage for distributing concrete over said roadbed in a layer of predetermined thickness, means on said carriage spaced rearwardly of said distributing means for striking off said distributed concrete, and means interposed between said distributor and said strike-off means including a plurality of elongated rods mounted in spaced relation to each other in a direction transversely of said roadbed, and power means for moving said rods toward and away from said roadbed to penetrate and tamp said layer of concrete.

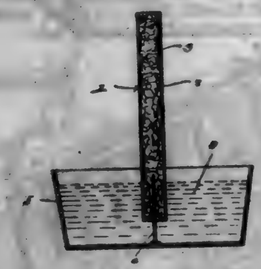
2,030,316
AIR CONDITIONING DEVICE
Fred M. Opitz, Milwaukee, Wis., assignor to Herzel Radiator Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 4, 1933, Serial No. 693,164
20 Claims. (Cl. 219—39)



1. In a portable air conditioning device, a water receptacle, a heating element in direct thermo-conductive contact with the water in said receptacle and sealed in said receptacle, an air inlet for said receptacle, a fan mounted in the upper portion of said receptacle and enclosed within an annular casing communicating with said receptacle, and automatic means for controlling the operation of said heating element and fan responsive to the water level in said receptacle.

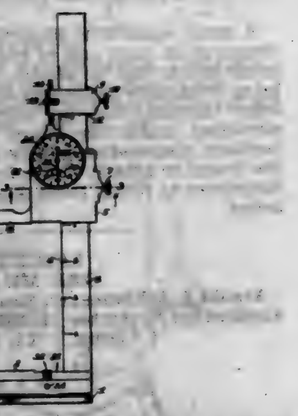
2,030,317
MACHINE FOR THE PRODUCTION OF KNITTED FABRICS
John Archibald Phillips, Nottingham, England
Original application May 3, 1930, Serial No. 449,646, now Patent No. 1,910,932, dated May 23, 1933. Divided and this application July 13, 1931, Serial No. 550,573. In Great Britain May 7, 1929
7 Claims. (Cl. 66—25)

1. A machine for the production of ribbed knitted fabric having two sets of needles which draw their loops in opposite directions, thread feeding means for feeding a ground and a plating thread to said needles, cams for operating the needles of one set to knit the ground and plating threads and the needles of the other set to knit the said ground thread and to receive the said plating thread over their latches and means for subsequently displacing the needles of the second set to cause the said plating thread to take up a position below the said latches to be cast off with the old loops on the said needles.



2,030,318
WELL BORING APPARATUS
Albert Prenger and Burwell Bayliss, Jr., Beaumont, Tex., assignors, by mesne assignments, to International-Stacey Corporation, Columbus, Ohio, a corporation of Ohio
Application June 1, 1931, Serial No. 541,466
3 Claims. (Cl. 145—23)

1. A make-and-break rotary comprising a rotatable table, a spider, means for driving said rotatable table, an oil bath housing partially enclosing said rotatable table and projecting partially across the top thereof, a skirt on said rotatable table, and an annular trough entirely within said housing and so disposed as to cooperate with said skirt for conducting foreign matter thereinto, said annular trough having ports leading therefrom.

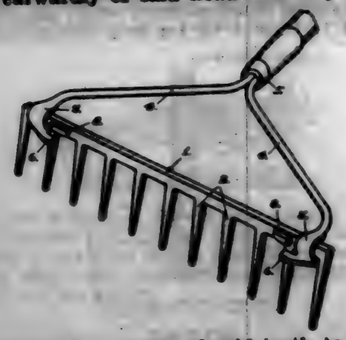


2,030,319
CIGARETTE AND METHOD OF MAKING THE SAME
Arthur F. Rembert, Irondequoit, N. Y.
Application January 31, 1934, Serial No. 709,181
1 Claim. (Cl. 131—58)

The herein described method consisting in partly inserting a pin in one end of a cigarette, then inserting that end of the cigarette containing the pin in a receptacle having a flat bottom to a point where the outer end of the pin will rest on the bottom, whereby said end of the cigarette is spaced from the bottom, said receptacle containing liquid material which will solidify when dry to form a tip for said one end of the

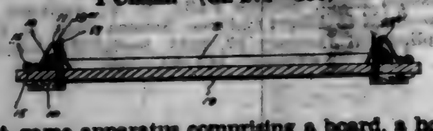
cigarette, the level of the liquid in the receptacle being below the end of the pin in the cigarette, then removing the cigarette, and finally removing the pin after the coating has solidified.

2,030,320
PRECISION INSTRUMENT
Massino Bicci, Seneca Falls, N. Y., assignor of one-half to Albert Caluros, Seneca Falls, N. Y.
Application January 27, 1934, Serial No. 708,633
2 Claims. (Cl. 33—147)



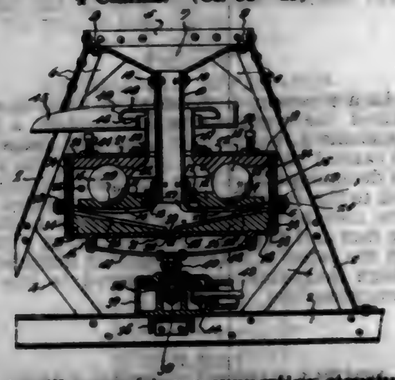
1. In a precision instrument of the character described, the combination with a stem, a fixed gauge element thereon and a movable gauge element carried thereby, of a rack bar on the stem, a low denomination dial on the movable element geared to the rack bar, a high denomination dial on the movable element calibrated in multiples of the first and provided with an opening through which the latter is readable, and an indicator on the high denomination dial geared to the low denomination dial.

2,030,321
DOUBLE ACTING GARDEN RAKE
Edward H. Rushlow, Arcadia, Calif.
Application October 24, 1934, Serial No. 749,770
2 Claims. (Cl. 55—16)



1. In a garden rake, a handle, arms extending outwardly from said handle, eyes at the outer ends of said arms, a rake head mounted to turn in either direction in said eyes, teeth depending from said head and stop members carried by

each of said eyes below the plane and forwardly and rearwardly of said head and in position to

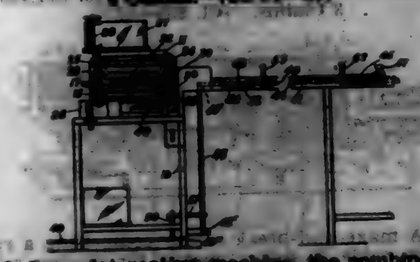


be engaged by certain of said teeth to limit the turning of the rake head in either direction.

2,030,111
GAME APPARATUS
Henry B. Scherer, South St. Paul, Minn.
Application June 22, 1935, Serial No. 28,937
1 Claim. (Cl. 273—1.07)

A game apparatus comprising a board, a hood structure at each end of the board within which game pieces can be stored, said hood structures being swingably connected to the board along one edge thereof, and an elongated elastic band stretched under the board and having its end portions disposed upwardly through openings in the board to attach to the free edges of the hood structures to retain them downwardly against the board.

2,030,323
ORE MILL
Arnold J. Schlumegger, San Bernardino, Calif.
Application November 11, 1932, Serial No. 642,226
4 Claims. (Cl. 83—45)



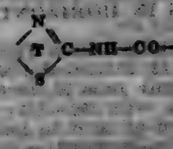
1. A mill comprising a supporting structure, a stationary member mounted on the supporting structure, a housing rotatably mounted on the stationary member and enclosing said stationary member, means for introducing the material into the housing, means in the housing for reducing the material, and flexible drive means for actuating the housing and permitting substantially universal movement of said housing relative to the stationary member, the last-named means comprising a resilient plate secured, at its ends, to the housing, a drive shaft, and means connecting the resilient plate to said drive shaft.

2,030,324
ACTUATING MEANS FOR CLOSURES, SUCH AS DOORS, LIDS, AND THE LIKE
Oscar C. Schmidt, Cincinnati, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a corporation of Ohio
Application May 27, 1935, Serial No. 23,512
5 Claims. (Cl. 16—73)

1. In actuating means of the character described, the combination of a bracket arranged to be secured to the wall of a closure opening, an arm arranged for shiftable connection with the closure, a helical spring extending lengthwise of the arm, a rod therein having pivotal connection at its outer end with said bracket, the outer end of said spring having abutment on said arm, the inner end of said spring having abutment on the inner portion of said rod, and a link having pivotal connections at its respective ends with the outer end of said arm and said bracket, the axis of said first-named pivot being normally at one side of the plane of the axes of said second-named pivots when the closure is closed.

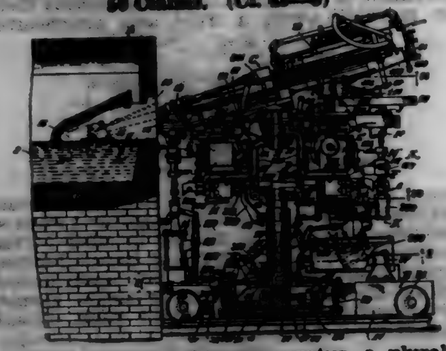
2,030,325
ROLLER COATING MACHINE
William E. Shelton, Los Angeles, Calif.
Application March 9, 1934, Serial No. 715,313
Renewed November 30, 1935
9 Claims. (Cl. 91—59)

1. In a slat coating machine, the combination of a frame; a face roller journalled on said frame, a feed roller journalled on said frame and frictionally engaged with said face roller for carrying coating material to the latter, supply means for carrying coating material to said feed roller; a companion face roller journalled on said frame, a feed roller journalled on said frame and frictionally engaged with said companion face roller, supply means for carrying coating material to said last mentioned feed roller, said face rollers being spaced to accommodate the travel of a slat therebetween; driving means gearing all of said rollers together; means to direct a slat for engagement between said face rollers; side coating roller mechanisms, one mounted at each end of a face roller, each mechanism comprising a roller carrier mounted on said frame for lateral adjustment with respect to said slat, a side feed roller journalled on said carrier and frictionally engaged with an end of a face roller, an intermediate roller journalled on said carrier and frictionally in train with said side feed roller, and a side distributing roller journalled on said frame and frictionally in train with said intermediate roller, said side distributing roller being resiliently mounted to be engaged with a side of a slat.



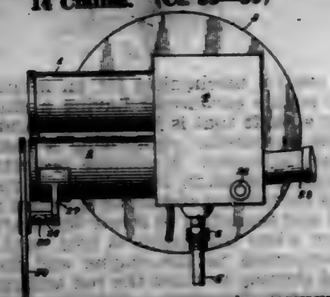
2,030,326
FILAMENT SUPPORT
Ralph C. Sherwood, San Francisco, Calif., assignor to Heinis and Kaufman, Ltd., San Francisco, Calif., a corporation of Nevada
Application May 22, 1935, Serial No. 22,723
3 Claims. (Cl. 250—27.5)

1. In combination, a thermionic tube envelope having an inwardly projecting stem, a single pair of current supply leads sealed through said stem, said leads being bent to form a pair of spaced horizontal extensions, and again bent downwardly to form spaced adjacent elbows, and still again bent each lead to pass under the other, and finally rising to terminate in the plane of said extensions, and a plurality of electron emitting filaments bridging said leads and connected thereto in the plane of said extensions.



2,030,327
WATERINSOLUBLE AZODYESTUFFS
Gerhard Schrader, Opladen, near Cologne, and Werner Zerweck, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Original application September 2, 1933, Serial No. 688,669. Divided and this application August 4, 1934, Serial No. 738,582. In Germany September 5, 1932
8 Claims. (Cl. 260—44.2)

1. Waterinsoluble azodyestuffs of the general formula:

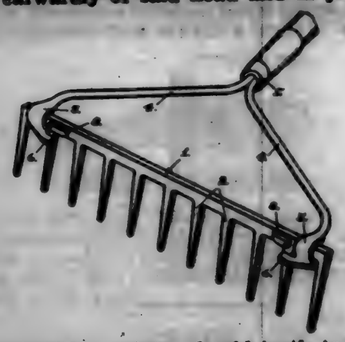


wherein T stands for the radical of a thiazole compound, ac stands for an acyl radical and R stands for the radical of a diazotized primary amine suitable for producing azodyestuffs, yielding, when produced on the fibre, generally yellow shades of good fastness properties.

2,030,328
GLASS WORKING APPARATUS
Harold R. Schenk, Ottawa Hills, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application July 11, 1932, Serial No. 621,854
50 Claims. (Cl. 49—5)

1. In a glass working apparatus, a plurality of glass treating mechanisms each positioned at a separate station, a plurality of similar independently movable glass forming mechanisms, and means for moving each forming mechanism independently to each station in properly timed relation to the movements of the other forming mechanisms so that only one of the forming mechanisms will be at any one station at any one time.

2,030,329
APPARATUS FOR COMPARING COLORS
James E. Simons, San Francisco, Calif.
Application September 22, 1934, Serial No. 745,074
14 Claims. (Cl. 35—59)

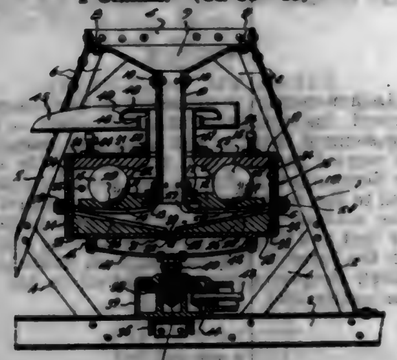


1. A color comparing apparatus comprising a sight tube adapted to be directed at an object, a rotary drum mounted alongside of the tube and having a series of colors arranged on the inner periphery thereof and adapted to bring any one of the colors in side by side relation to the tube, an enclosure for the drum secured to the tube, a light chamber adjacent the drum enclosure and adjacent the tube and having means for illuminating the object and the color thus positioned, and a light passage leading from said color to the rear of the tube.

2,030,330
DRIVE MECHANISM FOR SHAKER CONVEYERS
William W. Sloane, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application August 16, 1933, Serial No. 685,427
Renewed June 27, 1935
10 Claims. (Cl. 74—56)

1. In a shaker conveyer drive, a motor, a reciprocable driven member, and means for trans-

each of said eyes below the plane and forwardly and rearwardly of said head and in position to



be engaged by certain of said teeth to limit the turning of the rake head in either direction.

2,030,322
GAME APPARATUS
Henry B. Scherer, South St. Paul, Minn.
Application June 28, 1935, Serial No. 28,937
1 Claim. (Cl. 273—136)

A game apparatus comprising a board, a hood structure at each end of the board within which game pieces can be stored, said hood structures being swingably connected to the board along one edge thereof, and an elongated elastic band stretched under the board and having its end portions disposed upwardly through openings in the board to attach to the free edges of the hood structures to retain them downwardly against the board.

2,030,323
ORE MILL
Arnold J. Schlunegger, San Bernardino, Calif.
Application November 11, 1932, Serial No. 642,226
4 Claims. (Cl. 83—45)

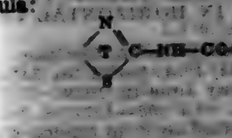
1. A mill comprising a supporting structure, a stationary member mounted on the supporting structure, a housing rotatably mounted on the stationary member and enclosing said stationary member, means for introducing the material into the housing, means in the housing for reducing the material, and flexible drive means for actuating the housing and permitting substantially universal movement of said housing relative to the stationary member, the last-named means comprising a resilient plate secured, at its ends, to the housing, a drive shaft, and means connecting the resilient plate to said drive shaft.

2,030,324
ACTUATING MEANS FOR CLOSURES, SUCH AS DOORS, LIDS, AND THE LIKE
Oscar C. Schmidt, Cincinnati, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a corporation of Ohio
Application May 27, 1935, Serial No. 22,642
5 Claims. (Cl. 12—72)

1. In actuating means of the character described, the combination of a bracket arranged to be secured to the wall of a closure opening, an arm arranged for shiftable connection with the closure, a helical spring extending lengthwise of the arm, a rod therein having pivotal connection at its outer end with said bracket, the outer end of said spring having abutment on said arm, the inner end of said spring having abutment on the inner portion of said rod, and a link having pivotal connections at its respective ends with the outer end of said arm and said bracket, the axis of said first-named pivot being normally at one side of the plane of the axes of said second-named pivots when the closure is closed.

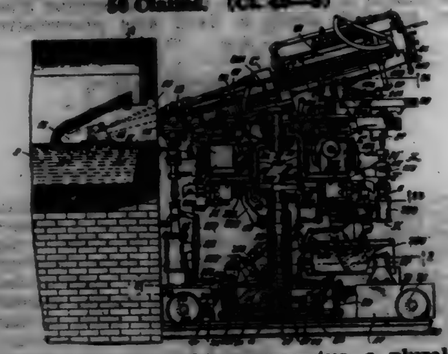
2,030,325
ROLLER COATING MACHINE
William E. Sheldon, Los Angeles, Calif.
Application March 6, 1930, Serial No. 714,511
Renewed November 20, 1935
6 Claims. (Cl. 91—59)

1. In a slat coating machine, the combination of a frame; a face roller journalled on said frame, a feed roller journalled on said frame and frictionally engaged with said face roller for carrying coating material to the latter, supply means for carrying coating material to said feed roller; a companion face roller journalled on said frame, a feed roller journalled on said frame and frictionally engaged with said companion face roller, supply means for carrying coating material to said last mentioned feed roller, said face rollers being spaced to accommodate the travel of a slat therebetween; driving means gearing all of said rollers together; means to direct a slat for engagement between said face rollers; side coating roller mechanisms, one mounted at each end of a face roller, each mechanism comprising a roller carrier mounted on said frame for lateral adjustment with respect to said slat, a side feed roller journalled on said carrier and frictionally engaged with an end of a face roller, an intermediate roller journalled on said carrier and frictionally engaged with said side feed roller, and a side distributing roller journalled on said frame and frictionally in train with said intermediate roller, said side distributing roller being resiliently mounted to be engaged with a side of a slat.



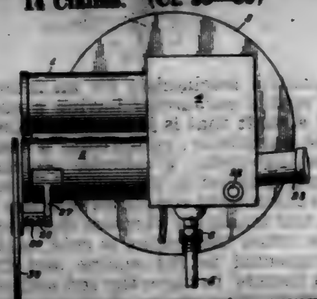
2,030,326
FILAMENT SUPPORT
Ralph C. Sherwood, San Francisco, Calif., assignor to Heintz and Kaufman, Ltd., San Francisco, Calif., a corporation of Nevada
Application May 22, 1935, Serial No. 22,723
3 Claims. (Cl. 250—27.5)

1. In combination, a thermionic tube envelope having an inwardly projecting stem, a single pair of current supply leads sealed through said stem, said leads being bent to form a pair of spaced horizontal extensions and again bent downwardly to form spaced adjacent elbows, and still again bent each lead to pass under the other, and finally rising to terminate in the plane of said extensions, and a plurality of electron emitting filaments bridging said leads and connected thereto in the plane of said extensions.



2,030,327
WATERINSOLUBLE AZODYESTUFFS
Gerhard Schrader, Opladen, near Cologne, and Werner Zerweck, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Original application September 8, 1933, Serial No. 688,660. Divided and this application August 4, 1934, Serial No. 738,562. In Germany September 9, 1932
8 Claims. (Cl. 260—44.2)

1. Waterinsoluble azodyestuffs of the general formula:

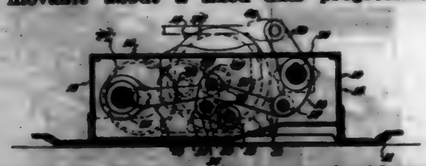


wherein T stands for the radical of a thiazole compound, ac stands for an acyl radical and R stands for the radical of a diazotized primary amine suitable for producing azodyestuffs, yielding, when produced on the fibre, generally yellow shades of good fastness properties.

2,030,328
GLASS-WORKING APPARATUS
Harold E. Schantz, Ottawa Hills, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application July 11, 1933, Serial No. 681,854
50 Claims. (Cl. 49—5)

1. In a glass working apparatus, a plurality of glass treating mechanisms each positioned at a separate station, a plurality of similar independently movable glass forming mechanisms, and means for moving each forming mechanism independently to each station in properly timed relation to the movements of the other forming mechanisms so that only one of the forming mechanisms will be at any one station at any one time.

2,030,329
APPARATUS FOR COMPARING COLORS
James E. Simons, San Francisco, Calif.
Application September 22, 1934, Serial No. 745,074
14 Claims. (Cl. 35—59)



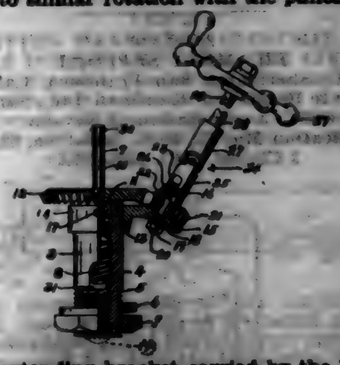
1. A color comparing apparatus comprising a sight tube adapted to be directed at an object, a rotary drum mounted alongside of the tube and having a series of colors arranged on the inner periphery thereof and adapted to bring any one of the colors in side by side relation to the tube, an enclosure for the drum secured to the tube, a light chamber adjacent the drum enclosure and adjacent the tube and having means for illuminating the object and the color thus positioned, and a light passage leading from said color to the rear of the tube.

2,030,330
DRIVE MECHANISM FOR SHAKER CONVEYERS
William W. Sloane, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application August 16, 1933, Serial No. 685,427
Renewed June 27, 1935
10 Claims. (Cl. 74—26)

1. In a shaker conveyer drive, a motor, a reciprocable driven member, and means for trans-

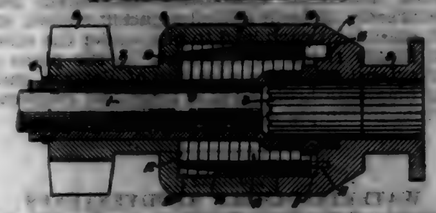
posing the rotary motion of said motor into rectilinear motion having predetermined changes in acceleration during various parts of the stroke comprising a crank, a connecting rod connected thereto a rocking member movable about a fixed axis spaced longitudinally from the axis of pivotal movement of said crank, a second rocking member movable about a fixed axis progressively

spaced longitudinally from the axis of said crank and first-mentioned rocking member, a connection from said second rocking member to said reciprocable driven member and means for connecting said connecting rod with each of said rocking members comprising a single member having pivotal connection with each of said members.



2,030,231
CARBURETOR
Stuyvesant C. Smith, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application January 25, 1932, Serial No. 653,500
9 Claims. (Cl. 123—119)

1. A control mechanism for an internal combustion engine carburetor having a choke valve fixed on a shaft that is journaled in and projects from the carburetor, comprising a casing fixed upon the carburetor, a cylinder projecting from the casing, a piston in the cylinder, a rod on the piston, a thermostat connected between the shaft and rod and tensioned to rotate the shaft to close the valve when the engine is cold, said cylinder being connected to the engine and the piston actuated thereby to move the rod and reduce the tension of the thermostat when the engine fires, a stove on a heated portion of the engine, a duct connecting the stove to the casing to conduct heat thereto, and a valve floating on said shaft and connected to the thermostat and moved thereby to block said duct and regulate the amount of heat admitted to the casing.



2,030,232
VALVE
John E. Spear, Helena, Okla., assignor of one-third to George Maypole and one-third to Emerson Werner, both of Helena, Okla.
Application October 6, 1934, Serial No. 747,127
3 Claims. (Cl. 137—34)

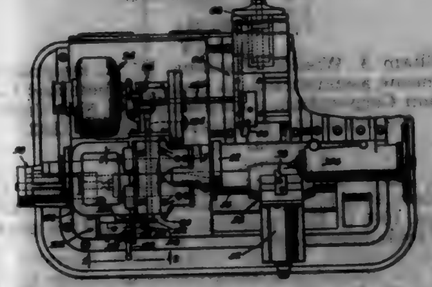
1. A drain valve for vehicle crank-cases, embodying an interiorly and exteriorly threaded tubular valve housing having lateral inlet ports for admitting liquid, the exterior threads of said housing adapted to engage a drain hole in the bottom of a crank-case, a solid cylindrical core threadedly engaged within the housing and adapted to open and close the inlets, a pinion journaled in the upper end of the housing, an axial stem carried by the core passing through the pinion and having a splined connection therewith whereby the stem is permitted longitudinal movement independently of the pinion but is forced to similar rotation with the pinion, a lat-

erally extending bracket carried by the housing, a second pinion carried by the bracket and in mesh with the first pinion, a shaft for rotating the second pinion, a swivel joint carried by the shaft, and a second shaft connected to the joint and adapted to pass through the top of the crank-case.

2,030,233
CLUTCH SPRING
William C. Starkey, Indianapolis, Ind., assignor, by mesne assignments, to William C. Starkey, Indianapolis, Ind., Raymond S. Pruitt and Walter H. Beal, Chicago, Ill., trustees
Original application January 7, 1931, Serial No. 507,462. Divided and this application March 21, 1933, Serial No. 661,125
16 Claims. (Cl. 192—107)

9. A clutch spring embodying therein a plurality of coils made of stock of the same cross sectional area, said spring having a ground cylindrical gripping surface, certain of the coils having axially extending gradient grooves in said gripping surface to make said certain coils more flexible than the other coils of the spring.

2,030,234
APPARATUS FOR THE PRODUCTION OF COKE AND GAS IN HORIZONTAL CHAMBER OVENS
Carl Still, Recklinghausen, Germany
Application June 12, 1931, Serial No. 543,969
In Germany June 19, 1930
2 Claims. (Cl. 202—257)

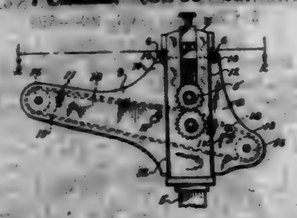


2. The combination of an oven having a horizontal chamber for the destructive distillation of coal including a roof having spaced passages in the central longitudinal plane of the chamber passing substantially vertically through said roof, and a mechanism for forming ducts in a charge within the oven comprising a frame at each end of said oven extending above the roof thereof,

a track supported on the upper extremity of said frame and disposed transversely to the longitudinal axis of said oven, a carriage adapted to move along said tracks, elongated duct forming tools adapted to pass through said passages, winding drums on said carriage adapted to be

positioned over said passages, cables attached to the upper end of said tools and to said drums, means for simultaneously rotating said drums for moving said tools vertically into and out of said chamber through said passages for the purpose of forming ducts within a body of coal charged into said chamber.

2,030,235
MATERIAL WORKING APPARATUS
Ernest J. Svenson, Rockford, Ill.
Application May 15, 1931, Serial No. 537,647
43 Claims. (Cl. 92—2)

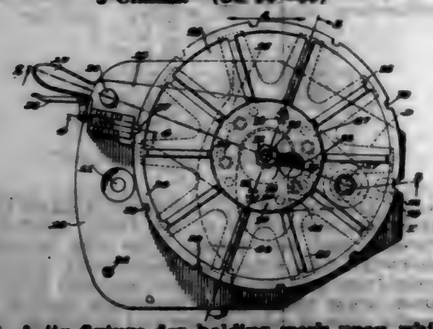


1. In a hydraulic actuator system for propelling machine parts and the like, a hydraulic actuator including a piston within a cylinder, fluid propelling mechanism for imparting movement to said actuator, means for driving said fluid propelling mechanism, shiftable normally balanced valve means for controlling the functioning of said actuator, and means responsive to increases in pressure within said actuator for controlling the movement of said shiftable valve means.

2,030,236
PHOTOGRAPHIC DEVELOPER
Heinrich Ulrich and Karl Saurwein, Ludwigshafen-on-the-Rhein, Germany, assignors to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
No Drawing. Application December 22, 1932, Serial No. 648,672. In Germany December 24, 1932
7 Claims. (Cl. 95—88)

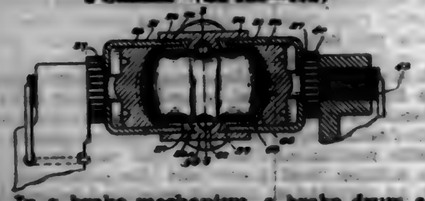
1. A photographic developer comprising a developing agent and a weak acid salt of a hydroxyalkylamine.

2,030,237
CLOTHES WRINGER
George Wales, Tyner, Saskatchewan, Canada
Application March 24, 1933, Serial No. 662,554
In Canada March 24, 1932
7 Claims. (Cl. 68—32)



1. In combination with a wringer, a safety feed attachment comprising a feed frame extending forwardly and downwardly from said wringer; a delivery frame extending backwardly and upwardly from said wringer, said feed and delivery frames being individually removably applied to opposite sides of said wringer and an endless belt running around said frames.

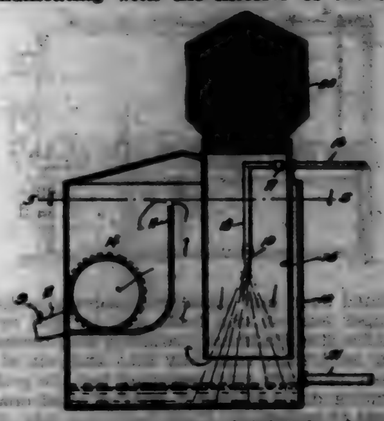
2,030,238
STROPPER
William E. Watts and Jesse W. Lowry, McCammon, Idaho
Application November 11, 1933, Serial No. 697,650
1 Claim. (Cl. 51—153)



A stropper of the class described comprising a base having flanges at its ends and rounded ribs adjacent its side edges, a bar having its ends connected with the flanges and extending across the middle portion of the base and paralleling the ribs, a strop passing over the ribs and under the bar, an inverted U-shaped member connected to one end of the base and having an outwardly bowed bight, the under edge of which is toothed, a carrier bar having its central portion pivoted to the upper face of the base, the flanges having slots therein through which the ends of the carrier bar pass, the ends of said carrier bar being upturned, a shaft having its ends journaled in said upturned ends, a pinion attached to one end of the shaft and meshing with the teeth of the U-shaped member, a T-shaped bar slidably supported on the under face of the base, the stem of said T-shaped bar being connected with the carrier bar, whereby sliding movement of the T-shaped bar will impart a rocking movement to the carrier bar, and a handle depending from the T-shaped bar, and a blade carrier having one edge connected with the shaft.

2,030,339
JIG
William A. Weightman, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 15, 1932, Serial No. 616,879
5 Claims. (Cl. 90—59)

1. A jig fixture for holding work upon which machine operations are to be performed by the same tool through relative reciprocation of the work and the tool upon parts of the work disposed at an angle to each other, comprising a base, an oscillatable member pivoted on an axis at right angles to the base, a work holder fixed to said oscillating member for angular movement with respect thereto about an axis located at one side of the pivotal axis of said oscillating member, means to support the work from the work holder in a position in which the line connecting the pivot of said member and the axis of movement of said work holder substantially bi-sects the angle between the parts of the work to be operated upon, and means defining two positions of said oscillable member spaced apart angularly about the pivot of said member by an angle equal to the said angle between the parts of the work to be operated upon.



2,030,340
HYDRAULIC BRAKE SYSTEM
John William White, Buffalo, N. Y., assignor, by mesne assignments, to General Motors Corporation, a corporation of Delaware
Application November 8, 1928, Serial No. 317,933
3 Claims. (Cl. 188—152)

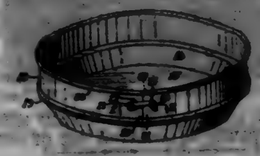
1. In a brake mechanism, a brake drum and cooperating means together forming an enclosure, brake friction means therein, an hydraulic actuator for said brake friction means, an adjustment means between said hydraulic actuator and brake friction means including a revoluble member peripherally notched to be engageable with and operable by a screw driver or like tool, said enclosure being apertured for the insertion of said tool.

2,030,341
AIR WASHER
Edward K. Wills and James H. McElhannon, Corpus Christi, Tex.
Application May 26, 1935, Serial No. 23,220
1 Claim. (Cl. 261—116)

An air washer for engine comprising a casing, a transverse vertical partition dividing substantially intermediately across diameter of the casing, a horizontal partition in the casing with which the vertical partition merges to define a chamber, said vertical partition terminating adjacent to the top of the casing, a discharge pipe communicating with the interior of the casing

at the chamber, a narrow inlet tube depending into the casing from the top thereof, said tube being provided with an air filter at the top thereof, the upper portion of the tube projecting above the top of the casing, a fluid conduit extending into the tube at the portion above the top of the casing, and a downwardly disposed nozzle at the inner end of the conduit.

2,030,342
ALLOY
William A. Wissler, Flushing, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York
No Drawing. Application July 15, 1933, Serial No. 680,661
7 Claims. (Cl. 75—1)



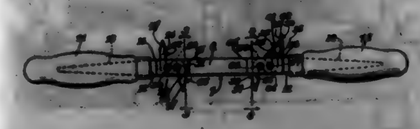
1. Alloy comprising substantially 1% to 4% carbon, 10% to 35% chromium, 1.5% to 6% vanadium, 10% to 30% tungsten, 0.10% to 2.5% boron, the remainder cobalt.

2,030,343
ALLOYS
William A. Wissler, Niagara Falls, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York
No Drawing. Original application July 15, 1933, Serial No. 680,661. Divided and this application May 14, 1935, Serial No. 21,824
6 Claims. (Cl. 75—1)

1. Alloy having a composition within the limits: 1% to 4% carbon, 10% to 35% chromium, 10% to 30% metal of the group consisting of tungsten and molybdenum, 1.5% to 6% vanadium, the remainder cobalt except for insignificant quantities of impurities normally associated therewith.

2,030,344
PREPAN
Maude M. Young, Portland, Oreg.
Application February 27, 1934, Serial No. 713,169
1 Claim. (Cl. 53—8)

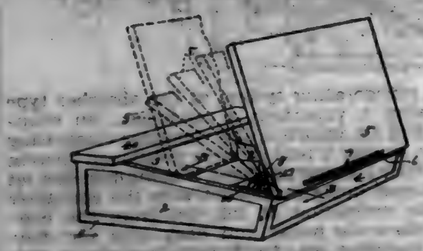
A rim for use with pie pans having outwardly turned upper edges, said rim consisting of a split cylindrical body of less diameter than is the outside diameter of the pie pan, the pan engaging edge of said body having a bead formed around same and extending outwardly therefrom and with its innermost face concave to receive the outwardly turned rim of said pie pan, the opposite edge of said body having a wire bead around same, one end of which forms a dowel pin for holding the ends of the edge in alignment and means for urging the split edges of said cylindrical body into an overlapping relationship.



2,030,345
VALVE ACTUATING MECHANISM
Victor E. Kabelitzke, New York, N. Y.
Application January 17, 1935, Serial No. 2,135
12 Claims. (Cl. 123—90)

8. An operating mechanism for the valve of an internal combustion engine, comprising, a spring seated valve, a rocker arm having one end in contact with the valve, a push rod engaging the other end of the rocker arm, a cam for reciprocating said push rod, the ends of the push rod and the rocker arm having sliding contact for permitting a predetermined amount of lost motion in the operating parts, and a device incorporated in said parts of the valve mechanism for laterally displacing said push rod.

2,030,346
PUNCHING DEVICE
Marie Ahlemius, Chicago, Ill., assignor of one-third to Maurice H. Herman, Chicago, Ill.
Application April 17, 1935, Serial No. 16,878
9 Claims. (Cl. 164—119)

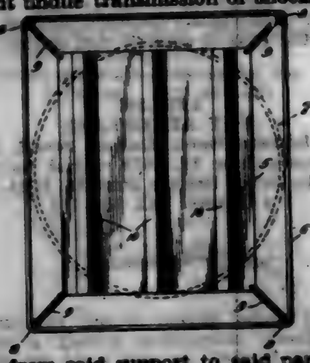


1. A punching device for the purpose set forth comprising a carrier formed with a pair of spaced parallel open top and bottom chambers, an S-shaped body anchored in each of said chambers, and a pair of oppositely disposed punches extending from the ends of each of said bodies.

2,030,347
TOY AEROPLANE
William Edward Beck, Oulton Broad, England
Application June 11, 1935, Serial No. 26,059
In Great Britain June 16, 1934
5 Claims. (Cl. 46—76)

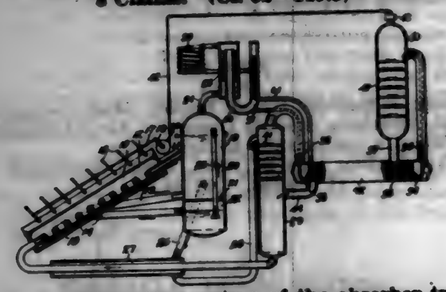
1. A toy glider devoid of self contained mechanical power comprising a body, a longitudinal support carried by said body on each side thereof, at least one wing, elastic attachment means which pass through apertures in each wing and corresponding registering apertures in the glider body and camber and angle of incidence varying means in conjunction with at least one wing whereby the camber and angle of incidence of each wing can be adjusted, the pivotal attachment of said wings to said supports allowing the wing to rotate or pivot on the support to absorb shock without breakage should one side of a wing strike any heavy object.

2,030,348
DESK
Glenn J. Barrett, Grand Rapids, Mich., assignor to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application May 27, 1935, Serial No. 23,633
11 Claims. (Cl. 45—91)



1. In a desk: a top box provided with a swingable cover; a slide bearing extending rearwardly-forwardly of the box; a hinge for mounting the cover comprising a hinge member fastened to the cover and a hinge member carried slidably on the slide bearing; a pawl pivoted on the second-mentioned member adapted to engage the slide bearing to hold the cover in slid position; a pawl pivoted on the second-mentioned member adapted to engage the first-mentioned member to hold the cover in raised position.

2,030,349
BAKING PAN SUPPORTING RACK
Thomas B. Bradley, Du Bois, Pa.
Application October 21, 1933, Serial No. 694,846
3 Claims. (Cl. 53—5)



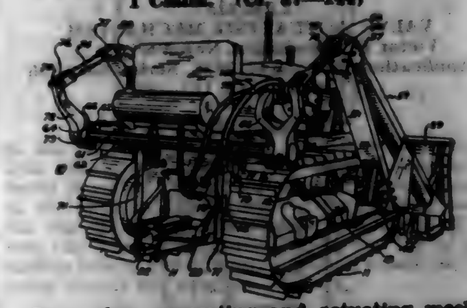
1. A supporting rack for baking pans including a support of a size to be received in the oven of a cooking stove and adapted to rest upon the bottom or shelf of the oven, a pan sustaining member, and yieldable means mounting said pan sustaining member on said support, said mount-

ing means being so highly and freely yieldable as to prevent undue transmission of shocks and vi-

brations from said support to said pan sustaining member.

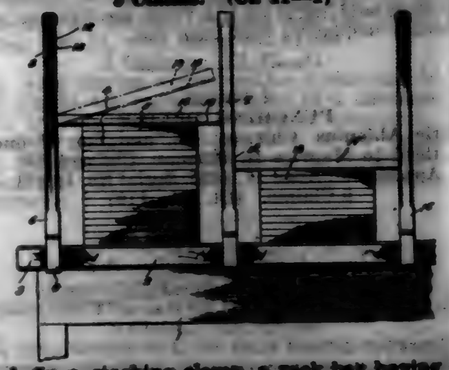
2,030,354
SOLAR OPERATED REFRIGERATING SYSTEM
Albert T. Brosser, Westmont, N. J., assignor of fifty-two per cent to Carl G. Fisher, Miami Beach, Fla.
Application April 10, 1933, Serial No. 665,461
8 Claims. (Cl. 62—119.5)

4. A refrigerating system of the absorber type comprising a vaporizer, a condenser, an evaporator and an absorber, the vaporizer comprising a boiler having a pair of coils positioned therein and having a rising gradient, a container, one set of said coils being connected with the container to cause circulation of solution from the container thru the boiler and back into the container, the other set of coils being connected with the absorber and with the container to cause circulation of solution from the absorber thru the boiler and back into the container, the said last named coils supplying a relatively strong solution to the container as well as serving to boil off vapor from the solution.



2,030,351
METHOD OF APPLYING PROTECTIVE COLORING IN THE PRINTING OF DOCUMENTS REPRESENTING VALUE
Sydney George Clifford, London, England, assignor to Waterlow & Sons Limited, London, England, a British company
Application October 11, 1933, Serial No. 693,179
In Great Britain October 31, 1932
8 Claims. (Cl. 101—311)

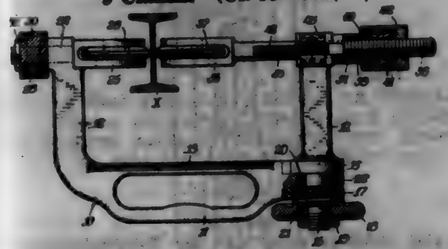
4. In the process of printing a multicolor background design upon commercial paper, the method of producing a background design in continuously variegated colors which comprises printing each of a plurality of partial designs in a set of bands of distinctive colors separated by merging bands of the adjacent distinctive colors, the set



of color bands of one partial design extending at a substantial angle to another set of color bands.

2,030,352
EARTH MOVING DEVICE
Roy E. Cheeste and Waldo E. Keller, Cedar Rapids, Iowa, assignors to La Plant-Cheeste Manufacturing Company, Inc., Cedar Rapids, Iowa, a corporation of Delaware
Application May 9, 1933, Serial No. 670,194
1 Claim. (Cl. 37—144)

In a plow supporting and actuating mechanism including a tractor, a beam extending across the rear of the tractor and secured to the transmission case thereof, the beam projecting beyond the sides of the transmission case to either side of the tractor, a running board secured to the side of the crank case and to the beam to thus afford a platform, a cross shaft mounted for rotation on the beam and the beam having suitable bearings for so mounting the cross shaft, a hydraulic jack pivotally mounted on the platform formed by the running board, crank arms on the end of the cross shaft, the ram of the hydraulic jack being pivotally connected to one of said crank arms.



2,030,353
PAPER STACKING CLAMP
George H. Cole, Lakeland, Fla.
Application August 22, 1934, Serial No. 741,021
Renewed July 13, 1935
5 Claims. (Cl. 11—1)

1. In a stacking clamp, a rack bar having an L-shaped lower portion, the free end of which is

substantially perpendicular to said rack bar, and an integral angular off-set between said rack bar and L-shaped portion extending over and shorter than said free end, so that a plane embracing said rack bar intersects said free end at an intermediate point.

2,030,354
VERNIER GAUGE
Frank Cacuba, Duluth, Minn., assignor to American Steel & Wire Company, Chicago, Ill., a corporation of New Jersey
Application June 27, 1931, Serial No. 547,324
9 Claims. (Cl. 33—143)

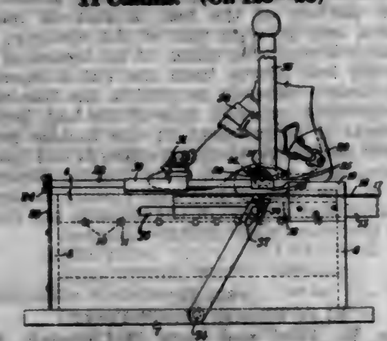
1. A measuring instrument comprising a frame, one end of said frame receiving a caliper member, an arm journalled in the other end of the frame, a caliper member mounted for reciprocation in said arm, a handle wheel having a hub portion fixedly secured to the arm for rotating the same, and a coil spring encircling the arm and enclosed in the hub portion, said spring being secured at one end to the frame and at the other end to the wheel to yieldingly hold the arm in normal position with its caliper member directed toward the other member on the frame.

2,030,355
AZODYESTUFFS AND THEIR PRODUCTION
Detlef Delfs, Leverkusen-I. G.-Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application July 28, 1934, Serial No. 737,477. In Germany August 18, 1933
8 Claims. (Cl. 260—54.5)

7. Azodyestuffs of the general formula:

wherein R stands for the radical of a diazotization component and R^1 stands for the radical of an aromatic coupling component.

2,030,356
COLLECTION BOX
Joseph W. Dibb, Milwaukee, Wis.
Application January 14, 1935, Serial No. 1,479
9 Claims. (Cl. 229—8)



1. A collection box of cross shape formed of a folded blank and having a main, substantially rectangular tubular body portion adapted to receive coins and provided with vertical walls and a horizontal top wall having a coin receiving slit therein, and having a laterally projecting portion folded around said main body portion and constituting the horizontal arms of the cross.

2,030,357
PROCESS OF REMOVING TIN FROM COLUMBIUM ALLOYS
Ernest F. Doom, Niagara Falls, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York
No Drawing. Application March 21, 1934, Serial No. 716,651
1 Claim. (Cl. 75—13)

1. The process of removing tin from columbium alloys which comprises introducing silicon into said alloys in an amount at least equivalent to that required to provide a ratio of silicon to columbium satisfying the formula Cb_3Si, and treating said alloys with aqueous hydrochloric acid.

2,030,358
APPARATUS FOR TREATING FEET
Harold J. Derrance, Pittsburgh, Pa.
Application February 16, 1933, Serial No. 657,014
Renewed November 12, 1934
11 Claims. (Cl. 128—35)

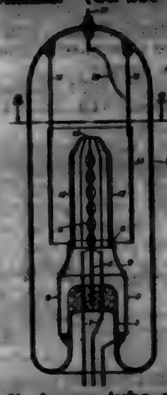
1. In a device for treating human feet, the combination with a rollable elastic member and a reciprocable support for said member, of means for securing a foot in position above said member in such manner that said member is compressed by contact with a portion of the bottom of the so-called longitudinal arch of the foot and means for reciprocating said member-support whereby said member is caused to roll back and forth in contact with said arch.

2,030,359
HAND BAGGAGE
Leonard H. Dyer, New York, N. Y.
Application January 6, 1934, Serial No. 705,488
2 Claims. (Cl. 190—55)

1. Hand baggage, having a flexible bag, an opening therein, said opening extending across the greater portion of the bag, a pair of handle members, one on each side of the opening, and

extending beyond the edges of the opening, but occupying less length than the entire opening, a single slide closure fastener, secured to the edges of the opening, on each side of the bag, beyond the points of attachment of the handle members, and also to the abutting edges of the handle members, a pair of rigid closure members, one on each edge of the opening, and inside of the handle members, so that the bag may be closed, and the handle members secured together, by means of the single closure fastener.

2,030,359
HAND BAGGAGE
Leonard H. Dyer, New York, N. Y.
Application June 27, 1934, Serial No. 732,616
1 Claim. (Cl. 190—55)



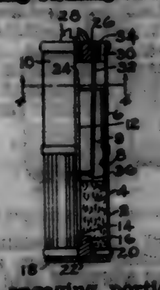
Hand baggage, having a flexible bag, an opening therein, said opening extending across the greater portion of the bag, a pair of handle members, one on each side of the opening, and extending beyond the edges of the opening, but occupying less length than the entire opening, a slide closure fastener, secured to the free edges of the opening, on each side of the bag, beyond the points of attachment of the handle members, and also to the abutting edges of the handle members, and a second slide closure fastener, inside of the first mentioned closure fastener, for closing that portion of the opening not closed by the first mentioned closure fastener.

2,030,361
ELECTRODE MOUNTING
William W. Eitel and Jack McCullough, San Bruno, Calif., assignors to Heintz & Kaufman, Ltd., San Francisco, Calif., a corporation of Nevada
Application August 15, 1933, Serial No. 685,284
3 Claims. (Cl. 250—27.5)

1. In combination, an envelope having a hemispherical end and cylindrical side walls, an anode having spaced circumferentially attached leads extended from one end of said anode only, said leads being separately sealed to said hemispherical end, and a cylindrical grid concentrically positioned within said anode having spaced leads circumferentially attached to the other end only of said grid, said latter leads being extended laterally and separately sealed to said side walls below the level of said anode.

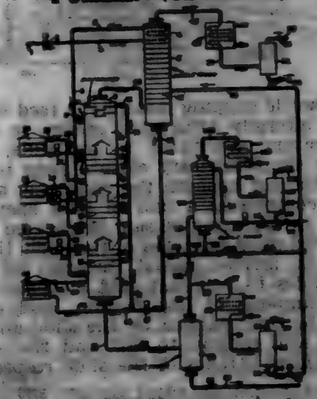
2,030,362
SPACE DISCHARGE DEVICE
William W. Eitel and Jack McCullough, San Bruno, Calif., assignors to Heintz & Kaufman, Ltd., San Francisco, Calif., a corporation of Nevada
Application November 7, 1933, Serial No. 696,974
5 Claims. (Cl. 250—27.5)

1. A space discharge tube comprising an envelope having a reentrant stem, a concentric anode, cathode and control electrode contained therein and mounted to have axes common with that of said stem, and support means for said control electrode consisting solely of a plurality of spaced conductive risers separately fused directly to the side wall of said stem.



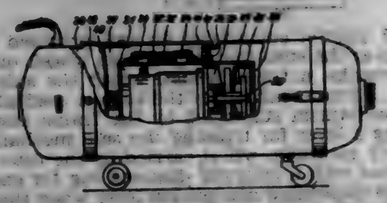
2,030,363
TAG FASTENER
Carl A. Flood, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a corporation of Massachusetts
Application March 7, 1934, Serial No. 714,433
2 Claims. (Cl. 40—24)

1. A tag fastener formed of a single piece of wire, the mid portion of which is bent upon itself to form two arms, said arms crossing each other to form a loop, said arms having extensions, the extension of one arm being bent into a hook and the extension of the other arm being formed into a closed elongated loop to retain and guard said hook and to receive and guide said one arm, the end portion of said hook yieldingly abutting one end of said elongated loop, the other end of said elongated loop forming a stop for said one arm to limit the opening movement of said hook, said extensions forming with each other another loop when in abutting relation.



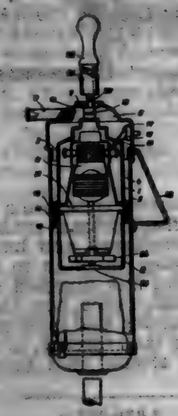
2,030,364
CIGARETTE LIGHTER
Irving Fiorman, New York, N. Y.
Application June 21, 1934, Serial No. 731,769
11 Claims. (Cl. 67—7.1)

1. A cigarette lighter comprising two sections including a body portion and a cover movable with respect thereto, a wick element within said body and cover, and means within said body and cover operable, by relative movement between said sections to ignite the wick, said igniting means comprising striking means having a plu-



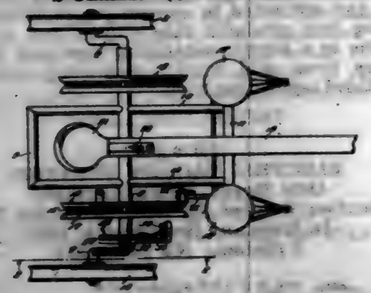
rality of flint engaging portions, an elongated flint element extending between said portions, said portions resiliently engaging the opposite sides of the said flint element simultaneously.

2,030,385
TREATMENT OF HYDROCARBON OIL
Wright W. Gary, Great Neck, N. Y., assignor to Gasoline Products Company, Inc., Newark, N. J., a corporation of Delaware
Application February 1, 1933, Serial No. 654,569
4 Claims. (Cl. 196—49)



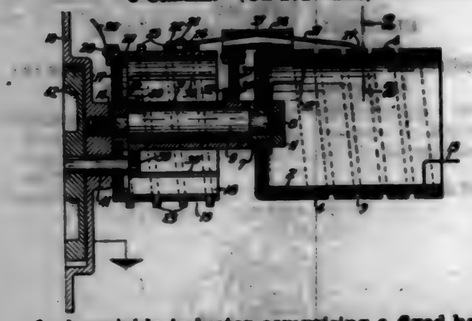
4. The process of treating hydrocarbon oil which comprises discharging preheated relatively heavy oil into a first separating zone wherein vapors separate from liquid residue, removing said vapors and forming a desired distillate therefrom, removing liquid residue from said first separating zone and passing it through a cracking zone wherein it is raised to a cracking temperature and subjected to conversion, introducing resulting hot products of conversion into a second separating zone wherein vapors separate from liquid residue, passing vapors from said second separating zone into said first separating zone, while excluding said vapors from said cracking zone, removing liquid residue from said second separating zone, passing it through a second cracking zone, in a stream of restricted cross-sectional area, wherein it is raised to a cracking temperature and subjected to conversion, introducing hot products of conversion into a third separating zone wherein vapors separate from liquid residue, passing vapors from said third separating zone into said second separating zone, while excluding said vapors from said second cracking zone, removing liquid residue from said third separating zone and introducing it into a flashing zone under reduced pressure to cause additional vaporization thereof, fractionating resulting vapors to form a clean condensate charging stock, passing said clean condensate charging stock through a third cracking zone wherein it is raised to a vapor phase cracking temperature and subjected to conversion, separating resulting hot products into vapors and a liquid residue in a fourth separating zone and passing vapors from said fourth separating zone into said third separating zone.

2,030,386
ELECTRIC VACUUM CLEANER
Otto Grave, Berlin, Germany
Application October 26, 1934, Serial No. 750,140
In Germany November 4, 1933
2 Claims. (Cl. 230—232)



1. In an electric vacuum cleaner, a casing, a housing, a motor located within said housing, two rubber rings supporting said motor from the casing, fans driven by the motor producing a vacuum, an S-shaped ring holding said rubber rings in place, said rubber rings minimizing the motor noise, an air jacket surrounding said housing, orifices in the housing for the admission of air propelled by the fans to said jacket and a lining of fabric to said air jacket for lessening the noise of entering air.

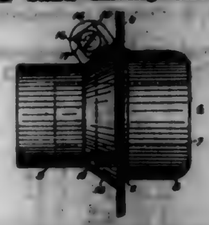
2,030,387
ELECTRIC VACUUM CLEANER
Otto Grave, Berlin, Germany
Application October 26, 1934, Serial No. 750,141
In Germany December 11, 1933
3 Claims. (Cl. 230—232)



1. In an electric vacuum cleaner, in combination an outer housing, an inner housing located within said outer housing, an elastic ring supporting said inner housing, means supporting said elastic ring, an elastic buffer cushioning the end of said inner housing, a motor supported in the inner housing, a ring supporting said motor and a fan driven by said motor.

2,030,268
WIRELESS CORN PLANTER
Wilber A. Harrison, Danville, Ill.
Application August 19, 1935, Serial No. 36,916
2 Claims. (Cl. 111—23)

1. A planter comprising an axle provided with cranks at the ends thereof, traction wheels on the said cranks, a tube through which the axle extends, a frame carried by the tube, a seed planting mechanism supported by the frame and including a lever for tripping the said mechanism, a freely rotatable wheel carried by the tube and provided with a laterally disposed lug for engaging the dispensing mechanism lever when the last mentioned wheel is in ground engaging position, means whereby the said axle can be swung so as to lower the tube and the wheel thereon so that the said last mentioned wheel will engage the ground and rotate coincidentally with the rotation of the traction wheel.



2,030,269
VARIABLE INDUCTOR
Ralph M. Heintz, Palo Alto, Calif., assignor to Heintz & Kaufmann, Ltd., San Francisco, Calif., a corporation of Nevada
Application April 17, 1934, Serial No. 720,938
6 Claims. (Cl. 171—242)

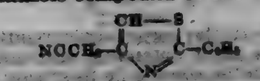
1. A variable inductor comprising a fixed helical inductance, a fixed coaxial guide spaced axially from said inductance and having threads thereon corresponding in pitch to the turns of said helix, a contact link disposed parallel with the axes of the inductance and the guide and having one end touching said inductance and the other end entering said threads, and means for rotating said link around said inductance and guide.

2,030,270
BUSHING ASSEMBLY
Joseph B. Hedtum, Bellevue, Pa., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application September 17, 1931, Serial No. 563,519
10 Claims. (Cl. 173—311)

1. In combination, a supporting element having a hole therein, an insulating member having an annularly grooved shank portion extending through said hole and having a head portion adjacent one side of said supporting element, a frusto-conical band having one edge in said

groove and another edge engaging the opposite side of said supporting member, and means for increasing the axial width of said frusto-conical band so as to bias the head portion of said insulating member toward said supporting element.

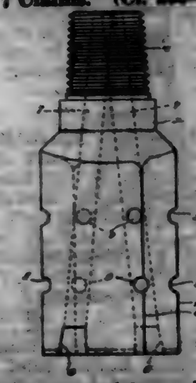
2,030,271
BOTTLE CAPPING AND CLOSING MACHINE
Jacob J. Dilan, Chicago, Ill.
Application December 27, 1933, Serial No. 704,169
5 Claims. (Cl. 226—92)



2. In a bottle capping machine, a feed slide for the caps, laterally bifurcated means to impart a reciprocatory movement to the slide, and a feed for a supplementary closure strip to bring a section thereof beneath the cap being applied, said feed comprising a pair of bars operatively connected to the arms of said bifurcated means and mounted upon the sides of the slide, the bars having slots, screws passed through the latter into the slides to transmit said movement with a limited amount of lost motion, and a push plate for the strip carried by the slide and controlled by said motion to fall and rise on the feed and return strokes of the slide respectively.

2,030,272
PROCESS FOR THE PRODUCTION OF PRACTICALLY IRON-FREE COMPOUNDS OF THE EARTH METALS, ALKALINE EARTH METALS, RARE EARTH METALS, EARTH ACIDS, OR THE LIKE
Gustav Jaeger, Neu-Isenburg, Germany, assignor to Deutsche Gold und Silber Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany, a corporation of Germany
No Drawing. Application November 8, 1934, Serial No. 751,670. In Germany November 8, 1933
12 Claims. (Cl. 23—23)

1. A process for the removal of iron from iron-containing raw materials, said process comprising the steps of reducing the valence of the iron, treating with a cyanide, adding water, separating any insoluble matter which may be present at this point, and adding an alkaline reagent to precipitate as hydroxides all cations in the raw material which have the property of forming insoluble hydroxides in the presence of alkaline cyanide, said iron in combination with said cyanide forming a complex water soluble ferrocyanide and removing the insoluble hydroxides.

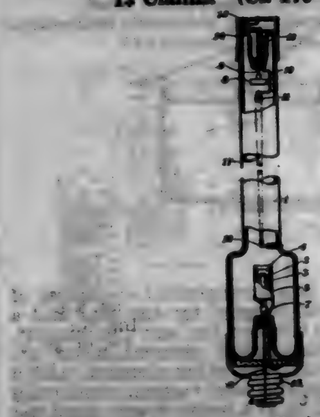


2,030,273
DERIVATIVES OF THIAZOLE AND PROCESS OF PREPARING THE SAME
Treat B. Johnson, Bethany, Conn., assignor to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application August 18, 1932, Serial No. 629,197
2 Claims. (Cl. 260—44)

1. The thiazole compound of the formula:

said compound boiling at 180–185° C. at 4–5 mm.

2,030,274
DRILL BIT
Herman Louis Kless, Houston, Tex.
Application May 22, 1933, Serial No. 672,231
Renewed August 21, 1935
7 Claims. (Cl. 255—61)



1. A drill bit comprising a body having fluid passages therein communicating with the lower end of the bit and extending to the trailing faces of said bit on opposite sides of its longitudinal axis, and reaming cutters on the vertical edges of the body, each cutter having a concaved front face and a rearwardly and inwardly sloping outer edge, portions of the passages opening out through the trailing faces of said cutters.

2,030,275
COMBINED DEVICE OF A SHIP'S PROPELLER ENCLOSED BY A NOZZLE
Ludwig Kort, Hanover, Germany
Application September 7, 1933, Serial No. 688,985
In Germany July 25, 1933
13 Claims. (Cl. 115—42)

1. Propelling device on screw-propelled ships comprising in combination a screw propeller, and a tubular shaped nozzle around the propeller arranged longitudinally of the propeller shaft, said nozzle being fitted to the hull, surrounding near its narrowest inner cross section closely the propeller circle, and widening out quickly in front of the propeller to an entrance opening, the size of which is substantially larger than that of the exit opening aft of the propeller, the body of the nozzle having a shape substantially such that the distance from the shaft to the exterior surface of the nozzle decreases from forward to aft and having a well rounded entering edge at the mouth of the nozzle forming the connection between the inside and outside surfaces of the nozzle body.

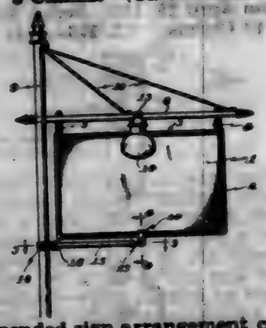
2,030,276
GASEOUS ELECTRIC DISCHARGE DEVICE
Carl E. Kenty, Jersey City, N. J., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a corporation of New Jersey
Application April 25, 1932, Serial No. 607,445
13 Claims. (Cl. 176—124)

1. An electric gaseous discharge device comprising a sealed envelope containing a gaseous atmosphere, a cathode and another main electrode sealed into said envelope, and a resistance wire constituting an auxiliary anode electrically connected to the latter electrode and extending within said envelope from a point near said electrode to a point near said cathode, the resistance of said wire per unit distance along the arc path between said cathode and the other electrode progressively increasing in the direction of said cathode.

2,030,277
IRRADIATION OF VITAMIN D AND PRODUCT THEREOF
Otto Linsert, Wuppertal-Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application October 30, 1933, Serial No. 695,959. In Germany November 5, 1932
6 Claims. (Cl. 260—183)

1. The product of the formula $C_{28}H_{44}O$ having the specific rotatory power

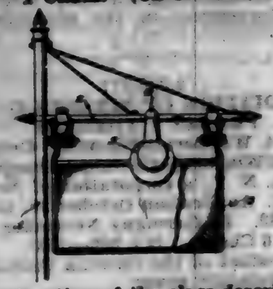
$$[\alpha]_D^{20} -16°$$



in a 1% chloroform solution, which product is a stereoisomer of ergosterol and forms a white powder which melts at about 50° C. and is insoluble in water but soluble in organic solvents and forms a well crystalline ester with meta-dinitrobenzoic acid melting at 138° C. and having a specific rotatory power

$$[\alpha]_D^{20} +33°$$

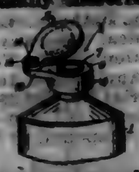
in a 1% acetone solution, said product being characterised by its increasing action on the level of the blood calcium but is practically antirachitically inactive, and being obtainable by ultra violet irradiation of highly purified vitamin D which is the antirachitically active irradiation product of



ergosterol, transformation of the irradiation product obtained into its 3.5-dinitro-benzoic acid ester, separating the crystal fraction first formed and saponifying the said ester by means of alkali.

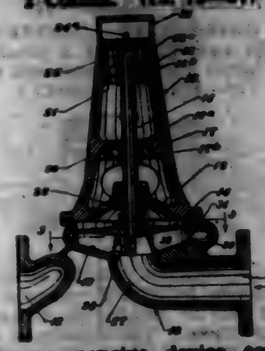
2,030,375
SWING CHECK FOR SIGNS
Frederick A. Lippold, Chicago, Ill., assignor to Reliance Advertising Co., Chicago, Ill., a corporation of Delaware
Application July 31, 1935, Serial No. 33,987
3 Claims. (Cl. 40—128)

1. A suspended sign arrangement consisting of a sign, a horizontal support for the sign and a pivotal connection between the sign and support, said horizontal supporting element being attached to a vertical supporting element, and a swing check connecting said vertical supporting element with the sign at a point remote from the pivotal connection, said swing check including a relatively reciprocating tube and plunger.



2,030,379
SUSPENSION MEANS FOR SWING SIGNS
Frederick A. Lippold, Chicago, Ill., assignor to Reliance Advertising Co., Chicago, Ill., a corporation of Delaware
Application July 31, 1935, Serial No. 33,996
1 Claim. (Cl. 40—128)

In a construction of the class described, a horizontal support, a sign frame, a suspending means for the sign frame, said suspending means comprising a rigid attachment to the support and including a bearing for the sign frame and stops for limiting motion of the sign frame around said bearing, said sign frame having shoulders for engagement with said stop elements, a pivot passing through said sign frame and suspension means, and a coil spring surrounding said pivot and having its ends respectively in engagement with the suspension means and the sign frame.



2,030,386
CLOSURE CAP
Solomon A. Love, Decatur, Ga.
Application October 19, 1933, Serial No. 694,312
6 Claims. (Cl. 220—44)

1. The combination with the neck of a container, of a closure therefor comprising: a collar detachably connected to said neck, a lug extending radially from said collar, a closure cap having a lug extending radially therefrom, said lugs be-

ing inclined at the same angle relative to said collar, and a pivot extending through said lugs at an angle to the common axis of said collar and neck.

2,030,391
APPARATUS FOR METERING FLUIDS
Rudy Lowe, Chicago, Ill., assignor to Proportioneers, Inc., Providence, R. I., a corporation of Rhode Island
Application June 26, 1933, Serial No. 678,538
2 Claims. (Cl. 73—37)

1. A flow responsive device comprising, in combination, a casing having inlet and outlet ports and a rotor chamber, a rotor in said chamber, said casing having an unobstructed passage formed therein centered on the axis of said rotor and having one side opening into said rotor chamber so that one side of said rotor moves along the unobstructed side of the passage, and said passage being closed at one end and connected at its other end to said outlet port and the cross sectional area of said passage being gradually increased from the closed end to the large end thereof which is connected to said outlet port, and said rotor having ducts formed therein each communicating at one end with said inlet opening and at the other end with said passage, said ducts having their leading sides formed with surfaces which are substantially centered on the axis of said rotor so as to direct the fluid from the ducts toward the closed end of said passage.

2,030,523
METHOD OF TREATING PULP
Arno J. Lath, Port Edwards, Richard A. Nugent, Nekoosa, and Neil H. Christian, Port Edwards, Wis., assignors to Nekoosa-Edwards Paper Company, Port Edwards, Wis., a corporation of Wisconsin
No Drawing. Application October 18, 1934, Serial No. 748,521
11 Claims. (Cl. 8—8)

3. The method of obtaining bleached pulp of improved characteristics from pulp prepared by the use of an alkaline cooking liquor containing an active sulfide ingredient, which comprises treating the pulp in a closed vessel under pressure before being exposed to the oxidising influences of

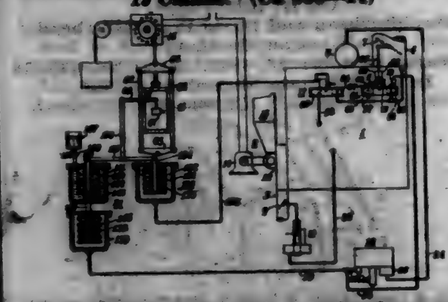
dissolved and atmospheric oxygen with a fresh caustic alkali solution in an amount equivalent to about 2.5 to 15% of NaOH on the air dry weight of the pulp to dissolve phlobotannin color bodies, subjecting the treated pulp after washing to a multi-stage bleaching operation and treating said pulp intermediate successive bleaching steps with an alkaline solution to remove color bodies then present.

2,030,533
METHOD OF TREATING PULP
Arno J. Lath, Port Edwards, Richard A. Nugent, Nekoosa, and Neil H. Christian, Port Edwards, Wis., assignors to Nekoosa-Edwards Paper Company, Port Edwards, Wis., a corporation of Wisconsin
No Drawing. Application October 18, 1934, Serial No. 748,523
7 Claims. (Cl. 92—14)

1. The method of treating pulp which has been cooked with a cooking liquor containing a sulphur compound as an active ingredient thereof, which comprises subjecting the freshly cooked pulp before washing in a closed vessel to the action of a caustic solution of sufficient strength to dissolve color bodies present and then washing the pulp.

2,030,534
METHOD OF BLEACHING PULP
Arno J. Lath, Port Edwards, Richard A. Nugent, Nekoosa, and Neil H. Christian, Port Edwards, Wis., assignors to Nekoosa-Edwards Paper Company, Port Edwards, Wis., a corporation of Wisconsin
No Drawing. Application October 18, 1934, Serial No. 748,522
7 Claims. (Cl. 8—8)

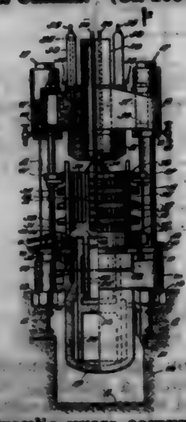
1. The method of obtaining bleached pulp of improved characteristics from pulp prepared by the use of an alkaline cooking liquor containing an active sulphide ingredient, which comprises treating the pulp before it is washed and before it is exposed to the oxidising influences of dissolved and atmospheric oxygen with a caustic alkali solution containing an oxygen liberating alkali metal compound, subjecting the treated pulp after washing to a multi-stage bleaching operation and treating said pulp between successive bleaching steps with a caustic alkali solution also containing an oxygen liberating alkali metal compound.



6. In the process of obtaining a bleached sulphate pulp of improved characteristics, the step of subjecting freshly blown pulp before it is exposed to the oxidising influences of dissolved and atmospheric oxygen to the action of an aqueous solution of caustic soda and sodium peroxide, the amount of caustic soda being equivalent to 2.5 to 15% of NaOH on the air dry weight of the pulp and the amount of sodium peroxide being equivalent to 0.5% and higher on the air dry weight of the pulp.

2,030,535
EMULSIONS
George James Manson, Hawkesbury, Ontario, Canada, assignor, by mesne assignments, to Manson Chemical Company, Montclair, N. J., a corporation
No Drawing. Application July 3, 1933, Serial No. 679,501. Renewed October 27, 1933.
11 Claims. (Cl. 134—22)

1. The herein described method of treating wax which comprises melting the wax, adding the same to a solution of a water soluble salt; then adding to the solution a second water soluble salt adapted with the first water soluble salt to form a gel.



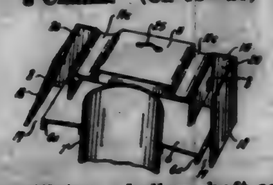
11. An emulsion containing particles of thermoplastic waterproofing agent carrying a thin coating precipitated by double decomposition in situ on said particles of waterproofing agent, said coating being sufficient to maintain the particles in discrete form without substantial tendency to tackiness.

2,030,536
COMBUSTION CONTROL SYSTEM
Paul S. Miller, New York, N. Y., assignor to John M. Haywood, Dermont, Pa.
Application November 28, 1933, Serial No. 700,222
19 Claims. (Cl. 236—14)

1. In combination with a boiler furnace having adjustable sources of fuel and air supply, and an outlet damper for adjusting the draft, of a regulator for adjusting the outlet damper, a master regulator responsive to variations in demand for steam for creating pressure impulses that vary by and in accordance with the load demand, the outlet damper regulator responding to the draft in the furnace outlet and the pressure impulses to so adjust the damper as to maintain a balance between the draft and pressure impulses, a regulator responding to the amount of furnace gases flowing to the outlet for maintaining a predetermined relation between the air supply and rate of fuel supply, and means responsive to the pressure impulses of the master regulator for adjusting the fuel supply for a period of time such as will allow the furnace gas responsive regulator to respond to the change in load.

2,030,557
HYDRAULIC PRESS
Louis A. Malin, Chicago, Ill.
Application September 25, 1933, Serial No. 690,862
12 Claims. (Cl. 100—50)

1. An hydraulic press comprising in combina-



tion, a freely slidable curb, a ram movable to compress the material in the curb and retractible to its initial position, the curb moving with the ram during the initial stage of compression and the ram thereafter moving relative to the curb until compression is complete and the ram in its retracted position defining an opening with the adjacent end of the shifted curb, means for holding the curb in its shifted position, and positively actuated means for discharging the residue cake through the opening.

2,030,318

AIR OR GAS EXTRACTOR FOR VEHICLES OR BUILDINGS

James Muirhead and David Frain Muirhead, Glasgow, Scotland

Application October 28, 1933, Serial No. 695,676
In Great Britain November 16, 1932
8 Claims. (Cl. 98—39)

1. In a ventilator, a hollow shaft communicating with the space to be ventilated, a four sided outer structure comprising two end walls and two transverse upwardly and inwardly inclined deflector plates spaced from said shaft, a cowl above said shaft comprising baffles extending from end wall to end wall between said shaft and said deflectors, said baffles and deflectors forming two elongated slots terminating at the top in substantially parallel openings at opposite sides of said shaft, and base means extending outward from said shaft at a distance below said baffles, but terminating just short of said deflectors to provide drainage slots between the base means and said deflectors.

2,030,319

SODIUM RESISTANT GLASS

Louis Navias, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application August 11, 1934, Serial No. 739,454
2 Claims. (Cl. 176—122)

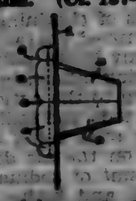
1. In combination with an electrical discharge device which contains a quantity of chemically active material and comprising a container which is susceptible to chemical attack by said material, a lining for said container comprising a borosilicate glass, the boric anhydride content of which is within the limits of about 50 to 75 per cent, the silica content of which is within the limits of about 3 to 15 per cent, and the oxide of alkali metal is less than about 10 per cent.

2,030,320

GLASS

Louis Navias, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application August 11, 1934, Serial No. 739,455
2 Claims. (Cl. 176—122)



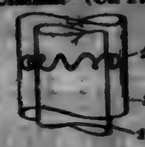
1. In combination with an electrical discharge device which contains a quantity of chemically active material and comprising a container which is susceptible to chemical attack by said material, a lining for said container comprising a barium-containing borosilicate glass, the barium oxide content of which is within the limits of about 25 to 60 per cent, the boric anhydride of which is within the limits of 50 to 70 per cent, and the silica content of which is less than about 20 per cent.

2,030,321

SILENCER

Reuben Ott, Buffalo, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a corporation of Virginia

Application September 2, 1932, Serial No. 632,581
1 Claim. (Cl. 137—160)



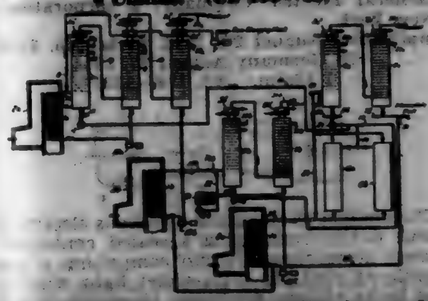
A silencer comprising a carrying plate provided with an opening therein, a plurality of tongues spaced about said opening, flexible strips having their side edges inclining inwardly toward each other, said strips having their larger ends attached to said tongues and being free to flex throughout the major portion of their length, said strips being adapted to normally urge the inclined edge portions of one strip to engage the inclined edge portions of the strip next thereto to form a normally complete passage thru the silencer of gradually decreasing cross sectional area from its inlet to its outlet, said flexible strips being yieldable outwardly to form openings in the passage wall with the greatest range of movement at the outlet end.

2,030,322

MANUFACTURE OF ELECTRIC DISCHARGE TUBES

Arthur George Pearce, Middlesex, England, assignor to General Electric Company, a corporation of New York

Application July 19, 1934, Serial No. 736,662
In Great Britain July 22, 1933
7 Claims. (Cl. 176—123)



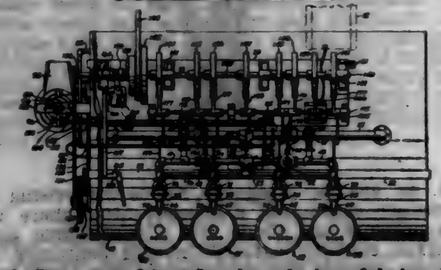
1. An electric gaseous discharge device comprising a sealed envelope containing a gaseous atmosphere and having electrodes sealed therein, an enclosing heat-conserving jacket for said envelope, and means to support said envelope concentrically within said jacket, said means comprising a metal member which surrounds said envelope and makes contact therewith only at a plurality of isolated places.

2,030,323

ART OF CRACKING HYDROCARBONS

Harry L. Pelzer, Houston, Tex., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine

Application August 26, 1931, Serial No. 559,870
4 Claims. (Cl. 196—48)



1. In the manufacture of gasoline by cracking high boiling hydrocarbon oils, the improvement which comprises heating a stream of oil to a high cracking temperature in a primary heating operation, subjecting the hot oil products of this primary heating operation and raw oil not subjected to this heating operation together to a tar separating and evaporating operation and discharging tar including constituents of the raw oil therefrom, subjecting the vapors escaping from this separating and evaporating operation successively to a primary fractionating operation and a secondary fractionating operation, condensing a high boiling condensate including constituents of the raw oil subjected to said evaporated in the separating and evaporating operation in the primary fractionating operation and supplying this condensate to the primary heating operation, condensing a lower boiling high boiling condensate in the secondary fractionating operation, separately heating this second-mentioned condensate to a higher cracking temperature in another heating operation and subjecting the hot oil products of this heating operation to a second tar separating operation and discharging tar therefrom, supplying tar from the first-mentioned tar separating operation to a coking operation through which at least a portion of the hot oil products from the second-mentioned heating operation pass, subjecting the vapors escaping from the second tar separating operation to a fractionating operation and condensing a high boiling condensate therein, discharging at least a part of this third-mentioned condensate without permitting return of the discharged part to either heating operation, and condensing a gasoline fraction from the vapors escaping from the said secondary fractionating operation and from the subsequently-mentioned fractionating operation.

2,030,324

METHOD OF AND APPARATUS FOR WASHING FABRICS

Lucien Pierce, Malden, Mass., assignor of one-half to Family Laundry Co., Malden, Mass., a corporation of Massachusetts, and one-half to George W. Hooper, Salem, Mass.

Application January 4, 1930, Serial No. 418,518
9 Claims. (Cl. 68—18)

1. In a machine for laundering fabrics, the sub-combination comprising a wash wheel, a main water supply valve, draining means providing a continuous overflow of waste wash water from the wash wheel during the washing operation while maintaining a predetermined level of water therein, means for maintaining the water supply valve in a predetermined position to continuously admit a predetermined quantity of water into the machine during the washing operation, receptacles for respectively containing different laundering agents, a cam shaft and a plurality of cams carried thereby and a plurality of valves respectively associated with the outlets of said laundering receptacles, means operated by the cams and associated with such latter valves to admit predetermined quantities of the respective laundering agents successively into the machine during the washing operation and means for admitting a fixed charge of a laundering agent into the respective receptacles therefor.

2,030,325

AUTOMATIC TYPEWRITING MARGINATOR

Thomaz Pimentel, Campinas, Brazil

Application February 4, 1935, Serial No. 4,946
In Brazil February 28, 1934
2 Claims. (Cl. 197—141)

1. A foot margin regulator for typewriters having platens comprising a cylinder mounted on one end of the platen, said cylinder being provided with a spiral groove and a recess in one end

thereof, a pawl pivotally mounted on the typewriter, slidably engageable in said groove and adapted to drop into said recess, a spring associated with said pawl tending to keep said pawl in engagement with said groove whereby the platen after successive turns is stopped when the pawl engages said recess.

2,030,396

RECTIFIER AND THE LIKE

Eugene F. Randall, Medford, Mass., assignor to General Electric Vapor Lamp Company, Hoboken, N. J., a corporation of New Jersey

Application December 20, 1925, Serial No. 76,427. Renewed July 22, 1933

15 Claims. (Cl. 250—27.5)

1. An electric discharge device comprising a container containing a gaseous atmosphere at low pressure, an anode and a vaporizable and electron emitting cathode in said container, a tubular cathode lead surrounding said anode, an insulator between said anode and said cathode lead and concentrically arranged conductors extending from said insulator between said anode and said cathode lead, said conductors being spaced closely comparable to the mean free path of electrons in said atmosphere.

2,030,397

COMPOSITE GLASS CONTAINER

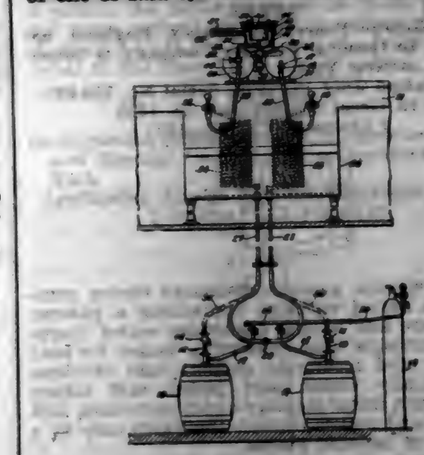
Neil B. Reynolds, Scotia, N. Y., assignor to General Electric Company, a corporation of New York

Application December 17, 1932, Serial No. 647,750

5 Claims. (Cl. 176—122)

1. An electrical discharge device comprising a sealed container of fixed form constituted mainly of silicate glass, a charge of alkali metal therein, means for conducting electric current through the vapor of said metal and an inner coating of glass of materially lower fusing temperature, resistant chemically to alkali vapor, and having a short working range and fused in situ to said formed container.

2,030,398



APPARATUS FOR CLEANING PIPES

Lionel I. Rivard and Cyril I. Bemster, New Haven, Conn.

Application March 6, 1935, Serial No. 9,623

4 Claims. (Cl. 225—12)

1. In an apparatus for cleaning pipes, the combination with companion cylinders having at one end a pipe connection therebetween; a valve in the pipe connection; a reservoir connected with said pipe connection; a pipe secured to the head of one of said cylinders having a reservoir con-

nected therewith; a similar pipe secured to the other of said cylinders; and a pipe between said reservoirs.

2,030,399

GASEOUS ELECTRIC DISCHARGE LAMP DEVICE

Robert Rompe, Berlin, Germany, assignor to General Electric Company, a corporation of New York

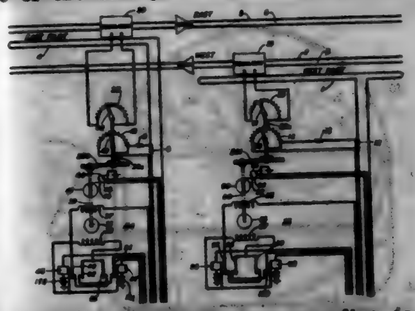
Application August 20, 1935, Serial No. 37,054

In Germany August 27, 1934

1 Claim. (Cl. 176—123)

The method of operating a gaseous electric discharge device comprising a sealed container, a gaseous atmosphere therein comprising a vapor capable of emitting ultra-violet light when excited by an electric discharge, electrodes in operative relation thereto and a body of fluorescent material associated therewith which consists in applying a high frequency current greater than 10^6 cycles to said lamp, restricting the current density to less than 10 milliamperes per tube section and restricting the vapor pressure to less than 10^{-2} mm. whereby substantially no visible light is emitted by the gaseous electric discharge and an intense light is emitted by said fluorescent body.

2,030,400



CONTROL CIRCUIT

Victor E. Rosene, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application February 21, 1935, Serial No. 7,573

18 Claims. (Cl. 178—44)

1. In a transmission system having separate east and west lines, two pilot lines respectively associated with the east and west lines and having resistance variations respectively according to the resistance variations of the east and west lines, attenuation equalizer means in the east line and in the west line, and means controlled consecutively by the east pilot line and the west pilot line for controlling the east equalizer means and the west equalizer means to govern the attenuation in the east line according to the resistance of the east pilot line and to govern the

attenuation in the west line according to the resistance of the west pilot line.

2,030,401

ELECTRIC GASEOUS DISCHARGE DEVICE

Harold H. Buff, Rugby, England, assignor to General Electric Company, a corporation of New York

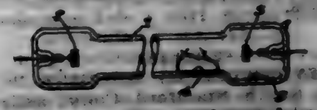
Application September 3, 1935, Serial No. 39,067

In Great Britain September 19, 1934

4 Claims. (Cl. 176—122)

1. An electric gaseous discharge device comprising a tubular sealed envelope having electrodes at opposite ends thereof, a coil about said envelope in a plane which passes through the line determined by said electrodes, and a vitreous jacket about said envelope and coil.

2,030,402



GASEOUS ELECTRIC DISCHARGE LAMP

Alfred Rüttenauer, Berlin-Halensee, Germany, assignor to General Electric Company, a corporation of New York

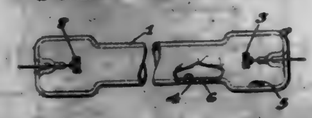
Application August 7, 1935, Serial No. 35,167

In Germany August 20, 1934

3 Claims. (Cl. 176—123)

1. A gaseous electric discharge lamp comprising a container, electrodes sealed therein, a gaseous atmosphere therein capable of emitting visible rays and ultra-violet rays when excited by an electric discharge between said electrodes, a coating of fluorescent material associated therewith, said coating consisting of a mixture of from 90 to 97% of the yellowish-white form of zinc silicate and from 10 to 3% of calcium tungstate.

2,030,403



GASEOUS ELECTRIC DISCHARGE LAMP

Alfred Rüttenauer, Berlin-Halensee, and Otto Fritze, Berlin, Germany, assignors to General Electric Company, a corporation of New York

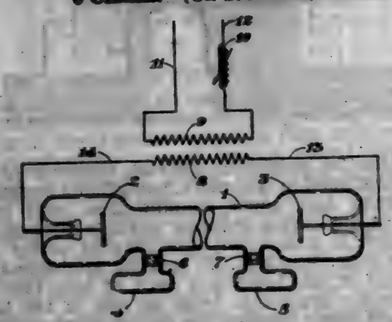
Application August 14, 1935, Serial No. 36,190

In Germany August 25, 1934

1 Claim. (Cl. 176—122)

A gaseous electric discharge lamp comprising a container, electrodes sealed therein, a gaseous atmosphere therein capable of emitting visible light and ultra-violet light when excited by an electric discharge between said electrodes, a body of luminescent material which is weakly excited by the rays emitted by said discharge and another body of material which transforms the ultra-violet rays emitted by said discharge into visible light which strongly excites the material of said first named body and causes it to emit light different in color from that emitted by said first named body and by said discharge, said last named body being interposed between said first named body and said discharge.

2,030,404



ELECTRIC DISCHARGE DEVICE

John Walter Ryde, London, and Henry Grainger Jenkins, Hatch End, England, assignors to General Electric Company, a corporation of New York

Application November 17, 1931, Serial No. 575,654

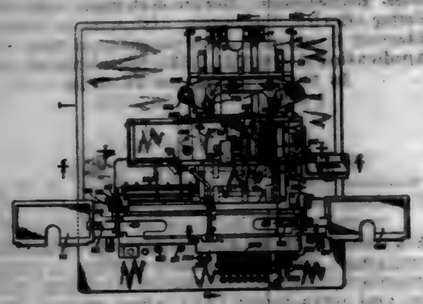
In Great Britain December 3, 1930

6 Claims. (Cl. 176—125)

4. An electric discharge lamp containing a rare gas and provided with means for introducing a stream of vaporous impurity therein, said means comprising a porous body through which the impurity diffuses and means for automatically increasing the current through the lamp to a larger value for a short period and reducing it to a smaller value for a longer period.

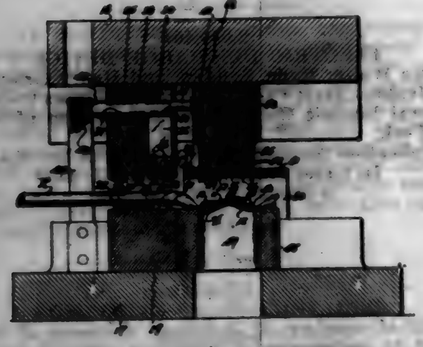
2,030,405

RECORD PERFORATING MACHINE



John T. Sahnaff, deceased, late of Washington, D. C., by Lillian A. Sahnaff, executrix, Washington, D. C., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York

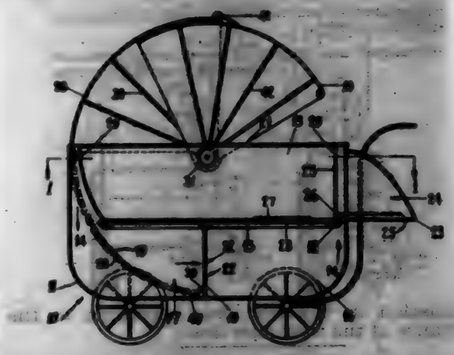
Application March 21, 1934, Serial No. 716,880



19 Claims. (Cl. 164—113)

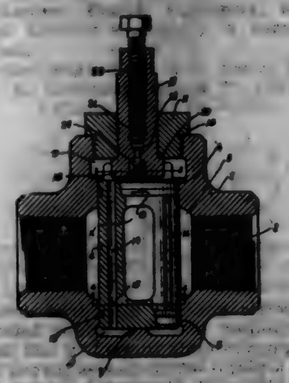
1. In a record perforating machine, a plurality of punches, a die plate associated with said

punches, means for moving the die plate to press a record against the punches to effect perforating, and a record counting device operated by movement of the die plate.



2,030,496
TOOL FOR MAKING SNAP FASTENERS FOR BAG FRAMES
Edward W. Schantz, Newark, N. J.
Application June 26, 1934, Serial No. 732,395
6 Claims. (Cl. 29—34)

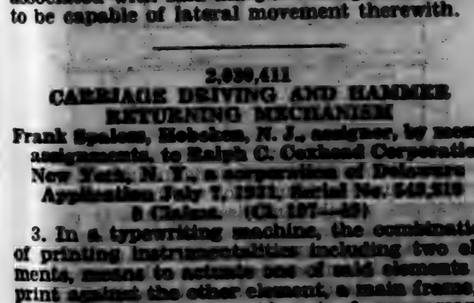
1. Dies for producing fastener elements of the kind described in one-piece, comprising cooperating lower and upper shaping dies, said lower shaping die having obtusely angular faces in one of which is a fastener base shaping cavity and in the other a cavity for shaping approximately one-half of the head and neck of said fastener in angular projection from an end of the base, and said upper shaping die having corresponding inverted obtusely angular faces in one of which are cavities for shaping riveting lugs in right angular projection from the bottom plane of the fastener base and in the other a cavity for shaping the remaining portion of the head and neck of said fastener.



2,030,497
BABY CARRIAGE
Harry Serisky, Brooklyn, N. Y.
Application February 6, 1935, Serial No. 5,161
2 Claims. (Cl. 280—47)

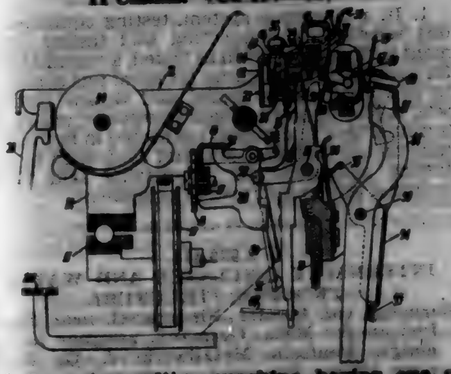
1. A baby carriage and crib of the character described, comprising in combination, a carriage body having a frame fixed thereto above the carriage floor and horizontally therein, a removable baby crib mounted on said frame and spaced away from said floor, an apertured vertical wall between said crib and carriage floors forming storage compartments therebetween, said crib being mounted centrally in said carriage and forming a continuous circulation passage around the

sides and below the bottom of said crib and through said storage compartments.



2,030,498
LUBRICATED PLUG VALVE
Ralph P. Sherman, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a corporation of Texas
Application March 24, 1933, Serial No. 662,902
3 Claims. (Cl. 251—83)

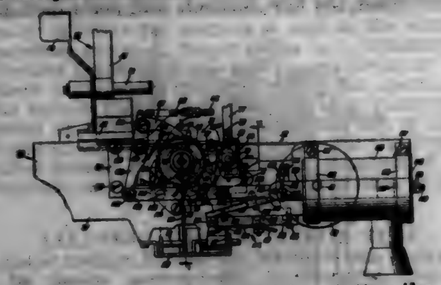
1. A plug valve including a housing, a fluid passage therethrough, a cylindrical plug rotatable in said passage and having a transverse fluid opening therein, peripheral packing rings adjacent each end of said plug, lubricant channels longitudinally of the outer surface of said plug terminating at said rings, means to conduct lubricant to both ends of said plug and approximately balance said plug longitudinally in said housing, and means to force lubricant slowly to said channels.



2,030,499
TYPEWRITING MACHINE
Jesse A. B. Smith, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application May 11, 1935, Serial No. 20,996
16 Claims. (Cl. 197—63)

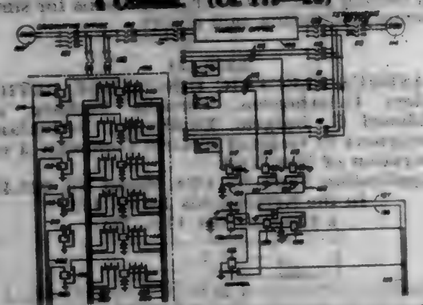
1. In a typing machine, the combination with a letter-feeding carriage, and differentially settable margin-gages to limit the carriage-movement, of a plurality of margin-gage-setting stops, and means, operable at will, whereby said stops may be selectively interposed into line with companion features provided on the margin-gages, for gaging and thereby facilitating the setting of

the margin-gages according to a plurality of certain line-length standards.



2,030,415
TYPEWRITING MACHINE
Jesse A. B. Smith, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application October 2, 1935, Serial No. 43,181
11 Claims. (Cl. 197—42)

1. In a typewriting machine having one or more tabular keys, tabular or column stops and a margin-setting device, a paragraph-setting mechanism adapted to engage one of said stops to cause said stop to act as a paragraph-stop, said paragraph-setting mechanism operatively associated with said margin-setting device so as to be capable of lateral movement therewith.

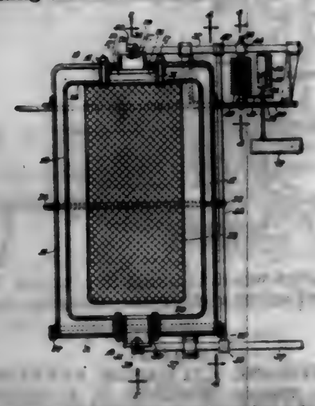


2,030,411
CARRIAGE DRIVING AND HAMMER RETURNING MECHANISM
Frank Spalon, Hoboken, N. J., assignor, by mesne assignments, to Ralph C. Coxhead Corporation, New York, N. Y., a corporation of Delaware
Application July 7, 1931, Serial No. 548,519
8 Claims. (Cl. 197—49)

3. In a typewriting machine, the combination of printing instrumentalities including two elements, means to actuate one of said elements to print against the other element, a main frame, a carriage to travel on said main frame, escapement mechanism including a shaft supported on said main frame, means connecting said shaft to be rotated by said carriage, means to propel said carriage, an escapement wheel rotatably supported on said shaft, a ratchet wheel secured to said escapement wheel, means operable by the escapement wheel to restore the actuable printing element to normal, a pawl carried by said shaft to cooperate with said ratchet to form a one way driving connection between the carriage and the escapement wheel, and auxiliary means acting

on said ratchet wheel to assist in rotating the escapement wheel to restore the actuable printing element.

2,030,412
TELEPHONE EXCHANGE SYSTEM
Franklin A. Stearn, Westfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 24, 1934, Serial No. 749,718
4 Claims. (Cl. 179—18)

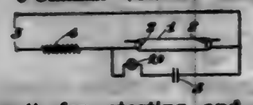


1. In a telephone exchange system, a calling office, called offices, an intermediate office, switching mechanism located in said calling office, a group of direct paths extending from said switching mechanism to each of said called offices, a group of indirect paths extending from said switching mechanism through said intermediate office to each called office, a register sender for recording office code designations of wanted lines and for controlling said switching mechanism to select a path to the called office in which a wanted line terminates, a translating means including a pulse machine for translating office code registrations to enable said sender to control said switching mechanism, reroute relays in said translating means corresponding to the groups of direct paths, each of said reroute relays being operable to change the translation normally effective for routing a call to the corresponding group of direct paths to a translation effective for routing the call to said group of indirect paths, and means effective for operating the reroute relay corresponding to a particular group of direct paths when all but one of that group of paths are actually busy and said pulse machine has completed a cycle to route a call to the last idle path of that group.

2,030,413
REFRIGERATOR
James A. Stone, Philadelphia, Pa.
Application December 14, 1932, Serial No. 647,687
12 Claims. (Cl. 62—61.5)

14. Refrigerating apparatus comprising a heat insulated container adapted to receive a quantity

of evaporative refrigerant, said container having inlet and outlet ports to permit the flow of air and gases through said container, and means for controlling the flow through said ports including

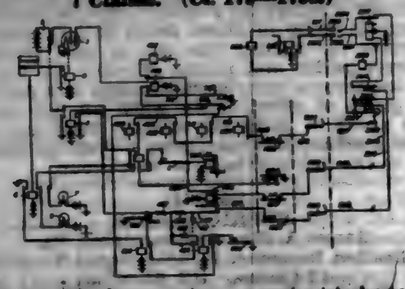


a valve member for each of said ports adapted to close the same, a shaft for each of said valves, each of said shafts extending longitudinally of and beyond said container, and means for simultaneously actuating said shafts.

2,030,414
GASEOUS ELECTRIC DISCHARGE DEVICE

William Uyterhoeven, Cornelis Verburg, and Eduard G. Dergels, Eindhoven, Netherlands, assignors to General Electric Company, a corporation of New York

Application June 26, 1934, Serial No. 732,490
In the Netherlands July 4, 1933
6 Claims. (Cl. 176—124)

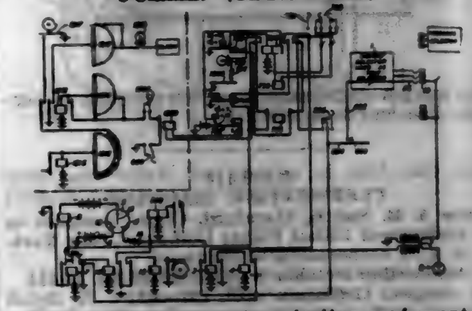


1. A circuit for starting and operating a gaseous electric discharge device comprising in combination, a condenser connected in parallel with said device, a choke-coil connected in series with said device, a current source for said device, said choke-coil and said condenser being so proportioned with respect to each other that they are in resonance for a higher harmonic of the alternating current source.

2,030,415
TELEPHONE SYSTEM

Edward L. Vibbard, St. Albans, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application November 17, 1934, Serial No. 753,434
7 Claims. (Cl. 179—175.2)



1. In a telephone system, a contact to be tested, testing equipment including a gas-filled tube having a cathode, an anode and a grid, means to prepare a circuit including the contact to be tested, said cathode and said anode, and means to ionize said tube to complete the test circuit.

2,030,416
TELEPHONE SYSTEM

Edward L. Vibbard, St. Albans, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

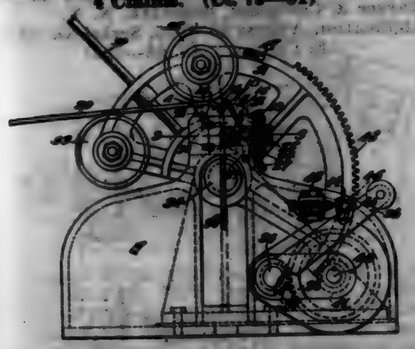
Application November 17, 1934, Serial No. 753,435
6 Claims. (Cl. 179—175.2)

1. In a telephone system, testing equipment, a test selector for connecting said testing equipment with equipment to be tested, a terminal bank for said selector including terminal sets connected to equipment to be tested and vacant terminal sets, means to position said selector on one of said terminal sets, and means connected in multiple to said vacant terminal sets and controlled by said testing equipment for identifying said vacant terminal sets to said testing equipment.

2,030,417
INTERNALLY INSULATED AND WATER-PROOFED STRUCTURE

Hermann von Perrier, Niederursel, near Frankfort-on-the-Main, Germany, assignor to Vereinigte Deutsche Metallwerke A. G., Hinsel, near Altona, Germany, a corporation of Germany

Application February 10, 1934, Serial No. 710,668
In Germany July 11, 1933
12 Claims. (Cl. 72—127)

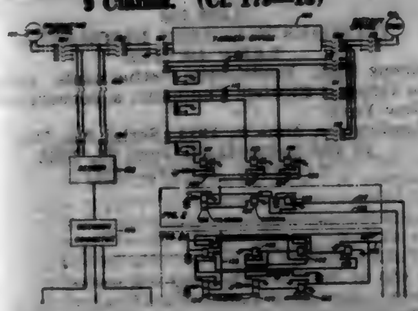


1. An insulated and waterproofed layer for constructions above and underground including bridges, tunnels, foundations of buildings, dams, containers which comprises a plurality of long, foldable and corrosion-resistant metallic sheets of foil thickness connected together and capable of expanding and contracting and of remaining flexible and elastic, said sheets being thin enough to be ductile and to conform to elevations and depressions of the surrounding structural members and having sufficient mechanical strength to resist penetration of said structure, and an intermediary layer of an adhesive substance interposed between each side of the aforesaid sheets and the adjacent surface of the construction to be protected including concrete, stonework, masonry, and brickwork, said adhesive substance being adapted to remain plastic and elastic at atmospheric temperatures, to absorb shocks, and to prevent the occurrence of condensates on the surfaces of said metallic sheets.

2,030,418
TESTING MACHINE

David M. Warner, Dayton, Ohio, assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a corporation of Pennsylvania

Application July 28, 1931, Serial No. 553,579
6 Claims. (Cl. 73—81)

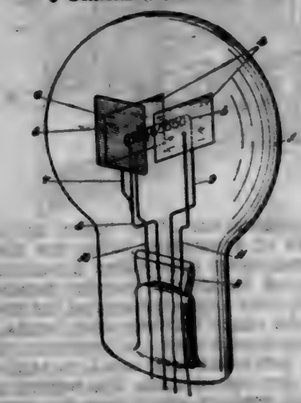


2. A machine for testing the ductility of a material comprising a vise arranged to hold a specimen projecting outwardly therefrom and forming an axis about which said specimen is arranged to be bent, bending members arranged to engage opposite sides of said specimen and mounted to rotate about a common axis located in the plane of the fixed part of the specimen, said common axis being spaced from the aforesaid axis of bending, and means to oscillate said members whereby said specimen is always bent without localized work hardening effect.

2,030,419
TELEPHONE EXCHANGE SYSTEM

Samuel B. Williams, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application October 24, 1924, Serial No. 749,692
9 Claims. (Cl. 179—18)

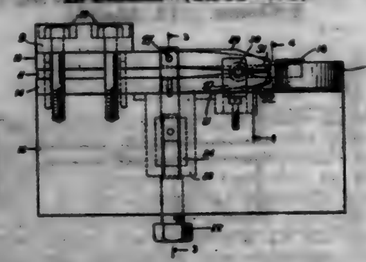


1. In a telephone exchange system, a calling office, called offices, an intermediate office, switching mechanism located in said calling office, a group of direct paths extending from said switching mechanism to each of said called offices, a group of indirect paths extending from said switching mechanism through said intermediate office to each called office, a register sender for recording the office code designations of wanted lines and for controlling said switching mechanism to select a path to the called office in which a wanted line termination, translating means associated with said sender for translating office code registrations to enable said sender to control said switching mechanism, reroute relays in said translating means corresponding to the groups of direct paths, each of said reroute relays being operable to change the translation normally effective for routing a call to the corresponding group of direct paths to a translation effective for routing the call to said group of indirect paths, and means effective for operating the reroute relay corresponding to a particular group of direct paths when all but one of that group of paths are actually busy and the translating means has completed the direction of an initiated call to the last idle path in that group.

2,030,479
ELECTRIC ARC DISCHARGE TUBE

Gustav Zecher, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, a corporation of New York

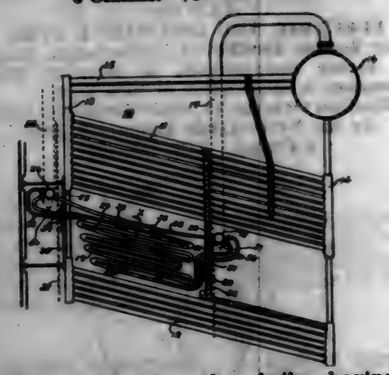
Application October 22, 1930, Serial No. 491,769
In the Netherlands January 9, 1930
6 Claims. (Cl. 250—35)



1. An electric discharge lamp device comprising a container, a gaseous atmosphere therein, electrodes sealed therein, one of said electrodes being an elongated cathode of disintegratable material, two of said electrodes being plate shaped anodes mounted in parallel positions in said container, said cathode being interposed between said anodes and a grid in said container mounted at right angles to the longitudinal axis of said cathode parallel to the discharge path between said electrodes and interposed between said cathode and a light transmitting part of said container.

2,030,421
TUNED VIBRATING SYSTEM

Theralf Aasaedt, Westerleigh, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

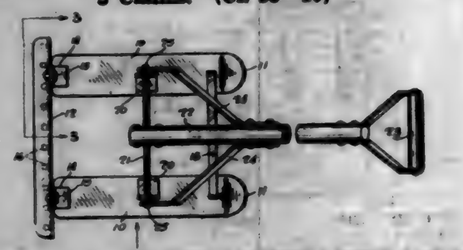


Application April 6, 1933, Serial No. 664,189
13 Claims. (Cl. 84—403)

1. A tuned vibrating system comprising a contoured vibrating bar, two clamp members along a portion of opposite sides of the bar having a

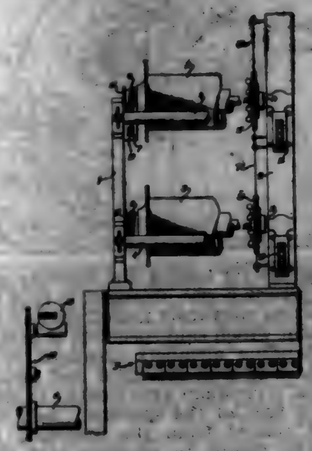
normal radius of curvature different from the bar, means for supporting the bar and the clamps at one end, means for forcing the clamps into intimate contact with the bar throughout their lengths, and means for gradually deflecting the free ends of the clamps to vary progressively the effective free length of the bar.

2,030,422
SUPERHEATER
William H. Armacost, New York, N. Y., assignor to The Superheater Company, New York, N. Y.
Application August 12, 1931, Serial No. 556,883
6 Claims. (Cl. 122—478)



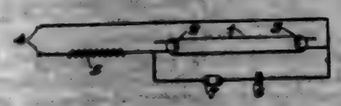
3. The combination of a boiler having two spaced banks of generating tubes one above the other, a superheater comprising a pair of horizontally spaced horizontal tubular headers and having multi-loop units connected between said headers in the space between said banks, means extending above said units, connections for transferring the weight of said units to said means, connections for transferring the weight on said means to said headers, and means for supporting said headers independent of said tube banks.

2,030,423
ALKYL RESORCINOLS
William E. Austin, New York, N. Y., assignor to Bank of The Manhattan Company
No Drawing. Application July 26, 1932, Serial No. 624,270
6 Claims. (Cl. 260—154)



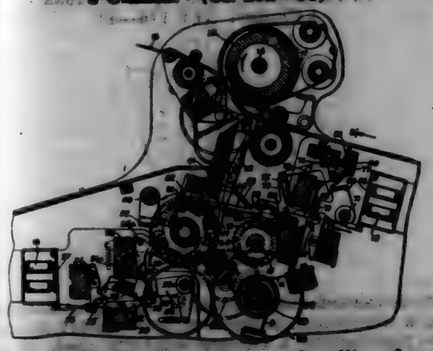
1. Alkyl resorcinols of the general formula $C_6H_3(OH)_2(CHR_1R_2)$ where H is hydrogen, and R_1 and R_2 are alkyls, the group (CHR_1R_2) containing not less than seven carbon atoms, and being attached to the resorcinol nucleus by a carbon other than an end carbon.

2,030,424
SAND TRAP RAKE
Edgar J. Buckgahn, Red Bank, N. J.
Application November 27, 1934, Serial No. 754,935
5 Claims. (Cl. 55—10)



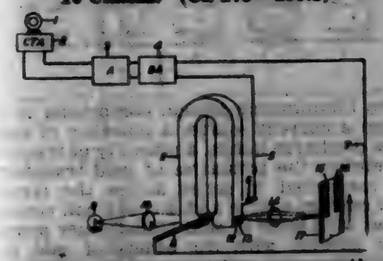
1. A sand trap rake comprising spaced shoes, a bar extending transversely relative to and connecting the shoes, teeth carried by the bar extending downwardly beyond the lower surface of the shoes, and an operating handle pivotally attached to the shoes.

2,030,425
SPEED INDICATOR AND TENSION REGULATOR FOR WARP KNITTING MACHINES
William J. Bernstein, Sanford, N. Y., and Joseph L. Beers, Bloomfield, N. J., assignors to Julius Kayser & Company, Brooklyn, N. Y.
Application August 30, 1935, Serial No. 38,596
18 Claims. (Cl. 66—125)



1. In combination with the upper and lower warp beams, and the course regulating element of a warp knitting machine, a separate counter independently mounted and operatively associated with each of said beams and said course regulating element, whereby the relative speed therebetween may be visually indicated.

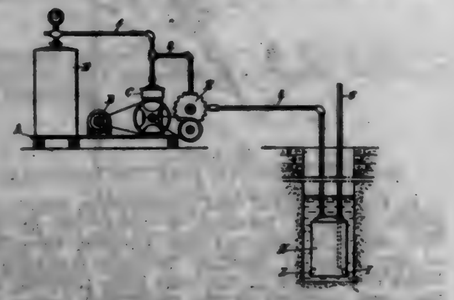
2,030,426
GASEOUS ELECTRIC DISCHARGE LAMP DEVICE
Lourens Blok, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application June 2, 1934, Serial No. 728,765
In the Netherlands June 24, 1933
2 Claims. (Cl. 176—124)



1. A circuit for starting and operating a gaseous electric discharge device comprising in combination, a condenser connected in parallel with said device, a self-inductance connected in series with said device, an auxiliary gaseous electric discharge device connected in series with said condenser, a current source for said first named device, the starting voltage of said auxiliary device being less than the voltage of said current source and the operating voltage of said auxiliary discharge device being greater than that applied thereto after said first named device has been started into operation.

2,030,427
TABULATING MACHINE
Eugen Bahler, Binghamton, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application December 14, 1934, Serial No. 757,461
8 Claims. (Cl. 101—93)

1. In a printing machine, a plurality of continuously moving type carriers each having a plurality of type spaced thereon, a printing hammer, means for impelling said hammer against one of said elements while in motion to effect printing thereby, means for suppressing operation of said impelling means with respect to certain type and means for rendering said suppressing means inoperative at will.



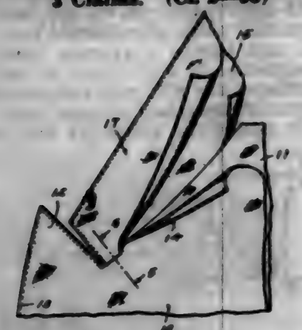
2,030,428
SOUND RECORDING SYSTEM
Irl M. Chambers, Los Angeles, Calif., assignor, by mesne assignments, to Western Electric Company, Incorporated, a corporation of New York
Application September 15, 1932, Serial No. 633,262
10 Claims. (Cl. 179—100.3)

1. A light valve comprising a magnetic structure having parallel pole faces each pierced by a plurality of aligned apertures, a pair of electrical conductors supported between said parallel pole faces and defining a light transmitting slot in each of said apertures, an electrically conductive connection between said conductors intermediate their ends, and means for supplying current to one end of one of said conductors and to the other end of the other of said conductors to vary their space relation whereby the light transmitted through said slots is alternately varied in accordance with the variations in the alternate half-waves of the current.

2,030,429
COMPRESSED AIR WATER ELEVATOR
Antonio Mello da Silva, Rio de Janeiro, Brazil
Application October 3, 1933, Serial No. 692,374
In Brazil October 14, 1932
2 Claims. (Cl. 103—260)

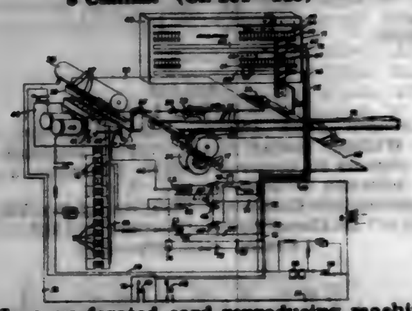
1. In apparatus for the intermittent elevation of water and other liquids by means of compressed air, including a prime mover, an air compressor driven thereby and an air container for compressed air connected to said compressor, a water container adapted to be at least partly immersed in the water to be raised and having both a delivery pipe extending from the upper portion thereof for delivering water therefrom and an air pipe connected thereto for injecting compressed air from said air container, there being one or more inlet valves in the lower portion of said water container for solely letting water into the same, and an exterior distributing and regulating valve both connected to said air pipe so as to control the same intermediate both of said containers, and having a grooved rotary valve member connected to and driven by said prime mover simultaneously with said compressor in order to alternately open said air pipe from said air container to said water container and drive the

water from the latter and then both close said air pipe from said air container to said exterior valve and simultaneously open said air pipe from said water container to said exterior valve through the latter in order to exhaust the air in said water container and allow the same to fill with water through said one or more inlet valves, which exterior distributing and regulating valve has a casing provided with four channels arranged in two groups of two, with the channels in each group disposed at practically a right angle to each other, while said channels cooperate with the grooves in the rotary member of said valve so that the first group of channels serves to pass compressed air into the water container from the air container and the other group serves to exhaust the compressed air from said water container.



2,030,430
ELECTRIC LAMP
Leonard John Davies, Charles Glisen, and William Joseph Scott, Rugby, England, assignors to General Electric Company, a corporation of New York
Application October 4, 1934, Serial No. 746,912
In Great Britain October 6, 1933
1 Claim. (Cl. 176—122)

In combination, a gaseous discharge device comprising a tubular envelope, electrodes within said envelope, a vaporizable material within said envelope in an amount just sufficient to generate a pressure of the order of atmospheric when entirely vaporized, a surrounding enclosure for said envelope, means for producing an arc discharge between said electrodes said envelope being located during operation in a position with its axis inclined to the vertical, and magnetic control means located in the space between said envelope

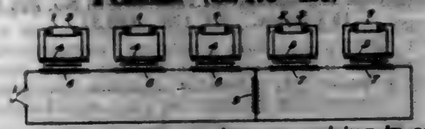


and enclosure and energized by the discharge current for counteracting the tendency of the arc to be deflected from an axial position within said envelope by convection currents set up in said filling by the heat of the arc.

2,030,431
METHOD OF COAT CONSTRUCTION
Frank J. Di Biase, Brooklyn, N. Y.
Application August 15, 1935, Serial No. 36,423
3 Claims. (Cl. 2—98)

1. The method of coat construction which comprises initially forming a collar of at least two pieces of material and stitching three sides of the material together, initially stitching the front and facing of the coat body together with the neck portions of the front and facing free, tacking the ends of the collar through the front and facing of the coat body with a single line of stitching, stitching the balance of one portion of the collar to the facing and stitching the balance of the other portion of the collar to the front of the coat.

2,030,432
PUNCHING MECHANISM
Arthur H. Dickinson, Brooklyn, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application March 24, 1934, Serial No. 717,170
8 Claims. (Cl. 164—115)

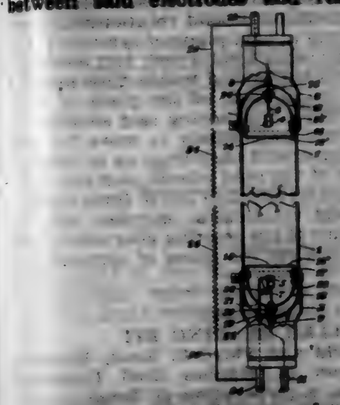


1. In a perforated card reproducing machine, means for analyzing a field of a record card in which a characteristic perforation may be present, means for perforating a field of another card under control of the field of the first card to reproduce all perforations other than the characteristic perforation, and automatically effective upon analysis of the index point position of the characteristic perforation for suppressing the reproduction of a corresponding perforation if one is present in the analyzed card and for effecting a characteristic perforation if there is none in said analyzed card.

2,030,433
GASEOUS ELECTRIC DISCHARGE DEVICE
Eduard G. Dergels, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application April 6, 1934, Serial No. 719,361
In the Netherlands April 22, 1933
4 Claims. (Cl. 176—1)

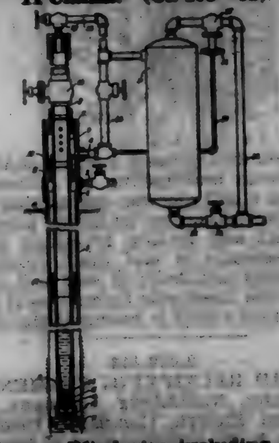
1. A gaseous electric discharge device comprising a container, a gaseous atmosphere therein, two resistances, a current lead for each of said resistances and a thermionic cathode sealed therein, said resistances being connected in series across said current leads and said cathode being connected in series with said resistances, said cathode being mounted between said resistances, said current leads serving as anodes for said cathode.

2,030,434
GASEOUS ELECTRIC DISCHARGE DEVICE
Eduard G. Dergels, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application April 16, 1935, Serial No. 16,687
In the Netherlands April 15, 1934
2 Claims. (Cl. 176—124)



1. An illuminating system comprising in combination a current source, a plurality of gaseous electric discharge lamps, a plurality of transformers therefor, the primaries of said transformers being connected in series across the terminals of said current source and a choke coil connected in series with some of said transformer primaries and in parallel with the others of said transformer primaries with respect to said current source, said choke-coil starting said lamps connected to the transformers connected in parallel thereto after said lamps connected to said transformers connected in series therewith have started.

2,030,435
GASEOUS ELECTRIC DISCHARGE LAMP DEVICE
Adolf Feige, Berlin, and Hermann Krefft, Berlin-Friedrichshagen, Germany, assignors to General Electric Company, a corporation of New York
Application September 7, 1934, Serial No. 743,160
In Germany September 26, 1933
2 Claims. (Cl. 176—122)



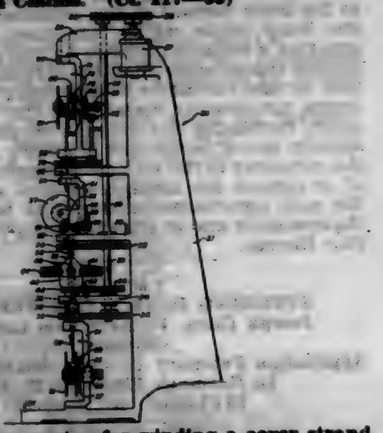
1. A gaseous electric discharge device comprising a container, electrodes and electrode leads sealed therein, a gaseous atmosphere therein, a chamber in said container for each of said electrodes, said chambers being separated from said container, attached to said electrode leads and

opening in the direction of the discharge path between said electrodes and resilient support

means interposed between and pressing against the inner wall of said container and the outer wall of each of said chambers.

2,030,436
PLUNGER LIFT CONTROL
Harold W. Fletcher and Ralph Neuhaus, Houston, Tex., assignors to Hughes Tool Company, Houston, Tex., a corporation of Texas
Application February 18, 1935, Serial No. 7,107
11 Claims. (Cl. 103—53)

1. A plunger lift device including an eduction tube having fluid openings at its lower end, a fluid outlet adjacent its upper end, and a plunger movable from end to end of said tube, in combination with a gaseous fluid inlet in said tube at a level spaced upwardly from its lower end, a valve in said inlet arranged to be opened by upward movement of said plunger past the same and to be closed by downward movement of said plunger past the same.

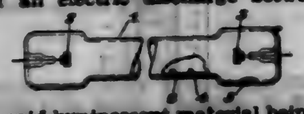


2,030,437
ELECTRIC DISCHARGE DEVICE
Victor James Francis and John Walter Hyde, Middlesex, England, assignors to General Electric Company, a corporation of New York
Application January 7, 1935, Serial No. 740
In Great Britain January 12, 1934
4 Claims. (Cl. 176—122)

1. An electric discharge device comprising a container, electrodes sealed therein, a quantity of vaporizable material therein, a sealed envelope for said container and a gas in said envelope under

a pressure greater than 1 mm. to retard the formation of dark deposits on the inner surface of said container.

2,030,438
METHOD OF AND APPARATUS FOR HANDLING STRANDS
Erwin E. Franz, Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 12, 1934, Serial No. 734,714
4 Claims. (Cl. 117—35)



1. In an apparatus for winding a cover strand on a core strand, means to rotate the core strand in one direction and at the same time to twist the core strand, and means to revolve the cover strand about the rotating core strand simultaneously in the opposite direction.

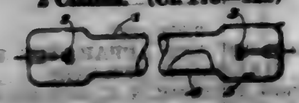
2,030,439
MANUFACTURE OF FABRICATED GLASS ARTICLES
Otto Fritze, Berlin, and Alfred Rittenauer, Berlin-Halensee, Germany, assignors to General Electric Company, a corporation of New York
Application December 18, 1934, Serial No. 758,028
In Germany March 16, 1934
5 Claims. (Cl. 176—122)

1. A gaseous electric discharge lamp device comprising a container, electrodes sealed therein, gaseous atmosphere therein, a coating of light transmitting enamel on the inner surface of said container and luminescent material embedded

in the surface of said enamel coating, said luminescent material having a smooth, glassy surface, said gaseous atmosphere emitting visible light and ultraviolet light when excited by the passage of an electric discharge between said

electrodes, said luminescent material being transparent to said visible light and transforming said ultraviolet light into visible light to complement the spectrum of the visible light emitted by the gaseous atmosphere and to supplement the intensity of the visible light.

2,030,440



MANUFACTURE OF FABRICATED GLASS ARTICLES

Otto Fritze, Berlin, and Alfred Büttemaner, Berlin-Halensee, Germany, assignors to General Electric Company, a corporation of New York

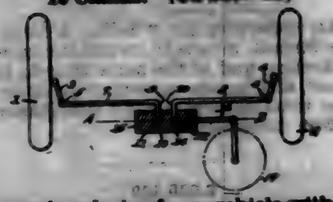
Application December 30, 1934, Serial No. 757,514

In Germany January 3, 1934

2 Claims. (Cl. 176—122)

1. A process for applying luminescent material to the inner surface of the container of an electric lamp device which comprises the steps of applying a binding material having a lower volatilizing temperature than the softening temperature of said container to said inner surface, applying luminescent material to the binding material, increasing the pressure in said container slightly above barometric pressure and heating the container to the softening temperature thereof to remove the binding material and to cause the said luminescent material to be fused into the container and to present a smooth glassy surface thereat.

2,030,441



STEERING DEVICE FOR VEHICLES

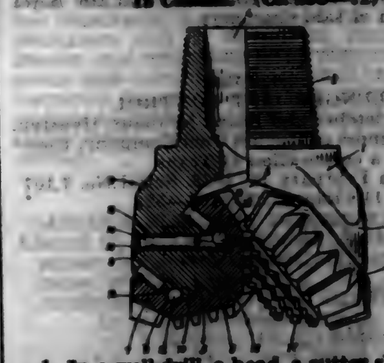
Joseph Ganz, Frankfort-on-the-Main, Germany

Application February 12, 1935, Serial No. 582,516

In Germany February 16, 1931

10 Claims. (Cl. 280—96)

1. A steering device for a vehicle with individually steered road wheels and with a steering column arranged on one side of the plane of symmetry thereof which comprises a rotationless member mounted approximately in the vicinity of the plane of symmetry of the vehicle and being capable of only sliding transversely to said plane, a steering gear controlling rod having one end pivotally mounted in said rotationless member approximately at said plane of symmetry and having its other end operatively associated with one of said road wheels, said controlling rod being substantially parallel to said rotationless member and extending from said plane of symmetry to said wheel, a second steering gear controlling rod pivotally mounted in said rotationless member approximately at said plane of symmetry and extending to the other road wheel, and mechanical means connected to said rotationless member and extending to one side of the plane of symmetry of the vehicle for moving said slidable rotationless member transversely to move the said controlling rods parallel thereto so as to individually steer each of the road wheels, said mechanical means having an effective line of force extending through said rotationless member and the pivotal mountings of the steering gear controlling rods at approximately the plane of symmetry of the vehicle.



2,030,442

ROLLER BEARING BIT

Lewis E. Garfield and Floyd L. Scott, Houston, Tex., assignors to Hughes Tool Company, Houston, Tex., a corporation of Texas

Application October 20, 1932, Serial No. 638,554

15 Claims. (Cl. 255—71)

1. In a well drill, a head, a cutter shaft integral with said head and having an outboard roller raceway and a ball raceway spaced therefrom, an approximately conical cutter fitting about the end of said shaft and having raceways to register with the raceways in said shaft, rollers in said roller raceways and balls in said ball raceways; said balls being insertable through said shaft and head when said cutter is mounted thereon.

2,030,443

SOLID RECTIFYING ELEMENT

Ottmar Geisler, Nuremberg, Germany, assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

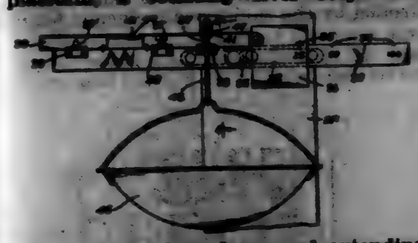
Application July 18, 1934, Serial No. 735,042

In Germany March 15, 1934

11 Claims. (Cl. 175—366)

1. An alternating current rectifier of the type having a rectifying layer of selenium between and intimately attached to a pair of electrodes, in which one electrode is of aluminum.

2,030,444



WEIGHING AND COUNTING SCALE

William Nathan Gilbert, Hudson Heights, N. J., assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application May 19, 1933, Serial No. 671,974

3 Claims. (Cl. 265—39)

1. In a device of the class described, a platform, a base lever operated thereby, automatic counterbalancing and indicating mechanism operated by said lever, a housing for said mechanism above the platform, a counting lever responsive to

movements of the base lever and extending at substantially right angles to the front of the housing, and a ratio pan carried by said counting lever.

2,030,445

GASEOUS ELECTRIC DISCHARGE LAMP DEVICE

Henricus Geeskens, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York

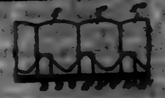
Application November 7, 1934, Serial No. 751,953

In the Netherlands November 9, 1933

6 Claims. (Cl. 176—122)

1. A gaseous electric discharge lamp device comprising a container, electrodes sealed therein, a starting gas and a quantity of vaporizable material therein, means for maintaining a part of said container at a lower temperature than the other parts thereof and a heater mounted in said container adjacent the lowest temperature part thereof.

2,030,446



APPARATUS FOR USE IN COLOR PHOTOGRAPHY

Edgar Gretener, Berlin-Siemensstadt, Germany, assignor to Optische Aktiengesellschaft, Glarus, Switzerland, a corporation of Switzerland

Application December 22, 1933, Serial No. 703,708

In Germany December 29, 1932

3 Claims. (Cl. 88—24)

1. In an optical system for use with lenticulated films having three color records behind each lenticulation, a film gate through which such a film is adapted to be moved, a diaphragm through which light may pass to or from said film in the gate, means to form an image of said diaphragm at said gate, said diaphragm having three apertures spaced apart transversely of the lenticulations on the film, the central one of said apertures being rectangular in shape and the side apertures being separated from the central aperture by opaque strips said strips having curved edges forming the boundaries of said side apertures.

2,030,447

MULTICOLOR-SCREEN FOR USE WITH LENTICULATED FILMS

Edgar Gretener, Berlin-Siemensstadt, Germany, assignor to Optische Aktiengesellschaft, Glarus, Switzerland, a corporation of Switzerland

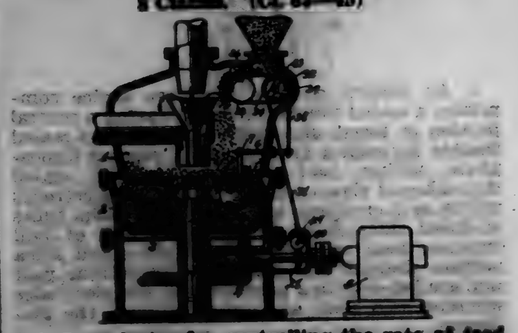
Application January 28, 1934, Serial No. 707,531

In Germany January 19, 1931

1 Claim. (Cl. 88—16.4)

A color filter for use with lenticulated films and high intensity lamps emitting light of approximately equal energy for all wave lengths of the spectrum, said filter comprising three zones extending generally parallel to the lenticulations on the films, the filter being circular and the zones being colored green, red, and blue, with the red zone extending substantially diametrically across the filter, and the green and blue zones being disposed generally parallel to the red zone and on opposite sides thereof.

2,030,448



FEED CONTROL FOR MILLS

Ralph M. Hardgrove, Bethlehem, Pa., assignor to Fuller Lehigh Company, Fullerton, Pa., a corporation of Delaware

Application May 23, 1925, Serial No. 231,565

Renewed July 20, 1932

8 Claims. (Cl. 83—45)

1. In a device for controlling the rate of feed to a ball mill having a series of horizontally rotating grinding balls and drive means therefor, a feed mechanism, and means independent of said drive means and operated by the depth of material in the mill to control the feed mechanism.

2,030,449

MERCURY SWITCH

Charles Hotop, Berlin-Charlottenburg, Germany, assignor to General Electric Company, a corporation of New York

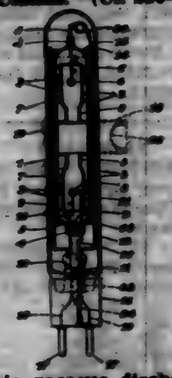
Application April 20, 1932, Serial No. 607,047

In Germany May 5, 1931

2 Claims. (Cl. 200—152)

1. A switch comprising a tubular container having a cup-shaped enlargement at right angles to the longitudinal axis thereof, a solid metal elec-

trode and a fluid electrode in said container, one end wall of said container being flexible, a lever fused into said flexible wall, a flexible resilient strip of conducting material fused into the opposite end wall of said container and extending toward said flexible wall, said lever and said strip



overlapping for the greater part of their length in said container, said solid metal electrode being mounted on the end of said strip, said fluid electrode being in said cup-shaped enlargement, said lever on successive movements thereof making and breaking the electrical contact between said electrodes.

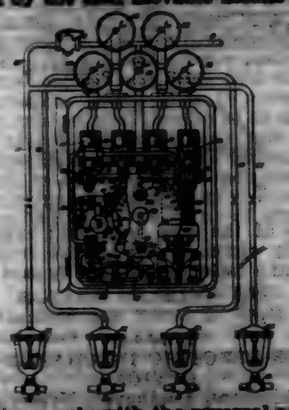
2,029,450

ELECTRIC GASEOUS DISCHARGE DEVICE

Artur Hansche, Berlin, and Hermann Krefft, Berlin-Friedrichshagen, Germany, assignors to General Electric Company, a corporation of New York

Application August 26, 1935, Serial No. 37,456
In Germany September 11, 1934
2 Claims. (Cl. 250—35)

1. An electric gaseous discharge device comprising a sealed tubular envelope having a central portion of fused silica with ends of glass sealed thereto through a graded seal, a gaseous atmosphere within said envelope, inleads sealed through said glass ends and supporting electrodes within said envelope, and a pair of coaxial tubes of fused silica fused to the inner wall of said envelope near opposite ends of the fused silica portion thereof and extending therefrom past said graded seals to a point beyond said electrodes whereby said seals are protected from the discharge.



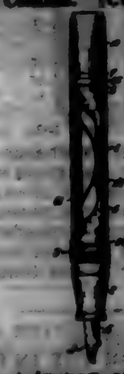
2,029,451

TIME-CYCLE CONTROLLER

William J. Kerr, Waterbury, and Edward C. Miller, Naugatuck, Conn., assignors to The Bristol Company, Waterbury, Conn., a corporation of Connecticut

Application January 3, 1934, Serial No. 705,634
10 Claims. (Cl. 161—7)

1. In a time-cycle controller embodying pilot means, devices controlled thereby, and means for actuating the pilot means: a cam having a plurality of axially displaced surfaces adapted for engagement with the said actuating means, means to rotate the cam substantially continuously during a complete cycle including a reversal of the rotation thereof, means including between the said rotating means and the cam for changing its direction of rotation, means movable with the cam for determining the time of reversal of the rotation of the cam, and means controlled by the said movable means for effect-



ing simultaneously with the reversal an axial displacement of the cam whereby its engagement with said actuating means is transferred from one to another of said surfaces.

2,029,452

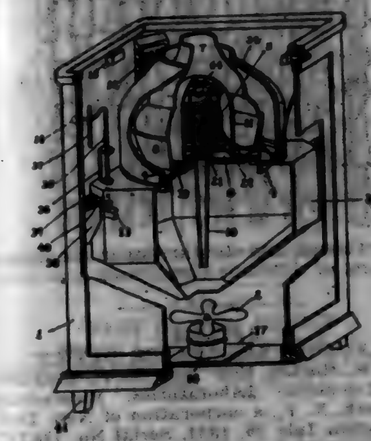
SOLUBLE INK FOUNTAIN PEN

Russell B. Kingsbury, Grange, N. J., assignor, by mesne assignments, to Conmel Pen Company, a corporation of New Jersey

Application April 22, 1935, Serial No. 17,501
9 Claims. (Cl. 120—48)

1. In a fountain pen of the kind described, a barrel open at its upper end, a throat-section to carry a pen nib and its feed bar, associated with the lower end of said barrel, an ink material storage means movable within the upper open end portion of said barrel and having an end exteriorly projecting from the latter, a reservoir means including a flexible sac interconnected in communication between said storage means and said throat-section, the sac being adapted to be collapsed by movement of the storage means relative to said barrel.

2,029,453



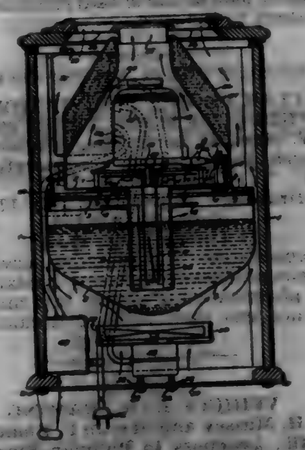
HUMIDIFIER

Leo Kresser, Springfield, Mass., assignor to United American Bosch Corporation, Springfield, Mass., a corporation of New York

Application September 26, 1932, Serial No. 633,179
5 Claims. (Cl. 261—91)

1. A humidifier comprising a cabinet, a water reservoir in said cabinet spaced from the inner

side surfaces thereof, means for propelling a draft of air between said reservoir and said surfaces, the reservoir having an opening in the top, a basin in said opening, a cover having an outlet neck for the basin, a plate having a downturned rim resting upon the bottom of the basin, a motor on said plate, a centrifugal disk between



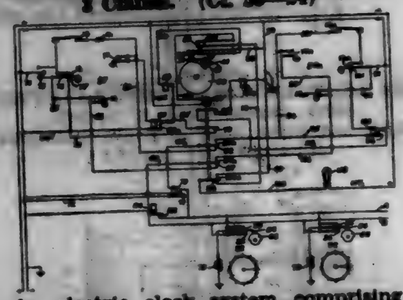
said plate and the basin connected to be rotated by the motor and a tubular member projecting downward from said disk through an opening in the bottom of the basin into the reservoir, said disk having a central opening through which water can be drawn by way of said member to the top surface of the disk.

2,029,454

HUMIDIFIER APPARATUS

Leo Kresser, Springfield, Mass., assignor to United American Bosch Corporation, Springfield, Mass., a corporation of New York

Application December 15, 1934, Serial No. 757,645
5 Claims. (Cl. 261—91)



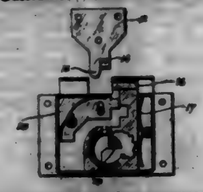
1. In a humidifier, a water tank, an atomizer in communication with said tank, a motor driving said atomizer, means for establishing a stream of moist air surrounding said motor, means for establishing a stream of dry air substantially concentric with said moist air stream, and a sound absorbent partition separating said air streams and positioned adjacent said motor.

2,029,455

ELECTRIC CLOCK SYSTEM

Clinton E. Larrabee, Binghamton, N. Y., assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application July 16, 1932, Serial No. 622,963
3 Claims. (Cl. 58—24)



3. An electric clock system comprising two master clocks, a plurality of secondary clocks adapted to be operated by one or the other of said master clocks, means operated conjointly by both master clocks and means controlled by said last named means for selecting the one or the other of said two master clocks for operating the secondary clocks.

2,029,456

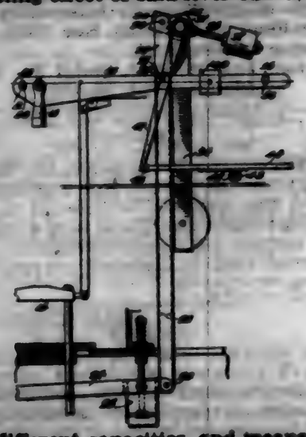
LOCK

Charles Lodin, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn.

Application May 13, 1930, Serial No. 542,074
3 Claims. (Cl. 70—27)

1. In a suitcase, a lid, a hasp secured to said lid on the inside thereof, a lock comprising locking mechanism and a main body portion adapted to receive and lock said hasp therein, a cylinder lock slidably mounted relatively to said lock body and secured to the locking mechanism for directly actuating the same, said cylinder projecting forwardly from said main lock body and through a hole in the suitcase, a head on said cylinder, said cylinder being slidable laterally relatively to the hole in the suitcase, said head being of such size relatively to the hole as to fully cover the hole when the cylinder is at its extreme positions.

2,029,457



UNIVERSAL TESTING MACHINE

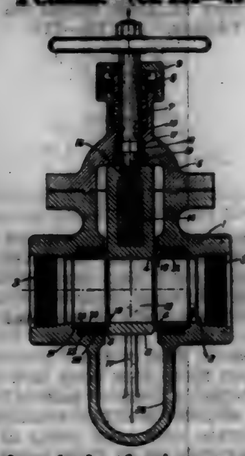
Robert B. Lewis, Philadelphia, Pa., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a corporation of Pennsylvania

Application October 12, 1932, Serial No. 637,394
5 Claims. (Cl. 265—16)

2. In a testing machine, the combination of a weighing system including a load responsive lever, an indicator, means for operating said indicator, means forming a point of connection between said lever and indicator operating means, means for applying a testing load to said lever, means providing two fulcrum saddles for said le-

ver, a single removable knife edge for selecting one or the other of said fulcrum saddles whereby the operating effect of said lever can be varied at

will for different capacities, and means to maintain said lever balanced about said point of connection whereby the same zero setting of said indicator is maintained for all capacities.



2,030,458

RESILIENT SEAT FOR VALVES

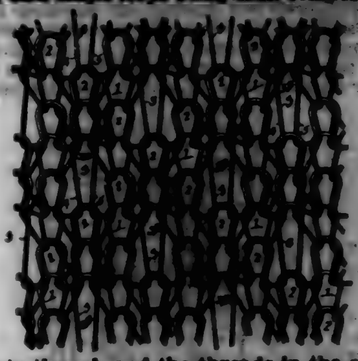
Marion E. McKellar, Ralph P. Sherman, and Harold W. Fletcher, Houston, Tex., assignors to Hughes Tool Company, Houston, Tex., a corporation of Texas

Application April 6, 1931, Serial No. 528,684

2 Claims. (Cl. 251—167)

1. A valve body having a fluid passage therethrough, a valve in said passage, sleeves slidable in said passage, valve seats on said sleeves, a chamber surrounding each sleeve, and lubricater attachments through which lubricant may be forced against each of said sleeves to move said seats against said valve, there being ducts in said sleeves for lubricant to the faces of said seats, and means to seal about said sleeves in said passage.

2,030,459



MILANESE CLOTH

Ernst Richard Meinig, Wyomissing, Pa.

Application May 13, 1933, Serial No. 670,842

9 Claims. (Cl. 66—126)

1. A Milanese cloth consisting of relatively different sized threads forming diagonal rows of single and double knitted loops, the limbs of certain of said single loops being each composed of a

separate thread, and the threads in the opposite limbs being of different thicknesses.

2,030,460

ELECTRIC RESISTANCE DEVICE

Edmund B. Merian, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 20, 1934, Serial No. 736,147

4 Claims. (Cl. 201—63)

1. In a resistance device, a core of insulating material having spoolhead portions, a polygon portion and a screw threaded fastening portion integrally formed therewith, the polygon portion and the screw threaded portion extending from the opposite side of one of said spoolhead portions with respect to the core.

2,030,461

GRANULAR PRODUCT CONDITIONER AND PRODUCTS MADE THEREWITH

Henry V. Moss, St. Louis, Mo., assignor to Swann Research, Incorporated, a corporation of Alabama

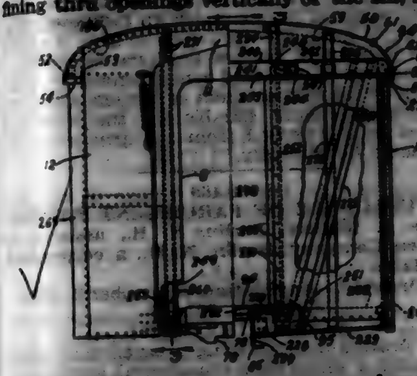
No Drawing. Application July 12, 1933, Serial No. 680,155

12 Claims. (Cl. 99—11)

1. A conditioner for granular, crystalline or amorphous products comprising a mixture of tricalcium phosphate and starch, said mixture containing not less than 30% of tricalcium phosphate.

2,030,462

VEHICLE END FRAMING



William H. Massey and Martin P. Blomberg, Chicago, Ill., assignors to Pullman-Standard Car Manufacturing Company, Chicago, Ill., a corporation of Delaware

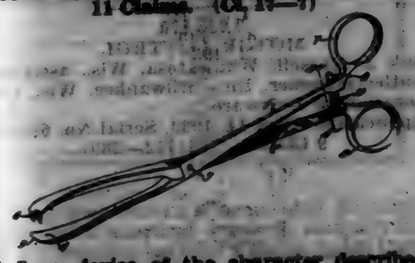
Original application June 17, 1933, Serial No. 676,265. Divided and this application June 14, 1934, Serial No. 730,619

11 Claims. (Cl. 105—402)

1. In a railway car, a vestibule end framing including a buffer end sill having web portions ex-

tending thru openings vertically of the sill, hollow

end posts entered in said openings, and means for locking said posts to said sill.



2,030,463

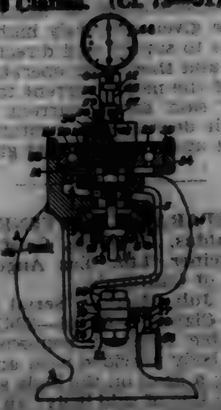
FISH BONING DEVICE

Homer L. Nalon, Albany, N. Y.

Application July 13, 1933, Serial No. 680,264

11 Claims. (Cl. 17—7)

1. In a device of the character described, a pair of pivotally connected members having handles at one end and jaws at the other, the jaw end of one of said members being flattened and provided at its extremity with a transverse cutting edge and the jaw end of the other member being provided with a gripping means cooperating with the flattened portion of the first mentioned member.



2,030,464

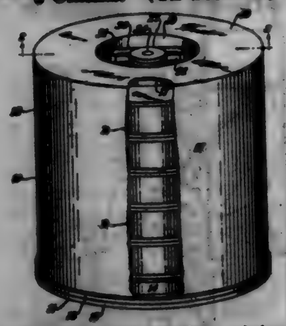
TESTING DEVICE FOR THREADED ARTICLES

Frederick C. Nilson, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y.

Application July 14, 1933, Serial No. 680,416

9 Claims. (Cl. 73—51)

1. In a testing device for screws, means for subjecting a screw to variable tensile and torsional stresses, means for measuring said tensile stresses, means for measuring the efforts required to effect said stresses, means for measuring torsional stresses obtaining simultaneously with said tensile stresses, and means registering the linear and twisted deformation resulting from said tensile and torsional stresses.



2,030,465

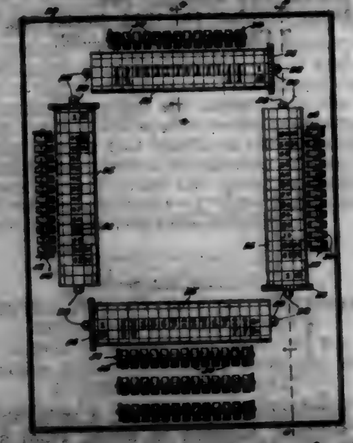
RECEPTACLE FOR MOTION PICTURE FILMS

Joseph T. Nist, Canton, Ohio

Application March 8, 1934, Serial No. 714,634

5 Claims. (Cl. 206—58)

1. A receptacle for motion picture film reels including a base, a cover having a top wall and side walls fitting around the base, the top wall having an aperture therein, a reel-threading rod secured at one end in the base and having its other end projecting through the aperture in the top wall, a plurality of film reels threaded on said rod and supported on the base within the cover, and handle means for clamping said cover on said base, said handle means including a nut member for screwing on the projecting end of the rod and a handle member swiveled on the nut member and adapted for selectively engaging the nut member for turning the same.

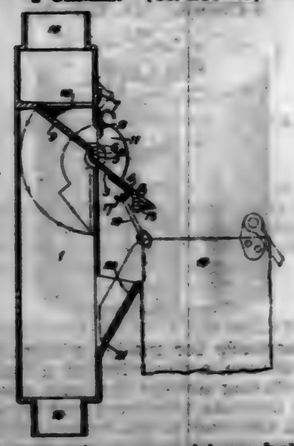


2,030,466

DOUBLE DUMMY BRIDGE GAME

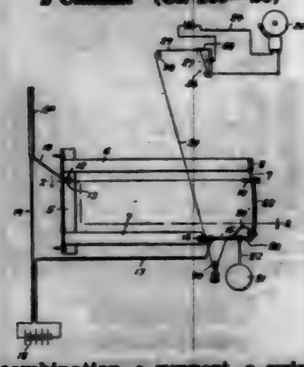
Israel R. Paris, Washington, D. C.

Application September 23, 1932, Serial No. 634,601



26 Claims. (Cl. 273—148)

1. A new article of manufacture for the play of double dummy bridge comprising a plate, said plate having four elongated slots therein, and

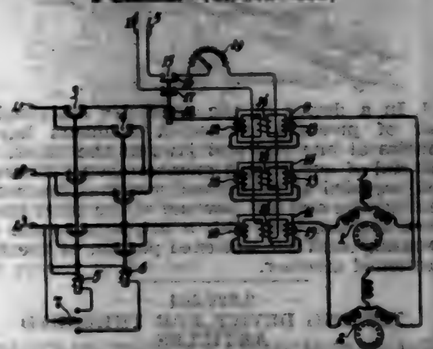


means carrying insignia of playing cards, said means being operable to display through said slots preselected groups of said insignia forming any one of a plurality of possible bridge games, each game consisting of four simultaneously displayed hands, one hand being displayed through each slot.

2,030,467
RAINWATER TRAP
Herbert Plaistowe Pearse, London, England
Application January 2, 1933, Serial No. 129
In Great Britain January 8, 1934
4 Claims. (Cl. 137—9)

1. A rainwater trap comprising a hollow casing adapted to be inserted in the stack pipe and having upper and lower openings, a water diverting flap hinged adjacent the lower edge of the upper opening, an offset wall provided at the lower opening and forming an upwardly opening mouth for receiving and supporting the overflow spout of a receptacle positioned to receive discharge from the hinged flap when the latter is tilted outwardly.

2,030,468
FIRE EXTINGUISHER
Frederick C. Rahlmann, San Antonio, Tex., assignor of fifteen one-hundredths to G. Woodson Morris, San Antonio, Tex.
Application October 16, 1934, Serial No. 748,538
2 Claims. (Cl. 169—26)



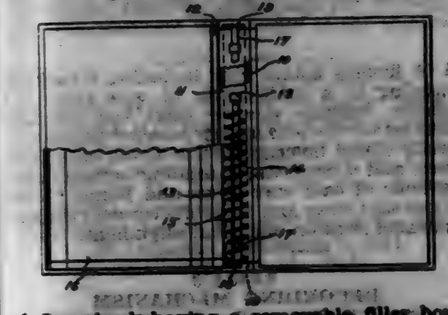
1. In combination, a support, a swingable arm on the support adapted to swing from a horizontal to a vertical position, a thermostatic element secured at one end to the support, a lug on the opposite end of the element for sustaining the arm in horizontal position, said thermostatic element adapted to flex under an increased temperature to move the lug from the arm, a spring on the element in normal tensional engagement with the arm to urge said arm downwardly when released by the displacement of the lug, and a fire extinguishing bomb slidable on the arm and adapted to be released from the arm when the arm moves downwardly.

2,030,469
MANUFACTURE OF PARCHMENT PAPER
George A. Richter, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a corporation of Maine
No Drawing. Application September 3, 1932, Serial No. 631,495
2 Claims. (Cl. 8—30)

1. A process for producing a parchment paper presenting a variegated ornamental appearance which comprises first distributing through a paper base over localized areas only thereof a compound which reacts with parchmentizing, sulphuric acid solution to produce an insoluble, opaque filler in situ in the base, and thereafter treating the paper with said solution to effect its parchmentization and to produce said filler.

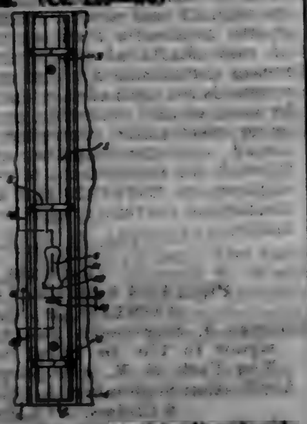
2,030,470
MOTOR CONTROL
Frank J. Russell, Wauwatosa, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application April 14, 1933, Serial No. 666,806
9 Claims. (Cl. 172—239)

2. In combination, a squirrel cage motor, reactors having coils traversed by the current supplied to the motor and direct current coils for varying the reactance value of the former coils, and means responsive to the motor current and operative at a given relatively high value of the motor current to supply said direct current coils with current and thereafter operative at a given lower value of the motor current to decrease the excitation of said direct current coils and to maintain such decrease in excitation until the motor current again attains said given relatively high value.



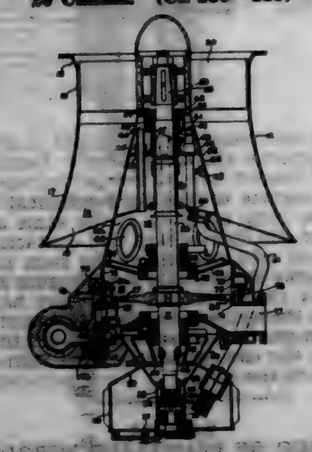
2,030,471
SEPARABLE FASTENER
George G. Sabins, Glendale, Calif., assignor to Samuels-Kleiner, Ltd., Los Angeles, Calif., a corporation of California
Application July 24, 1934, Serial No. 736,667
4 Claims. (Cl. 24—224)

1. A separable fastener, comprising; an eye part having a body provided with an opening between its ends; a head on the body spanning said opening at one side of said body; an extension on one edge of the body extending inward to span said opening at the other side of said body and spaced from the head to form an intervening eye; and a hook part having a hook extendable through



said eye to engage said head, and be positively guided in its movement by said head and extension.

2,030,472
BOOK CONSTRUCTION
Frank Stanley Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts
Application June 26, 1935, Serial No. 28,430
8 Claims. (Cl. 281—19)

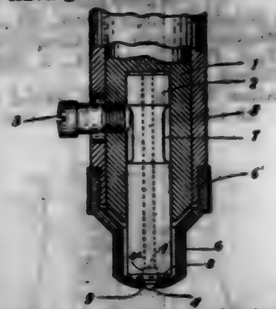


1. In a book having a removable filler bound together with a helical wire coil, said coil being held by a securing member passing inside the coil and underneath arches formed in a back plate secured to the cover of the book, that construction of securing means in which it is shaped to contact with the wire coils along two lines spaced laterally from the central line of contact of the wire coils with the back plate.

2,030,473
LOOSE LEAF BOOK
John Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts
Application February 12, 1935, Serial No. 6,211
9 Claims. (Cl. 129—24)

1. A ring binder having in combination hinged connected hook plates, a spring plate to hold the hook plates, an operating lever for the hook plates, said lever having two pivots one on the hook plates and one on the spring plate, the connection with the lever by one of said pivots being slidable enough to position the lever with respect to its pivots so as to lock the hook plates in closed position.

2,030,474
BLOWER
Henry F. Schmidt, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 8, 1935, Serial No. 9,963
20 Claims. (Cl. 230—116)



1. In a propeller blower, an outer tubular housing having throat and diverging portions, a spindle arranged coaxially of the housing, a propeller in the throat portion and connected to one end of the spindle, an elongated central tubular structure arranged coaxially of the outer housing and encompassing the spindle, the central housing structure including first and second portions which converge toward the respective extremities thereof and the first convergent portion being disposed in the divergent portion of the outer housing so that its small end is adjacent to the propeller and the first convergent portion cooperating with the divergent portion of the outer housing to provide an annular discharge passage for the propeller, guide vanes in the annular discharge passage and joined to the interior of the divergent portion of the outer housing and to the exterior of the first convergent portion of the central housing structure for supporting the latter from the former, said guide vanes extending substantially for the full length of the annular passage and being curved lengthwise of the latter, and bearings carried by the outer extremities of the convergent portions of the central housing structure for supporting the spindle.

2,030,475
PENETRATOR-STEM FOR HARDNESS-INDICATING APPARATUS
Albert F. Shaw, New York, N. Y.
Application October 28, 1927, Serial No. 228,749
12 Claims. (Cl. 265—12)

5. In means for measuring the hardness of material, a pressure bar having a socket in one end, a stem carried in the bar socket and of a length to project beyond the end of the bar, said stem having an annularly reduced portion adjacent one

end and reduced at the opposite end, and said last mentioned end having a socket therein the wall of which tapers inwardly and radial serrations disposed about the entrance to the socket, a screw threaded into an opening in the socket wall of the pressure bar and adapted to engage the reduced portion of the stem to releasably retain the stem in the bar socket, an indentor mounted in the stem socket and having a hemi-spherical tip and a body having a conical side wall merging

with the surface of the hemi-spherical tip, the wall of the body tapering at the same angle as the wall of the stem socket and contacting with the serrated wall portion of the stem socket, a sleeve slidably mounted on the pressure bar, and a contactor cap carried by the sleeve having an opening in the end wall for the passage of the indentor and an annular shoulder about the opening within the cap for engagement with the reduced end of the stem.

2,030,476

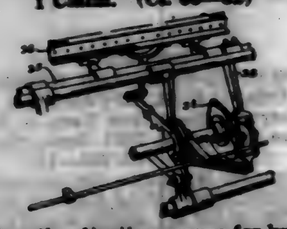
METHOD OF PRODUCING MIRRORS

Harry Edward Smith, Brooklyn, N. Y., assignor to Foster Dee Snell, Brooklyn, N. Y.

No Drawing. Application January 21, 1931, Serial No. 510,315

4 Claims. (Cl. 91—68.2)

4. The method of producing clear silvered glass flakes, which comprises cleaning the glass flakes, washing the cleaned glass flakes, treating the glass flakes with a freshly prepared dilute stannous chloride solution, washing the glass flakes with water, plating the glass flakes with a solution of silver nitrate and dextrose, washing the plated glass flakes and drying the same.



2,030,477

FULL FASHIONED HOSIERY KNITTING MACHINE

Howard B. Snader, Temple, Pa., assignor to Vanity Fair Silk Mills, Reading, Pa., a corporation of Pennsylvania

Original application July 19, 1933, Serial No. 679,895, now Patent No. 1,979,066. Divided and this application September 21, 1933, Serial No. 690,451

1 Claim. (Cl. 66—82)

Stitch length adjusting means for knitting machines comprising in combination, an actuating cam, a needle bar arm having an eye with its opening in the plane of rotation of said actuating cam, of a journal mounted eccentrically in the eye of said needle bar arm, a cam roller revolubly mounted on said journal, and a handle including a detent for holding the handle in any position to which it may be shifted, for shifting the throw of said eccentric journal to vary the distance of the axis of rotation of said roller from the cam which determines forward and backward movement of said needle bar.

2,030,478

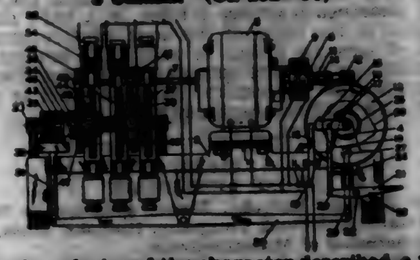
MEANS AND METHOD FOR BINDING BOOKS

Isidore Spinner, Chicago, and Philip V. Spinner, Wilmette, Ill.

Application August 6, 1934, Serial No. 738,494

4 Claims. (Cl. 281—35)

4. A flexibly bound book including a backbone consisting of a multiplicity of wire rings of a diameter slightly greater than the combined thickness of the leaves and inserted through integrally closed holes along the bound edge of the leaves, and a cross bar extending between abutting ends of said wire rings and joined thereto to close said rings and to rigidly connect the same in parallel relation and axial alignment.



2,030,479

RECORDING MECHANISM

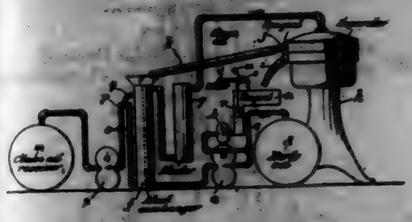
Joseph B. Strauss, San Francisco, Calif.

Application October 22, 1932, Serial No. 638,138

3 Claims. (Cl. 101—96)

1. In a device of the character described, a plurality of concentric shafts, a type drum mounted on each of said shafts, means for rotating said shafts, means for stopping the rotation of each of said shafts at pre-determined points, said means comprising a group of radially positioned solenoids for each of said shafts, a latch actuated by each of said solenoids, each of said solenoids being electrically connected to remotely positioned contacts capable of being energized through the engagement of contacts moving into engagement therewith, and a master switch for conducting current to said contacts and to said motor.

2,030,480



PROCESS FOR RECLAIMING OIL CONTAINING CARBON

George J. Streyaski, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey

Application September 14, 1933, Serial No. 689,309

9 Claims. (Cl. 196—16)

1. The process of reclaiming used lubricating oil containing dispersed carbon which comprises coagulating dispersed carbon out of the oil phase and preventing its dispersal in the aqueous phase by mixing and heating with an alkaline solution having a specific gravity more than 30% greater than that of the oil, separating the oil from the

alkaline solution and the carbon and the carbon from the alkaline solution, treating successive quantities of used oil with the alkaline solution and adding water to compensate for evaporation and thus maintain the gravity of the solution.

2,030,481

MACHINE TOOL, PARTICULARLY MILLING MACHINE HAVING A COUNTER SUPPORT

Richard Stahlmecker, Siegmar, near Chemnitz, Germany, assignor to Wanderer-Werke vorm. Winklhofer & Jaenicke Akt.-Ges., Schoenau-Chemnitz, Germany

Application August 12, 1933, Serial No. 684,685

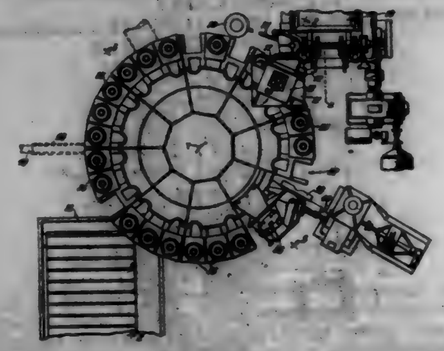
In Germany September 7, 1931

6 Claims. (Cl. 90—33.5)

1. A machine tool, particularly a milling machine, comprising a machine standard, an overarm arranged on and exclusively fastened to the standard, the main part of the overarm projecting freely from the standard, a working spindle, means for supporting the working spindle, said means being arranged at the projecting part of the overarm, and lateral bracing arms, each in one piece, directly connected at one end to the sides of the projecting part of the overarm and at the other end to the standard.

2,030,482

METALLURGICAL APPARATUS



David L. Summey, Waterbury, Conn.; The Colonial Trust Company and Richard F. Weeks Summey, executors of said David L. Summey, deceased, assignors to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut

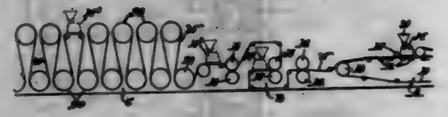
Application May 14, 1932, Serial No. 611,294

Renewed December 20, 1934

7 Claims. (Cl. 22—77)

1. Casting apparatus comprising in combination, a fixed base, a movable carrier mounted above the base, a plurality of molds thereon, a closing cap for the bottom of each mold, means disposed in a given position on said base beneath

the path of the caps of the molds for forcing the caps closed when the molds are halted above said cap-closing means, and means for holding said caps in closed position.



2,030,483

METHOD FOR THE MANUFACTURE OF COATED PAPER

Dieng D. Ueng, Fitchburg, Mass., assignor to Fitchburg Paper Company, Fitchburg, Mass., a corporation of Massachusetts

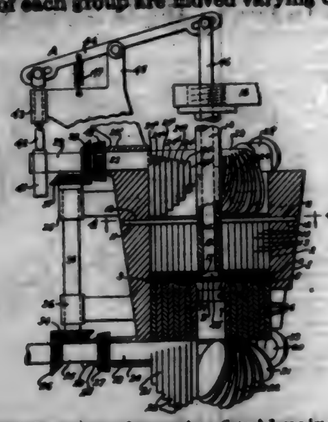
Application April 1, 1933, Serial No. 663,968

1 Claim. (Cl. 92—40)

The method of coating paper which comprises removing a portion only of the moisture from a paper web in a paper machine having forming wires and a pressing section, applying a coating of moisture-reactive coating material in dry powdered form to the paper web after said web has left the forming wires and at a point adjacent the pressing section, allowing said powdered coating material to coact with the still substantially moist paper web, and thereafter drying and removing additional moisture from said web and causing said previously powdered material to form a relatively smooth surface on the paper prior to leaving said machine, all of said operations being performed successively as parts of a continuous paper-making process.

2,030,484

SHAPING MACHINE



Fred G. Waller, East St. Louis, Ill.

Application March 21, 1934, Serial No. 716,684

5 Claims. (Cl. 113—38)

1. A shaping machine comprising a body portion provided with an opening through which a sheet of material is fed into the machine, cutting means within said body portion for cutting blanks from said sheet of material, a pair of groups of nested forming elements arranged within said body portion above and below said sheet of material for forming said blanks into articles of the desired shapes, and means for imparting independent movement to the forming elements of

said groups in such manner that the forming elements of each group are moved varying distances,

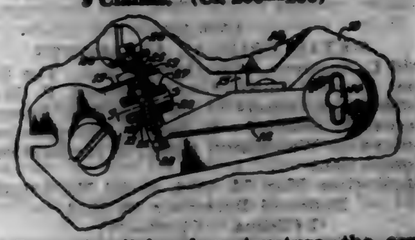
and said forming elements of said pair of groups being moved in the same direction.

2,030,425
OIL DISTILLATION
John Samuel Wallis, New York, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application December 3, 1930, Serial No. 499,624
20 Claims. (Cl. 196—114)

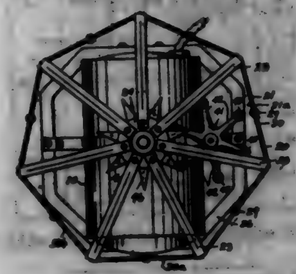
8. An apparatus for condensing mixtures of hydrocarbon vapor and the like comprising a vertical shell, a cooling unit within said shell, means for introducing hydrocarbon vapor above said cooling unit and means for directing the vapor downwardly over the unit to the lower portion of the shell and upwardly to the upper portion of the same independently of the downflowing vapor.

2,030,426
MOVEMENT FOR KICKING DOLLS
Ernst Weiss, Nuremberg, Germany
Application December 21, 1934, Serial No. 758,616
In Germany September 21, 1934
6 Claims. (Cl. 46—150)

1. A movement for kicking dolls, comprising in combination a spring motor having two side plates, a driving crank journalled in said side plates driven by said motor, two mutually displaced cranks journalled at the upper end of said plates adapted to carry the arms of the doll, rods connecting said cranks with said driving crank, two mutually displaced cranks journalled at the lower end of said plates, extensions one on each of said lower cranks adapted to carry the legs of the doll, and a slidable telescopic connecting member between said lower cranks and said driving crank adapted to extend when the lower cranks are turned so that said extensions are at right angles to said side plates to bring the legs of the doll on said extensions into sitting position.



2,030,427
CLOCK CASE
Richard H. Whitehead, New Haven, Conn., assignor to The New Haven Clock Company, New Haven, Conn., a corporation
Application November 30, 1934, Serial No. 755,236
5 Claims. (Cl. 58—54)

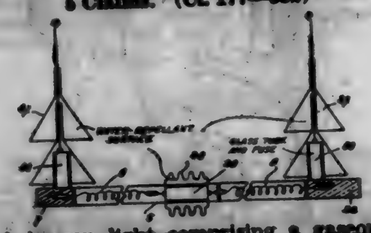


1. A clock case including: a clock base forming one part; a split case-band forming another part and having a minor portion of its circumference engaged against the base and with the split intermediate the ends of the area of engagement of the case-band and base, the main portion of the circumference of the case-band forming part of the outside surface of the clock case; and means adjacent and at opposite sides of said split securing portions of the case-band on opposite sides of said split, to the base.

2,030,428
CIRCUIT BREAKER
Ralph M. Williams, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 6, 1934, Serial No. 752,708
9 Claims. (Cl. 200—166)

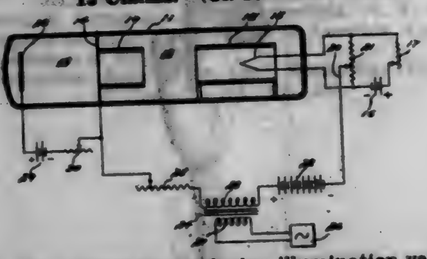
1. In a circuit-breaker structure, the combination of a contact point holding screw, a slide on the end of the screw, a locking screw within the holding screw, and a reversible contact point structure comprising opposed contact faces held in the slide by the locking screw.

2,030,429
PROJECTOR
Russell E. Wilson, Cleveland, Ohio
Application January 15, 1934, Serial No. 706,649
8 Claims. (Cl. 88—27)



1. A light projection apparatus, comprising a cylindrical housing horizontally disposed, a source of illumination therein, a frame encircling said housing and adapted to carry a series of units through which a beam of light may be projected, a centrally located swivel connection extending vertically from the top portion of said housing and said frame, a supplementary frame member carried by the lower portion of said housing and means supported by said supplementary frame member to rotate said frame intermittently a fraction of a revolution to bring successive units into position to be projected by the beam of light.

2,030,430
HAIR WAVING APPLIANCE
Thelma H. Zinn, Columbus, Ohio
Original application March 23, 1934, Serial No. 717,049. Divided and this application June 6, 1935, Serial No. 25,285
2 Claims. (Cl. 132—33)

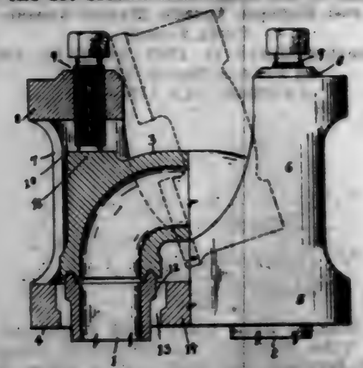


1. An appliance for waving hair on the scalp, comprising a bar having a longitudinal groove in its forward edge, a metallic rod coextensive with the forward edge of said bar, a pivotal connection uniting said rod to said bar for turning movement toward and away from the grooved edge of the bar, a roll of compressible material surrounding said rod, a latch member pivotally connected in permanently secured relationship with the end of said bar opposed to the end thereof pivotally carrying said rod, said latch being shouldered at its outer end to engage with the adjoining end of said rod, and spring means cooperative with said latch for positively maintaining the shouldered end thereof in holding engagement with said rod.

2,030,431
DEVICE FOR APPLYING LUMINESCENT TUBES TO POWER TRANSMISSION LINES
Jean-Baptiste Joseph Marcel Abadie, Paris, France
Application March 11, 1933, Serial No. 660,298
In France March 17, 1931
5 Claims. (Cl. 177—352)

2. A beacon light comprising a gaseous discharge tube element, an electrical connecting element between said tube and a power line, a circuit completing element, and a water repellent member disposed at a point intermediate the ends of said tube and making water tight connection therewith to prevent the accumulation of a short-circuiting water film, said member comprising a collar provided with a water repellent surface.

2,030,432
GLOW TUBE CONTROL SYSTEM
David Applebaum, Los Angeles, Calif.
Application December 14, 1931, Serial No. 580,814
13 Claims. (Cl. 176—124)



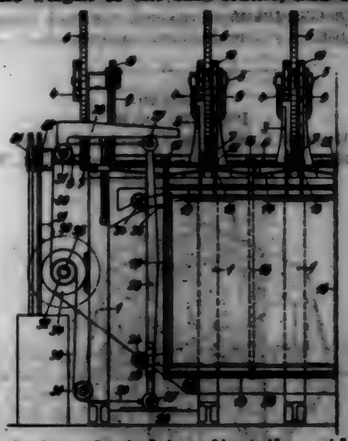
1. In a device for producing illumination varying rapidly in accordance with electrical impulses, means defining an evacuated space, a cathode and an anode in the space, means enclosing an ionizable gas atmosphere adjacent the space and separated from it by an electron pervious window, means producing a steady space charge between the cathode and anode, sufficient to cause electrons to excite the gas to a state of luminescence, and means for supplying a supplemental space charge in accordance with the electrical impulses.

2,030,433
RETURN BEND FOR CRACKING STILLS
Charles E. Ard, Birmingham, Ala., assignor to Fred C. Fantz, Webster Groves, Mo.
Application January 25, 1933, Serial No. 653,393
2 Claims. (Cl. 285—20)

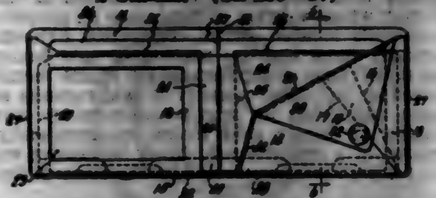
1. In a refinery apparatus, a conventional return bend adapted to connect a pair of shouldered still tubes so as to provide a passageway therethrough, said tubes being demountably mounted in a housing for said return bend, said housing having annular portions, upwardly extending arcuate side walls integral with said annular portions and having integral connecting walls at their top, which form an inverted U, screws mounted in said connecting portions of the U,

said connecting portions being spaced from the annular portions a sufficient distance whereby when the set screws are raised the return bend

can be inserted and removed from inside the housing, the inner ends of said set screws abutting the return bend to force it against the ends of the tubes to form a leak-proof joint.



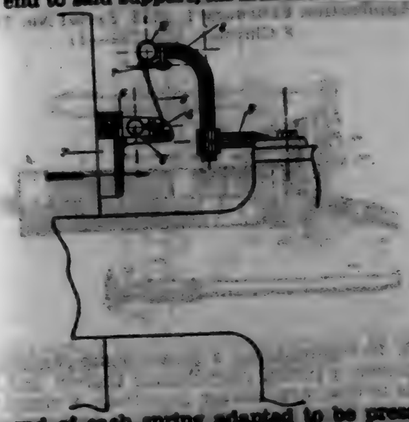
2,030,494
CLEANING DEVICE
Bertha M. Birtley and Charles E. Birtley, Hollywood, Calif.
Application April 30, 1935, Serial No. 19,066
4 Claims. (Cl. 15—227)



1. A device of the character described, comprising; a flexible and impervious covering for the hand of a user; and a flexible pad on the outer surface of the covering; the body of the pad being of erasive rubber-like material having spaced absorbent fibres embedded therein and held thereby; and said fibres being exposed at the outer surface of the pad, and extending obliquely inwardly therefrom.

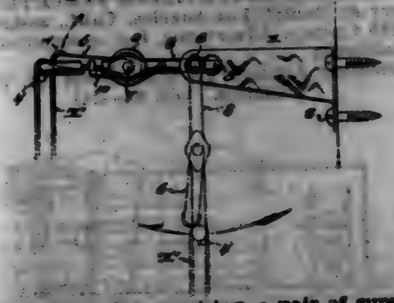
2,030,495
EMBROIDERING MACHINE
Max Bretschneider, Plauen, Germany
Application October 26, 1930, Serial No. 490,027
In Germany October 24, 1929
10 Claims. (Cl. 112—86)

1. In an embroidering machine the combination of a reciprocating rod with needles, a carrier bar with shuttles cooperating with the needles, fabric rollers, a frame for fixing therein the fabric to be embroidered and consisting of longitudinal girders, side portions and struts connecting the said longitudinal girders and serving as bearing for the fabric rollers, supporting devices on the said frame struts and side portions, carrier members adapted to support the said struts and side portions of the said frame, a suspension device carrying the said carrier members and adapted to bear the weight of the said frame, and an automatic device adapted to adjust the said suspension device.



2,030,496
FLEXIBLE POCKET RECEPTACLE
Warner R. Burton, Longmeadow, Mass.
Application March 20, 1933, Serial No. 662,238
2 Claims. (Cl. 150—37)

1. A flexible pocket receptacle, comprising an outer wall having intermediate its ends a transverse line of fold, a flap foldably connected to one side edge of said wall and disposed wholly on one side of said line of fold, a wall secured to the rear side of said flap to form therewith and therebetween a coin pocket, said flap and the wall attached thereto being folded over and upon the outer wall and secured along its outer end edge only to the outer wall, said flap being greater in area than the wall attached thereto and having a triangular gusset portion disposed intermediate two other portions of the flap and enabling the last named portions to be folded in partially overlapping relation with the gusset portion therebetween so that the projected area of the folded flap substantially equals the area of the wall attached thereto, a member interposed between said outer wall and the rear wall of the coin pocket and secured to the outer wall, a corresponding member secured to the outer wall on the other side of said line of fold, said members spaced from said line of fold and forming end sections of an inner wall between which and the outer wall bills are adapted to be placed, and a central inner wall section bridging the gap between said end sections and slidable relatively to at least one thereof.



2,030,497
FEELER DEVICE FOR LOOMS
Juan Picaflel Campo, Sabadell, Spain
Application August 26, 1933, Serial No. 686,865
In Switzerland June 21, 1933
3 Claims. (Cl. 139—372)

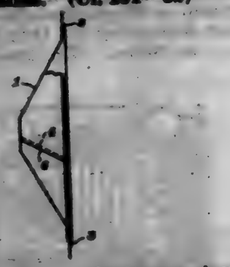
1. A loom weft-feeler device, comprising in combination with the lay, the breast beam of the loom and the metal sleeve of the cop bobbin, a support of insulating material carried by said breast beam and adapted to be moved back by the lay in its movement towards said breast beam, two spring wires spirally wound about and fixed at one end to said support, an arm formed at the

other end of each spring adapted to be pressed into contact with the metal sleeve of the cop bobbin by the spirally wound portion of the wires, and an electric circuit connected to said arms and adapted to be closed by the contacting of said arms against said metal sleeve.

2,030,498
TOWEL RACK
Anton J. Chmurski, Milwaukee, Wis.
Application June 7, 1934, Serial No. 729,459
4 Claims. (Cl. 211—89)

1. A towel rack comprising, a pair of supporting brackets provided in their ends with horizontal keyhole slots, a U-shaped rack bar having its ends terminating in lateral flattened pintles projecting into said keyhole slots for pivotal movement in one portion of the slots and locking engagement against pivotal movement in the other portion of said slots.

2,030,499
SLIP
Walter L. Church, Houston, Tex.
Application November 10, 1933, Serial No. 697,364
9 Claims. (Cl. 24—243)

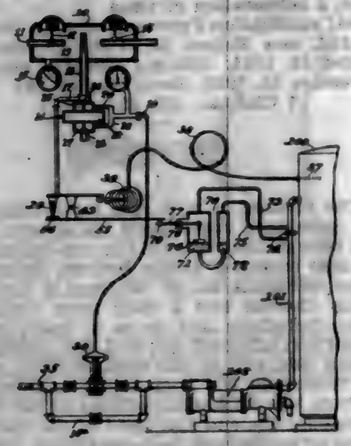


1. In a pipe holding slip a segment having an enclosed, unobstructed drain channel therethrough.

2,030,500
METHOD OF MAKING HOLLOW HEAD VALVES
Archie T. Colwell, Cleveland, Ohio, assignor to Thompson Products Incorporated, Cleveland, Ohio, a corporation of Ohio
Original application February 19, 1931, Serial No. 516,382, now Patent No. 1,984,728, dated December 18, 1934. Divided and this application November 19, 1934, Serial No. 753,595
7 Claims. (Cl. 29—156.7)

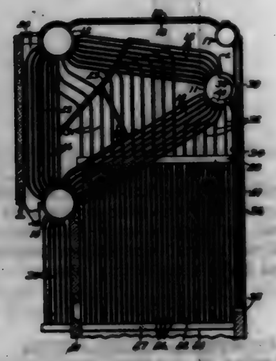
1. The method of making a valve which comprises forming a cup-shaped blank with an enlarged bottom, the recess in the cup-shaped blank being also enlarged at the bottom, forging said cup-shaped blank so as to form a head with a cavity therein and a solid stem portion extending therefrom and so as to leave a thickened portion adjacent the end and intermediate the head and end of the stem, drilling out said stem, reworking the stem so as to form partitions from the thickened portions at the end and intermediate the end and head of the valve, boring apertures through said partitions, introducing a fusible cooling medium into the valve, and plugging up the apertures in said partitions.

2,030,501
LOUDSPEAKER CONE DIAPHRAGM AND METHOD OF PRODUCING SAME
David H. Cunningham, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 31, 1934, Serial No. 709,111
12 Claims. (Cl. 181—32)



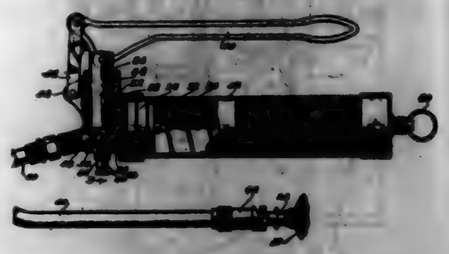
1. As an article of manufacture, a circular sheet of fibrous material from which a sector has been cut away and from an annular surface near the periphery of which a substantial portion of the thickness has been removed.

2,030,502
CONTROL MECHANISM
Edward T. Dahl, Randolph, Mass., assignor, by mesne assignments, to Eldon Macleod, Westwood, and Frank A. Morrison, Newton, Mass., and Cameron Macleod, Berwyn, Pa., Leslie Soule, Dedham, and Sullivan A. Sargent, Jr., Needham, Mass., trustees, doing business as Mason-Neilan Regulator Company, Boston, Mass.
Application September 20, 1932, Serial No. 635,568
20 Claims. (Cl. 236—18)



1. In a control system, a medium subjected to changes in temperature, a second medium acting on the first medium to regulate its temperature and supplied by a power-operated pump, a source of power supply for operating the pump, a control valve on the power supply line controlling the

supply of power to the pump, an independent pressure system for operating said control valve, an instrument responsive to changes in temperature of the first medium, a second instrument



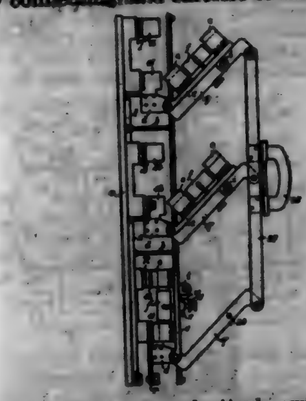
responsive to changes in rate of flow of the second medium, and means operated by the resultant action of said instruments for controlling the independent pressure system and hence the supply of the second medium.

2,030,563
STEAM BOILER
Fred H. Daniels, Worcester, Mass., assignor to Riley Stoker Corporation, Worcester, Mass., a corporation of Massachusetts
Application September 13, 1933, Serial No. 689,296
5 Claims. (Cl. 122—235)

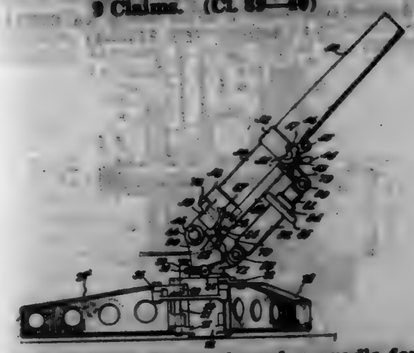
1. A steam boiler comprising a transverse horizontal water drum, a lower bank of tubes connected to the drum and extending rearwardly and downwardly therefrom, an upper bank of tubes connected to the drum and extending rearwardly and upwardly therefrom, a furnace wall at the front of the drum, water wall tubes associated with the wall and connected to the drum, a partition mounted within the drum and cooperating with the front wall of the drum to form a passage leading from the water wall tubes to tubes in the upper portion of the upper tube bank, and downcomer tubes arranged to supply water from the main portion of the drum to the water wall tubes.

2,030,564
METHOD OF LUBRICATION AND APPARATUS THEREFOR
Ernest W. Davis, Oak Park, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application February 7, 1934, Serial No. 710,851
8 Claims. (Cl. 184—1)

5. In combination, a grease pump comprising a cylinder, a piston reciprocable therein and operable to discharge grease therefrom, a check valve for admitting air to said cylinder, and a relatively weak spring normally holding said valve closed but openable upon a pressure difference of the order of five pounds per square inch to permit admission of a regulated quantity of air to said cylinder upon the suction stroke of said piston, whereby the admitted air may mix with the grease in said cylinder and be discharged therewith from the pump cylinder.



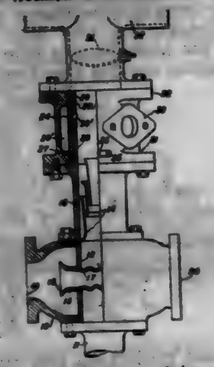
2,030,585
OUTDOOR ADVERTISING STRUCTURE
Henry de Roulet, Los Angeles, Calif., assignor to 20th Century Advertising, Inc., a corporation of California
Application January 31, 1934, Serial No. 709,967
8 Claims. (Cl. 88—24)



1. An advertising apparatus comprising a structure formed with a proscenium having an opening therein, a translucent screen mounted in said opening for receiving pictures on the reverse side thereof which are visible on the obverse side thereof, means for horizontally adjusting and for inclining said screen in said opening selectively, and means at the front of said opening for closing said screen against access.

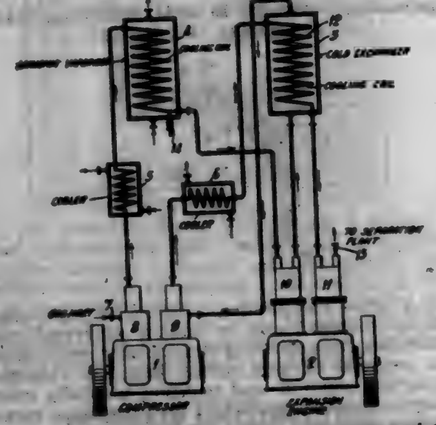
2,030,591
DISTRIBUTION BOARD WITH FUSES ADAPTED TO BE CUT OUT BY HAND
Fritz Driescher, Rheydt, Germany
Application February 2, 1933, Serial No. 590,494
In Germany June 1, 1931
1 Claim. (Cl. 200—114)

A distribution board with fuses arranged one above the other and adapted to be cut out by hand, comprising in combination a base plate, fuse carriers hingedly connected to said base plate, a switch bar, spring bolts detachably and flexibly connecting said carriers to said bar to allow said carriers to be selectively switched in and out individually and jointly by said bar.



2,030,587
GUN OF THE MORTAR HOWITZER TYPE
Louis L. Driggs, New Rochelle, N. Y., assignor to Roberts Whiting Driggs, New Rochelle, N. Y.
Application November 29, 1932, Serial No. 644,368
Renewed July 15, 1935
9 Claims. (Cl. 89—40)

1. A gun comprising a barrel, a cradle for the rear end portion of the barrel and pivotally connected thereto at the forward end of the cradle, a breech block on the rear end of the cradle, means for interlocking the barrel and the breech block in registering position, a gun mount having a rotatable support pivotally connected to the rear side of the breech block and upon which the barrel and cradle are adapted to swing, and a counterpoised support disposed between said post and the cradle for adjusting and retaining the cradle at the desired elevation upon the pivot of the breech block.

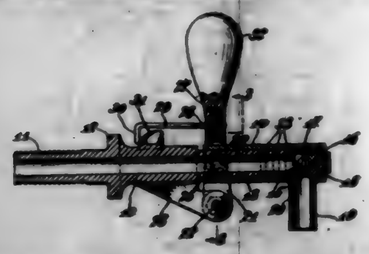


2,030,596
FUEL PREHEATING AND MIXING APPARATUS FOR INTERNAL COMBUSTION ENGINES
William Stuart Falconer, Flinders East, near Melbourne, Victoria, Australia, assignor to International Motor Patents Proprietary Limited, Melbourne, Victoria, Australia, a company of Australia
Application October 12, 1934, Serial No. 748,966
In Australia August 17, 1934
3 Claims. (Cl. 123—119)

1. In a fuel-supplying system for internal combustion engines, a mixing chamber comprising a casing having a pair of inlet openings, a circumferentially movable tubular member mounted in said casing and separating said openings, said member having ports communicating with said openings, a stationary tubular member disposed concentrically within said movable member, and

having ports adapted to register with the ports of the first member which communicate with one of said openings while the wall of the inner member closes the ports communicating with the other opening, and means for moving the movable member from one communicating position to the other.

2,030,599
PROCESS AND APPARATUS FOR COOLING GASEOUS MIXTURES
Mathias Fränkl, Augsburg, Germany, assignor to American Oxythermic Corporation, New York, N. Y., a corporation of Delaware
Application July 19, 1932, Serial No. 623,345
9 Claims. (Cl. 62—123)



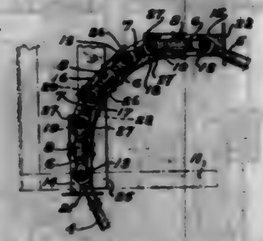
7. In a process for cooling a gaseous mixture prior to separation into components, the improvement which comprises compressing a gaseous mixture, cooling said compressed mixture, then cooling the gaseous mixture compressed a second time by heat exchange with said first cooled mixture, and further cooling the thus cooled compressed gaseous mixture by an expansion with external work.

2,030,514
FAUCET
William U. Griffiths, Philadelphia, Pa.
Application September 18, 1933, Serial No. 689,538
Renewed July 2, 1935
2 Claims. (Cl. 251—5)

1. In a faucet structure, a tubular body member having a valve seat on one end thereof, a

reciprocating sleeve mounted on said body member and having its outer end extending beyond said valve seat, a lateral spout on said sleeve near the outer end thereof, a valve in the outer end of the said sleeve for engagement with said valve seat upon the inward movement of said sleeve, a lateral projection on one side of said body member near the inner end of said sleeve, a pivoted yoke member having the free ends thereof

connected to said projection and the intermediate portion connected to said sleeve to effect reciprocation thereof, a handle on said yoke, a beveled keeper on said body member opposite said projection, and a flat spring latch on said yoke having a hook on the free end thereof movable into and out of engagement with said keeper upon manipulation of said handle to hold said valve in closed position and release the same.



2,030,511

MOTION-TRANSMITTING MECHANISM

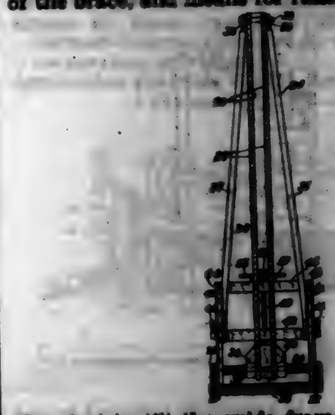
Earl B. Graber, Wauwatosa, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin

Application November 15, 1934, Serial No. 753,077

13 Claims. (Cl. 64—1)

1. A drive comprising, a series of rigid shaft sections disposed end to end, a universal joint connecting the adjoining ends of each set of adjacent sections of said series, bearings rotatably supporting some of said sections, pivotally interconnected plates supporting said bearings, means coacting with said plates for limiting the angular displacement afforded by each of said joints to a proportionate share of the total angular displacement of the drive when the latter is at the extreme limit of displacement, and resilient means for biasing said sections into axial alinement.

2,030,512



MOUNTING FOR ROCK DRILLS

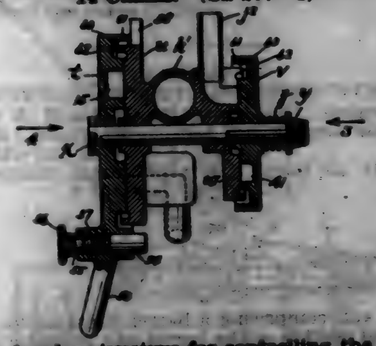
Charles C. Hansen, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey

Application August 22, 1934, Serial No. 741,647

2 Claims. (Cl. 255—51)

1. A mounting for rock drills, comprising a support, a guide frame for a rock drill pivoted to the support, a brace pivotally connected with one end to the guide frame, a pivot for the other end of the brace, and means for raising and lowering

the pivot to tilt the guide frame with respect to the support.



2,030,513

VALVE FOR CONTROLLING FLOW OF MILK AND AIR IN MILKING MACHINES

Cyrus Howard Hapgood, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey

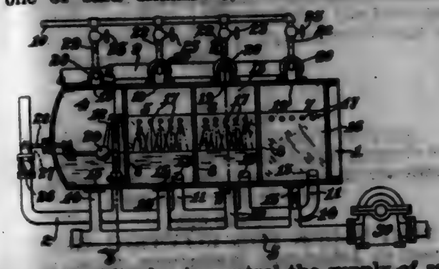
Application June 2, 1932, Serial No. 615,119

14 Claims. (Cl. 277—4)

1. A valve structure for controlling the flow of fluid, which comprises a valve block having two pairs of ports and a valve turnable on the valve block and having two elongated recesses, said recesses and ports being so disposed that the valve is turnable into one position to establish communication through one recess between one pair of ports, into another position to establish connection through the other recess between the other pair of ports, and into a third position to simultaneously connect through the second named recess the first named pair of ports and through the first named recess the second named pair of ports.

2,030,514

REFRIGERATING CONSTRUCTION



Frederick H. Hibbard, Rumson, N. J., George H. Woodard, Phillipsburg, N. J., and John Kirgan, Easton, Pa., assignors to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey

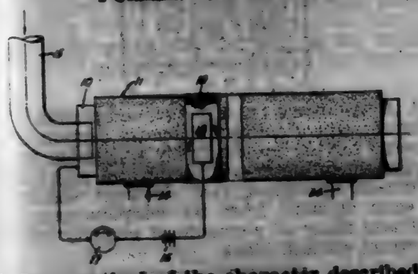
Application March 23, 1934, Serial No. 716,946

8 Claims. (Cl. 62—152)

1. A refrigerating construction comprising an evaporator to receive a liquid refrigerant, said evaporator containing a plurality of chambers,

a well in each of said chambers, means for admitting said liquid refrigerant to said wells to be discharged from the upper portions thereof in said chambers, said means containing a valve outside of said evaporator, a regulating element in one of said chambers, connections between

same and said valve to control the supply of said liquid refrigerant and render it independent of the rate of outflow of said chambers, a common delivery pipe connected to said chambers and means for removing vaporized refrigerant from said chambers.



2,030,515

METHOD OF MANUFACTURING NONCORROSIVE ARMORED METAL PIPE

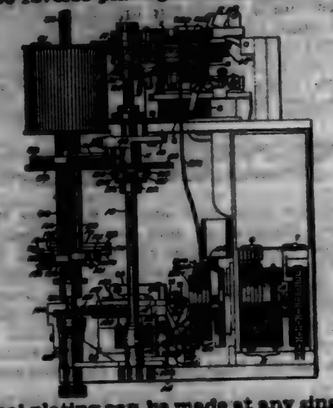
Warren A. Kramer, San Francisco, Calif., assignor to Cement Wrapped Pipe Company, Ltd., San Francisco, Calif., a corporation of Arizona

Application January 4, 1933, Serial No. 650,968

4 Claims. (Cl. 91—70)

1. In a method of the character described for the manufacture of coated metal pipe, applying a covering of bitumen pitch to one surface of the pipe, applying a wet mix of hydraulic concrete mortar on top of said covering, and then increasing the dielectric strength of the composite coating by heating the metal pipe to a temperature sufficient to cause flow of the bitumen pitch without decomposition of the same.

2,030,516



JACQUARD PATTERN MECHANISM FOR KNITTING MACHINES AND METHOD OF PATTERNING EFFECTED THEREBY

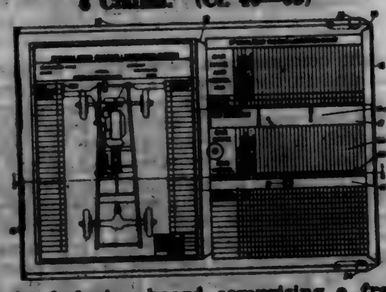
Robert H. Lawson, Pawtucket, and Arthur N. Cloutier and Alfred L. Hutton, Jr., Lonsdale, R. I., assignors to Hemphill Company, Pawtucket, R. I., a corporation of Massachusetts

Application January 5, 1933, Serial No. 650,390

40 Claims. (Cl. 66—46)

1. A circular knitting machine having independent needles and having means to feed a plurality of yarns thereto in a plating relation, sinkers cooperating with one or more of the yarns to effect change from normal plating to reverse plating, or vice versa, and a jacquard or selector member having means to control the sinkers individually for each needle wale in each course of an extended fabric, whereby changes from normal to reverse plating or from reverse plating

to normal plating can be made at any single stitch in any course of the fabric.



2,030,517

INDEXING SERVICE BOARD

Leonard Cleveland Eldridge and Benjamin Goodall Symon, St. Louis, Mo., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Refiled for abandoned application Serial No. 569,236, January 20, 1932. This application November 21, 1932, Serial No. 643,782. Renewed July 8, 1935. In Canada April 11, 1932

6 Claims. (Cl. 40—65)

1. An indexing board comprising a frame, a chart mounted in said frame, and a movable member slidably engaged on said frame, said movable member possessing a slot therein as well as a protruding element whereby relative motion is caused between the member and the frame, said slot being positioned over the chart so as to expose certain indicia thereon.

2,030,518

CONCRETE CONSTRUCTION

Francis Walter Guibert, Beverly Hills, Calif.

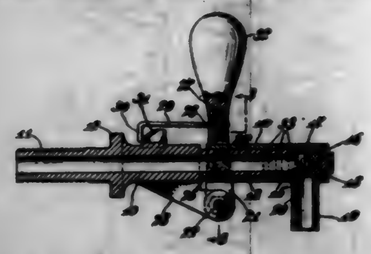
No Drawing. Application November 27, 1933, Serial No. 699,975

4 Claims. (Cl. 106—94)

1. The process which comprises mixing in separate batches, a mixture of hydraulic cement and water, and a mixture of the remaining constituents of concrete, adding an oily material to the said remaining constituents, and mixing the two batches.

2,030,519

HEAT DISTRIBUTING MEANS



Karl M. Hamilton, Chicago, Ill.

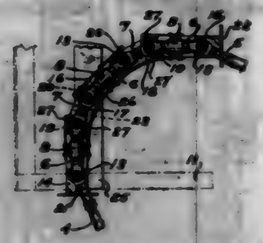
Application August 1, 1933, Serial No. 683,183

5 Claims. (Cl. 126—215)

1. In a device of the character described, an outer annular shell of dished shape, a central in-

reciprocating sleeve mounted on said body member and having its outer end extending beyond said valve seat, a lateral spout on said sleeve near the outer end thereof, a valve in the outer end of the said sleeve for engagement with said valve seat upon the inward movement of said sleeve, a lateral projection on one side of said body member near the inner end of said sleeve, a pivoted yoke member having the free ends thereof

connected to said projection and the intermediate portion connected to said sleeve to effect reciprocation thereof, a handle on said yoke, a beveled keeper on said body member opposite said projection, and a flat spring latch on said yoke having a hook on the free end thereof movable into and out of engagement with said keeper upon manipulation of said handle to hold said valve in closed position and release the same.



2,030,511

MOTION-TRANSMITTING MECHANISM

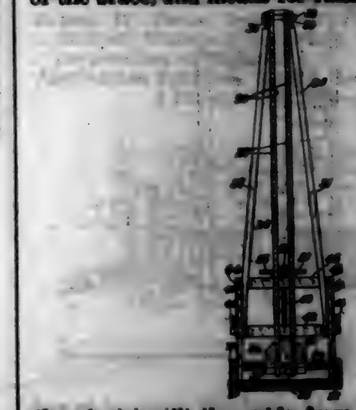
Earl R. Gruber, Wauwatosa, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin

Application November 15, 1934, Serial No. 753,977

12 Claims. (Cl. 64—1)

1. A drive comprising, a series of rigid shaft sections disposed end to end, a universal joint connecting the adjoining ends of each set of adjacent sections of said series, bearings rotatably supporting some of said sections, pivotally interconnected plates supporting said bearings, means coacting with said plates for limiting the angular displacement afforded by each of said joints to a proportionate share of the total angular displacement of the drive when the latter is at the extreme limit of displacement, and resilient means for biasing said sections into axial alinement.

2,030,512



MOUNTING FOR ROCK DRILLS

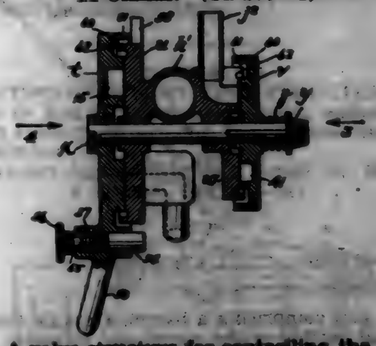
Charles C. Hansen, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey

Application August 22, 1934, Serial No. 741,047

1 Claim. (Cl. 255—61)

1. A mounting for rock drills, comprising a support, a guide frame for a rock drill pivoted to the support, a brace pivotally connected with one end to the guide frame, a pivot for the other end of the brace, and means for raising and lowering

the pivot to tilt the guide frame with respect to the support.



2,030,513

VALVE FOR CONTROLLING FLOW OF MILK AND AIR IN MILKING MACHINES

Cyrus Howard Hapgood, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey

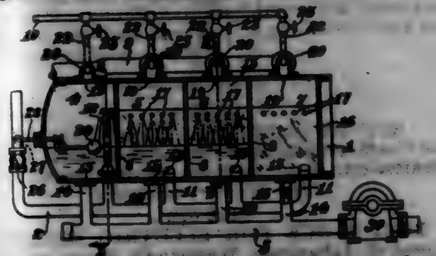
Application June 2, 1933, Serial No. 675,119

14 Claims. (Cl. 277—4)

1. A valve structure for controlling the flow of fluid, which comprises a valve block having two pairs of ports and a valve turnable on the valve block and having two elongated recesses, said recesses and ports being so disposed that the valve is turnable into one position to establish communication through one recess between one pair of ports, into another position to establish connection through the other recess between the other pair of ports, and into a third position to simultaneously connect through the second named recess the first named pair of ports and through the first named recess the second named pair of ports.

2,030,514

REFRIGERATING CONSTRUCTION



Frederick H. Hibbard, Bayside, N. Y., George H. Woodard, Phillipsburg, N. J., and John Kirgan, Easton, Pa., assignors to Ingersoll-Rand Company, Jersey City, N. J., a corporation of New Jersey

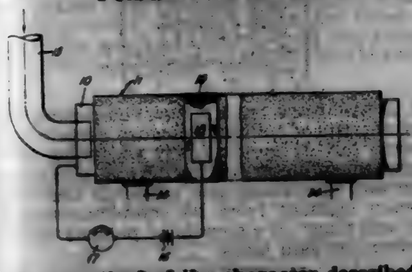
Application March 22, 1934, Serial No. 716,346

2 Claims. (Cl. 62—122)

1. A refrigerating construction comprising an evaporator to receive a liquid refrigerant, said evaporator containing a plurality of chambers,

a well in each of said chambers, means for admitting said liquid refrigerant to said wells to be discharged from the upper portions thereof in said chambers, said means containing a valve outside of said evaporator, a regulating element in one of said chambers, connections between

same and said valve to control the supply of said liquid refrigerant and render it independent of the rate of outflow of said chambers, a common delivery pipe connected to said chambers and means for removing vaporized refrigerant from said chambers.



2,030,515

METHOD OF MANUFACTURING NONCORROSIVE ARMORED METAL PIPE

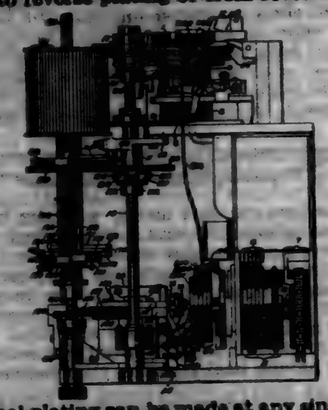
Warren A. Kramer, San Francisco, Calif., assignor to Cement Wrapped Pipe Company, Ltd., San Francisco, Calif., a corporation of Arizona

Application January 4, 1933, Serial No. 650,648

4 Claims. (Cl. 91—70)

1. In a method of the character described for the manufacture of coated metal pipe, applying a covering of bitumen pitch to one surface of the pipe, applying a wet mix of hydraulic concrete mortar on top of said covering, and then increasing the dielectric strength of the composite coating by heating the metal pipe to a temperature sufficient to cause flow of the bitumen pitch without decomposition of the same.

2,030,516



JACQUARD PATTERN MECHANISM FOR KNITTING MACHINES AND METHOD OF PATTERNING EFFECTED THEREBY

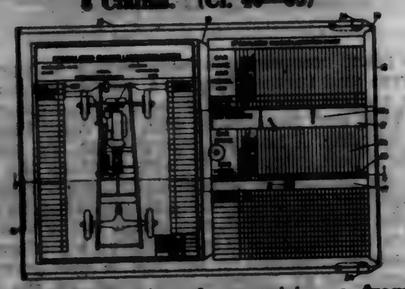
Robert H. Lawson, Pawtucket, and Arthur N. Cloutier and Alfred L. Hutton, Jr., Lonsdale, R. I., assignors to Hemphill Company, Pawtucket, R. I., a corporation of Massachusetts

Application January 3, 1933, Serial No. 650,290

40 Claims. (Cl. 66—49)

1. A circular knitting machine having independent needles and having means to feed a plurality of yarns thereto in a plating relation, sinkers cooperating with one or more of the yarns to effect change from normal plating to reverse plating, or vice versa, and a jacquard or selector member having means to control the sinkers individually for each needle wale in each course of an extended fabric, whereby changes from normal to reverse plating or from reverse plating

to normal plating can be made at any single stitch in any course of the fabric.



2,030,517

INDEXING SERVICE BOARD

Leonard Cleveland Eldridge and Benjamin Goodall Symons, St. Louis, Mo., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Refiled for abandoned application Serial No. 589,536, January 30, 1932. This application November 21, 1932, Serial No. 643,782. Renewed July 8, 1935. In Canada April 11, 1932

6 Claims. (Cl. 40—65)

1. An indexing board comprising a frame, a chart mounted in said frame, and a movable member slidably engaged on said frame, said movable member possessing a slot therein as well as a protruding element whereby relative motion is caused between the member and the frame, said slot being positioned over the chart so as to expose certain indicia thereon.

2,030,518

CONCRETE CONSTRUCTION

Francis Walter Guilbert, Beverly Hills, Calif.

No Drawing. Application November 27, 1933, Serial No. 699,975

4 Claims. (Cl. 106—84)

1. The process which comprises mixing in separate batches, a mixture of hydraulic cement and water, and a mixture of the remaining constituents of concrete, adding an oily material to the said remaining constituents, and mixing the two batches.

2,030,519

HEAT DISTRIBUTING MEANS

Karl M. Hamilton, Chicago, Ill.

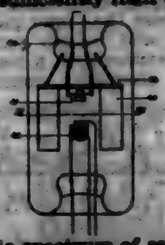
Application August 1, 1933, Serial No. 682,182

3 Claims. (Cl. 126—315)

1. In a device of the character described, an outer annular shell of dished shape, a central in-

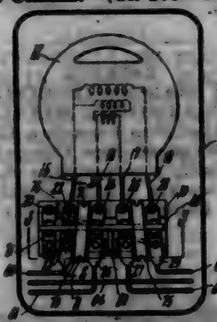
verted conical shell, and means carried by said outer shell for supporting said conical shell on said outer shell in spaced relation, the inner peripheral edge of said outer shell overlapping the peripheral edge of said conical shell, whereby to provide an annular heat directing passage, the peripheral edge of at least one of said shells being disposed to support a cooking utensil over

the space between said shells, whereby heat entering the opening of said annular shell will be discharged in an annular region against the bottom of the cooking utensil, the peripheral edge of said conical shell having one or more heat discharge outlets, said central shell comprising an outer annular member and a central conical member supported on said annular member, said members having heat passages therebetween.



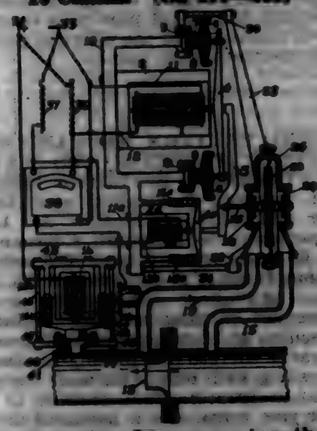
2,030,520
POWER PLANE
Gus Helmrath, New Waterford, Ohio
Application June 6, 1935, Serial No. 25,329
1 Claim. (Cl. 145—5.1)

A plane comprising a base having an opening therein and further having a socket therein, rotary cutters mounted for vertical movement of the base and engageable with the work through the opening, a housing mounted on the base, a vertical post extending slidably through the base and the housing, a substantially convex head on the lower end of said post engageable with the work for elevating said post, the socket in the base being for the reception of said head, an adjusting nut threadedly mounted on the post, a lever pivotally mounted, at an intermediate point, on the base and having one end operatively connected to the cutters and its other end operatively connected to the adjusting nut, said lever constituting means for connecting the cutters to the post and to the adjusting nut for raising and lowering said cutters, and a spring in the housing operatively connected to the post for yieldingly urging said post downwardly for elevating the cutters when the plane is disengaged from the work.



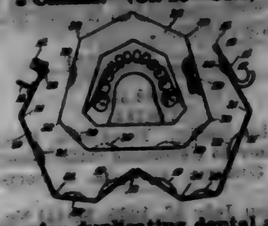
2,030,521
ELECTRIC DISCHARGE TUBE
Gustav Ludwig Horst, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, a corporation of New York
Application October 19, 1934, Serial No. 744,413.
Renewed February 4, 1935. In France November 30, 1933
10 Claims. (Cl. 176—122)

9. An electric lamp comprising a light-transmitting bulb, electrodes therein including a cathode comprising an electron emitting metal compound, a charge of rare gas having a pressure of the order of about one millimeter, and a quantity of vaporizable metal in said bulb, said lamp being constructed to operate with an arc discharge between said electrodes at a temperature at which the metal vapor in the path of said discharge has a sufficiently high density to cause



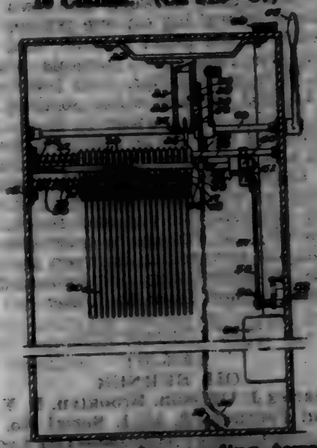
the characteristic spectrum of said metal to predominate in light radiated by said lamp.

2,030,522
TEST-BLOCK FOR ELECTRIC METERS
Ernest G. Johannsen, Watertown, Mass., assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass., a corporation of Massachusetts
Application March 30, 1932, Serial No. 603,523
16 Claims. (Cl. 175—183)



13. A test-block for a meter, comprising a plurality of pairs of contact elements, certain of said elements having means freely accessible for the attachment of meter-testing devices, and insulating means separating said elements and shielding each element from its complementary element and from all elements of polarity different therefrom on said block.

2,030,523
CARBON PILE METER
John Donald Keller, Pittsburgh, Pa.
Application October 8, 1930, Serial No. 487,469
10 Claims. (Cl. 177—351)

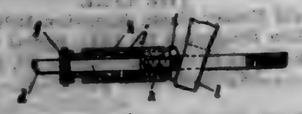


10. In apparatus for measuring the flow of fluids, means producing a force which is substantially proportional to the square of the rate of flow, an electric circuit, a compressible solid body whose electrical characteristics are variable in response to changes in pressure included in said circuit, means absorbing part of said force, the fraction of said force absorbed by said means increasing at a greater rate than the increase of said force, and means transmitting the force produced by the fluid flow both to said solid body and to the absorbing means.

2,030,524
ORTHODONTIA MOLDING DEVICE
Rayner Lambert, Brooklyn, N. Y.
Application October 12, 1933, Serial No. 693,553
2 Claims. (Cl. 18—34.1)

1. A frame for duplicating dental models comprising rigid parts directly hinged together and having walls of uniform height to enclose a model and leave space around the sides and over the teeth of the model for the reception of a gelatinous mold-forming substance, said frame having integral means for repositioning the mold after the model has been removed and said walls having a smooth inner surface, and integral inwardly projecting wedge shaped lugs on the inner surfaces of the walls adapted to hold the solidified mold when plaster is being poured and shaken in.

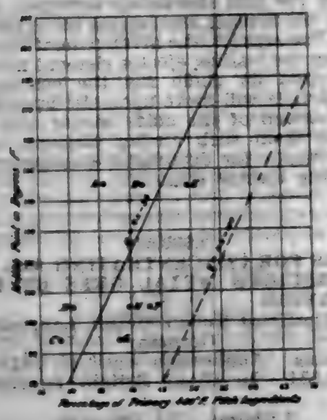
2,030,525
TOWEL VENDING MACHINE
Harry F. Mayfield, Anderson, S. C.
Application June 26, 1934, Serial No. 732,502
10 Claims. (Cl. 312—37)



5. In a machine for vending towels having grommets, a rod to receive the grommets thereon and having a free end, a flexible element attached to such free end, a second rod arranged near the first named rod and extending longitudinally thereof said projecting beyond the free end for a substantial distance, ejector elements permanently mounted upon the second named rod to move longitudinally thereof and having parts arranged between the towels in alternate relation therewith, and means to engage the leading ejector element to shift the same toward the free end of the grommet receiving rod.

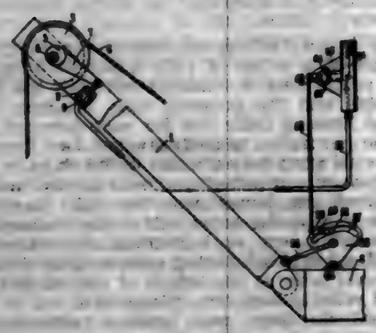
9. In a machine for vending articles, a guide rod, article holding means having a portion thereof arranged generally parallel with the guide rod and a portion projecting laterally from the guide rod, ejector elements slidably mounted upon the guide rod and alternately arranged with relation to the articles and having parts projecting between the articles, the arrangement being such that when the leading ejector element moves forwardly upon its guide rod the corresponding leading article will move upon the laterally projecting portion of the guide means and will be separated from such ejector element, and releasable means for detachable engagement with the leading ejector element.

2,030,526
PROCESS FOR CONCENTRATING ALL KINDS OF PRECIOUS METAL ORES BY FROTH FLOTATION
Carl Gottfried Rudolf Meiser, Langenberg, Germany
No Drawing. Application April 17, 1935, Serial No. 16,824. In Great Britain December 22, 1933
5 Claims. (Cl. 209—166)



1. In the process of treating precious metal containing ores which comprises subjecting the ore pulp to the action of a reagent selected from the group consisting of the sulphides and sulpho salts of copper, lead, silver, mercury, said reagent being present in a coagulated colloidal condition, and subjecting the mass to froth flotation.

2,030,527
DEVICE FOR SIMULTANEOUSLY REGULATING THE PRESSURE OF A SERIES OF PRESSURE ROLLS ADJACENT A HEATING TABLE
Hans Meyer, Altona-Bahrenfeld, Germany
Application December 5, 1934, Serial No. 756,189
In Germany June 19, 1933
4 Claims. (Cl. 154—1)



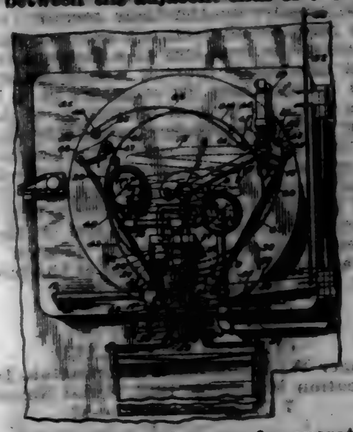
1. A device for simultaneously regulating the pressure of a series of rolls adjacent a heating table, comprising in combination with the heating table and the pressure rolls, brackets fixed on said heating table one for each pressure roll, an axle journalled in each bracket, two forwardly directed arms for each roll keyed on each axle, a downwardly directed and rearwardly inclined bifurcated arm keyed near the right hand end of each axle at the outer side of the corresponding carrying arm, a horizontal rod extending through all said bifurcated arms a short distance above said table at the height of the central axis of said rolls, means for shifting said rod in longitudinal direction, and loading regulators on said rod one for each roll arranged behind the corresponding bifurcated arm and adapted to exert a resilient pressure on said bifurcated arms and, through the same on said rolls, the distance between the rolls and the table remaining the same.

2,030,528
BLENDED PITCH PRODUCT AND METHOD OF MAKING
Stuart Parmelee Miller, Englewood, N. J., assignor to The Barrett Company, New York, N. Y., a corporation of New Jersey
Application July 24, 1933, Serial No. 682,634
In Canada July 19, 1928
12 Claims. (Cl. 196—152)

12. The method of producing a blended pitch product from coal tar which comprises distilling coal tar to pitch having a melting point above 250° F. by means of hot gases passing through a tar still wherein the tar and pitch produced therefrom are sprayed and resprayed from a body of the tar in the bottom of the still into the gases passing therethrough in the form of a fine intense spray having sufficient force to impinge against and wash the interior surfaces of the still whereby distillation is effected with a minimum of decomposition and blending the pitch while yet hot and fluid with a flux of the group consisting of coal tar, coal tar pitches, and coal tar oils.

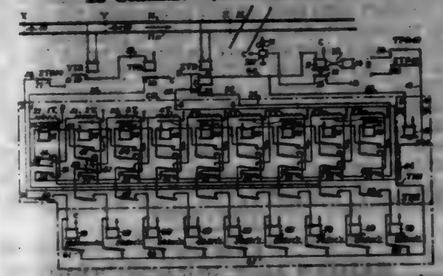
2,030,529
SAFETY DEVICE FOR CRANES AND THE LIKE
Archibald Fraser Nash, Kingston Hill, England
Application December 22, 1931, Serial No. 582,666
In Great Britain December 29, 1930
3 Claims. (Cl. 116—114)

1. A safe load indicator for a lifting device of the kind having a member to which motion is imparted for varying the radius of lift, comprising a scale bearing member marked with graduations indicating load magnitudes, an indicator element in the form of a scale marked with indications "Safe", "Maximum" and "Danger", a cam pivotally mounted on the lifting device, a connection between the member to which motion is imparted for varying the radius of lift and the cam whereby by such variation motion will be imparted to the cam, a connection between the cam and the indicator element in the form of a scale marked with indications "Safe", "Maximum" and "Danger" adapted to move the said indicator element relatively to the scale bearing member in accordance with variation in the radius of lift, an indicator element in the form of a pointer, a weight sensitive device and an operative connection between said weight sensitive device and the pointer adapted to move the pointer relatively to the scale bearing member in accordance with variations in the magnitude of the load being raised.



2,030,530
DRILL
Harry Charles Norley, Peterboro, Ontario, Canada, assignor to Canadian Atlas Steels Limited, Welland, Ontario, Canada, a corporation of Canada
Application July 26, 1935, Serial No. 33,250
11 Claims. (Cl. 255—64)

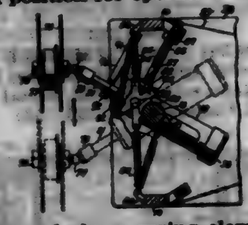
1. In a drill, the combination with a shank portion and a detachable bit portion, of a non-rotative connection between the two portions comprising a lateral lug on one portion received into a notch in the other portion, and coacting means on the respective portions adapted to interlock with each other, said portions being initially applied to each other so that the longitudinal axis of one portion is at an angle to the longitudinal axis of the other portion wherein the lug and notch and the interlocking means partially engage and finally such portions being so disposed that their longitudinal axes are coincident, wherein the lug and notch and the locking means fully engage to constitute respectively a driving connection between the portions and means for preventing longitudinal displacement of one portion from the other.



2,030,531
OIL BURNER
Charles J. Ohlsson, Brooklyn, N. Y.
Application February 2, 1931, Serial No. 512,982
4 Claims. (Cl. 158—1.3)

1. The combination with the nozzle of an oil burner furnace, said nozzle being formed to deliver fuel in a whirling spray, of a casing communicating at the inner end thereof with said furnace and including an outer end wall and a lateral series of curved plates surrounding the delivery portion of the nozzle, one end of each plate being located further inwardly, radially, than its other end for directing air toward the nozzle with a whirling motion, a series of shutters located between the adjacent ends of the curved

plates of the series, and means for operating the shutters.

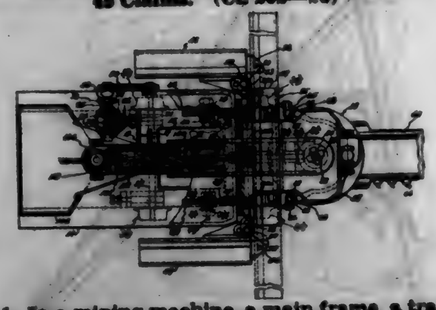


2,030,532
APPARATUS FOR THE CONTROL OF HIGHWAY CROSSING SIGNALS
James A. Parkinson, Topeka, Kans., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application April 24, 1935, Serial No. 17,974
15 Claims. (Cl. 246—130)

1. In combination, a stretch of railway track intersected by a highway, a highway crossing signal located adjacent the intersection, a speed measuring means controlled by a train approaching a fixed point in the rear of the intersection to register the speed of the train, a time measuring device including a series of individual electro-responsive timing units, means governed by the speed measuring means to selectively control said timing units in accordance with the registered speed, means controlled by the train upon reaching said fixed point to energize the particular timing unit selected, and circuit means governed by said timing units for setting the signal into operation and rendered effective when the selected unit has operated.

2,030,533
AUTOMATIC LUBRICATING MECHANISM
Robert Lee Pate, Jr., Pittsburg, Kans.
Application August 5, 1932, Serial No. 628,765
11 Claims. (Cl. 184—15)

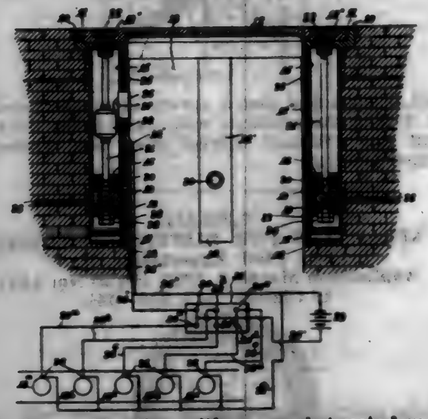
1. Apparatus for lubricating moving equipment having spaced lubricant-receiving fittings, comprising a movable lubricating device in position for engagement by said fittings and operated by the travel thereof for feeding lubricant to the fittings, and means acting automatically between successive lubricating operations to set and latch said device comprising a stop element for limiting the return movement of the device into a predetermined position for operative engagement by



said fittings and also a spring element operative by wiping engagement with said device to prevent any rebound thereof from said predetermined position.

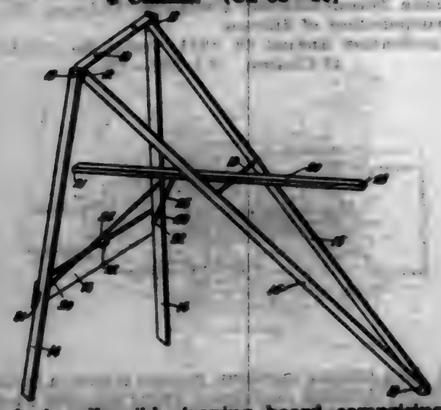
2,030,534
APPARATUS FOR DISPENSING LIQUID
Fred C. Ptell, Eggertsville, N. Y.
Application March 2, 1935, Serial No. 9,049
13 Claims. (Cl. 225—44)

1. An apparatus for dispensing liquid from a container comprising a valve body adapted to be mounted on the container and provided with a liquid discharge passage, a valve closure movable on said body into different positions for opening or closing said passage, and a baffle member mounted on said body so as to be movable in a plane parallel to the adjacent surface of the container and adapted in one position to permit said closure to be moved into a position which opens said passage, and in another position to hold said closure in a position which closes said passage.



2,030,535
MINING MACHINE
Charles A. Pratt, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application August 22, 1931, Serial No. 559,869
45 Claims. (Cl. 262—26)

1. In a mining machine, a main frame, a transversely extending rectilinear guide member wholly supported by said main frame forwardly of the forward end thereof, and a chain carrying cutter bar wholly supported on said transversely extending guide member, said cutter bar being

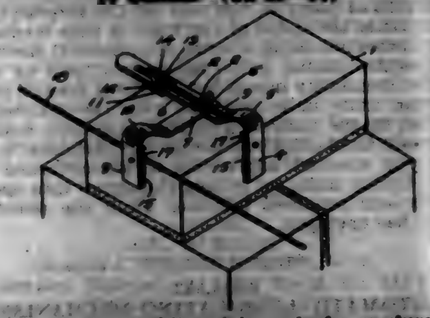


adapted to depend from said guide member and mounted thereon for translational and pivotal movement with respect thereto.

2,030,536
SAFETY DEVICE FOR MANHOLE COVERS
Charles E. Rego, East Boston, Mass.
Application September 27, 1932, Serial No. 691,162
5 Claims. (Cl. 200—52)

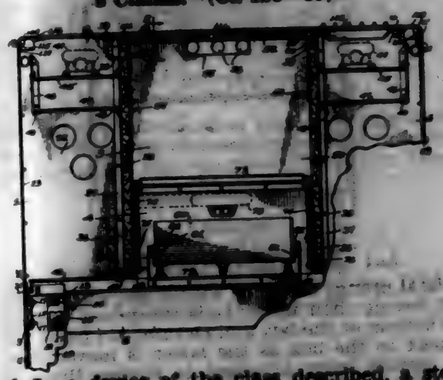
1. In combination with an unobstructed manhole located below the surface of a street or the like and in which a man may work; a cover therefor having a level upper face alined with said street surface; an annular seat for said cover; a rod depending from said cover; a piston thereon; a housing for said piston outside the wall of said manhole; a spring coacting with said piston to retain said cover on its seat; an electric circuit; a normally open switch therefor in the wall of said housing; and means on said rod for closing said switch whenever said piston is raised against the tension of said spring.

2,030,537
IRONING BOARD
Chester A. Rich, Cincinnati, Ohio, assignor to The Rich Pump & Ladder Company, Cincinnati, Ohio, a corporation of Ohio
Application January 8, 1935, Serial No. 851
6 Claims. (Cl. 68—10)



1. A collapsible ironing board comprising in combination: a table member having front and rear ends and an under surface; a front leg structure comprising a pair of members pivoted relative to the table member adjacent to the rear end thereof, and a pair of spaced rear legs also pivoted relative to the table member adjacent to the rear end thereof, a transverse strain bar connecting the rear legs at a distance from the pivotal mountings thereof, a fulcrum rod supported by the front leg structure at a location remote from the pivotal mountings of the front legs, a resilient bow-piece swingingly supported upon the fulcrum rod, said bow-piece having a front end and a rear end, short and sturdy compression members cooperating to guide the rear end of the bow-piece onto the strain bar, and an abutment on the under surface of the table member, said abutment being located out of registration with the front end of the bow-piece except upon bending the bow-piece.

2,030,538
CONTINUOUS FILTER
Roger W. Richardson, Wilmington, Del.
Application March 21, 1932, Serial No. 600,141
7 Claims. (Cl. 92—53)

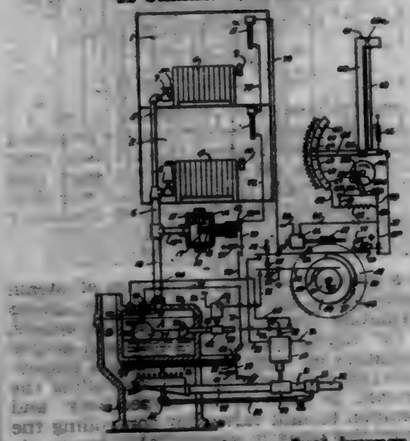


1. In a continuous filtering device comprising a frame, a continuous moving screen, a suction box in contact with said screen and means for producing vacuum in said suction box, a plurality of slats within said suction box mounted upon links of a series of rotatable endless roller chains and supporting said screen, means for supporting the roller member of said links, means for maintaining said links and movable member thereof in fixed movable rolling relationship to said supporting means, and means for rotating said screen and said slats supported by said links at approximately the same speed.

2,030,539
MASON'S LINE HOLDING TRIG
John Riley, Chicago, Ill., assignor of one-half to Adam J. Sertinsky, Chicago, Ill.
Application July 21, 1934, Serial No. 735,851
10 Claims. (Cl. 33—34)

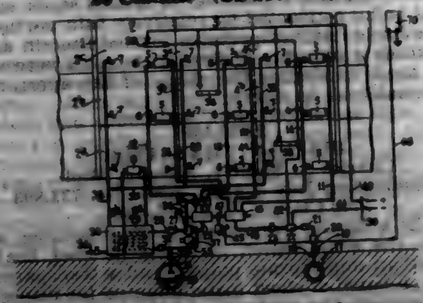
1. In a line holding trig, a body, a plurality of arms connected with the body and relatively adjustable, said arms being normally substantially parallel for supporting a body therebetween, means carried by one of the arms for detachably connecting a cord therewith, and a resilient element secured to one side of each of said arms for frictionally engaging an object disposed between the arms.

2,030,540
STOVE CONSTRUCTION
Charles J. Rogers and Walter F. Rogers, Cicero, Ill., assignors to Crown Stove Works, Cicero, Ill., a corporation of Illinois
Application August 24, 1934, Serial No. 741,190
5 Claims. (Cl. 126—39)



1. In a device of the class described, a stove body having front, rear and end walls, and a removable top comprising a front rim section detachably connected to said front wall, a rear rim section detachably connected to said rear wall, a pair of end rim sections detachably connected to said end walls, an intermediate panel having downwardly offset portions thereof underlying said front and rear rim sections, and burner tops between and supported by said intermediate panel and said end rim sections, said rear rim section and the rear ends of said end rim sections having overlapping parts detachably connected together, and said front rim section and the front ends of said end rim sections having overlapping parts detachably connected together.

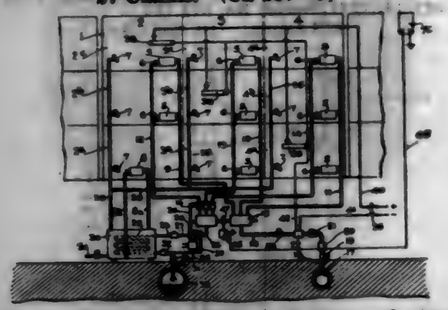
2,030,541
APPARATUS FOR DELIVERING POWDERY MATERIAL
Alfred German Rose, Gainsborough, England, assignor to Rose Brothers (Gainsborough) Limited, Gainsborough, England, a British company
Application March 15, 1935, Serial No. 11,515
In Great Britain January 22, 1934
2 Claims. (Cl. 221—130)



1. In an apparatus for delivering solid material, a hopper for containing bulk material having an opening in the bottom thereof, a feed wheel rotatable in said opening to feed a uniform stream of material from the hopper continuously and at a constant rate, means for varying the depth of said stream, means for receiving the fed stream, and rotary means having projections thereon between the hopper and the means for receiving the stream for continuously breaking up the stream after the stream has left the hopper, there being an unbroken portion of the stream on the feed wheel between the hopper and the breaking up means.

2,030,542
HEATING SYSTEM
Oscar A. Ross, New York, N. Y.
Continuation of application Serial No. 56,283, September 14, 1925. This application February 14, 1931, Serial No. 515,761
42 Claims. (Cl. 236—91)

1. A steam generator, a fuel burner therefor having a fuel supply connected thereto, means for controlling the supply of fuel to the burner from the fuel supply means, ignition means for igniting the fuel at the burner, a time interval device for rendering the fuel control means effective to supply fuel to the burner, and means controlled by the ignition means for annulling the control of the fuel supply means by the time interval device.



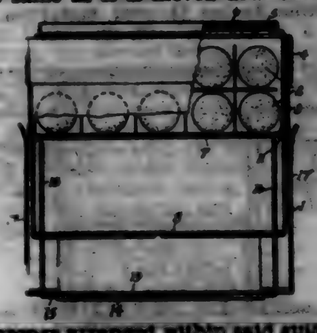
2,030,543
METHOD OF HEATING
Oscar A. Ross, New York, N. Y.
Application November 15, 1927, Serial No. 233,482
Renewed September 12, 1934
20 Claims. (Cl. 237—12)

1. The method of supplying heat from a source to a plurality of subsidiary heating systems forming a major heating system arranged to heat a plurality of enclosed spaces which involves, establishing a flow of the heat from the source to each subsidiary system for one period of time alternate-

ly with cancelling the flow for another period of time, the flow periods being established to each subsidiary system at predetermined successive time intervals and the time interval of the non-flow periods being sufficiently long to permit completing the heat flow period to the last subsidiary system before again establishing the heat flow to the first subsidiary system.

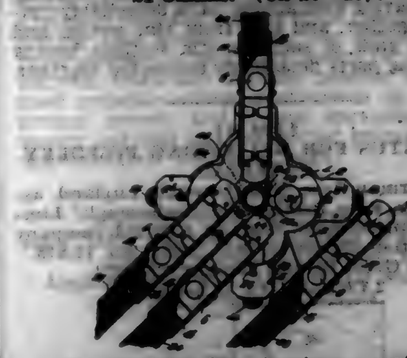
2,030,544
HEATING SYSTEM
Oscar A. Ross, New York, N. Y.
Original application November 15, 1927, Serial No. 233,482. Divided and this application December 17, 1934, Serial No. 757,790
27 Claims. (Cl. 237—8)

26. In a heating system, a source of steam under pressure, a plurality of grouped spaces having radiators therein for heating the spaces, conduits for conveying steam from said source to the radiators of each of said groups respectively, valves in said conduits for controlling the flow of steam to each group respectively, and means common to said valves for controlling the operation of the same in sequential order to alternately admit and check the flow of steam to each of said groups, whereby the steam is successively apportioned from said source to the several groups.



2,030,545
FOROUS BOOT OR SHOE SOLE
Hermann Schulze, Leipzig, Germany
Application March 19, 1934, Serial No. 716,235
In Germany June 22, 1933
2 Claims. (Cl. 36—3)

1. A boot or shoe sole of rubber or the like material having a plurality of relatively thick portions defining a plurality of spaced studs, said studs being connected by relatively thin portions of said sole having apertures formed therein and providing a plurality of flexing elements between said studs to change the shape of the apertures when said sole is flexed.

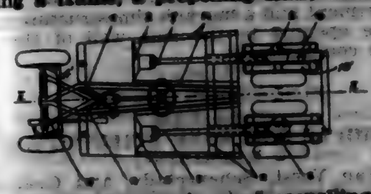


2,030,546
DISPLAY CONTAINER
Charles A. Sheffer, Allegan, Mich.
Application July 5, 1934, Serial No. 733,883
40 Claims. (Cl. 206—44)

1. In a display container of the character set forth, the combination of a box of fiber board having an imperforate bottom and a transparent cover, a panel of sheet metal adapted for disposition between the contents and the bottom of said box, the panel having beveled corners and outwardly and downwardly inclined side flanges slidably fitting the walls of the box and provided with teeth at their ends engaging the walls of the box adjacent but spaced from the corners thereof, and means for elevating said panel within the box as the contents thereof are exhausted from the top, said means comprising vertical guide means adapted to receive the box and guide the same as it is moved downwardly, and

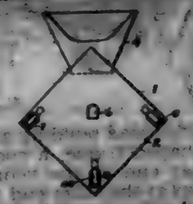
vertical prongs arranged within said guide means and having their upper ends sharpened to pierce the bottom of the box and elevate said panel with respect to the box as the latter is moved down, the prongs being arranged to engage the panel near the corners thereof.

2,030,547
BRACELESS PANIC RELEASE, ROLLER LATCHING, REVOLVING DOOR HARDWARE
John W. Shields and Maurice M. Hagenbeck, Evansville, Ind., assignors, by mesne assignments, to International Door Company, Evansville, Ind., a corporation of Illinois
Application April 6, 1934, Serial No. 719,390
21 Claims. (Cl. 20—13)



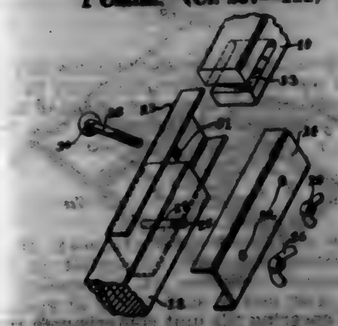
1. In a revolving door structure, a vertical shaft member, a pair of carriers mounted on said shaft member, each of said carriers having diametrically opposed sockets therein, swinging members, each having a stud projecting into a socket in said carriers, door hangers supported by said swinging members and latching means on the ends of said door hangers engaging cooperative latching means on said carriers when said swinging members are in alignment with said door hangers in radial position.

2,030,548
TRUCK OR TRACTOR WITH TWO REAR AXLES
Herman René Marie Gerard Smeets, Roermond, Netherlands
Application June 16, 1933, Serial No. 676,185
In the Netherlands July 1, 1932
3 Claims. (Cl. 180—22)



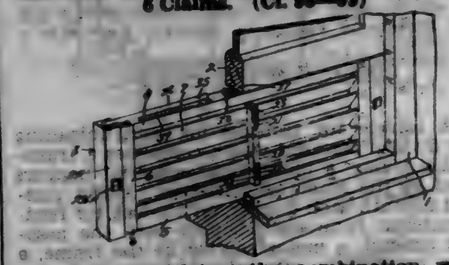
1. A truck comprising a main frame composed of a front part and a rear part, a steerable axle supporting the forward end of the front part, and

two motor vehicle units supported at opposite sides of the front part of the frame and each including a frame, a propelling shaft and a rear



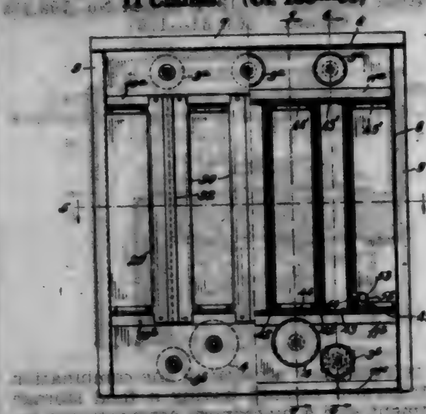
axle and ground engaging and propelling wheels on each rear axle disposed under and in a position to support the rear part of the main frame.

2,030,549
GAME
Joseph F. Smith, Fort Wayne, Ind.
Application October 8, 1934, Serial No. 747,382
4 Claims. (Cl. 273—95)



1. A game comprising a receptacle having a plurality of openings in its front side, means in the receptacle to form passageways leading to said openings respectively, a feed opening in the receptacle and common to all the passageways, baffling means between the feed opening and the entrances to the passageways and resilient ejectors mounted in some of the passageways rearwardly of the said openings for batting articles that travel by chance in the passageways from the receptacle.

2,030,550
JOINTED POLE FOR TREE PRUNERS
Justin L. Smith, Watertown, Conn., assignor to Seymour Smith & Son, Inc., Oakville, Conn., a corporation of Connecticut
Application November 24, 1933, Serial No. 699,559
1 Claim. (Cl. 287—111)

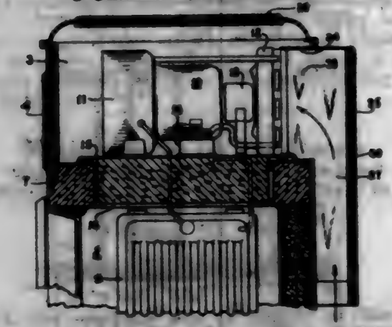


In a sectional pole, a pair of elongated pole sections arranged end to end one end of one of said sections having a plain tubular socket mounted on one end of the other pole section and having a hollow section extending therebeyond, a clamping bolt passing through said socket and the body of said unslotted pole section at a point adjacent the end thereof, a second clamping bolt passing through said socket and located in the slot of said slotted pole section, and nuts on said bolts to hold the sides of said tubular socket in tightly clamped position.

2,030,551
VENTILATOR
Fern A. Strawsine, Corunna, Mich.
Application February 12, 1932, Serial No. 656,541
6 Claims. (Cl. 98—99)

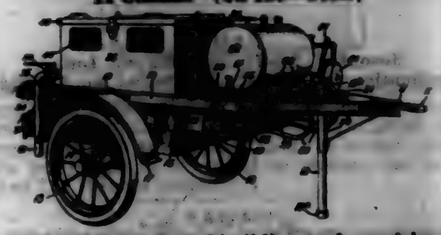
1. In a ventilator, the combination with a Z-shaped vane, of bars at opposite ends of said vane and formed with notches through which said vane extends and for pivotal engagement with the end portions of the apex of one of the V-shaped portions of said vane.

2,030,552
DRY TYPE SELF-CLEANING AIR FILTER
Richard Strindberg, Worcester, Mass., assignor to Development Associates, Inc., Worcester, Mass., a corporation of Massachusetts
Application July 12, 1932, Serial No. 622,928
11 Claims. (Cl. 183—63)



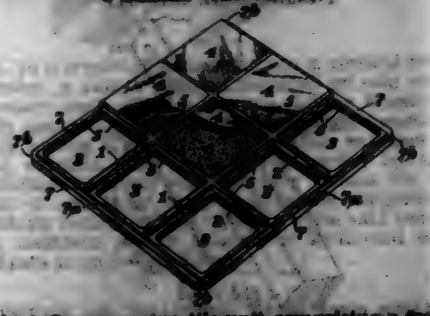
1. In an air filter, a frame having spaced compartments and a filtering chamber therebetween, an endless filter curtain of continuous sheet material, rollers mounted in each of said compartments and supporting and guiding the filter curtain for movement in a circuitous path, spaced stretches of said curtain extending through the filtering chamber between said compartments and forming the opposite walls of alternating substantially parallel air inlet and outlet passages opening on opposite sides of the frame, cooperating sealing means on said frame at the opposite sides of the filter chamber and at the edges of the filter curtain, preventing direct communication between the inlet and outlet passages, said means on the curtain also cooperating with said rollers to guide and tension the curtain, means substantially sealing communication between said passages and the roller compartments, and means for moving said filter curtain.

2,030,553
RAILWAY CAR
George E. Tiley, Woodhaven, N. Y., assignor to General Chemical Company, New York, N. Y., a corporation of New York
Application November 14, 1932, Serial No. 642,486
10 Claims. (Cl. 214—83)



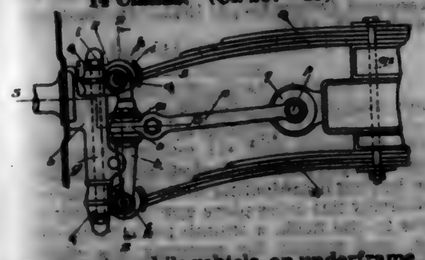
1. A vehicle for transporting and unloading finely divided material which comprises a transportable frame, a plurality of material hoppers carried by the frame, a discharge conduit positioned beneath each hopper, an air-lock for feeding material from each hopper into the associated conduit, a motor carried by the frame, a blower operatively connected to the motor, a shaft driven by the motor, means for selectively connecting the air-locks to the shaft to operate the air-locks, and a connection between the blower and a discharge conduit for pneumatically discharging material from the vehicle.

2,030,554
CABINET CONSTRUCTION
Walter M. Van Seiver, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 30, 1934, Serial No. 708,950
3 Claims. (Cl. 62—116)



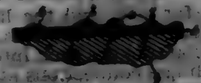
1. In refrigerating apparatus, the combination of a refrigerator cabinet having a food storage compartment and a machinery compartment located above the food storage compartment together with an intermediate structure disposed between the food storage compartment and the machinery compartment, said machinery compartment having an opening in a side wall thereof and said intermediate structure providing an opening between the compartments, a refrigerating unit embodying a condensing element and an evaporating element together with an intermediate base portion assembled therewith and detachably engaging the intermediate structure for supporting the condensing element in the machinery compartment and the evaporating element in the food storage compartment, said refrigerating unit being movable horizontally through said opening in the side wall of the machinery compartment and also movable vertically in the machinery compartment to project the evaporating element through said intermediate structure into the food storage compartment, said intermediate structure and said base member cooperating to form a partition separating the machinery compartment and the food storage compartment and a movable flue structure covering the opening in the side wall of the food storage compartment.

2,030,555
VEHICLE FOR ROAD BUILDING AND REPAIRING
John Van Vorst, Schenectady, and George M. Baker, Scotia, N. Y., assignors, by mesne assignments, to Mohawk Asphalt Heater Company, Frankfort, N. Y.
Application August 30, 1929, Serial No. 389,421
11 Claims. (Cl. 126—343.5)



1. A vehicle for road building and repairing including a V-shaped frame, a combustion chamber at the rear end of the vehicle and having burner openings at the other end thereof, a material heating chamber arranged above said combustion chamber, said chambers being secured to the arms of said frame, an oil tank supported on said frame at the front of said chambers and spaced therefrom, a plurality of burners below said tank directed into the openings in said combustion chamber, flexible connections between said fuel tank and said burners, a cross member depending from said frame for supporting said burners, a shield between said tank and said combustion chamber and burners, a movable wind deflector for said burners forming a continuation of said shield, and wheels attached to said frame.

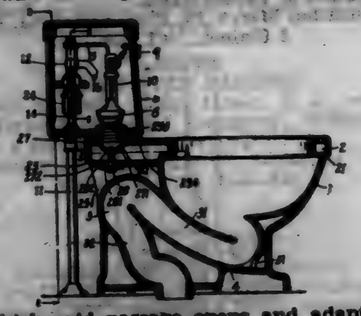
2,030,556
LINOLEUM TILE OR THE LIKE
Ernest Veltang, New York, N. Y.
Application August 25, 1933, Serial No. 686,941
8 Claims. (Cl. 94—18)



1. A floor covering tile unit comprising a frame made up of frame bars extending at angles to each other and united to provide pockets or spaces for the reception of filling material, marginal bars connecting the frame bars and providing uniform, continuous ledge faces extending outwardly throughout the length of the marginal bars on all sides of the unit substantially midway of the height of the frame bars to uninterruptedly engage and interfit with marginal bars of similar adjacent units, said continuous, uninterrupted ledge faces all facing in the same direction substantially perpendicular to the plane of the unit at all points around the unit.

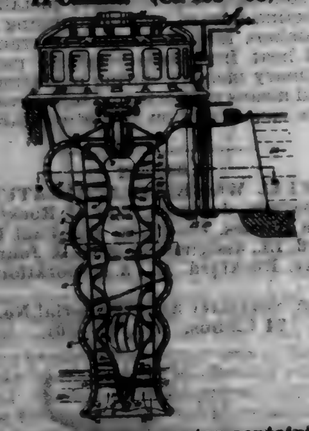
2,030,557
VEHICLE SUSPENSION
Max Wagner, Stuttgart, Germany, assignor to Daimler-Benz Aktiengesellschaft, Stuttgart-Unterturkheim, Germany, a company of Germany
Application January 26, 1933, Serial No. 653,450
In Germany June 4, 1931
14 Claims. (Cl. 267—19)

1. In an automobile vehicle, an underframe, two laminated springs arranged substantially parallel one above the other and secured to the underframe, an axle piece carrying the vehicle wheel, and connected with the ends of the laminated springs arranged substantially one above the other, an intermediate piece arranged on the axle piece, one end of which is rotatably supported on the axle piece and its other end is supported with clearance on the axle piece, and a guiding link arranged parallel to the laminated springs, one end of the guiding link being pivotally connected with the underframe and its other end with the said intermediate piece.



2,030,558
SURFACE ORNAMENTATION
Byron E. White, Kalamazoo, Mich., assignor to Globe Casket Manufacturing Company, Kalamazoo, Mich.
Application November 5, 1934, Serial No. 751,520
2 Claims. (Cl. 41—34)

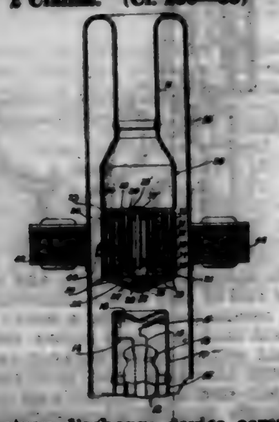
1. The combination with a backing panel, of a sheet of parchmentized kraft crepe paper glued to said panel, a coating of colored lacquer on said sheet, and a coating of transparent lacquer on said colored lacquer coating.



2,030,559
WATER CLOSET
Carl H. Zwermann, deceased, late of Robinson, Ill., by Hilda Zwermann, executrix, and Carl H. Zwermann, Jr., executor, Robinson, Ill., assignors to W. A. Case & Son Mfg. Co., Robinson, Ill.
Original application July 30, 1932, Serial No. 626,540. Divided and this application January 26, 1935, Serial No. 2,532
5 Claims. (Cl. 4—16)

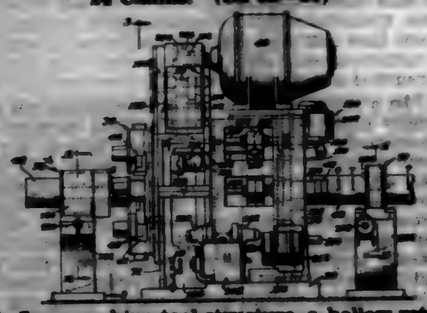
1. In a water closet having a bowl with a rearwardly projecting hollow shelf adapted to supply said bowl, a jet within the bowl, a passage to said jet within the bowl, a gravity tank adapted to supply said hollow shelf and be supported thereon and having therein a ball cock and an auxiliary valve controlled by pressure from the ball cock and having therein a direct connection through the tank and from the main water supply adapted to be connected to said passage in said bowl and controlled by said auxiliary valve, the same constituting automatic means for controlling said water supply, the combination of side walls supporting said hollow shelf and forming a concealed recess at the back of the bowl, a side wall forming a second concealed recess

into which said passage opens and adapted to receive the end of said direct connection through said tank, means for forming a water tight joint between said tank and said hollow shelf, a butt-joint in said second recess between said connection through the tank and said passage, and means to pull said tank toward said shelf to seal said means for forming a water-tight joint between the tank and shelf to secure the tank on the shelf and to seal said butt-joint comprising a screw concealed in said first-mentioned recess.



2,030,560
SCREW PUMP
James L. Adams, Jr., Youngstown, Ohio
Application September 14, 1934, Serial No. 744,624
11 Claims. (Cl. 103—83)

1. In a screw pump, a rotor containing an externally and transversely corrugated element of substantially cylindrical outline, helical screw blades mounted on the corrugations of said element and lying within the generally straight, cylindrical outline of the said rotor, a stator surrounding the rotor and comprising an internally corrugated casing, with the corrugations partially displaced axially of said pump with respect to the corrugations on the rotor, a plurality of longitudino-radial guide vanes mounted in peripherally spaced relation within the corrugations of said casing, and forming a substantially



straight cylindrical internal working face for said stator, with a slight radial clearance to the above cylindrical surface of the rotor, and a power driving means for the said rotor, the said blades and vanes being in general longitudinally out of alignment with each other.

2,030,561
X-RAY TUBE
Victor John Andrew, Upper Montclair, N. J., assignor to Westinghouse Lamp Company, a corporation of Pennsylvania
Application March 28, 1933, Serial No. 663,130
2 Claims. (Cl. 250—35)

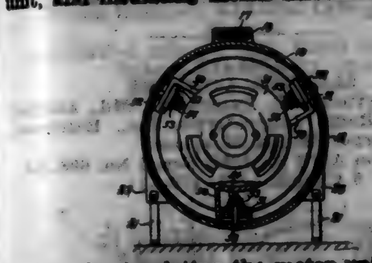
1. An electron discharge device comprising an envelope having a thermionic cathode and an anode disposed therein, said anode comprising a stationary metallic member of good heat conducting material supported by said envelope and forming a comparatively large chamber with the lower end thereof formed into a plurality of concentrically spaced fluid tight annular chambers and a rotatable metallic member having a plurality of concentrically arranged metallic cylinders projecting toward and surrounding said annular chambers for the purpose of transmitting generated heat from said rotatable member to said stationary member during operation of said device, and means supported by said envelope and operable to cause rotation of said rotatable member.

2,030,562
METAL WORKING APPARATUS
John S. Barnes, deceased, late of Rockford, Ill., by Hope Barnes, executrix, and Paul R. Guirl, Rockford, Ill., assignors to W. F. & John Barnes Company, Rockford, Ill., a corporation of Illinois
Application November 24, 1933, Serial No. 699,543
24 Claims. (Cl. 82—38)

1. In a machine tool structure, a hollow rotary tool carrier, a work support extending therein for securing a work piece within the confines of said hollow carrier in a fixed position to be acted upon by tools on said carrier, tool holding means slidably mounted on said carrier and adapted to reciprocate toward and away from a supported work piece, and means for causing said tool holding means to experience variable speed and for causing the positive reciprocation thereof.

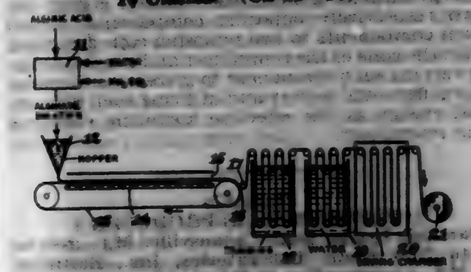
2,030,563
STRAP FASTENER
Lawrence John Barnes, Dee Why, New South Wales, Australia
Application November 21, 1933, Serial No. 698,962. Renewed December 4, 1935. In Australia December 13, 1932
1 Claim. (Cl. 24—201)

For the purpose indicated, in combination, a plate having a projecting neck in the same plane, a relatively flat cross piece approximately at right angles to the neck, a thumb piece upon the cross piece, and means for securing the plate to a strap, a second plate having hooks into which said cross piece when at a suitable angle may be passed, there being a gap between the hooks to receive the neck, and means for securing said second plate to a strap.



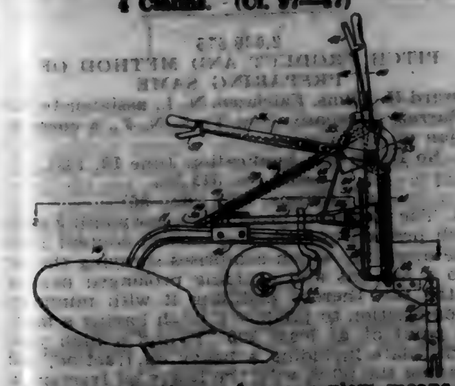
2,030,564
CUSHION SUPPORT FOR EGGS AND THE LIKE
Leon Bamak, New York, N. Y.
Application April 20, 1935, Serial No. 16,827
3 Claims. (Cl. 217—27)

1. A support for eggs and the like formed of a sheet of fibrous material which is slitted to provide companion tongues each integrally joined to the sheet by hinge connections at points intermediately of the upper and lower edges of the tongue behind which there is an open space into which the tongue may yield in response to pressure.



2,030,565
VACUUM CLEANER
Tord Erik Daniel Bilde, Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del., a corporation of Delaware
Original application February 25, 1930, Serial No. 431,241, now Patent No. 1,966,534, dated May 31, 1932. Divided and this application May 1, 1932, Serial No. 608,598. In Germany March 5, 1929
2 Claims. (Cl. 242—54)

1. In a vacuum cleaner, a horizontally supported cylindrical casing, a motor unit, means for resiliently supporting said motor unit in said casing comprising spiral springs extending between said motor unit and said casing, said springs being conical and being peripherally disposed about said motor unit and having their apexes secured to the casing and their bases secured to the motor unit, and insulating means associated with the

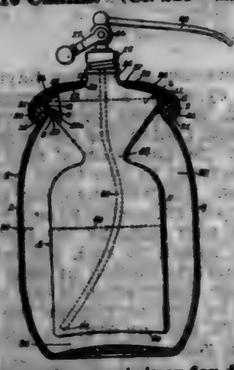


springs for insulating the motor unit from the casing.

2,030,566
PRODUCTION OF FILMS
Cyril Wilfred Beaullieu, Leamington Spa, England
Application December 11, 1933, Serial No. 701,924
In Great Britain December 15, 1932
10 Claims. (Cl. 18—57)

1. A process for producing from alginic material films free from opacity, consisting in preparing an aqueous solution of an alkali-radicle alginate which solution is substantially both sterile and clear and whose concentration (expressed in terms of alginic acid) does not exceed 10% of the weight of the solution, forming the said solution into a film before it has materially changed from the state in which it existed upon first formation and then drying the film in not more than fifteen minutes.

2,030,567
TRACTOR PLOW
Edson E. Bowen, Greenwich, Ohio, assignor to The Fate-Root-Heath Company, Plymouth, Ohio, a corporation of Ohio
Application August 6, 1934, Serial No. 738,867
4 Claims. (Cl. 97—47)

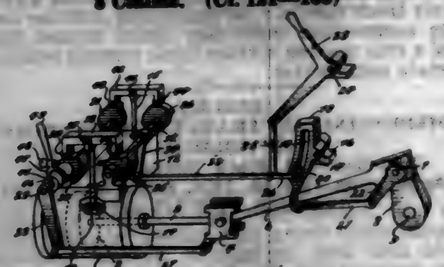


1. In combination, a frame, a plow, means for raising and lowering the plow comprising a rock shaft, a crank thereon, and means for operatively connecting the crank with the plow to the rear of said rock shaft, said crank standing in substantially vertical position when the plow is in the ground and in substantially horizontal position when the plow is raised, a counterbalancing spring attached to the end of the crank and to the frame at a point beneath said rock shaft, whereby the leverage exerted by the spring is approximately zero when the plow is in the ground and substantially a maximum when the rock shaft is turned forward through a quarter revolution to raise the plow.

2,030,568
LAMINATED RECORD
Benetech C. Brem, Cedar Grove, N. J., assignor to Dupont Viscoloid Company, Wilmington, Del., a corporation of Delaware
Application December 8, 1933, Serial No. 701,110
6 Claims. (Cl. 154—43)

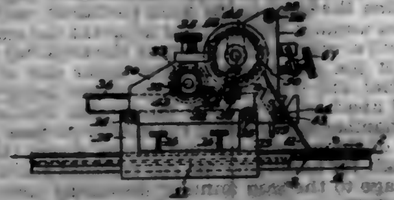
1. A laminated sound record comprising a relatively thick core of a homogeneous cellulose acetate composition containing finely divided filler and a thin playing surface of an unfilled cellulose acetate composition.

2,030,569
DISPENSING APPARATUS FOR CHARGED BEVERAGES
Nicholas V. D. Breck, Santa Ana, Calif.
Application July 18, 1934, Serial No. 735,761
10 Claims. (Cl. 215—12)



1. In a dispensing container for dispensing gas-charged beverages under pressure, the combination of an outer container with a mouth having an annular seat, an inner container with an annular shoulder adjacent said seat, and having an upwardly extending neck, a gasket pinched between the shoulder and the seat and having an extension overlying the upper side of the shoulder, and a cap having a central opening receiving the said neck, having a flange at its outer edge for securing the same to the outer container, said cap having annular corrugations adjacent the edge of its central opening for pinching the adjacent portion of the gasket against the upper side of the shoulder, the walls of said containers being disposed apart so as to form an annular insulating gas chamber surrounding the inner container, the walls of the inner container having a vent therethrough for admitting the gas pressure above the beverage to the said annular insulating space, to balance the pressure on the interior of the inner container, said cap cooperating with the gasket and the containers to seal and retain the gas pressure in the annular space.

2,030,570
HOSE ATTACHING DEVICE
Vita Buchanan, New York, N. Y.
Application May 21, 1932, Serial No. 612,718
9 Claims. (Cl. 24—73)

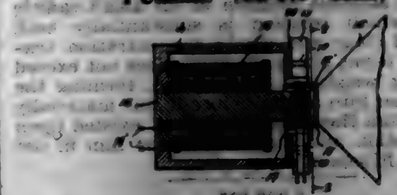


9. A device of the character described comprising a part having a plurality of transverse strap-receiving slots therein, said slots having their adjacent ends overlapping relative to each other, and a stocking engaging portion of reduced width depending from said first-named part with its vertical axis coinciding with the median line of the device.

2,030,571
VALVE OPERATING MECHANISM
George Cawley, Upper Montclair, N. J.
Application October 20, 1931, Serial No. 569,886
8 Claims. (Cl. 121—163)

1. In combination, an engine having a piston movable in a cylinder, a return crank operated by said piston, a poppet valve movable to and from its seat and controlling the passage of fluid as required for the operation of said piston, said valve being operated by two cams having spaced axes and a cam follower engaging both of said cams and pivotally connected to said valve, means to rock one of said cams by the normal motion of said piston, means to rock the other of said cams by the normal motion of said crank, and means to change the relation of one of said cams to its follower to thereby change the relation of said valve to its seat at a given time, to cause reversal of the engine.

2,030,572
APPARATUS FOR THE MANUFACTURE OF LAMINATED GLASS
Edle Demmler, Jeannette, Pa., assignor to American Window Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application May 6, 1933, Serial No. 669,737
4 Claims. (Cl. 91—43)

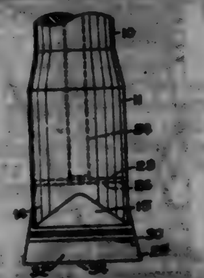


1. In apparatus for the manufacture of laminated glass, means for forming a film of a liquid, means including an inclined plate for flowing the film on a glass sheet, and means for regulating the temperature of said inclined plate for controlling the temperature of the liquid as it is flowed on the glass sheets.

2,030,573
ELECTRIC CONTROL
Marshall Lytton Dull, Catonsville, Md., assignor to Dull Radio Laboratories, Inc., Baltimore, Md., a corporation of Maryland
Application April 10, 1933, Serial No. 665,504
5 Claims. (Cl. 179—1)

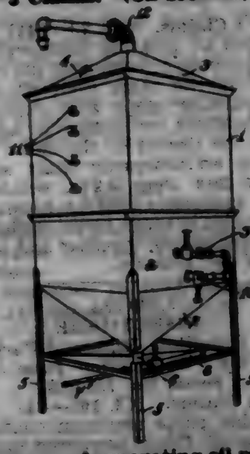
1. A method of increasing the sensitivity and response, and controlling the volume of a radio receiving set which includes a receiving circuit and a reproducer circuit which comprises operating the receiving circuit at the maximum efficient energy output, dividing such output energy into two respectively opposing components, feeding such components to two opposing coils associated with the cone of the reproducer and simultaneously varying each component to increase or decrease the differential energy and utilizing such differential energy as the effective operating energy of the reproducer.

2,030,574
ELECTRICAL REPRODUCER
Marshall Lytton Dull, Catonsville, Md., assignor to Dull Radio Laboratories, Inc., Baltimore, Md., a corporation of Maryland
Application August 22, 1932, Serial No. 629,965
7 Claims. (Cl. 179—115.5)



4. That method of increasing the sensitivity of electro-dynamic reproducers provided with an annular plate serving as a magnetic pole for the reproducer which comprises establishing in the said plate a plane of discontinuity, and insulating such plate.

2,030,575
PITCH PRODUCT AND METHOD OF PREPARING SAME
Edward H. Kline, Fairlawn, N. J., assignor to The Barrett Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 16, 1931, Serial No. 543,235
11 Claims. (Cl. 202—96)



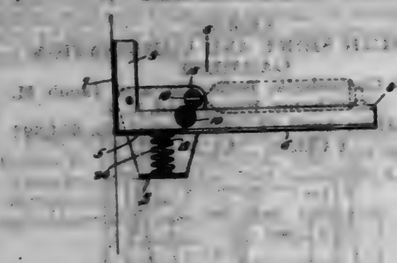
3. The method of producing a low melting point pitch product of high free carbon content from coke oven tar, which comprises spraying the tar into a hot gas and avoiding prolonged heating of the tar, thereby distilling it with minimum decomposition to produce a pitch having a melting point of at least 300° F. and a high yield of distillate including a heavy oil fraction, and blending the pitch with the heavy oil fraction in proportions to yield a pitch product with a carbon content between 12% and 25%.

2,030,576
REPLACEABLE BIT ROCK DRILL
Charles Erickson, Kirkland Lake, Ontario, Canada
Application July 23, 1933, Serial No. 680,823
Renewed October 15, 1935
7 Claims. (Cl. 255—64)

2. In a replaceable bit rock drill, a holder and bit together forming a loose dovetail joint, the bit having free lateral movement for shaping the hole and a limited longitudinal movement, said longitudinal movement contributing to a direct impact by the striking base of the tenon cut, at each stroke of said holder distinct from the origin of the stroke and to a swaging action on the bit, said striking base extending through fillets into the converging side walls of the cut at either side of the cooling fluid inlet.

2,030,577
PROCESS OF RENOVATING OIL
Leonard T. Evans, Indianapolis, Ind.
Application September 13, 1932, Serial No. 633,196
3 Claims. (Cl. 196—16)

1. The process of renovating oil recovered from journal box waste which consists in agitating the oil, adding thereto silicate of soda and water, heating and agitating the oil, then adding saponifiable fat and increasing the temperature of the oil and agitating the same and then allowing the mixture to stratify.

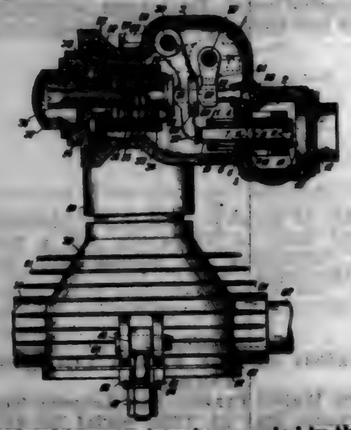


2,030,578
AIRCRAFT
Anton Flettner, Berlin, Germany
Application October 8, 1932, Serial No. 636,871
In Austria July 24, 1932
20 Claims. (Cl. 244—18)

1. Aeroplane with rotatable wings, comprising, in combination, an upstanding rotatable shaft, a plurality of bell crank levers pivoted transversely to the shaft with their arms extending substantially horizontally and substantially vertically,

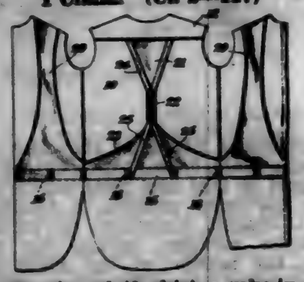
a plurality of wings pivoted to the substantially horizontal arms of the levers, and a movable member connecting the substantially vertical arms of the levers.

2,030,579
DISPENSING DEVICE FOR A COLLAPSIBLE CONTAINER
James Walter Frazier, San Antonio, Tex.
Application May 13, 1935, Serial No. 21,262
2 Claims. (Cl. 221—89)



1. A dispensing device of the class described comprising a plate, means for mounting the plate on a support so that said plate will be in a substantially horizontal position, a saddle of substantial U-shaped formation to include sides and a cross member, means for swingably mounting the saddle on the plate to swing thereon, a roller journaled across the sides of the saddle above the plate, a second roller, and means for rotatably mounting the second roller above the plate so that the first mentioned roller normally will contact therewith and spring means between the saddle and the plate urging the first mentioned roller toward the second mentioned roller.

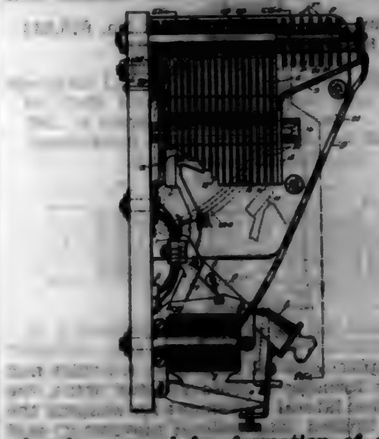
2,030,580
VAPOR REGULATOR
Lawrence H. Gillick, Evanston, and Edward A. Russell, Chicago, Ill., assignors to Vapor Car Heating Company, Inc., Chicago, Ill., a corporation of New York
Application November 19, 1934, Serial No. 753,662
11 Claims. (Cl. 236—49)



1. In a vapor regulator, a casing enclosing a high pressure steam chamber, a low pressure chamber from which steam is supplied to a heating device, a port connecting said chambers, and a return chamber into which is returned the steam supplied to the heating device, or fluids derived therefrom or both, a thermostatic element in the return chamber, a self-closing valve for normally closing said port, pressure-operated means for opening the valve when the pressure within the low pressure chamber falls below a predetermined minimum, and means operated by

the thermostatic element for rendering the pressure-operated means ineffective whenever a pre-

determined temperature is exceeded in the return chamber.



2,030,581
HEALTH SHIRT AND COMBINATION GARMENT
Morris Gottschalk, Belleville, and Jacob M. Abrahams, Bloomfield, N. J.
Application April 12, 1932, Serial No. 604,892
1 Claim. (Cl. 2—117)

In a garment, a cloth shirt, a yoke in said shirt, a reinforced trouser-supporting band about the waist of said shirt, a relatively open body within said shirt comprising straps having narrow portions at the tops thereof and widened portions at the bottoms thereof, said body being connected between said band and said yoke and adapted to give uniform and continuous support to said trouser-supporting band and being shorter in length than the distance between said yoke and said trouser-supporting band, and button-receiving means on said band which do not continue through said shirt.

2,030,582
CIRCUIT CONTROLLING METHOD AND APPARATUS
Herbert C. Graves, Jr., East Bradford Township, Chester County, Pa., assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa., a corporation of New Jersey
Application March 18, 1933, Serial No. 661,474
26 Claims. (Cl. 200—144)

1. An arc extinguishing device comprising a substantially confined arc extinguishing chamber, and means including a plurality of spaced conductive plates extending adjacent the arc source for transferring the arc to said plates and dividing it into a plurality of arcs extending therebetween, said conductive plates terminating in said chamber to facilitate the transfer of the arc thereto and terminal plates within said

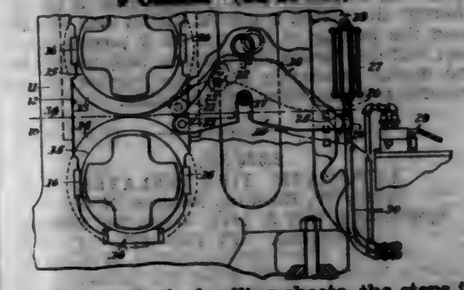
chamber spaced for formation of at least one arc therebetween of substantially greater length than any one of said plurality of arcs.

2,030,583
PROCESS FOR AVOIDING SETTING PHENOMENA IN COMMERCIALLY PREPARED SALTS
Julius Haas, Kassel-Wilhelmshöhe, and Gustav Adolf, Stockhausen, near Sonderhausen, Germany, assignors to Wintershall Aktiengesellschaft, Kassel, Germany
No Drawing. Application September 18, 1932, Serial No. 633,922. In Germany September 24, 1931
2 Claims. (Cl. 23—243)

1. A method of treating technically prepared salt for the purpose of removing the caking tendency shown by the same even when stored in the finely granular state with exclusion of atmospheric moisture, consisting in adding to the salt prior to the drying of the same an aqueous suspension of an inorganic slimy substance in quantities of less than 0.2%, whereby an extremely thin protective coating forms on the individual particles without being sufficient to permit of the latter caking together and so producing coarsening of the granule.

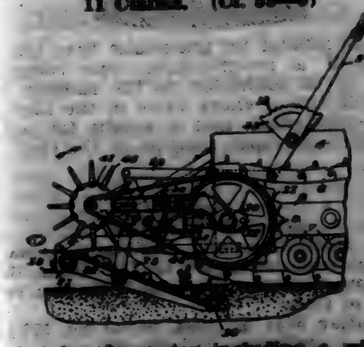
2,030,584
INSECTICIDE
Clyde C. Hamilton, Highland Park, N. J.
No Drawing. Application June 5, 1934, Serial No. 729,248
4 Claims. (Cl. 167—24)

4. A dilutable paste emulsion containing water, a suitable oil, finely powdered natural parts of a plant selected from the group consisting of derris and cube root, containing an inherent emulsifier consisting of the natural gums, resins and saponin of said plant parts and properties toxic to insects, said emulsion being supplemented when said plant parts are reduced in amount as herein set forth, by an auxiliary emulsifier such as colloidal clay in small amount.



2,030,585
PRUNING SHEARS
Calvin G. Hampton, Rio Vista, Calif.
Application June 14, 1927, Serial No. 618,708
1 Claim. (Cl. 30—11)

In a pruning shears having superimposed jaw-hubs from which the shanks of the shears project, a pivot pin for the hubs, non-removably mounted in one hub and on which the other hub is turnable, said pin terminating flush with the outer face of said other hub, a plate extending over said other hub and the adjacent end of the

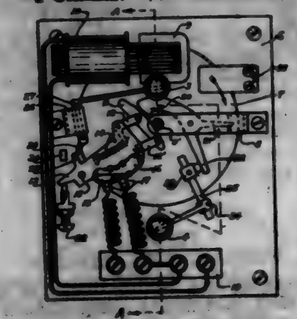


pin, a block on the shank of the one hub over which the plate projects, a removable screw securing the plate to the block, a removable screw connecting the plate and pin, and removable shims between the plate and block and between said plate and the other hub.

2,030,586
METHOD AND APPARATUS FOR ROLLING
Adam J. Haslett, Baltimore, Md., assignor to The Eastern Rolling Mill Company, Baltimore, Md., a corporation
Application October 20, 1934, Serial No. 749,243
9 Claims. (Cl. 29—17)

2. In a method of rolling sheets, the steps including entering a pack of sheets between reducing rolls, substantially along the line of the common tangent thereto, deflecting successive portions of the pack away from said line, and maintaining them in contact with one of said rolls as they enter the pass between the rolls.

2,030,587
TUBER HARVESTER
James G. Heaslet, Cleveland, Ohio, assignor to The Cleveland Tractor Company, Cuyahoga County, Ohio
Application November 13, 1934, Serial No. 753,602
11 Claims. (Cl. 55—9)

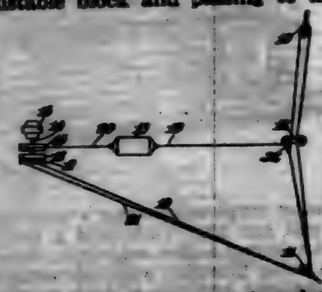


1. A tuber harvester including a wide tread track-laying tractor, sets of forwardly extending digger fingers pivotally connected to a platform secured to the rear of said tractor, and a rotary pusher mounted adjacent the said platform and adapted to dispose material therefrom.

2,030,588
CASKET CRYPT
Elmer N. Hedeen and Howard B. Turner, Mansfield, Ohio
Application April 13, 1933, Serial No. 665,858
2 Claims. (Cl. 27—35)

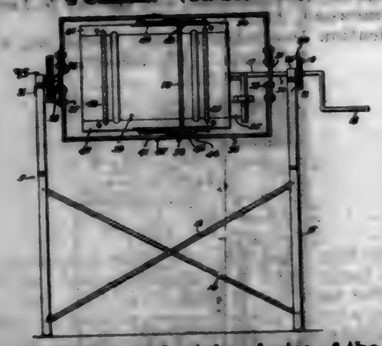
1. A casket crypt comprising a construction of pairs of end and side walls, and a bottom wall forming an oblong casket container, the side and end walls being provided with outwardly extending corrugations and one of said pairs of walls being provided with plain surface formations affording compression bearing surfaces for the corrugated ends of the other pair of walls, said pairs of walls having the bottom edges thereof formed to interengage with the marginal edges of the bottom wall and clamping means for causing said pairs of walls to compressively engage each other and said bottom wall.

2,030,589
ELECTRICAL CONTROL EQUIPMENT
Charles R. Hedgcox, Atlanta, Ga., and Harry H. Knowles, Birmingham, and George N. Lemmon, Homewood, Ala.
Application December 8, 1932, Serial No. 646,278
4 Claims. (Cl. 200—97)



1. Electrical control equipment which comprises an electromagnet operating an induction disc which is connected by gearing to a mercury-switch, together with means to disconnect the gearing if the electro-magnet becomes de-energised for longer than a predetermined time.

2,030,590
HAULAGE APPARATUS FOR OPERATING SOIL SCRAPERS, PLOWS, REAPING MACHINES AND THE LIKE
John Leonard Helman, Carbis Bay, Cornwall, and Arthur Treve Helman, Callestick, Cornwall, England, assignors to Helman Brothers Limited, Camborne, Cornwall, England, a British company
Application August 10, 1933, Serial No. 684,556
In Great Britain August 29, 1932
10 Claims. (Cl. 37—115)



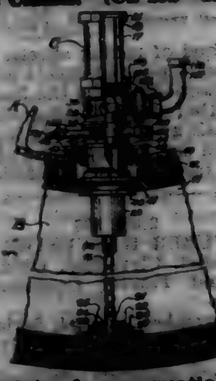
1. Scraper haulage mechanism comprising in combination two tail blocks spaced apart on one side of the area to be treated, an adjustable

block situated between them, a scraper device, a haulage rope therefor passing from one side of the scraper and over the adjustable block to one tail block, a standing rope for adjusting the position of the adjustable block in a direction transverse to that of scraping secured to one side of the adjustable block and passing to the other

tail block, one of said ropes passing also through the adjustable block to the opposite tail block from that to which it has passed as aforesaid to hold the adjustable block against movement towards the scraper, and winding means for each of said haulage and standing ropes and for any further rope passing to the other side of the scraper.

2,030,591
SEED MIXER AND AGITATOR
Albert Holmquist, Holmquist, S. Dak.
Application May 31, 1934, Serial No. 728,423
4 Claims. (Cl. 259—82)

1. An agitating and mixing device of the character described, said device comprising a support, a laterally expansible cradle revolubly mounted on said support, a container clamping frame pivotally connected to the opposite sides of said cradle, said frame being arranged for clamping a longitudinally disposed container, and adjustable means pivotally connecting the side of said clamping frame to a side of said cradle, said means comprising a pivot mounted on said side of the cradle, a toothed wheel concentric with said pivot and fixed against rotation relative to said side, and dog means mounted on said side of the clamping frame and normally engaging said toothed wheel to lock said frame from rotating relative to said cradle.

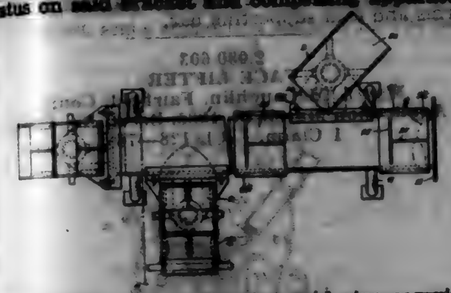


2,030,592
AUTOMATIC TIRE INFLATER
Oakley W. Hotting, Monroe, N. Y.
Application May 9, 1934, Serial No. 724,754
4 Claims. (Cl. 152—11)

1. In a tire inflater for pneumatic tires, the combination of a cylinder adapted to be supported adjacent the radially inner side of the tire, a piston slidably supported within said cylinder, a piston rod connected to said piston and projecting through the radially outer end of said cylinder, means adapted to operatively connect said

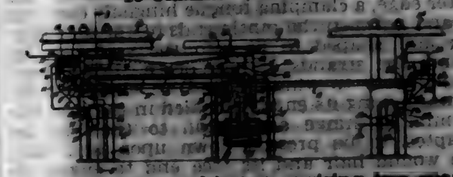
piston rod with the radially outer side of the tire whereby the piston is moved within said cylinder upon the flexing of the tire as it passes over a road surface, means for packing said piston rod, and means accessible from the interior of said cylinder for adjusting said packing.

2,030,593
AUTOMATIC TIRE INFLATER
Oakley W. Hotting, Monroe, N. Y.
Application May 8, 1935, Serial No. 20,694
5 Claims. (Cl. 152—11)



1. In an inflater for pneumatic tires the combination of a reciprocation type compressor adapted to be connected to the radially inner side of the tire, a check valve in the inlet port of said compressor, and a weight for opening said check valve upon rotation of the tire.

2,030,594
ASSEMBLY TABLE
Ralph E. Eyde, Cleveland, and Harry A. Maurer, Novelty, Ohio, assignors to The Osborn Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application May 25, 1934, Serial No. 727,468
9 Claims. (Cl. 29—33)



1. A pipe welding bracket comprising a body adapted to engage the edge of a bed, a mechanism carried by said bracket for adjusting the vertical angle of the body to the bed, pipe-carrying apparatus connected by said bracket, and

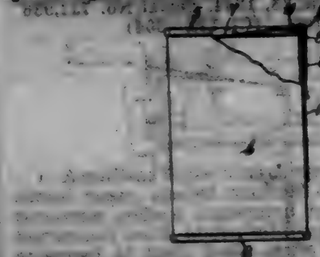
mechanism supporting said pipe-carrying apparatus on said bracket and comprising apparatus

for elevating and for turning said pipe-carrying apparatus.

2,030,595
PRESSING MACHINE
George W. Johnson, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application August 31, 1932, Serial No. 630,971
10 Claims. (Cl. 68—5)

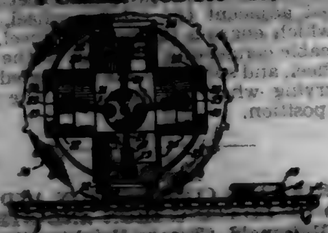
1. A pressing machine comprising two spaced interconnected pressing beds adapted to travel in a path, two spaced pressing heads arranged along said path to alternatively assist with one bed while exposing the other bed, one fluid pressure actuated cylinder and piston motor for causing pressing engagement between the heads and beds, and means carried by said beds for operatively connecting said motor with that bed only which is in position to coact with one of said heads.

2,030,596
PRESSING ELEMENT FOR PRESSING MACHINES
George W. Johnson, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application October 17, 1933, Serial No. 693,358
7 Claims. (Cl. 68—5)



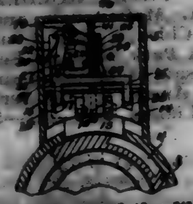
7. A pressing element comprising rigid portions arranged for relative movement toward and away from each other, one of said portions supporting a pressing surface, a tubular member supporting one portion on the other portion with the axis of the tubular member lying in a plane parallel to the pressing surface, and said tubular member being expansible in a direction normal to the general plane of said pressing surface.

2,030,597
FOOD CANE ATTACHMENT
Gamaliel B. Sabiston, East Milton, Mass.
Application February 14, 1935, Serial No. 6,704
4 Claims. (Cl. 46—11)



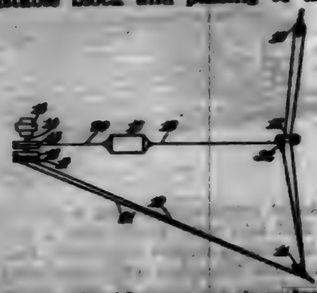
1. In combination with a receptacle having a flat head and a bead surrounding the edge there-

of, a flat spring metal clip bent approximately at a right angle and having two cut out portions with the free ends directed toward each other and spaced apart sufficiently to admit said bead and



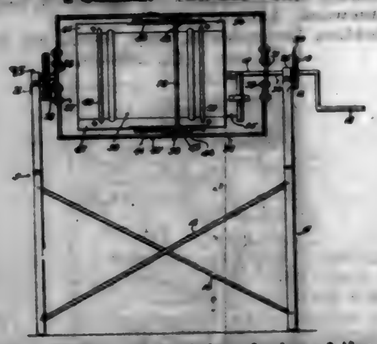
yieldingly to grip the same between them, one end of the clip being thereby yieldingly held in contact with the receptacle frictionally to support a card against the same.

2,030,598
PASTRY MAKING MACHINE
Cecil F. Liles, Independence, Mo.
Application February 25, 1935, Serial No. 8,686
2 Claims. (Cl. 107—15)



1. A pie trimming apparatus including in combination a conveyor, receivers mounted on said conveyor adapted to receive pies, a cylinder rotatably mounted adjacent said conveyor, a piston mounted for reciprocation in said cylinder, means for reciprocating said piston in phase relation to the motion of said conveyor, and pie trimming means carried by said piston.

2,030,599
LOCKING MECHANISM
Victoria Lopez Maurin, Habana, Cuba
Application December 15, 1934, Serial No. 757,722
In Cuba July 17, 1934
7 Claims. (Cl. 70—75)



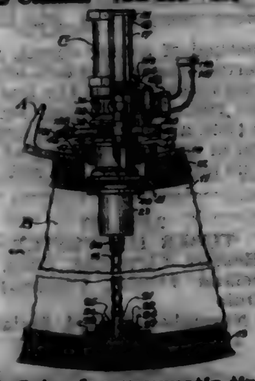
2. A lock for bicycles and the like, including a casing, a bolt movable in the casing, and including a locking lug, spring means in the casing for projecting the bolt into locking position, a retractor in the casing for moving the bolt into inoperative position, a tumbler cooperating with the retractor to lock the retractor in either of its positions, a dog movable in the casing to either of two positions, one to permit an operative movement of the bolt and another to lock the bolt in operative position, and a lever for operating the dog.

block situated between them, a scraper device, a haulage rope therefor passing from one side of the scraper and over the adjustable block to one tail block, a standing rope for adjusting the position of the adjustable block in a direction transverse to that of scraping secured to one side of the adjustable block and passing to the other

tail block, one of said ropes passing also through the adjustable block to the opposite tail block from that to which it has passed as aforesaid to hold the adjustable block against movement towards the scraper, and winding means for each of said haulage and standing ropes and for any further rope passing to the other side of the scraper.

2,630,531
SEED MIXER AND AGITATOR
Albert Helmquist, Hebronville, S. Dak.
Application May 31, 1934, Serial No. 728,423
4 Claims. (Cl. 259—61)

1. An agitating and mixing device of the character described, said device comprising a support, a laterally expansible cradle revolubly mounted on said support, a container clamping frame pivotally connected to the opposite sides of said cradle, said frame being arranged for clamping a longitudinally disposed container, and adjustable means pivotally connecting the side of said clamping frame to a side of said cradle, said means comprising a pivot mounted on said side of the cradle, a toothed wheel concentric with said pivot and fixed against rotation relative to said side, and dog means mounted on said side of the clamping frame and normally engaging said toothed wheel to lock said frame from rotating relative to said cradle.

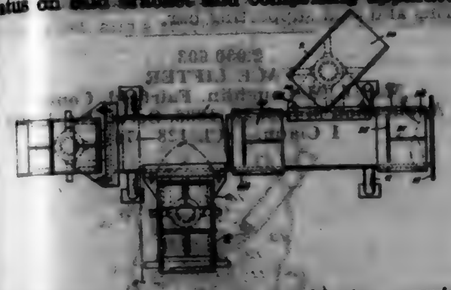


2,630,532
AUTOMATIC TIRE INFLATER
Oakley W. Hosking, Monroe, N. Y.
Application May 9, 1934, Serial No. 724,754
4 Claims. (Cl. 152—11)

1. In a tire inflater for pneumatic tires, the combination of a cylinder adapted to be supported adjacent the radially inner side of the tire, a piston slidably supported within said cylinder, a piston rod connected to said piston and projecting through the radially outer end of said cylinder, means adapted to operatively connect said

piston rod with the radially outer side of the tire whereby the piston is moved within said cylinder upon the flexing of the tire as it passes over a road surface, means for packing said piston rod, and means accessible from the interior of said cylinder for adjusting said packing.

2,630,533
AUTOMATIC TIRE INFLATER
Oakley W. Hosking, Monroe, N. Y.
Application May 9, 1934, Serial No. 725,434
5 Claims. (Cl. 152—11)



1. In an inflater for pneumatic tires the combination of a reciprocation type compressor adapted to be connected to the radially inner side of the tire, a check valve in the inlet port of said compressor, and a weight for opening said check valve upon rotation of the tire.

2,630,534
ASSEMBLY TABLE
Ralph E. Hyde, Cleveland, and Harry A. Maurer, Novelty, Ohio, assignors to The Osier Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application May 25, 1934, Serial No. 727,468
3 Claims. (Cl. 29—33)

1. A pipe welding bracket comprising a hook adapted to engage the edge of a bed, a mechanism carried by said bracket for adjusting the vertical angle of the hook to the bed, pipe-carrying apparatus supported by said bracket, and

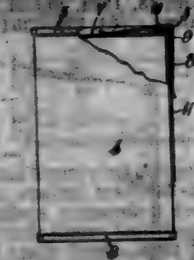
mechanism supporting said pipe-carrying apparatus on said bracket and comprising apparatus

for elevating and for turning said pipe-carrying apparatus.

2,630,535
PRESSING MACHINE
George W. Johnson, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application August 21, 1933, Serial No. 685,011
10 Claims. (Cl. 68—9)

1. A pressing machine comprising two spaced intercommunicated pressing beds adapted to travel in a path, two spaced pressing heads arranged along said path to alternatively coact with one bed while exposing the other bed, one fluid pressure actuated cylinder and piston motor for causing pressing engagement between the heads and beds, and means carried by said beds for operatively connecting said motor with that bed only which is in position to coact with one of said heads.

2,630,536
PRESSING ELEMENT FOR PRESSING MACHINES
George W. Johnson, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application October 17, 1933, Serial No. 693,858
7 Claims. (Cl. 68—9)

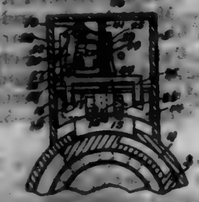


7. A pressing element comprising rigid portions arranged for relative movement toward and away from each other, one of said portions supporting a pressing surface, a tubular member supporting one portion on the other portion with the axis of the tubular member lying in a plane parallel to the pressing surface, and said tubular member being expansible in a direction normal to the general plane of said pressing surface.

2,630,537
FOOD CAN ATTACHMENT
Gunnar B. Johnson, East Milton, Mass.
Application February 14, 1935, Serial No. 6,536
5 Claims. (Cl. 49—11)

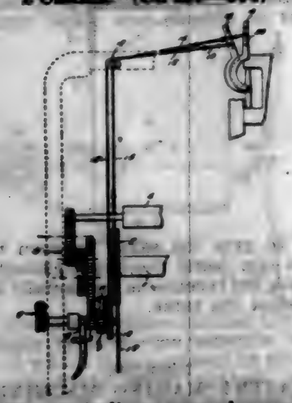
1. In combination with a receptacle having a flat head and a bead surrounding the edge there-

of, a flat spring metal clip bent approximately at a right angle and having two cut-out portions with the free ends directed toward each other and spaced apart sufficiently to admit said bead and



yieldingly to grip the same between them, one end of the clip being thereby yieldingly held in contact with the receptacle frictionally to support a card against the same.

2,630,538
PASTRY MAKING MACHINE
Cecil F. Allen, Independence, Mo.
Application February 15, 1935, Serial No. 6,606
3 Claims. (Cl. 107—15)



1. A pie trimming apparatus including in combination a conveyor, receivers mounted on said conveyor adapted to receive pies, a cylinder rotatably mounted adjacent said conveyor, a piston mounted for reciprocation in said cylinder, means for reciprocating said piston in phase relation to the motion of said conveyor, and pie trimming means carried by said piston.

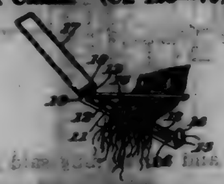
2,630,539
LOCKING MECHANISM
Vicente Lopez Maurin, Habana, Cuba
Application December 15, 1934, Serial No. 757,722
In Cuba July 17, 1934
7 Claims. (Cl. 70—75)

2. A lock for bicycles and the like, including a casing, a bolt movable in the casing, and including a locking lug, spring means in the casing for projecting the bolt into locking position, a retractor in the casing for moving the bolt into inoperative position, a tumbler cooperating with the retractor to lock the retractor in either of its positions, a dog movable in the casing to either of two positions, one to permit an operative movement of the bolt and another to lock the bolt in operative position, and a lever for operating the dog.

2,030,000
AUXILIARY PULL-DOWN MOTION FOR LOOMS
James William McDaniel, Pomona, N. C.
Application June 28, 1934, Serial No. 732,936
2 Claims. (Cl. 139—304)

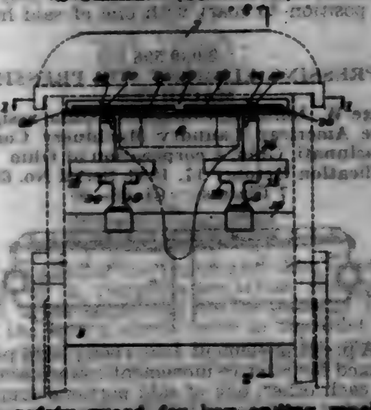
1. In a loom including a warp beam and a sand roll, and means for rotating the roll including a ratchet wheel, a dog carrying wheel rotatably supported adjacent the ratchet wheel, and the dog of which engages the ratchet wheel, a dobby jack, a cable connecting the same to the dog carrying wheel, and spring means connected with the dog carrying wheel for returning the parts to normal position.

2,030,001
RUSTPROOFING COMPOSITION AND METHOD OF COATING IRON AND STEEL
Guy A. McDonald, Chicago Heights, Ill., assignor to Victor Chemical Works, a corporation of Illinois
No Drawing. Application February 2, 1935, Serial No. 4,718
20 Claims. (Cl. 148—6.5)



1. A ferrous metal object having on a surface thereof an integral coating having the composition resulting from treating the ferrous metal object with an aqueous solution containing 10 to 25% phosphoric acid and chromate in a ratio equivalent to at least .25 part of sodium dichromate to one part phosphoric acid, and drying the coated article.

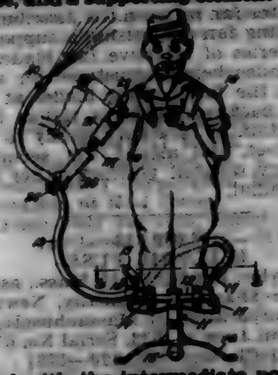
2,030,002
PAPER HOLDER
Ambrose A. McDonough and Charles D. Vickers, Chicago, and Charles Schaumburg, Oak Park, Ill.; said Schaumburg assignor to said McDonough and said Vickers
Application August 9, 1934, Serial No. 739,114
3 Claims. (Cl. 242—55.5)



1. A device of the character described, comprising a transverse supporting bar formed of wire bent at right angles at both ends to provide a pair of parallel arms, said arms bent inwardly to provide suspending loops, a severing bar formed of wire bent at right angles at both ends to provide a pair of parallel resilient arms, and a rigid connection between said parallel resilient arms and said supporting bar.

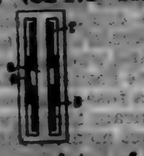
2,030,003
FACE LIFTER
May L. McLaughlin, Fairfield, Conn.
Application March 28, 1935, Serial No. 13,948
1 Claim. (Cl. 128—76)

A clamp for use in a facial lifting device comprising two hair attaching clamps, connected by an elastic cord, said clamps comprising an elongated trough-like base member having a pair of parallel up-turned, spaced apart ears on each end, the ears upon one end being provided with aligned pintle holes while the ears upon the other end are provided with aligned notches on their outer edge, a clamping tongue hingedly connected to and between the pintle ends of the said member and shaped to fit into the said base and clamp the strands of hair of the head therein preparatory to winding, and an elongated wire clamp having its ends journaled in the said holes forming a hinge connection to the base and adapted to be pressed down upon and clamp the wound hair and its free end to engage the notches in a way to hold the parts together.



2,030,004
SAFETY GUARD FOR BOX ENDING MACHINES
Julius M. Minkow, New York, N. Y.
Application September 20, 1934, Serial No. 744,750½
2 Claims. (Cl. 93—58)

1. A safety guard for box ending machines, consisting of guard bars for guarding the sides of a moving form, a front guard bar adjustable on the side guard bars, and means for adjustably mounting the side guard bars on the form carrier of a standard box ending machine.



2,030,005
LAWN SPRINKLER
Nielen E. Moore, Du Bois, Pa.
Application March 12, 1935, Serial No. 10,715
7 Claims. (Cl. 299—65)

8. A sprinkler comprising a base, a rotary head mounted on said base and having an outlet and an inlet, an upstanding support carried by said head, a flexible discharge hose connected with said outlet, and a supporting element for the hose

connected with the intermediate portion thereof and pivotally connected with said upstanding support.

2,030,006
MOVING COIL VOLTAGE REGULATOR
Eric Douglas Tobias Norris, Hollinwood, England, assignor to Ferranti Electric Inc., New York, N. Y.
Application May 31, 1935, Serial No. 24,457
In Great Britain April 24, 1934
6 Claims. (Cl. 171—119)

1. An A. C. voltage regulator of the type indicated comprising two fixed coaxial coils connected in series opposition and displaced with respect to each other in an axial direction, together with a movable short-circuited coil, the fixed coils and said movable coil mutually encircling when viewed axially, said fixed coils being disposed to possess mutual leakage impedance which is greater than the sum of the leakage impedance between the individual fixed coils and the movable coil when the moving coil is midway between the fixed coils.

2,030,007
METHOD OF PRODUCING NONSHATTERABLE GLASS
Walter Pegler, Parramatta, New South Wales, Australia, assignor to Joseph Leslie Pegler, Beecroft, New South Wales, Australia
No Drawing. Application August 22, 1933, Serial No. 25,332. In Australia April 24, 1934
2 Claims. (Cl. 49—81)

1. A method of producing safety glass consisting in soaking gelatine in water, then heating it until it becomes fluid, mixing formalin and glycerine in approximate proportion of one teaspoonful of glycerine to five ounces of the gelatine with a small amount of formalin, applying the solution thus produced to the surface of a sheet of glass, causing evaporation of moisture, then immersing the glass in a bath of formalin of about 60% of water and 40% of formaldehyde, removing the coated glass therefrom and permitting the film to dry and then placing the glass film side up, in a bath of resin of Canada balsam in solution, withdrawing the sheet of glass from the resinous bath and drying.

2,030,008
QUILTING FRAME
Earle E. Pike, Corsicana, Tex.
Application December 11, 1934, Serial No. 757,941
6 Claims. (Cl. 112—119)

1. A quilting apparatus comprising a main horizontal beam, spaced material-feeding and quilt-receiving rollers suspended from said beam, a horizontal track above said beam, arms pivotally attached at their lower ends to said beam and angularly adjustable with respect thereto, means at the upper ends of said arms for engaging the horizontal track, and means for retaining said arms in any one of a plurality of angular positions with respect to the beam to determine the vertical distance between the horizontal track and said beam.

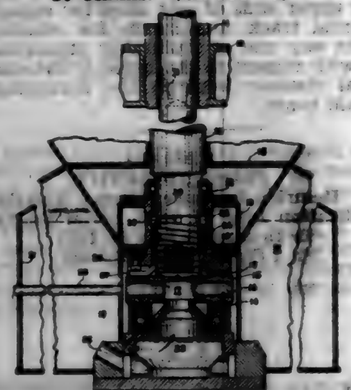
2,030,009
CLOSURE DEVICE
Heinrich Quittner, Vienna, Austria
Application June 28, 1934, Serial No. 732,367
In Austria July 12, 1933
1 Claim. (Cl. 221—69)

A tube closure adapted for attachment to the tube neck to open and close the outlet through the neck comprising a closure cap capable of being screwed on the tube neck and provided with an outlet corresponding with the tube outlet, a resilient stirrup preferably of wire, the web of which carries a resiliently deformable closure body for the outlet in the closure cap and is provided with two upwardly projecting parts, each part being firmly connected at the end with an arm, these two arms being extended downwardly below the closure body and provided on their lower ends with short pins adapted to engage corresponding recesses on opposite points of the closure cap for pivotally mounting the closure device on the closure cap.

2,030,010
ELASTIC YARN AND METHOD OF MAKING SAME
Norman Elmer Randall, Shamrock, R. I.
Application May 22, 1935, Serial No. 22,774
6 Claims. (Cl. 117—34)

1. An elastic strand for fabrication comprising a rubber core and a non-elastic covering therecover, said rubber core being substantially at rest and of a length but slightly longer than the length of the naked rubber core uncovered, said covering being arranged to limit the extension of the strand to substantially the extent of elongation as when the covering is applied, the same having a definite multiple of its length when at rest, said limit being substantially less than the limit of stretch of the naked rubber without a covering thereon.

3. The method of preparing a covered elastic strand for fabrication which consists in stretching



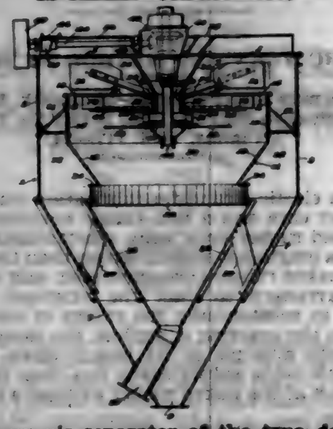
the core to an extent substantially less than its elastic limit, then covering the elastic core to prevent any substantial further elongation thereof, said covering being disposed at such a helical pitch with its convolutions so spaced that the core may contract to substantially its naked state at rest when released with the covering practically completely enveloping the core when the core is at rest.

2,030,611

LUBRICATING SYSTEM

Henry F. Schmidt, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 7, 1934, Serial No. 734,693
10 Claims. (Cl. 184—6)



1. A lubrication system for a machine comprising a centrifugal pump, a viscosity pump, and means for submerging the inlet of the viscosity pump in a body of liquid lubricant, the viscosity pump serving to provide pressure of lubricant for lubrication at low speeds and the centrifugal pump serving to provide pressure of lubricant for lubrication at higher speeds.

2,030,612

AIR SEPARATOR

Thomas J. Sturtevant, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a corporation of Massachusetts

Application May 2, 1934, Serial No. 723,748
12 Claims. (Cl. 209—139)

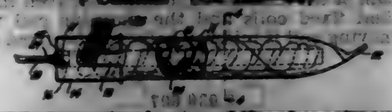
1. In an air separator of the type described, the combination with a circulating fan for causing air currents to flow upward through a top outlet of a classification zone and a rotary distributor in the lower part of said zone, of a rotary rejector fan between the distributing plate and circulating fan comprising a support having a circular series of rejective fan blades each of said fan blades being adjustable on a vertical axis to turn the faces of the blades at an angle forward or backward from a radius in regard to the direction of rotation thereby to vary the rejective effect, and means for securing said blades in any selected position either radial or oblique to radial.

2,030,613

ELECTRIC FUSE

Elmer H. Taylor, Newburyport, Mass., assignor to The Chase-Shawmut Company, Newburyport, Mass., a corporation of Massachusetts

Application June 1, 1933, Serial No. 673,847
31 Claims. (Cl. 200—119)



1. The combination of a fuse receptacle and a movable contact member therein having means by which the contact member can be properly guided for successful movement into closed-circuit position and when not so properly guided will move into some position other than closed-circuit position, and a fuse plug insertable in said receptacle having means for properly guiding and moving said contact member into closed-circuit position.

2,030,614

HEATER

Ewald F. Tebold, Cleveland, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

Application October 17, 1934, Serial No. 748,073
7 Claims. (Cl. 126—96)

1. A hair waving heater of the steam type comprising a tube open at one end and closed at the other end by a pressed flattened portion of the tube material, and a removable cap closing the open end of the tube and having means for attaching a steam supply pipe thereto in communication with the interior of the tube.

2,030,615

LAST

James B. Waterfield, Attleboro, Mass.

Application August 29, 1933, Serial No. 687,289
10 Claims. (Cl. 12—139)

1. In a last, a metal top comprising two members, means extending from the upper surface of one member through said member to the last, and means for securing the other member on the upper surface of the first member, said second member covering the securing means for the first member so as to lock the covered securing means in place.

2,030,616

WIRE-CLOTH SEAM AND METHOD OF MAKING SAME

Nelson W. Webb, Belleville, N. J., assignor to Eastwood-Nealley Corporation, Belleville, N. J., a corporation of New Jersey

Application July 26, 1935, Serial No. 33,154
10 Claims. (Cl. 245—10)

1. Method of joining wire cloth-ends which comprises preparing said cloth-ends for soldering them together edge to edge by replacing the last weft wire of each cloth-end with a solder-coated wire, the warp wires being cut off so that the side of its solder-coated wire projects beyond their cut ends, the latter extending beyond the axis of the solder-coated wire; and applying heat thereto to solder the warps to the solder-coated wires and the latter side by side to each other.

2,030,617

NONREFILLABLE BOTTLE

Alvin M. Whitney, Bradford, Pa., assignor to Cellocsal Company, Bradford, Pa., a corporation of Pennsylvania

Application May 17, 1935, Serial No. 21,673
1 Claim. (Cl. 215—8)

A non-refillable bottle comprising a neck including a restricted portion, a bushing fixed in said neck, said bushing having an annular groove therein, a plug removably mounted in the lower portion of the bushing and depending therefrom, a frangible retaining bag mounted on the lower portion of the bushing and depending therefrom and enclosing the plug, said bag terminating an internal head in its top portion engaged in the groove, the plug including a pointed lower end adapted to penetrate the bag, and a removable cap threadedly mounted on the neck, the restricted portion of said neck constituting means for arresting the plug when said plug is dislodged from the bushing.

2,030,618

BOTTLE CLOSURE

Alvin M. Whitney, Bradford, Pa., assignor to Cellocsal Company, Bradford, Pa., a corporation of Pennsylvania

Application August 17, 1935, Serial No. 36,730
2 Claims. (Cl. 215—8)

1. A bottle closure comprising a bushing adapted to be fixed in the neck of a bottle, the lower portion of the bore of said bushing being counterbored, and providing an internal shoulder, the lower portion of said bushing further being externally reduced, a frangible sealing disk engaged with the shoulder, a retaining ring fixed in the counterbored portion of the bushing and engaged with the sealing disk, an indicator plug removably mounted in the retaining ring, said indicator plug including a substantially flat, circular head engaged with the lower end of the retaining ring and the bushing, and a ring of compressible, contractible material mounted in the reduced lower portion of the bushing and encircling same and depending therefrom, the depending portion of the second-named ring being internally thickened and extending beneath the bushing and engaged with the periphery of the head for frictionally securing the indicator plug in position in the first named ring.

2,030,619

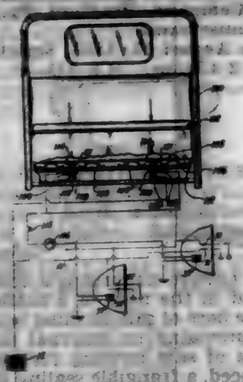
PROCESS FOR MAKING ANHYDROUS CITRIC ACID

Emil Accherie, Ludwigshafen-on-the-Rhine, Germany, assignor to the firm Chemische Fabrik Joh. A. Benckiser G. m. b. H., Ludwigshafen-on-the-Rhine, Germany

No Drawing. Application June 25, 1934, Serial No. 732,281. In Germany April 6, 1934
2 Claims. (Cl. 260—122)

1. A process for making anhydrous citric acid, consisting in boiling aqueous citric acid solutions in vacuo until an inspissated product is obtained having a concentration of about 48° Bé, running off the said inspissated product into a crystallizing vessel, mashing up the resulting crystal pulp during the cooling period with a mixture of citric acid and sulphuric acid of such a composition that citric acid can exist in it even at room temperature only in its anhydrous form, then stirring the mass up until it attains the temperature of the room, and separating the resulting crystals of anhydrous acid from the mother liquor.

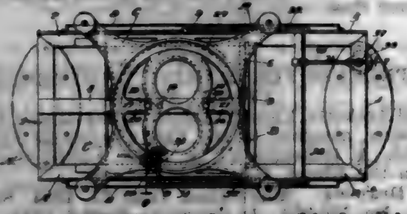
2,030,620



LIGHTING SYSTEM AND APPARATUS

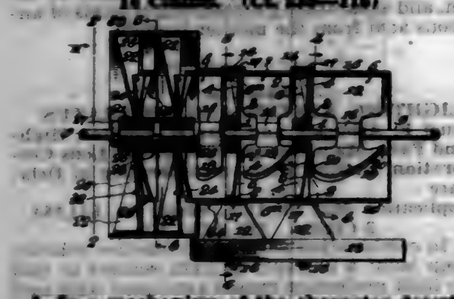
Samuel F. Arbuckle and Guy H. Coulter, Highland Park, Mich., assignors to United Lens Corporation, Detroit, Mich., a corporation of Delaware

Application May 21, 1932, Serial No. 614,384
3 Claims. (Cl. 240—7.1)



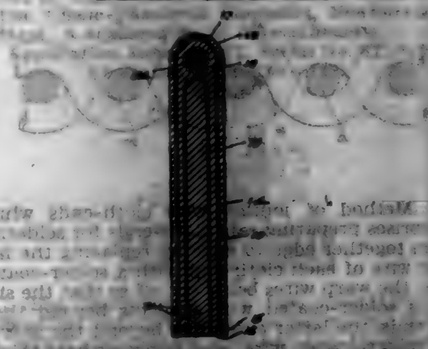
1. In combination with an automotive vehicle; a lamp bulb; a plurality of light sources in said bulb; light projecting means associated with said light sources for producing light beams having definite directional characteristics, and means for changing the position of said lamp bulb with

respect to the light projecting means for compensating changes in the static relative position of the vehicle for effecting a change in the direc-



tion of the light beams produced, said means being controlled by a lead receiving member located within the vehicle body.

2,030,631
REVOLVING CAR SEAT
Ernest J. Smith and Clarence A. Van Derveer, Michigan City, Ind., and King Karpen, Chicago, Ill., assignors to S. Karpen & Bros., a corporation of West Virginia
Application January 8, 1931, Serial No. 507,470
3 Claims. (Cl. 155—34)



3. In combination, a base, a block slidably mounted thereon, a seat plate pivotally carried by said block and equipped with a pair of substantially circular cam tracks communicating on one side to form a continuous track, and a cam stud secured to said base and adapted to engage said track.

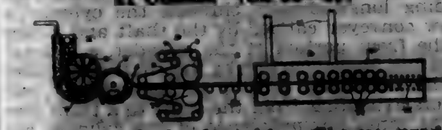
2,030,632
PROPELLER, FAN, AND EXHAUSTER
Stanley Czeliewski, Hillside, N. J.
Application July 17, 1933, Serial No. 680,897
14 Claims. (Cl. 230—116)

1. In a mechanism of the character described, a tunnel, a rotatable shaft passing into said tunnel, a gang of propellers mounted on said shaft within said tunnel and spaced apart, a set of converters located in said tunnel between adjacent propellers, means to hold said converters stationary, certain of said converters having bearings in which said shaft is journaled, said converters each including fan-like blades restricted near the center by webs forming an unbroken wall, said blades being shaped to receive air from said propellers diagonally to the axis and discharge the same parallel to the axis.

2,030,633
HIGHWAY GUARD POST
Oliver D. Eggleston, Carlton, Kans.
Application April 8, 1935, Serial No. 14,589
1 Claim. (Cl. 49—135)

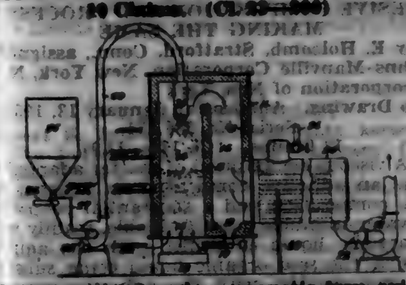
A guard post comprising a vertical body of flexible material, a pair of inverted U-shaped reinforcing members embedded in the body, one of said U-shaped members being wider and longer than the other and encompassing the smaller, both of said U-shaped members being disposed on substantially the same vertical plane, the upper portion of the body being provided with a pocket and a reflecting lens mounted in the pocket and substantially interposed between the light portions of the said U-shaped members.

2,030,634
COUNTING DEVICE
Emil Ek and Arthur E. Ek, Portland, Maine
Application January 14, 1936, Serial No. 429,744
9 Claims. (Cl. 235—132)



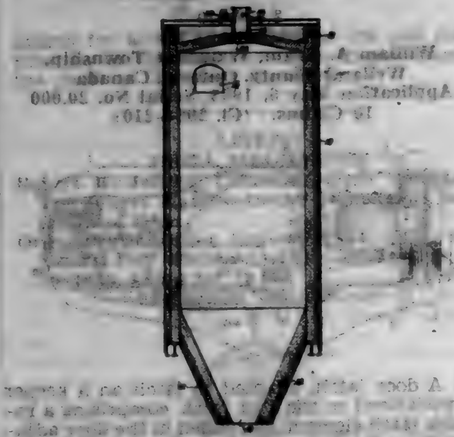
1. A counting device having, in combination, a main shaft adapted to be moved in accordance with the measurement being taken; a series of interconnected tally wheels rotatable in both directions; a single ratchet wheel connected to said series of tally wheels for actuating them; means connecting said main shaft with the ratchet wheel arranged to effect rotation of the latter in either direction in accordance with the movement of the former; and control means actuated by the rotation of said tally wheels and adapted upon the completion of a predetermined tally to shift the said connecting means whereby the direction of rotation of ratchet wheel and said tally wheels is changed without change of movement of the main shaft.

2,030,635
APPARATUS FOR AND PROCESS OF MAKING SYNTHETIC PRODUCTS
George H. Ellis, St. Paul, Minn., assignor to The Insulite Company, Minneapolis, Minn., a corporation of Minnesota
Application January 13, 1934, Serial No. 705,555
22 Claims. (Cl. 92—21)



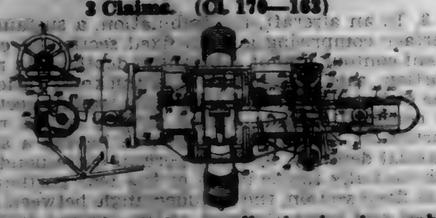
1. A process for producing hard, insecticide proof, synthetic boiler which comprises forming a continuous sheet from siliceous pulp stock having commingled therewith a toxic agent, squeezing the sheet to remove the surplus water, drying the sheet to remove substantially all the moisture, compacting the sheet under heat and pressure by means of rotatable members, tempering the sheet, severing the sheet transversely, passing the severed portions through a humidifier and finally passing the severed portions through a cooling means.

2,030,636
FIBROUS PRODUCT AND METHOD OF MAKING THE SAME
George H. Ellis, St. Paul, Minn., assignor to The Insulite Company, Minneapolis, Minn., a corporation of Minnesota
Application April 27, 1934, Serial No. 722,780
11 Claims. (Cl. 92—39)



1. The method of making fibrous products from waste fibrous material which comprises mechanically breaking up the fibrous material, reducing it to a pulpy mass, manipulating the mass to form a sheet from a water bath, removing the surplus moisture from the sheet and subjecting the sheet to the application of heat and pressure, said heat decreasing as the moisture contents of the sheet decreases.

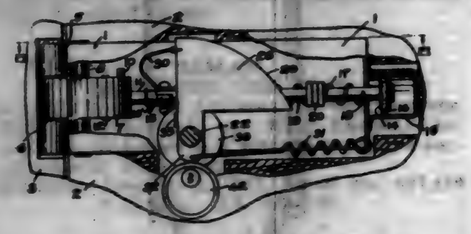
2,030,637
PROCESS OF MAKING IRON OXIDE AND SULPHUR DIOXIDE FROM IRON SULPHIDE ORES
Horace Freeman, Shawinigan Falls, Quebec, Canada, assignor to Nichols Engineering & Research Corporation of Canada, Limited, a corporation of Canada
Application March 9, 1936, Serial No. 433,471
20 Claims. (Cl. 23—200)



6. Process of forming magnetic iron oxide in the form of finely divided particles, which comprises roasting finely divided sulphide ore particles in suspension in an oxidizing gas, at a temperature causing fusion of the particles, the particles being allowed to gravitate from the area of roasting against an upwardly flowing stream of a relatively cool gaseous medium such that the particles while still in suspension are chilled sufficiently to substantially avoid agglomeration.

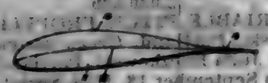
2,030,638
FLASH ROASTING
Horace Freeman, Montreal, Quebec, Canada, assignor to Nichols Engineering & Research Corporation of Canada, Limited, Montreal, Quebec, Canada, a corporation of Canada
Application January 8, 1935, Serial No. 817
6 Claims. (Cl. 266—20)

1. In a furnace for flash roasting finely divided ore particles in suspension, a roasting chamber, a nozzle at the midportion of the roof of said chamber for introducing the ore particles with a stream of gaseous medium, an opening being provided within said nozzle for discharging the central portion of said stream in a vertically downward direction, said opening being surrounded by an annular space providing additional ore discharge openings within said nozzle, and a plurality of curved vanes within said annular space for creating a turbulent condition in the ore and gaseous medium passing through said annular space.



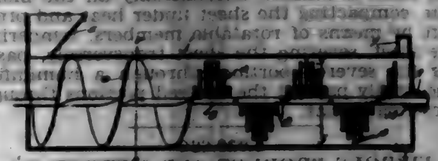
2,030,639
VARIABLE PITCH PROPELLER
Frank Gorski, Portland, Oreg., assignor of one-half to Julia Buszkowski, Portland, Oreg.
Application September 18, 1934, Serial No. 744,550
3 Claims. (Cl. 170—163)

1. A variable pitch propeller having in combination a propeller shaft, a tubular sleeve projecting forwardly from said shaft and secured thereto, said sleeve having slots formed therethrough, a spider having a hub within said



sleeve and having spokes thereon projecting through said slots and having a circular track around the ends of said spokes, anti-friction bearings in front of and behind the track on said spider, means for moving said bearings and the intervening spider manually, a plurality of propeller blades projecting radially from said sleeve and having their inner ends extending into same, the inner end of each propeller blade having a pinion secured thereon, a plurality of racks engaging said pinions, and means for connecting said racks to said spider whereby the manual movement of said spider will cause said pinions to rotate and the pitches of the propellers attached thereto to be varied in a manner that the pitches of all of the propellers will be increased or decreased at the same time and in a like degree.

2,030,630
DOOR LATCH
William A. Gram, Wainfleet Township, Welland County, Ontario, Canada
Application May 6, 1935, Serial No. 20,800
10 Claims. (Cl. 292—210)

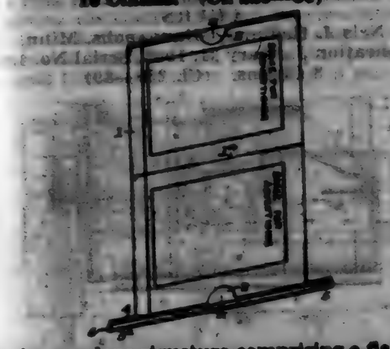


1. A door latch, adapted to latch on a keeper pin positioned on the door jamb, comprising a rotatable latch element journalled in the door adjacent the edge thereof and having a radial slot adapted to receive the keeper pin during rotation of the latch element into the latching position as the door is closed, spring means for actuating the latch element alternatively into the door latching and the door opening positions, and releasable means for retaining the latch element in the position of greatest rotation attained during the latching of the door.

2,030,631
AIRCRAFT
Joseph M. Gwinn, Jr., Buffalo, N. Y.
Application January 24, 1935, Serial No. 2,206
3 Claims. (Cl. 244—39)

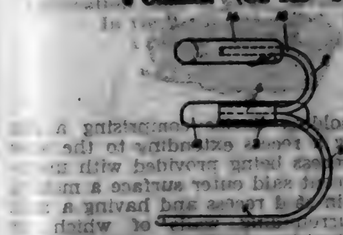
3. In an aircraft, in combination, a sustaining surface comprising a main fixed section of constant contour and of substantial depth at its rear portion, said section having a thickness ratio of the order of 20%, and a movable trailing section of constant contour hinged directly to the rear portion of said fixed section and having a substantial depth at its front portion corresponding substantially to the depth of the rear portion of said fixed section, the included angle between the upper and lower surfaces of the trailing section just back of the hinge location being substantially less than the included angle between the upper and lower surfaces of the fixed section just ahead of the hinge location, said trailing section having a mid-position substantially in continuation of the median line of the fixed section, said trailing section being movable upwardly from its mid position to a raised low drag position in which its lower surface is in smooth continuation of the lower surface of the fixed section and being movable downwardly from its said position to a lowered high camber low drag position in which its upper surface is in smooth continuation of the upper surface of the fixed section and in which the rear end of said trailing section constitutes the final surface of the aircraft for engagement with the air body through which the trailing section passes.

2,030,632
SEPARATION OF GARLIC AND ONION SEED FROM WHEAT
Bernard Hazel, Chesterton, Ind.
Application July 30, 1934, Serial No. 737,877
1 Claim. (Cl. 209—8)



An apparatus for separating garlic and the like from grains comprising a horizontally arranged cylinder, means for introducing the material into one end of the cylinder, a shaft extending longitudinally through the cylinder, a screw conveyor carried by the shaft and located in the front portion of the cylinder, a series of agitating fingers carried by the shaft and located in the remainder portion of the cylinder, said fingers extending from the shaft to a point close to the inner circumference of the cylinder and spirally arranged on the shaft, a cap closing the outlet end of the cylinder and movably arranged thereon, adjustable spring means for resisting outward movement of the cap, the cap having a discharge port on the top part of the flange which is closed by a portion of the discharge end of the cylinder when the cap is in normal position and which moves beyond said portion of the cylinder when the cap is forced outwardly against the pressure of the spring means, a discharge tube having one end connected with the cap and receiving material passing through the port, a suction producing device and a flexible conduit connecting the inlet of said device with a top part of the chute, and means for rotating the shaft.

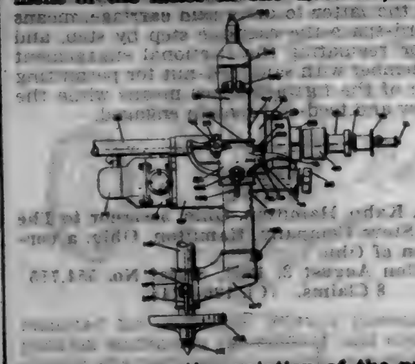
2,030,633
ADHESIVE COMPOSITION AND PROCESS OF MAKING THE SAME
Harry K. Holcomb, Stratford, Conn., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
No Drawing. Application January 13, 1933, Serial No. 651,454.
12 Claims. (Cl. 134—22.9)



1. A viscous composition of matter adapted for use as an adhesive comprising an aqueous adhesive composition and a substantial proportion of a water-insoluble, unsaponifiable, readily volatile, organic liquid associated with the aqueous adhesive, the said organic liquid being substantially non-reactive with the adhesive composition.

2,030,634
ENVELOPE STRUCTURE
Arthur V. Holloway, Philadelphia, Pa., assignor to Thomas M. Royal & Co., Philadelphia, Pa., a corporation of Pennsylvania
Application November 25, 1933, Serial No. 699,673
10 Claims. (Cl. 229—56)

1. An envelope structure comprising a flattened tubular section of paper or similar material open at both ends; said tubular section having a crease intermediate its ends where it may be folded in a size substantially one-half the overall length of the tube section, and detachable fastening means carried by one end of the section and serving to close such end whereby the structure may be used as a full length receptacle of the bag type, and to close both ends of the section when the same is folded.

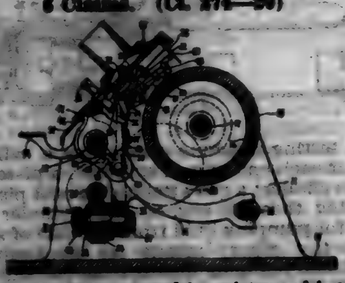


2,030,635
CHAIR
Nathan George Horwitt and Morris Katcher, New York, N. Y., assignors, by mesne assignments, to Ritzel Plastic, New York, N. Y.
Application May 17, 1933, Serial No. 671,436
Renewed August 1, 1935
6 Claims. (Cl. 155—50)

1. A chair comprising a seat, a support member formed with a backwardly projecting arm at each side of the seat, a back and arm seat member provided with backwardly extending arms adjacent the previously recited arms, and means engaging and holding together adjacent arms said means having provisions for supporting the seat.

2,030,636
DRILL MECHANISM
Robert K. Jeffrey, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a corporation of Ohio
Application September 24, 1930, Serial No. 484,190
16 Claims. (Cl. 255—67)

1. In apparatus of the class described, a longitudinally displaceable screw shaft, means to rotate said shaft, a nut engaging the threads of said shaft, means to rotate the nut in the same direction as the shaft and at a speed greater than that of the shaft to cause longitudinal displacement of the latter in one direction, and brake



means for arresting rotation of the nut during rotation of the shaft to cause displacement of the shaft in the other direction.

2,030,637
DRILL MECHANISM
Robert K. Jeffrey, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Original application September 24, 1930, Serial No. 484,190. Divided and this application April 24, 1935, Serial No. 18,093
17 Claims. (Cl. 255—46)

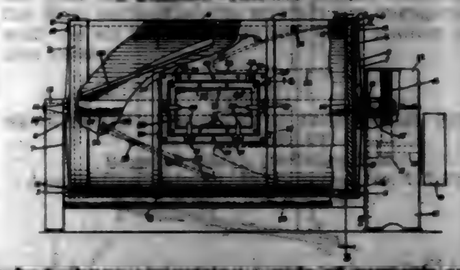
1. In apparatus of the class described, a feed nut comprising a plurality of segments, means mounting the segments for pivoting about axes eccentric to the axis of the nut, means tending to move the segments to inoperative position about their pivotal axes, and means adapted to engage the segments and hold them in operative relation.

2,030,638
PHONOGRAPH
Arthur A. Johnson, Bridgeport, Conn., assignor to Dictaphone Corporation, Bridgeport, Conn., a corporation of New York
Application January 16, 1928, Serial No. 246,934
Renewed September 29, 1934
6 Claims. (Cl. 274—20)

4. In a dictating machine, in combination, a carriage, a rotatable feed-screw for driving said carriage, a rotatable feed-nut mounted on said

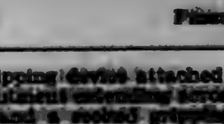
carriage in engagement with said feed-screw, a member frictionally engaging said feed-nut for enabling the latter to drive said carriage, means to forward-space the carriage step by step, and means for regulating the frictional engagement of said member with said feed-nut for permitting operation of the forward-space means while the feed-screw and feed-nut remain engaged.

2,030,639
STOVE
Lucian L. Kahn, Hamilton, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a corporation of Ohio
Application August 3, 1931, Serial No. 554,715
3 Claims. (Cl. 126—214)



2. In a stove having a cooking top defined by a frame enclosing a grill with burners therebeneath, a removable cover member receivable on the cooking top as a closure for the grill, hinge means attaching the cover plate to the stove, said hinge means comprising a hinge body having a pivotal connection with the cover plate for movement of the cover plate on a horizontal axis from the position of closure to a position in which the cover member stands in a vertical plane at the stove side and above the plane of the cooking top, and a pivotal connection between the hinge body and the stove for movement of the cover member in the vertical plane to a position of suspension from the hinge body in which the cover member lies below the plane of the cooking top.

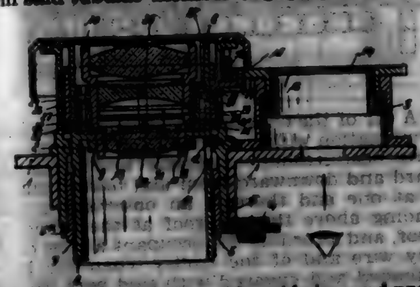
2,030,640
PORTABLE TESTING MACHINE
Augustus B. Kinzel, Beechhurst, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York
Application September 23, 1933, Serial No. 690,923
10 Claims. (Cl. 265—14)



8. A testing machine comprising a cylinder; a head for each end of said cylinder; a piston within said cylinder; a rod attached to said piston and extending through one of said cylinder heads; means for pumping fluid from one side of said piston to the other; means for bypassing fluid around said pumping means from one side of said piston to the other; a tubular member attached to said cylinder and having its axis parallel to and included within the projection of the bore of said cylinder; a gripping device attached to said piston rod, an abutment extending across said tubular member; and a second gripping device attached to said abutment in alignment with said first gripping device.

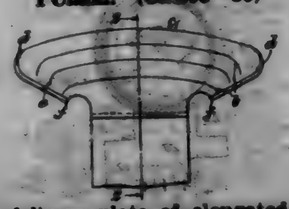
2,030,641
CHURN
Nels J. Hedlund, Minneapolis, Minn.
Application January 21, 1935, Serial No. 2,360
8 Claims. (Cl. 259—89)

1. A churn comprising a pair of supports and a cylinder rotatably mounted between said supports, said cylinder having normally imperforate ends each lying in a single plane, a plurality of vanes associated with the inner cylindrical wall of said cylinder, the longitudinal axes of said vanes with respect to said wall each defining a spiral, and means for rotating said cylinder, said means being secured to the exterior surface of the cylinder exteriorly of the end walls.



2,030,642
MOLD FOR MOLDING OR EMBOSSING OR THE LIKE PLASTIC MATERIAL SUCH AS DOUGH
Arthert Kronsalig, Hannoversleben, near Oschersleben, Germany
Application April 7, 1933, Serial No. 665,910
In Germany October 8, 1932
1 Claim. (Cl. 107—12)

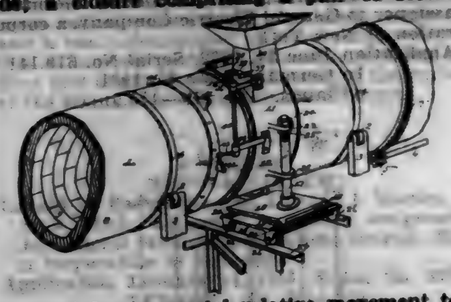
A rotary molding device comprising a ring element having a recess extending to the outer surface, said recess being provided with undercut edges adjacent said outer surface a molding insert located in said recess and having a mold cavity the surrounding walls of which are covered by said undercut edges, said molding insert being non-metallic and comprising a material which is inherently non-adhesive to dough, marzipan or the like and which is inserted in the ring element by molding under a moderate degree of heat.



2,030,643
COMBINED OBJECTIVE AND EXPOSURE METER FOR PHOTOGRAPHIC OR CINEMATOGRAPHIC EXPOSING APPARATUS
Heinz Küppenbender and Martin Nowicki, Dresden, Germany, assignors to Zeiss Ikon Aktiengesellschaft Dresden, Dresden, Germany
Application June 12, 1934, Serial No. 730,290
In Germany June 17, 1933
4 Claims. (Cl. 95—64)

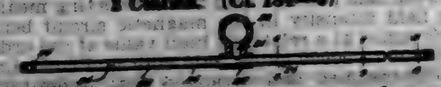
1. An arrangement on photographic cameras and the like for automatically adjusting the diaphragm in correspondence with the adjustment of an exposure meter, comprising in combination a tubular member having a slot in its wall, a pin projecting from the inner side of said tubular member at a distance from said slot, a sleeve surrounding said tubular member and adapted to be rotated during the adjustment of the exposure meter, a pin projecting from the inner side of said sleeve through the slot in said tubular member, a ring axially shiftable in said tubular member having distributed around its circumference three slots, namely a straight axial slot, a curved slot and an angular slot, and a pin projecting from said tubular member engaging in said axial

slot adapted to axially guide said ring and prevent rotation of the same, the end of this pin projecting from said sleeve engaging in said curved slot and adapted to axially shift said ring in said tubular member during the rotation of said sleeve, and a diaphragm adjusting ring in said slotted ring, a pin projecting from the outer side of said diaphragm ring and engaging in said angular slot and adapted to turn said diaphragm adjusting ring according to the shape of said angular slot during the axial displacement of said first mentioned ring.



2,030,644
AXLE BEARING LUBRICATION DEVICE
Walter Lehmann, Wuppertal-Elberfeld, Germany, assignor to Walter Peyinghaus, trading as Eisen- u Stahlwerk Walter Peyinghaus, Egge, near Volmarstein a. d. Ruhr, Germany
Application May 9, 1934, Serial No. 724,895
In Germany March 17, 1934
1 Claim. (Cl. 308—86)

An oil delivery plate of elongated shape, for axle bearing lubricating means more particularly for rail vehicles, having ribs on its surface, a throwing edge, and running off edges which are inclined at an angle of about 60° to the axis of symmetry of the plate and are sharpened and run out into a dripping point, the throwing edge being curved at its ends to meet the running off edges, forming rounded upper corners of the plate, and the ribs also being curved at their ends like the throwing edge.

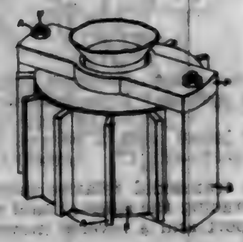


2,030,645
DRYING AND MIXING MECHANISM
Everett E. Lockridge and Louis W. Meyer, Pekotsky, Mich.
Application August 22, 1935, Serial No. 37,324
14 Claims. (Cl. 214—18)

1. A mechanical organization comprising, in combination, a hollow cylindrical element mounted for rotation about its approximately horizontal axis and having a port through its side; a closure comprising a pair of sections

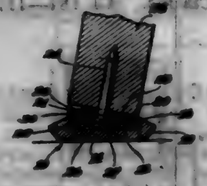
mounted for transaxial relative movement to a position embracing the sides of said element and closing the port and a reverse movement opening the port.

2,030,646
LUBRICATING DEVICE
Joseph Longo, Syracuse, N. Y.
Application September 28, 1934, Serial No. 745,423
2 Claims. (Cl. 184—6)



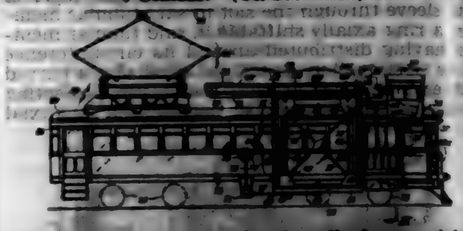
1. A lubricating device for overhead valves comprising an oil reservoir connected with the rocker arm shaft, a distributor pipe connected with the reservoir and disposed adjacent the push rod engaging ends of the rocker arms and in spaced parallel relation to the said shaft, and having a longitudinal series of downwardly stepped apertures therein for uniformly lubricating the push rod and rocker arm assemblies.

2,030,647
SPLASH OILING SYSTEM
Robert M. McMillin and Alex Taub, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 2, 1934, Serial No. 728,688
10 Claims. (Cl. 184—11)



1. In a lubricating system for internal combustion engines having an oil receptacle and a connecting rod interconnecting the wrist pin of a piston with the crank pin of a crank shaft, means on the connecting rod to take up a quantity of oil from the receptacle when the crank shaft rotates, means in the connecting rod and crank shaft pin to enable the oil to pass from the said first-named means to the interior of the crank shaft pin, and an oil passage in the connecting rod to enable the oil to pass from the crank shaft pin to the wrist pin of the piston.

2,030,648
MAGNET SYSTEM
Alexander Meissner, Berlin-Dahlem, Germany, assignor to General Electric Company, a corporation of New York
Application June 24, 1932, Serial No. 619,141
In Germany June 25, 1931
6 Claims. (Cl. 179—115.5)



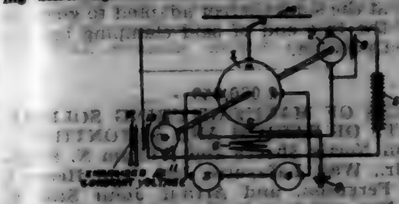
1. An electrodynamic loudspeaker driving unit comprising a core, a magnet coil surrounding said core, magnetic flux conducting means to complete a magnetic circuit through said core, a metal shell surrounding said coil and mounted between said coil and said flux conducting means, the field intensity in the magnetic circuit being maintained at a relatively high value of the order of 18000 to 20000 gauss, said core and coil being so dimensioned and arranged that undesirable temperature rise tends to occur in the coil at said field intensity, and means to prevent said undesirable temperature rise in the magnet coil at said field intensity, said means including cooling ribs forming part of said shell and a filling of insulating material having relatively very high heat conductivity arranged in the gap between said coil and shell.

2,030,649
FURNITURE LEG SHOE
Robert E. Miller, Bronxville, N. Y.
Application August 4, 1934, Serial No. 738,437
3 Claims. (Cl. 16—42)

1. A furniture leg shoe comprising an outer rigid member and an inner resilient element, said outer member having a floor-engaging surface and an upwardly opening cavity, and said inner element being positioned within said cavity, and the rim portions surrounding the mouth of said cavity being adapted to engage the lower surface of a furniture leg associated with the shoe, and the periphery of said floor-engaging surface lying outside of the vertical projection of said furniture leg engaging rim portion at all points thereof, means on said resilient portion engaging cooperating means on said outer member for retaining said resilient element within said outer portion, and means for fastening said resilient element to a furniture leg, said fastening means having an enlarged head at one end thereof adapted to engage said resilient inner element and retain it thereon when said fastening means has passed through said element and is in place in a furniture leg.

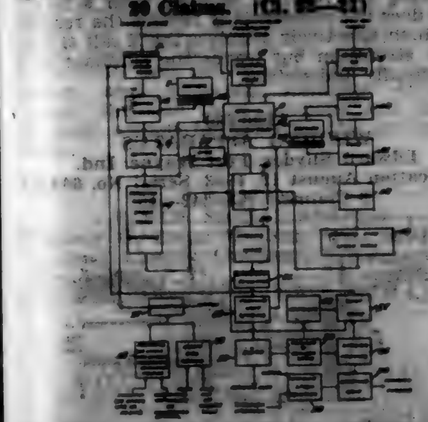
2,030,650
TROLLEY PATROL CAR
Robert N. Miller, Altoona, Pa.
Application November 6, 1931, Serial No. 573,257
7 Claims. (Cl. 105—338)

5. A car of the character described comprising, in combination with a car body and running gear, an overhead trolley extensible and retractible upward and downward from and toward the car roof at one end thereof, an observation cabin extending above the car roof at the other end thereof, and affording the occupant a view of the trolley wire and of the trolley when the latter is extended and engaged with said wire, so that the trolley may serve as a gauge of the height and alignment of the trolley wire relative to the track, and a tower structure between said cabin and trolley extensible upward from the car roof to permit working therefrom on the trolley wire, and retractible downward out of the way so as to leave unobstructed the view of the trolley wire and trolley from the cabin.



2,030,651
STORAGE BATTERY CHARGE INDICATOR
Frederick J. Pease, Wauwatosa, Wis., assignor to Clum Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin
Application December 22, 1930, Serial No. 503,043
3 Claims. (Cl. 136—182)

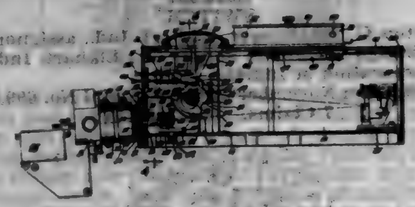
2. A circuit comprising the electrodes of one battery cell, the electrolyte of a second battery cell, an auxiliary electrode in said second battery cell and a low resistance electromagnetic indicating instrument, said electrode having a substantially constant exposed area such that the electrical resistance of the electrolyte to which said area is exposed is at least as great as that of all of the remainder of the circuit including the resistance of said instrument.



2,030,652
DIRECT ELECTRIC CURRENT TRANSFORMER DEVICE
Giuseppe Massimo Pestarini, Great City, N. Y.
Application May 7, 1934, Serial No. 724,324
In Great Britain May 9, 1933
7 Claims. (Cl. 171—119)

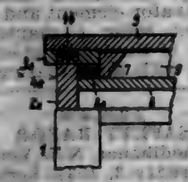
1. A power system including a source of electrical power supply, a commutating type metadyne transformer having a rotor provided with a primary brush set connected to said source of electrical power supply and a secondary brush set electrically displaced from said primary brush set, a field exciting winding for said metadyne transformer, a first dynamo-electric machine, a second dynamo-electric machine, means for driving said dynamo-electric machines at a speed

having a predetermined relation to the speed of said metadyne transformer, means including said first dynamo-electric machine and a battery for energizing said field exciting winding, means utilizing said second dynamo-electric machine to vary the excitation of said field exciting winding for maintaining the speed of said metadyne transformer substantially constant, and a load circuit connected to said secondary brush set.



2,030,653
FIREPROOFING
Robert C. Quinn, Glens Falls, N. Y., assignor to International Paper Company, New York, N. Y., a corporation of New York
Application December 18, 1931, Serial No. 581,825
20 Claims. (Cl. 92—21)

1. A continuous process for making fibre board, comprising the steps of preparing a stock solution of commerical monoammonium phosphate and boric acid of predetermined quantity and concentration, and containing finely divided colloidal material, adding a portion of said solution to coarse fibre stock, simultaneously subjecting other fibrous stock to a refining operation in the presence of another portion of said solution to form fine fibrous stock, separately screening the said coarse and said fine stock, commingling the stocks with an emulsion of size, wax and chlorinated naphthalene or the like, subjecting the mixture to beating action, forming the mixture into boards, recovering the solution expressed during the forming step, adding the recovered solution to the stock solution, drying the board, moistening the surfaces of the board with ammonia solution, and replenishing the stock solution with the amount removed from the system by the board, thereby maintaining a substantially constant amount of solution in contact with the fibre stock.

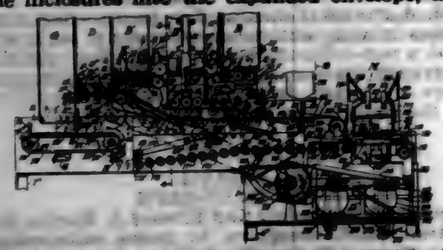


9. A process of making fibre board which comprises mixing ammonium phosphate, boric acid and a non-inflammable water-proofing composition with fibres in fluid suspension, forming such fibre into board, drying and treating the surfaces of the board with a solution of ammonia.

2,030,654
OSCILLOGRAPH
Gerald M. Rassweiler and Edward J. Martin, Detroit, Mich., assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 14, 1931, Serial No. 508,668
5 Claims. (Cl. 171—95)

1. In an oscillograph, a rotating mirror, a surface upon which a light diagram is made by light reflected from said mirror, shadow-forming means to intercept the light beam between the mirror and the surface, and means to secure said light-intercepting means in predetermined positions corresponding to positions of parts of the mechanism being investigated.

2,030,655
COMBINED BILLIARD TABLE AND EXPANDING TABLE
Rudolf Roch and Henary Rosh, Dresden, Germany
Application August 27, 1934, Serial No. 741,599
In Germany August 28, 1933
5 Claims. (Cl. 272—4)

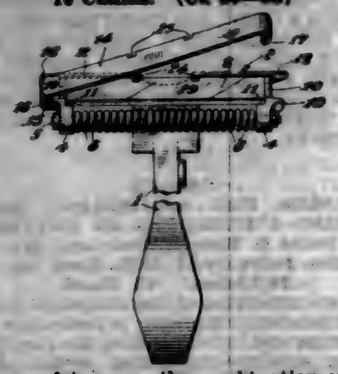


1. A combination extension and billiard table, comprising a frame, legs supporting said frame, a billiard bed supported by said frame in a plane below the same, guiding means provided in said frame, and a divided table top composed of removable sections in sliding engagement with said guiding means for horizontal inward and outward displacement.

2,030,656
MECHANISM FOR ASSEMBLING AND INSERTING INCLOSURES IN ENVELOPES
David O. Reyster, Overland, Mo.
Application February 17, 1933, Serial No. 657,185
30 Claims. (Cl. 93—6)

1. In an apparatus of the character described, the combination comprising a feed-plate having a projecting end for expanding the mouth of an envelope, envelope-supporting means shiftable for engaging an envelope on the envelope-expanding end of the feed-plate, means for assem-

bling a plurality of inclosures, means for feeding the inclosures into the expanded envelope, and

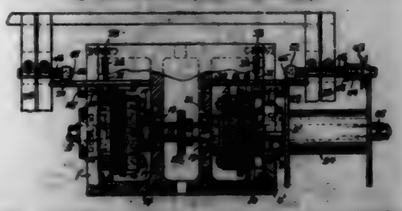


means including a roller shiftably carried by the support for sealing the envelope.

2,030,657
SWITCH
Newton C. Schollenger, Elkhart, Ind., assignor to Chicago Telephone Supply Co., Elkhart, Ind., a corporation of Indiana
Application November 24, 1933, Serial No. 699,490
7 Claims. (Cl. 200—67)

1. A snap switch comprising an insulating housing member, a stationary spring contact element comprising a contact portion and a shank portion, means securing said shank portion to said housing, an insulating actuator arm, a movable contact element carried on said actuator arm, means pivotally mounting said actuator arm on said housing, actuating means including a one piece actuator element, said pivotal mounting means pivotally mounting said actuator element on said housing, and spring means interposed between said actuator element and said arm, said actuator element being U-shaped and having provided in one of the legs thereof an open slot for engagement with an actuating member.

2,030,658
SAFETY RAZOR
Erwin Schoellbaser, New York, N. Y.
Application February 3, 1934, Serial No. 709,549
10 Claims. (Cl. 30—46)



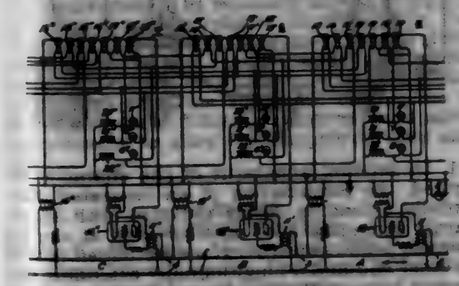
1. In a safety razor, the combination of a holding member, a clamping bar hinged at one end of said holding member for clamping a razor blade in operative position, the opposite end of said bar having a projection adapted to snap over the other end of the holding member to hold the bar in position, said other end of the holding member having a pair of raised projections extending along the sides of said clamping bar, said projections having upwardly and outwardly tapering surfaces at the sides thereof adapted to guide the sides of the free end of said clamping bar into its closed position.

2,030,659
PROCESS OF MANUFACTURING SOLUBLE SALTS OF BARIUM AND STRONTIUM
Randolph Norris Shreve and William N. Pritchard, Jr., West Lafayette, Ind., and Henry V. Farr, Ferguson, and Arthur John Still, St. Louis, Mo., and Jasm D. Crosby, Arlington, N. J., assignors to Mallinckrodt Chemical Works, St. Louis, Mo., a corporation of Missouri
No Drawing. Application December 19, 1934, Serial No. 758,638
13 Claims. (Cl. 23—91)

1. The process of manufacturing soluble salts of barium or strontium which comprises treating barium or strontium sulphate with a salt of the type MX, where M represents a basic radical selected from a group composed of calcium, magnesium, and aluminum, and X represents an acid radical capable of forming, with barium or strontium, the desired soluble salt, in such a manner that a double decomposition reaction takes place, forming a mixture of the sulphate of M and the X salt of barium or strontium, and thereafter extracting the reaction mixture with a solvent which does not substantially reverse the reaction and which selectively dissolves the X salt of barium or strontium but leaves the sulphate of M substantially undissolved.

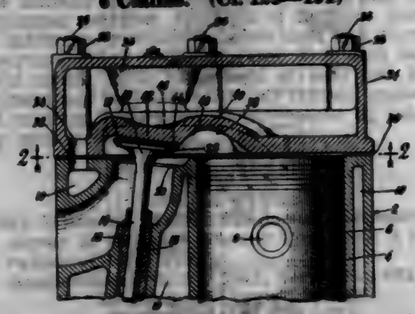
2,030,660
WINDING APPARATUS
Edward Snyder, Fort Wayne, Ind.
Application August 12, 1933, Serial No. 684,876
9 Claims. (Cl. 242—45)

1. In winding apparatus having a stock and traverse mechanism including a brake operated thereby, a spool supporting spindle rotatively mounted in said stock provided with an axially disposed stem, a brake drum supported rotatably in said stock and also on said stem engageable by said brake, a spur gear secured on said stem, a drive head mounted rotatably on said stem provided with planetary step gears operatively associated with said brake drum and spur gear, and an actuating rotative arbor axially alined with said stem operatively associated with said drive head.



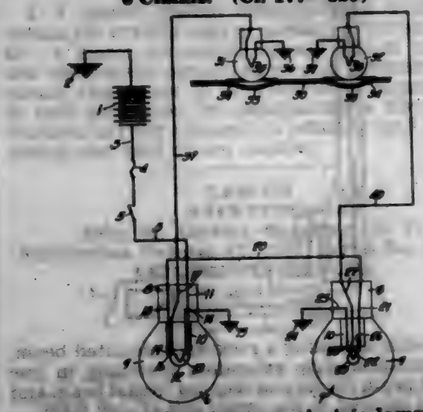
2,030,661
CLOTHING CONTAINER
Abraham Simon, Brooklyn, N. Y.
Application March 12, 1935, Serial No. 10,911
3 Claims. (Cl. 312—144)

1. A clothing container comprising a main body section constructed of a single sheet of flexible light weight material which is scored to define the side walls and closure of the container, end sections each comprising a panel and integrally formed inwardly directed marginal side, front and rear flanges, constructed of flexible light weight material and a marginal frame of rigid strips of material encompassing the outer portions of the flanges adjacent the juncture of the flanges with the panel and having their adjacent ends connected by metallic angle members with securing means extending through



the ends thereof and through the said strips and flanges, said frame surrounding the opposite ends of the body section when telescopically interfitted with the end sections and said flanges providing flexible inner portions extending inwardly beyond the frame, which inner portions may be spread apart to permit of the wedging of the end sections over the opposite ends of the body section, and fastening elements extending through the said inner portions and through the body section for securing the sections together.

2,030,662
BLOCK SIGNAL SYSTEM
Chauncey G. Suits, Madison, Wis., assignor to General Electric Company, a corporation of New York
Application December 5, 1929, Serial No. 411,929
29 Claims. (Cl. 246—34)

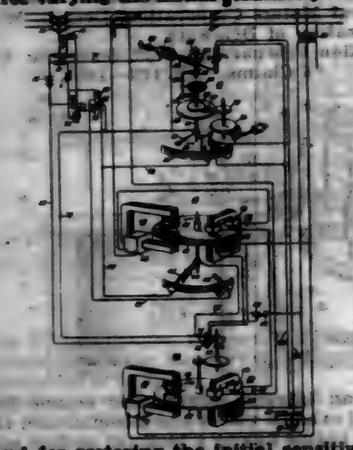


1. In a railway block signal system, a single electron discharge device in each block, means for controlling each of said discharge devices in accordance with track conditions in the respective block, means in each block for producing a plurality of indications, and means controlled entirely by said single discharge devices for causing said indicating means to produce indications in accordance with track conditions in the different blocks.

2,030,663
VENTURI TYPE CYLINDER HEAD
Caleb K. Summers, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application February 20, 1933, Serial No. 657,634
6 Claims. (Cl. 123—191)

1. In an internal combustion engine having inlet and exhaust valves and a combustion chamber, said engine having a jacketed cooling system, a non-recessed solid boss extending from the cooling system into the combustion chamber over the exhaust valve, said boss having a substantially round flat surface in close proximity to the valve when the latter is in open position.

2,030,664
FLASHING SIGNAL SYSTEM FOR MOTOR VEHICLES
Hans F. Theilacker, South Bend, Ind.
Application March 18, 1935, Serial No. 11,657
6 Claims. (Cl. 177—329)

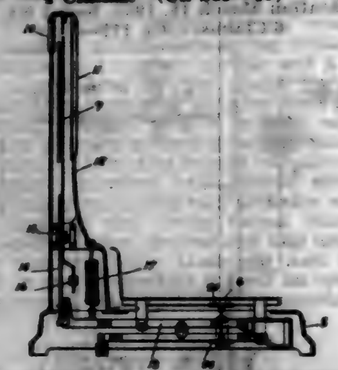


5. In a signal system, an electric lamp having a filament, a conductor spaced from said filament, and a thermally responsive member connected with a source of power and normally engaging said filament; and a second lamp connected to the conductor of the first lamp, said thermally responsive member being shiftable into engagement with said conductor to energize said second lamp and deenergize said first lamp periodically.

2,030,665
PROTECTIVE APPARATUS
Oliver C. Traver, Drexel Hill, and Charles R Mason, Media, Pa., assignors to General Electric Company, a corporation of New York
Application April 26, 1934, Serial No. 722,516
18 Claims. (Cl. 175—294)

1. In combination, an electric circuit, a fault responsive graded time action relay connected to

be energized from said circuit and means operative substantially immediately in response to a fault for varying the initial sensitivity of said relay and for restoring the initial sensitivity after the lapse of one of the graded times of operation thereof.



2,039,606
SCALE

Harold L. Walker, Brooklyn, N. Y., assignor to The Jacobs Bros. Co. Inc., Brooklyn, N. Y., a corporation of New York

Application May 11, 1933, Serial No. 670,550

4 Claims. (Cl. 265—39)

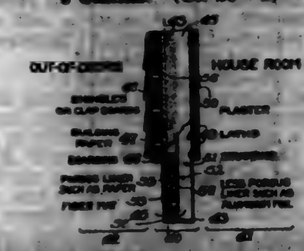
1. A scale including a rockingly mounted beam, a thermostatic strip extending vertically in line with the beam pivots and secured to said beam and a weight secured to the upper end of said strip.

2,039,607
SCALE

Harold L. Walker, Brooklyn, N. Y., assignor to The Jacobs Bros. Co. Inc., Brooklyn, N. Y., a corporation of New York

Application January 19, 1933, Serial No. 652,457

5 Claims. (Cl. 265—39)



1. A scale including a load receiving member, a registering mechanism connected thereto and responsive to the movements thereof, a cover member extending adjacent said registering mechanism and occupying a position to conceal the same, a spring tending normally to maintain said cover member in such position, said cover being shiftable to a position to reveal said mechanism, and means responsive to movement of said load receiving member and engaging said cover member to prevent the latter from occupying its normal position.

2,039,668
MEANS FOR INSULATING WALLS

Frederick Weyerhaeuser and John S. Busch, Cloquet, Minn., assignors to Wood Conversion Company, Cloquet, Minn., a corporation of Delaware

Application August 26, 1933, Serial No. 686,561

6 Claims. (Cl. 20—4)

1. A flexible heat insulating blanket for use in house walls and the like in position to include the dew point in cold weather, comprising a flexible insulating core, a flexible creped sheet liner impervious to moisture or moist air, said liner being secured to one face of said core for use on the warm side of said wall, and a flexible creped moisture-pervious sheet on the other face of said core.

2,039,683
TRACK SANDER

William H. White, Roanoke, Va., assignor to Morris B. Brewster Co. Inc., Chicago, Ill.

Application February 6, 1934, Serial No. 710,787

3 Claims. (Cl. 291—3)

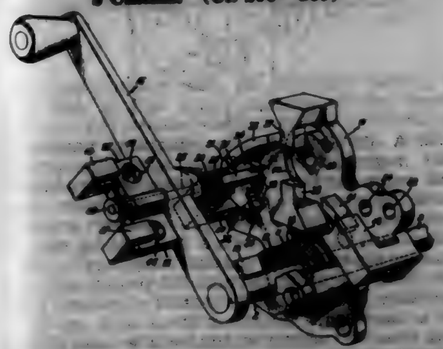
1. In sanding apparatus of the character described, the combination of an elongated, horizontally extending casing provided with an upwardly extending inlet duct for sand at one end thereof, a downwardly extending outlet duct at its other end and a longitudinally extending trap conduit between the two ducts, a horizontal nozzle extending through and secured removably in said one end of the casing and connected to receive fluid under pressure and to direct the fluid longitudinally through the trap conduit in order to force through the outlet duct the sand delivered into the casing via the inlet duct, and a horizontal housing around the nozzle projecting inwardly into the trap conduit from said one end of the casing and designed to prevent sand from escaping from the casing when the nozzle is removed.

2,039,670
PROCESS OF PREPARING METALLIC BARIUM FOR INTRODUCTION INTO ELECTRIC DISCHARGE DEVICES

Erich Wiegand, Berlin-Waidmannslust, Germany, assignor to General Electric Company, a corporation of New York

No Drawing. Application July 21, 1934, Serial No. 735,839. In Germany August 30, 1933

3 Claims. (Cl. 148—13)



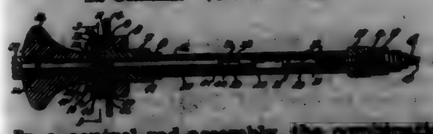
1. The process of treating metallic barium for introduction into electric discharge devices comprising distilling barium of a commercially obtainable purity, tempering the distilled metal near its melting point and rapidly cooling the same uniformly to distribute any traces of impurities therein, and applying a vaporizable non-oxidizing coating to said tempered metal to preserve the same.

2,039,671
ELECTRIC SWITCH

Ernest Williams, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York

Application July 11, 1934, Serial No. 734,577

3 Claims. (Cl. 200—168)



3. Switch operating mechanism comprising a switch operating handle arranged to be moved in the same direction from an open circuit position through a closed circuit position to a grounding position, and means for retaining the handle temporarily in said closed circuit position, said means including a member carried by said handle and constructed to be manually moved longitudinally and rotatively relative to the handle, and a fixed stop arranged to be engaged by said member when the handle reaches said closed circuit position, said member and stop having cooperating portions requiring successive movements of the member longitudinally, rotatively and again longitudinally to allow the member to pass said stop.

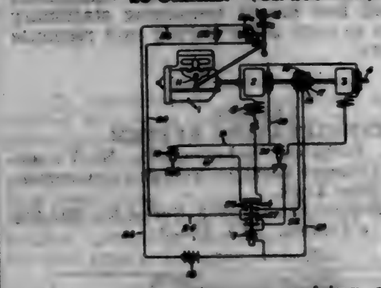
2,039,672
CONTROL DEVICE

Robert K. Wheeler, Wauwatosa, Wis., assignor to Cline Manufacturing Company, Milwaukee, Wis., a corporation of Wisconsin

Application February 17, 1933, Serial No. 657,675

12 Claims. (Cl. 74—502)

1. In a control rod assembly, the combination with an apertured mounting and a ball detent positioned in the aperture thereof, of an apertured hollow control rod reciprocable within said mounting and with the walls of the aperture of which said ball detent is engageable upon the registration of said aperture with that of the mounting, and means carried by said control rod for initially moving said ball detent from its rod engaging position, the wall of said rod being of a thickness suitable to move said ball from the aperture after initial movement of said ball by said means upon movement of said rod, but to engage said ball and positively prevent movement of said rod before initial movement of said ball by said means.



2,039,673
POWER SYSTEM

Otto Wünsche, Berlin-Friedenau, Germany, assignor to General Electric Company, a corporation of New York

Application July 21, 1932, Serial No. 623,618

In Germany August 1, 1932

25 Claims. (Cl. 290—17)

1. A power system comprising a generator, means for driving said generator, a driven member, a motor connected to said driven member and electrically connected to said generator, and means responsive to an electrical characteristic of said generator for establishing a direct mechanical driving connection between said driving means and said driven member.

2,039,674
SAFETY PIN

John M. Abrams, Brooklyn, N. Y.

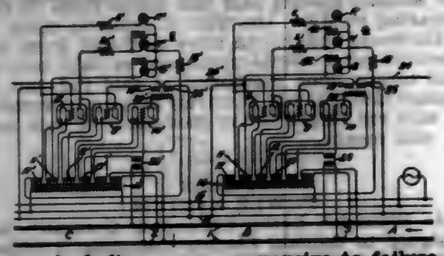
Application October 15, 1935, Serial No. 45,023

5 Claims. (Cl. 24—162)

1. A safety-pin formed of spring wire and embodying a body portion or shank terminating at one end in a spring hinge and pin section, the opposite end terminating in an arcuate section, a pin guard secured over the arcuate section to receive the free end of the pin section, and a coil element movably secured to the guard and adapted to be moved by the pin section in closing the pin until the same slips into the outermost convolution to be retained within the coil until the latter is manually moved.

2,039,675
BLOCK SIGNAL SYSTEM

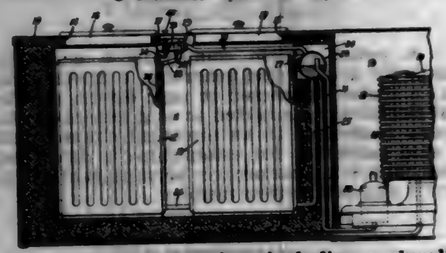
Weber H. Arkenburgh, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York



Application December 5, 1929, Serial No. 411,966

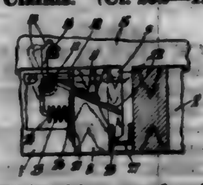
Renewed July 12, 1933

14 Claims. (Cl. 246—34)



10. In a railway block signal system, the combination of clear, caution and danger signals in

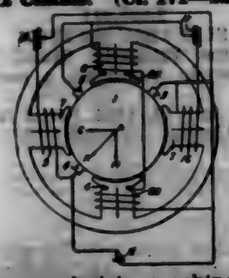
each block, means all of the component parts of which are stationary with respect to each other for energizing the danger signal when the respective block is occupied and for selectively energizing the caution and clear signals dependent upon the track condition of an adjacent block, said



means including means responsive to failure of any of said signals to produce an indication which is more restrictive than the indication produced by the signal which failed all of the component parts of said last means remaining stationary with respect to each other during said response to said failure.

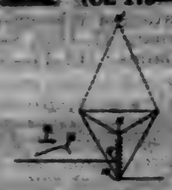
2,039,676
REFRIGERATING SYSTEM
Leonard W. Atchison, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 29, 1933, Serial No. 691,476
6 Claims. (Cl. 62—3)

1. A refrigerating system including a plurality of flooded evaporators, a conduit connecting the lowermost portion of one of said evaporators to the others, means for supplying liquid refrigerant to said evaporators, means for withdrawing gaseous refrigerant from said evaporators, and means controlling the withdrawal of gaseous refrigerant from one of said evaporators for maintaining said one evaporator at a predetermined temperature higher than that of the others of said evaporators.



2,039,677
DOOR LOCK
Albert E. Avels, Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application February 21, 1934, Serial No. 712,286
3 Claims. (Cl. 292—129)

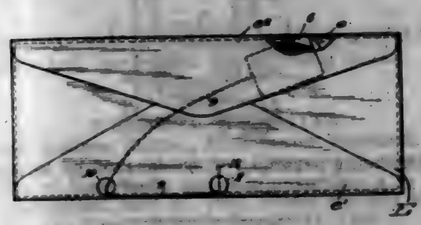
1. Concealed latching mechanism for one of a pair of cooperating swinging doors which are closed and latched in succession with their swinging edges in end to end relation, said mechanism including an oscillatory operating handle located within a radial recess in the swinging edge of the door and ended within said edge, a plate over the inner end of the recess having a bifurcated end, a part of which lies in the plane of the plate to receive the handle with the remainder thereof extending angularly from the plate and terminating in curled eyes, and a rockshaft projecting vertically through said eyes interiorly of the door structure for actuation by said oscillatory handle



---

2,039,678
DYNAMO-ELECTRIC MACHINE
Sven R. Bergman, Nahant, Mass., assignor to General Electric Company, a corporation of New York
Application August 29, 1934, Serial No. 741,942
12 Claims. (Cl. 171—223)

12. A dynamo-electric machine having two field magnetic circuits, an armature provided with a commutator, load brushes and an auxiliary brush associated with said commutator, means including a field exciting winding connected across said auxiliary brush and one of said load brushes arranged to magnetically excite one of said field magnetic circuits for producing a substantially constant difference of electrical potential between said auxiliary brush and one of said load brushes, means including a second field exciting winding connected across said load brushes arranged to magnetically excite the other of said field magnetic circuits for producing a variable difference of electrical potential between said load brushes equal to the algebraic sum of the voltages between said auxiliary brush and each of said load brushes, and means including an impedance connected in series with said second field exciting winding for limiting the flow of electric current through said second field exciting winding due to the transformer action between said second field exciting winding and said armature.

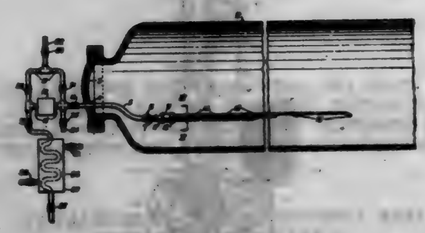


2,039,679
PROTECTION OF ELECTRIC CIRCUITS
Louis F. Blume, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application August 17, 1934, Serial No. 740,256
13 Claims. (Cl. 175—294)

1. In combination two electric circuits of different operating voltages, transforming means

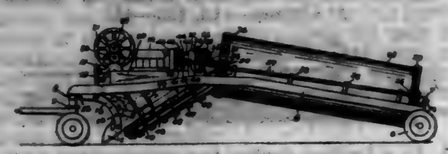
provided with a neutral and including windings connecting said circuits directly in series with each other, means connected in parallel relation with said windings for limiting voltage differences between said two circuits to a predetermined value, and voltage responsive discharge means connected between said neutral and ground.

2,039,680
ADVERTISING DISPLAY DEVICE
Aaron Bedenweiner, Chicago, Ill., assignor to Rotary Brush Company, Chicago, Ill., a corporation of Illinois
Application August 29, 1934, Serial No. 741,897
6 Claims. (Cl. 40—67)



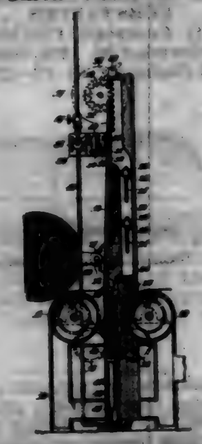
1. In combination with an envelope having a sealing flap at the upper margin of the front thereof, an advertising display device comprising a comparatively small card provided with advertising material on at least one face thereof, and adapted to be disposed in the envelope when the latter is sealed by the flap, and means for automatically swinging the card outside of the envelope when the latter is opened by unsealing the flap or by tearing or cutting the adjoining margins of the flap and envelope front formed from spring wire and including an arm extending along the bottom of the envelope and a second arm having one end thereof connected to the card and its other end joined to the other end of said one arm and adapted to assume a bent position when the card is in the envelope and to spring into a normal position at substantially right angles to the first mentioned arm upon opening of the envelope as aforesaid.

2,039,681
SPRING MEANS FOR CAR TRUCK BOLSTERS
Charles E. Busch, Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y., a corporation of New York
Application July 14, 1934, Serial No. 735,174
6 Claims. (Cl. 105—197)



1. Spring means for car-truck bolsters, including, in combination, side frames, a spring plank rigidly attached to the frames, a bolster, supporting springs between the ends of the bolster and spring plank, and an equalizing leaf spring bearing upwardly at its middle portion upon the bolster and having means at its ends to provide sliding contacts with the spring plank, the supporting springs being so arranged as to provide longitudinal spaces between them, and the sliding contacts being in the spaces.

2,039,682
APPARATUS FOR TREATING OR SAMPLING SUBSTANCES
Eugene G. Campbell, Pittsburgh, Pa.
Application September 20, 1930, Serial No. 485,571
13 Claims. (Cl. 73—21)



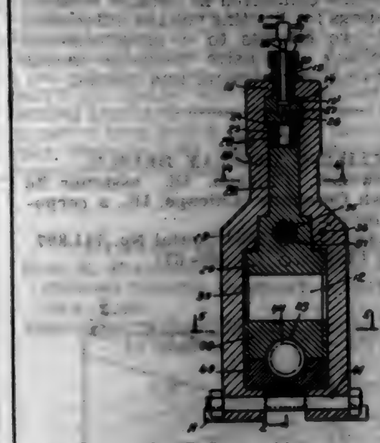
1. In combination, a container, and proportioning apparatus comprising a plurality of proportioning tubes, each extending to a different extent within said container so as to communicate with a different zone of the container, and flow regulating devices, one cooperating with each tube and each device having a flow controlling orifice of materially smaller area than the flow area of the tube with which it cooperates.

2,039,683
ROAD SURFACE MIXER
Thomas E. Chamberlain, Wilkeson, Wash.
Application December 2, 1933, Serial No. 700,663
1 Claim. (Cl. 94—41)

In a road surface mixer, the combination of a longitudinal frame, wheels supporting the frame, a cylinder open at both ends, mounted for rotary movement longitudinally upon the frame, a plurality of vanes fixed longitudinally to the inside of the cylinder, a plurality of fans mounted for rotary motion within the cylinder, said cylinder slanting downwardly from its forward to its rear end, a conveyor belt supported by the frame and extending in a slanting direction upwardly and directly into the forward end of the cylinder, a scoop supported by the frame immediately forward of the conveyor belt, and means for causing rotary movement of the conveyor belt, cylinder and fans, whereby road surfacing material is scooped up from the ground by the scoop when the mixer is moved over the ground and conveyed directly into the forward open end of the cylinder by the conveyor belt where it is elevated by the vanes within the revolving cylinder, dropped onto the revolving fans, mixed thereby and moved to the open rear end of said revolving and slanting cylinder where it is deposited back upon the ground.

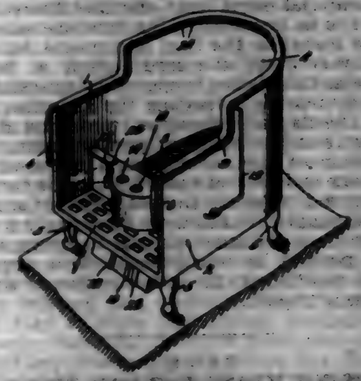
2,030,654
AUTOMATIC CUT-OFF FOR CLOTH BATCHERS
Nelson K. Coleman, Asheville, N. C., assignor to Sayles Biltmore Bleacheries, Inc., Biltmore, N. C., a corporation of Rhode Island
Application July 16, 1935, Serial No. 31,658
10 Claims. (Cl. 242—65)

7. The combination with a cloth batching machine including a cloth shell carriage having up and down movement; of a cloth cutting knife, and means operated by the carriage in its down movement to move the knife so as to cut the strand of the cloth fed across the knife.



2,030,685
FEEDING MECHANISM FOR ROCK DRILLS
John C. Curtis, Garfield Heights, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio, a corporation of Ohio
Application June 27, 1934, Serial No. 732,698
10 Claims. (Cl. 255—45)

1. In a feeding device, the combination with a support and a motor slidable thereon, a hammer reciprocable within said motor imparting jars thereto to reciprocate the motor relatively to the support, of a tube having a piston reciprocable therein, a connection between said motor and said piston for transmitting the reciprocation of the former to the latter, non-compressible fluid within said tube on both sides of said piston normally displaced within the former due to the reciprocatory movement of the latter, and means for selectively controlling the displacement of the fluid within said tube in a manner preventing the movement of said piston and consequently of said motor in one or the other direction.

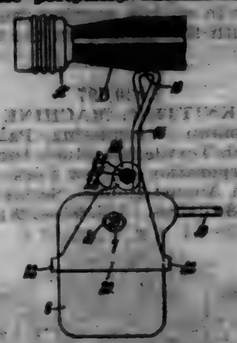


2,030,686
IMPACT DEVICE
Lewis K. Davis, Hampton, N. J.
Application September 22, 1931, Serial No. 564,491
6 Claims. (Cl. 140—113)

1. In an impact press, the combination of a frame, a piston slidable therein, means for receiving a charge of combustible material for generating gas to act on said piston and move the same, and shearable means on the frame engaging the piston for resisting movement thereof, said

means being arranged to be sheared by said piston at a predetermined gas pressure.

2,030,687
BATHTUB
Norman C. Davis, Baltimore, Md.
Application July 12, 1935, Serial No. 31,278
14 Claims. (Cl. 4—173)



1. A bathtub having front, rear and side wall portions, and comprising a shallow section and a deep section, said deep section forming a foot well and the bottom of said shallow section forming a seat for the bather and an inner step adjacent to a wall portion affording easy passage from said bathtub over said latter wall portion, and said latter wall portion having an outside step adjacent thereto affording easy passage over said latter wall portion into the bathtub.

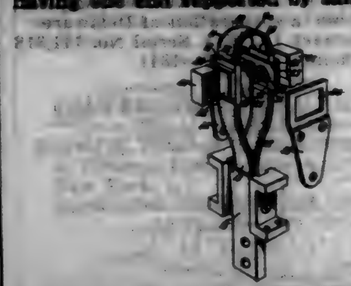
2,030,688
FEELER MECHANISM FOR LOOMS
Sherwood O. Dodge, Medford, Mass., assignor to Guaranteed Parts, Inc., Allston, Mass., a corporation of Massachusetts
Application July 9, 1934, Serial No. 734,975
7 Claims. (Cl. 139—331)

1. In a feeler mechanism for looms, the combination of a feeler stand, a yieldable side slipping feeler mounted thereon, a bracket adjustably mounted upon said stand, and a roller

mounted upon said bracket and having a groove formed in the periphery thereof in which the

feeler is supported and guided as it is moved forwardly and rearwardly on detecting beats.

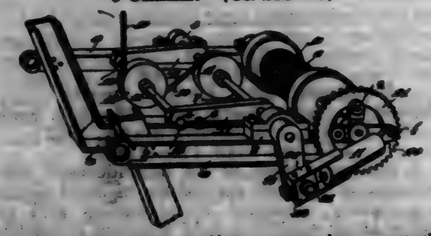
2,030,689
WELDING APPARATUS
James Andrew Derrat, Manchester, England, assignor to General Electric Company, a corporation of New York
Application July 31, 1933, Serial No. 682,692
In Great Britain August 11, 1932
12 Claims. (Cl. 219—8)



1. Welding apparatus comprising a welding agency, means for directing said welding agency along a predetermined closed path, and means for moving said welding agency more than one complete revolution in one direction about said path while welding and for moving said agency while not welding the distance greater than one revolution that said welding agency has traveled about said path during welding, said last mentioned movement occurring at one end of the welding movement and said moving means initiating and terminating its movement at a predetermined point in said path.

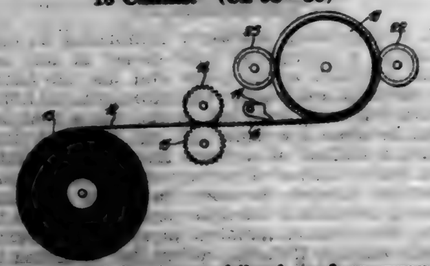
2,030,690
TAR ACID PRODUCT AND PROCESS OF PRODUCING IT
Charles Raymond Downs, Old Greenwich, Conn., and Robert Paul Weiss, New York, N. Y., assignors to Weiss and Downs, Inc., New York, N. Y., a corporation of New York
No Drawing. Application September 20, 1934, Serial No. 744,758
6 Claims. (Cl. 202—65)

1. The process of treating cresylic acid to render its color stable to light which includes distilling and treating said cresylic acid with about 2% of maleic anhydride before said distilled cresylic acid has become discolored.



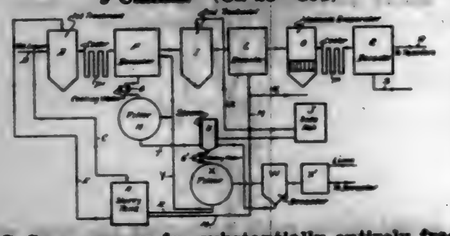
2,030,691
ELECTRIC SWITCH
Reginald O. Eaton, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application May 21, 1932, Serial No. 613,633
9 Claims. (Cl. 200—171)

1. In a switch, a movable switch member comprising a flexible conductor, a contact plate secured to one side of said conductor, a spring guide secured to the other side of said conductor opposite said contact plate, a compression spring having one end supported by said spring guide,



a second spring guide supporting the other end of said spring, and an operating member connected to said spring guides for operating said switch member and for supporting said guides.

2,030,692
ATTACHMENT FOR SPUDDING AND DRILLING MACHINES
William J. Edwards, Wichita Falls, Tex.
Application October 7, 1935, Serial No. 43,910
6 Claims. (Cl. 255—7)



1. A cable reciprocating apparatus comprising in combination with a cable drum having a driving wheel, arms connected to an oscillating shaft carrying a sheave, a crank on said shaft and having yielding, pitman connection to the driving wheel of said drum, a shaft having its ends adjustably journaled in the ends of said arms and also carrying a freely mounted sheave whereby to guide a cable over said first sheave onto said drum during oscillation of said arms by said drum gear and pitman.

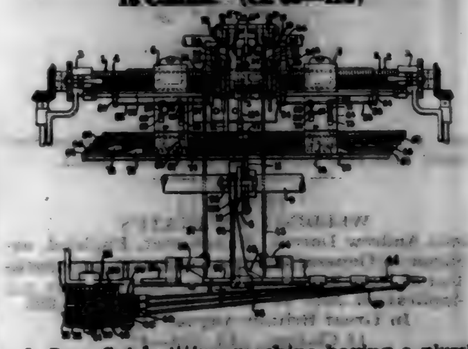
2,030,693
LAMINATED PAPER BARREL
James A. Eden, Springfield, Mass.
Application March 23, 1934, Serial No. 716,936
18 Claims. (Cl. 93—36)

1. A barrel having a bilged surface wrapped circumferentially in successive layers with a continuous strip of paper longitudinally expanded progressively towards its central zone relative to its side edges to conform to the bilged surface and to form a smooth unbroken bilged layer.

2,030,634
PURIFICATION OF CAUSTIC SODA
Harvey G. Elledge and Alfred Hirsch, Painesville, Ohio, assignors to Diamond Alkali Company, Painesville, Ohio, a corporation of Delaware
Application February 15, 1934, Serial No. 711,318
9 Claims. (Cl. 23—184)

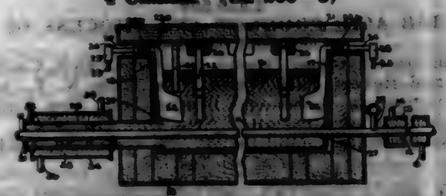
9. In a process for substantially entirely freeing caustic soda liquor of silica, alumina and iron, the steps of treating such liquor with strontium in the form of the sulphate, removing the precipitated impurities, recovering substantially all the strontium in the form of the carbonate and treating an additional portion of such liquor with a portion of the recovered strontium carbonate, such additional portion of caustic soda liquor being of a concentration sufficient to dissolve said strontium carbonate.

2,030,635
ELECTRIC LAMP
Bernhard Erber, Vienna, Austria
No Drawing. Application April 22, 1933, Serial No. 667,511. In Austria May 7, 1932
2 Claims. (Cl. 176—129)



1. A luminous body of an incandescent lamp comprising a filament consisting of solid carbon and a tightly adherent homogeneous and coherent coating enclosing said filament consisting of a carbide of one of the metals of the tantalum group.

2,030,696
DISPENSING CONTAINER
John S. Forster, Pittsburgh, Pa., assignor of one-half to Raymond Schmidt, Pittsburgh, Pa.
Application February 25, 1935, Serial No. 7,569
3 Claims. (Cl. 221—60)

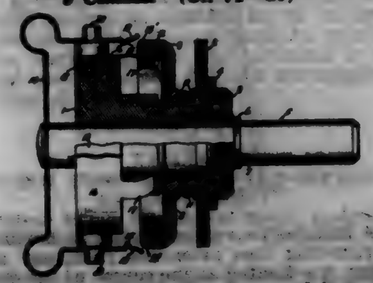


1. A dispensing container comprising in combination, a collapsible tube closed at one end, a top provided on the other end, the top having an opening extending therethrough, a hollow cylindrical neck provided on the top, a seat provided between the neck and top, the seat simulating a surface of a conic frustum inverted, a cork washer disposed in the neck, a substantially spherical closure member having a discharge opening extending therethrough disposed in the neck, the closure member pressing the washer tightly against the seat, means for retaining the closure member in engagement with the cork washer, an eye member carried by the closure member providing means for operating it, the eye member being disposed at right angles to the opening through the closure member and midway between the ends of the opening, the neck having a U-shaped notch therein to permit the operation of the eye member to rotate the closure member to set the opening therethrough in alinement with the opening in the top.

2,030,697
KNITTING MACHINE
Albert Friedmann, Wyomissing, Pa., assignor to Louis Hirsch Textile Machines, Inc., New York, N. Y., a corporation of New York
Application August 3, 1935, Serial No. 34,431
15 Claims. (Cl. 66—123)

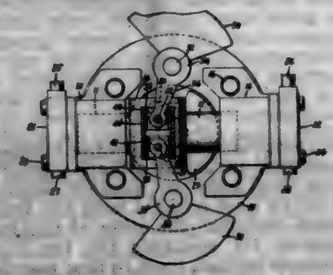
1. In a flat knitting machine having a plurality of longitudinally reciprocable carrier rods, means for arresting the traverse of the carrier rods at an intermediate point which consists of a pair of threaded, independently rotatable, spindles, a nut upon each spindle provided with individual stops for each rod and movable longitudinally thereof upon rotation thereof, stops upon each carrier rod engageable with the related stop upon each nut, means for rotating each spindle in either direction, means for rendering said rotating means operative and inoperative upon either spindle independently of the other and means for operating said last mentioned means in timed relation to the knitting cycle.

2,030,698
IMMERSION TUBE TYPE FURNACE
George J. Hains, Rocky River, Ohio, assignor to General Electric Company, a corporation of New York
Application April 12, 1934, Serial No. 720,194
4 Claims. (Cl. 266—3)



1. A continuous process annealing furnace wherein the material being annealed is passed through the furnace comprising a crucible, an elongated metallic tubular metal member forming a treating chamber having a portion constituting a heating zone passing through said crucible above its bottom wall, a heat transfer medium having a relatively high heat conductivity and thermal capacity within said crucible, means for applying heat to said medium to liquefy it whereby it envelops said heating zone to uniformly heat it throughout its length, means providing a fluid impervious joint between said tube at one end of the heating zone and the wall of said crucible where said tube passes out of said crucible, and means for cooling a portion of the heat transfer medium at the other end of said heating zone to solidify said medium and thereby seal said tube at said outer end of said zone.

2,030,699
CUSHION SLIDE FOR FURNITURE
Walter F. Herold, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application December 24, 1932, Serial No. 648,736
2 Claims. (Cl. 16—42)



1. A cushion slide for a furniture leg comprising a cushion body of rubber having an upper surface adapted to engage with the lower end of said leg, said cushion body having a peripheral groove intermediate its upper and lower surfaces defining an upper resilient portion and a lower shoe attaching portion, said upper portion being provided with a series of recesses rendering it less resistant to deformation than said lower portion, a non-resilient sliding shoe having a substantially flat base and an upwardly and inwardly extending rim, the lower portion of said cushion body being disposed in said shoe with the edge of said rim engaging said groove, the marginal portion of said upper portion overhanging said rim and adapted to be compressed between said rim and said leg, and leg attaching means carried by said cushion body, the relatively greater resistance to deformation of said lower portion being such that upon tilting of said leg relatively to said shoe separation of said shoe therefrom through deformation of said cushion body is prevented while said upper portion is subject to deformation.

2,030,700
REDUCTION DRIVE MECHANISM
Merrill C. Hexie, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application May 17, 1935, Serial No. 22,010
9 Claims. (Cl. 74—10)

1. In a dual drive mechanism, a driven member, a driving member axially and rotatably movable with respect thereto, a stationary friction surface, a resilient member surrounding said friction surface and connected to said driven member, means including a resilient arm mounted on said driving member for directly coupling said driving and driven members in one axial position of said driving member, and means including said resilient arm for advancing successive increments of said resilient member around said friction surface during rotation of said driving member when said driving member is shifted to another axial position.

2,030,701
COMPRESSOR AND BALANCING DEVICE THEREFOR
Wilfrid E. Johnson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 9, 1935, Serial No. 35,513
10 Claims. (Cl. 230—58)

1. A reciprocating type compressor and balancing device therefor comprising a reciprocatable piston, a plurality of inertia members, means including a plurality of pivots stationary with respect to the compressor for pivotally supporting said inertia members on opposite sides of the axis of said piston for oscillatory movement in an arc of less than 180°, and means including links connecting said inertia members and said piston for oscillating said inertia members about said stationary pivots and for accelerating said inertia members in such oscillatory movement with a component of movement in a direction opposite to the direction of movement of said piston and at a rate of acceleration in the direction of said component exactly proportional to the rate of acceleration of said piston.

2,030,702
LICENSE TAG
Thomas A. Kirton, Jacksonville, Fla.
Application April 10, 1934, Serial No. 719,959
7 Claims. (Cl. 40—125)

7. A tag having an enclosed chamber, opposed walls of which being provided with substantially aligned openings, a headed shank extending through one of the openings with the head within the chamber, an operating member within the chamber for coaction with the head of the headed shank for rotating said headed shank upon rotation of the operating member in one direction, a portion of said operating member being exposed through the second opening to allow turning thereof, and lugs carried by a wall of the tag and extending inwardly of the chamber at opposite sides of the operating member to hold said member against displacement within the chamber with respect to the head of the shank.

2,030,762
RAZOR
Leopold K. Kuhni, Bridgeport, Conn., assignor to Magazine Repeating Razor Company, New York, N. Y., a corporation of New Jersey
Application July 20, 1933, Serial No. 681,337
1 Claim. (Cl. 30—51)

A razor comprising two clamping members, one of said members including a blade platform with stops on its front edge, the members being hinged together on an axis parallel with the front edge of the blade platform, the other of said members having means for engaging the top face of a blade, a handle portion fixed to that member that engages the top face, and a laterally movable lever normally aligned with the fixed member to form a complete handle, said movable lever being pivoted near its top to the fixed portion and having a spring extension for engaging the under side of the blade platform.

2,030,764
METHOD OF REPAIRING A RAIL JOINT IN TRACK
George Langford, Joliet, Ill., assignor to McKenna Process Company of Illinois, Joliet, Ill., a corporation of Illinois
Application March 5, 1934, Serial No. 713,964
2 Claims. (Cl. 29—169)

1. The method of repairing in track a rail joint comprising angle bars having bottom rail fishing contacting members of considerable width effective to produce on the rail ends of the joint a downward component of thrust when the bars are drawn in to the rail ends by bolt tension, which method comprises cutting off lengthwise of the bars the outer portion of said bottom members in amount at least sufficient to eliminate said downward component of thrust present in said bars in their original condition, and then continuing the use of said bars in the joint without further alteration of said bars.

2,030,765
WINDOW CATCH
Ross S. Llewellyn, Glen Ellyn, Ill.
Application October 21, 1933, Serial No. 693,843
1 Claim. (Cl. 292—261)

1. A latching device for window sashes comprising: a one piece U-shaped frame of sheet metal, having a central bight adapted to rest horizontally atop the lower sash, and duplicate flat spaced arms extending up in parallel spaced relationship from the opposite ends of said bight; said bight being apertured substantially on its center line to receive fastening means, such as a woodscrew; each arm having an aperture defining a horizontal reach and an inclined reach extending outwardly and downwardly from the outer end of said horizontal reach; the lower margins of each reach having serrated edges defining rack teeth; a pintle having ends projecting through both apertures; a roller

on said pintle between said arms large enough to project substantially beyond the adjacent edges of said arms; pinions on said pintle on both sides of said roller, each pinion lying substantially in the plane of the adjacent arm and being held in mesh with said rack teeth by engagement of the pinion teeth with the smooth opposite edge of said aperture; the length of said inclined reach being sufficient to cause movement of said roller into and out of wedging engagement with an upper window sash.

2,030,766
MILK BOTTLE WEIR
Johan Samuel Lundgren, Superior, Wis.
Application February 1, 1935, Serial No. 4,516
7 Claims. (Cl. 210—51.5)

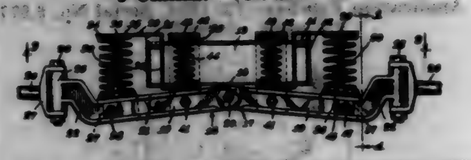
1. A milk bottle weir comprising a flexible disc, arm receiving lugs extending from one side of the disc, one located at the center of the disc and another intermediate of the center and circumferential edge thereof, said lugs having parallel holes therethrough at right angles to the axis of the disc, a handle formed of a single piece of spring wire bent intermediate of its ends and having two substantially parallel spaced arms bent at substantially right angles to the handle and terminating in oppositely disposed right

angular pintles for engagement within the holes in said lugs, whereby when the handle is squeezed the arms are displaced rotating the disc to a position permitting convenient insertion within the neck of a bottle.

1,818,797
BURNING BAR
Lee R. McLean, Toledo, Ohio, assignor to The Toledo Porcelain Enamel Products Company, Toledo, Ohio, a corporation of Ohio
Application July 10, 1933, Serial No. 679,662
1 Claim. (Cl. 25—153)

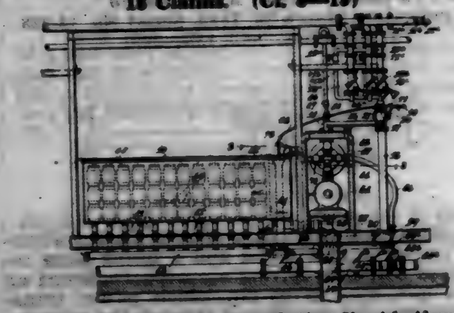
A device for supporting articles of various shapes in furnaces under conditions of great heat and destructive oxidation, comprising, in combination, an integral cast iron bar having a heavy flat base and an upstanding central longitudinal rib, said rib being expanded at intervals to form bosses, there being circular openings extending downwardly completely through said bosses and said heavy base, and a plurality of wrought metal members of heat-resistant alloy, each of said members being sharp at one end and having at its other end a blunt tenon fitting said openings in said bosses and base and a collar above said tenon engageable with the upper faces of said bosses, said wrought metal members being of various lengths and adapted for selective arrangement on said bar to support such articles of various shapes.

2,030,768
DRAINAGE RECEPTACLE
Courtney N. Mitchell, Strongsville, Ohio
Application May 29, 1935, Serial No. 23,976
12 Claims. (Cl. 4—290)



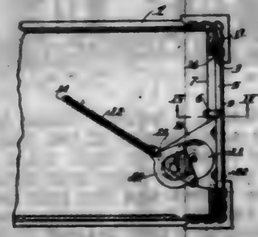
1. In a drainage receptacle, the combination of a basin having an opening in its bottom, a plate adapted to fit into said basin in proximity with the bottom, and a plug attached to said plate and passing loosely through the opening in the bottom of the basin.

2,030,769
COATING COMPOSITION AND METHOD OF APPLYING
Lewis Edgar Muns, Muskegon, Mich., assignor of one-half to E. H. Sheldon & Company, Muskegon, Mich.
No Drawing. Application February 5, 1933, Serial No. 656,627
22 Claims. (Cl. 134—58)



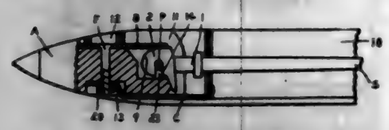
1. A coating composition comprising cooked cashew nut shell oil treated with formaldehyde, admixed with synthetic drying oil comprising a polymerization product of divinyl-acetylene, and admixed with a synthetic resin varnish to supply adhesive quality.

2,030,710
FLEXIBLE AXLE FOR VEHICLES
Charles Opels, Culver City, Calif.
Application March 10, 1934, Serial No. 714,971
9 Claims. (Cl. 267—20)



8. In a vehicle, a vehicle frame having side members, an axle formed of two half axle sections pivoted together at their inner ends by a longitudinal pivot, the outer ends being adapted for mounting wheels and the axle being transverse to the vehicle frame, auxiliary spring connections including a first bracket having a vertical plate secured to each of the half axles adjacent its pivot and having a horizontal extension forming an upper spring seat, each of the side members having a second bracket with a vertical plate and a horizontal extension forming a second spring seat, a coiled spring seated on the spring seats of the first and second brackets, main springs located outside of the side members, each having a lower connection to an axle section towards its outer end and an upper connection to the adjacent side member of the vehicle frame.

2,030,711
TREATING APPARATUS
Oscar Oppenlaender, Elizabethton, and Richard J. Golleng and Ralph H. Carter, Johnson City, Tenn., assignors to North American Rayon Corporation, New York, N. Y., a corporation of Delaware
Application May 25, 1931, Serial No. 539,739
18 Claims. (Cl. 8—19)

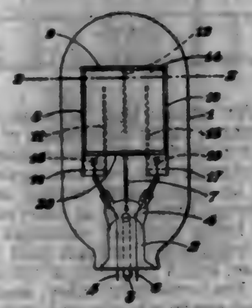


7. An apparatus for circulating liquids through a tank comprising a plurality of filling lines having downwardly disposed discharge outlets positioned in the arc of a circle, a plurality of discharge lines having upwardly disposed inlet openings positioned beneath said outlets, a pipe carried on a pivoted support and having an upper end adapted to swing in an arc beneath said outlets and a lower end adapted to swing in an arc above said inlets, an intermediate swiveled connection between the lower end portion of said swing pipe and the tank, said lower end being also provided with a valve normally closed, a telescopic sleeve at the upper end of said pipe adapted to be raised to surround an inlet opening from a filling line and means for raising and lowering said sleeve, a loose coupled rod connecting said sleeve with said valve, and a locking pin actuated by a float in said tank and adapted to hold said sleeve in a raised position while liquid remains in said tank.

2,030,712
CONCEALED COIN DRAWER
Edwin W. Pace, Chicago, Ill., assignor to Pace Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application February 18, 1935, Serial No. 6,977
3 Claims. (Cl. 232—1)

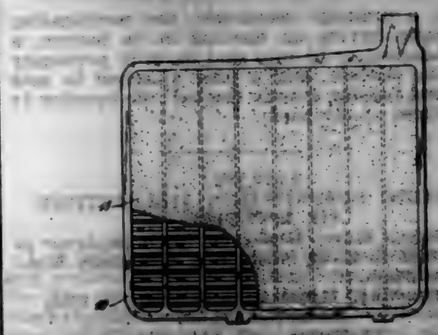
1. In a coin-receiving cabinet, a vertical wall provided with an opening, a door member turnable about a vertical axis disposed substantially midway of its length, said door member being arranged to occupy said opening in flush relationship with the cabinet wall, a coin receiver connected with the inner part of said door member to one side of its pivotal axis of turning movement, spring means tending to maintain said door member in its normal position, stop means for limiting oscillation of said door member in either direction about its vertical axis, and a coin chute disposed within said cabinet in registering relationship with said coin receiver.

2,030,713
SHUTTLE PIN LOCK
Carl P. Park, Manchester, N. H., assignor to U. S. Bobbin & Shuttle Company 1929, Providence, R. I., a corporation of Rhode Island
Application March 30, 1935, Serial No. 13,936
3 Claims. (Cl. 139—209)



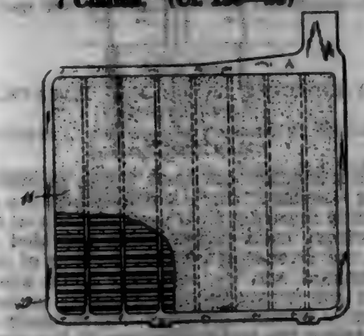
1. The combination in a shuttle; having a bobbin recess, a pivot recess and a spring plate recess; of a spindle having a curved head and an open mouth; a pivot pin which passes transversely into the shuttle and through the pivot recess, said pin having a constricted part which pivotally engages the spindle mouth; and a spring plate positioned in the spring plate recess and in engagement with the spindle head.

2,030,714
ALKALI METAL VAPOR RESISTANT GLASS
Marcello Pirani, Berlin-Wilmersdorf, and Georg Galdien, Berlin-Pankow, Germany, assignors to General Electric Company, a corporation of New York
No Drawing. Original application February 16, 1932, Serial No. 592,127. Divided and this application March 21, 1933, Serial No. 661,924. In Germany February 16, 1931
3 Claims. (Cl. 106—38.1)



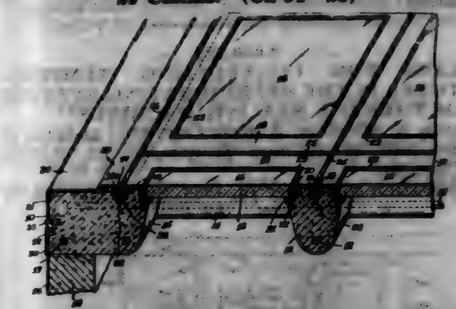
1. A new article of manufacture being a glass resistant to the chemical effects of alkali metal vapor and consisting of alkalies, alkali earths, aluminium oxide, not less than 20% boric oxide and not more than 50% silica and containing not more than 0.1% iron oxide.

2,030,715
GASEOUS ELECTRIC DISCHARGE LAMP DEVICE
Marcello Pirani, Berlin-Wilmersdorf, and Martin Reger, Berlin, Germany, assignors to General Electric Company, a corporation of New York
Application May 8, 1933, Serial No. 669,228
In Germany May 22, 1928
3 Claims. (Cl. 176—122)



1. An electric discharge device comprising a container, electrodes sealed therein a gaseous atmosphere therein and a gas pervious element therein separate from the walls of said container and surrounding said electrodes and the positive column discharge path between said electrodes and including a plurality of baffles whereby the discharge path is caused to deviate from a straight line between said electrodes in a multiplicity of overlapping parallel paths, said baffles having a different coefficient of expansion than the other parts of said gas pervious element, the joints between said baffles and said other parts being mechanical joints.

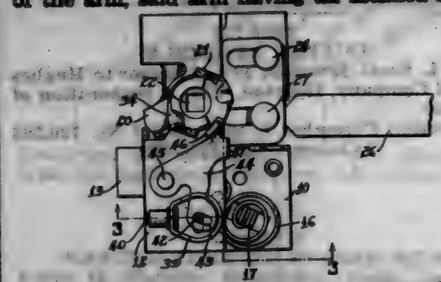
2,030,716
STORAGE BATTERY
Willard L. Reinhardt, Shaker Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Application March 9, 1933, Serial No. 660,116
8 Claims. (Cl. 136—27)



1. The process which comprises adding to a lead compound for plates of storage batteries of the lead-acid type a humic substance and an alkaline earth metal in solution, and a sulphate which causes the precipitation of humic acid and the sulphate of the alkaline earth metal.

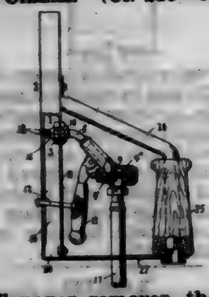
2,030,717
STORAGE BATTERY
Willard L. Reinhardt, Shaker Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Original application March 9, 1933, Serial No. 660,116. Divided and this application September 20, 1933, Serial No. 690,217
7 Claims. (Cl. 136—26)

1. A lead compound for plates of storage batteries of the lead-acid type having distributed therethrough a humic substance and a sulphate of an alkaline earth metal.



2,030,718
SKYLIGHT OR FLOORLIGHT CONSTRUCTION
Joshua M. Richards, Brookline, Mass.
Application December 30, 1933, Serial No. 704,628
29 Claims. (Cl. 94—28)

1. In a skylight or floorlight construction, the combination with a reinforced concrete framework comprising a solid portion and a portion provided with at least one opening, a light transmitting pane for the opening, and a pane-receiving shield anchored in the concrete about the opening spaced from the solid portion so as to leave the concrete adjacent thereto exposed, of means adapted to engage the pane and the shield for covering the exposed concrete.

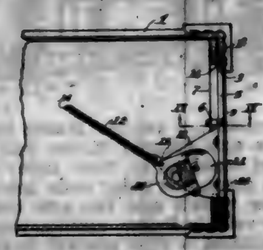


2,030,719
DOORLATCH
Holden W. Rightmyer, Toledo, Ohio, assignor to The American Swiss Company, Toledo, Ohio, a corporation of Ohio
Application March 3, 1934, Serial No. 713,718
3 Claims. (Cl. 70—89)

1. In a door latch, having a case plate and a tensioned latch bolt carried thereby, a roll back for retracting the bolt, and means for dogging the roll back including an arm pivoted between its ends to the plate, one end of the arm having a part to engage and dog the roll back and also having a stop member which lies adjacent to and engages an edge of the plate to limit swinging of the arm, said arm having an inclined slot in

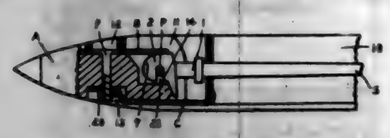
its opposite end, and a key-operated lock mounted on the case plate and having a member extending inwardly therefrom and received in said slot for operating the arm.

2,030,720
WALLPAPER REMOVER
Ethan A. Schaeffer, Jr., Springfield, Ohio
Application February 25, 1935, Serial No. 7,998
6 Claims. (Cl. 216—8)



1. In a wall paper remover, the combination of a pan open at one end, a steam jet carried by said pan and having an axially arranged orifice and a plurality of lateral orifices, and a connection for supplying steam under pressure to said jet.

2,030,721
HYDRAULIC PUNCH
Floyd L. Scott, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a corporation of Texas
Application August 4, 1930, Serial No. 473,169
6 Claims. (Cl. 78—96)

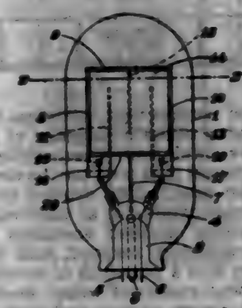


1. A hod to receive a billet from a furnace, means to lower said hod and move it into a predetermined angular position, and arms mounted pivotally at opposed sides of said hod, a yoke on said arms below said hod so as to be engaged

2,030,712
CONCEALED COIN DRAWER
Edwin W. Pace, Chicago, Ill., assignor to Pace Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application February 18, 1935, Serial No. 6,977
3 Claims. (Cl. 232—1)

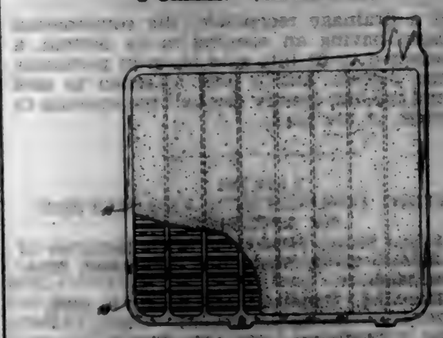
1. In a coin-receiving cabinet, a vertical wall provided with an opening, a door member turnable about a vertical axis disposed substantially midway of its length, said door member being arranged to occupy said opening in flush relationship with the cabinet wall, a coin receiver connected with the inner part of said door member to one side of its pivotal axis of turning movement, spring means tending to maintain said door member in its normal position, stop means for limiting oscillation of said door member in either direction about its vertical axis, and a coin chute disposed within said cabinet in registering relationship with said coin receiver.

2,030,713
SHUTTLE PIN LOCK
Carl P. Park, Manchester, N. H., assignor to U. S. Bobbin & Shuttle Company 1929, Providence, R. I., a corporation of Rhode Island
Application March 26, 1935, Serial No. 11,938
2 Claims. (Cl. 139—209)



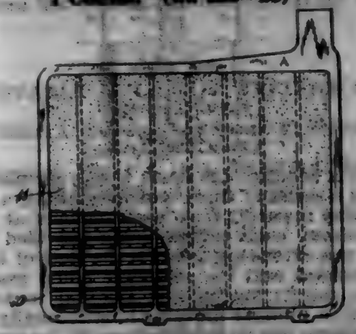
1. The combination in a shuttle; having a bobbin recess, a pivot recess and a spring plate recess; of a spindle having a curved head and an open mouth; a pivot pin which passes transversely into the shuttle and through the pivot recess, said pin having a constricted part which pivotally engages the spindle mouth; and a spring plate positioned in the spring plate recess and in engagement with the spindle head.

2,030,714
ALKALI METAL VAPOR RESISTANT GLASS
Marcelle Piranl, Berlin-Wilmersdorf, and Georg Galdics, Berlin-Pankow, Germany, assignors to General Electric Company, a corporation of New York
No Drawing. Original application February 10, 1933, Serial No. 656,137. Divided and this application March 21, 1933, Serial No. 661,926. In Germany February 15, 1932
2 Claims. (Cl. 106—54.1)



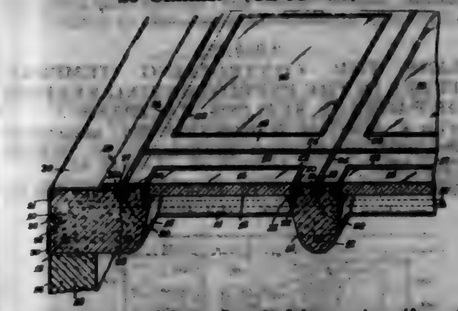
1. A new article of manufacture being a glass resistant to the chemical effects of alkali metal vapor and consisting of alkalies, alkali earths, aluminium oxide, not less than 30% boric oxide and not more than 50% silica and containing not more than 0.1% iron oxide.

2,030,715
GASEOUS ELECTRIC DISCHARGE LAMP DEVICE
Marcello Pirani, Berlin-Wilmersdorf, and Martin Reger, Berlin, Germany, assignors to General Electric Company, a corporation of New York
Application May 2, 1935, Serial No. 19,115
In Germany May 23, 1932
3 Claims. (Cl. 176—122)



1. An electric discharge device comprising a container, electrodes sealed therein a gaseous atmosphere therein and a gas pervious element therein separate from the walls of said container and surrounding said electrodes and the positive column discharge path between said electrodes and including a plurality of baffles whereby the discharge path is caused to deviate from a straight line between said electrodes in a multiplicity of overlapping parallel paths, said baffles having a different coefficient of expansion than the other parts of said gas pervious element, the joints between said baffles and said other parts being mechanical joints.

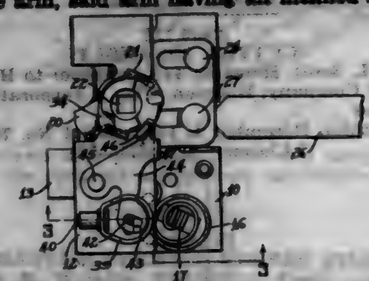
2,030,716
STORAGE BATTERY
Willard L. Reinhardt, Shaker Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Application March 9, 1933, Serial No. 660,116
8 Claims. (Cl. 136—27)



1. The process which comprises adding to a lead compound for plates of storage batteries of the lead-acid type a humic substance and an alkaline earth metal in solution, and a sulphate which causes the precipitation of humic acid and the sulphate of the alkaline earth metal.

2,030,717
STORAGE BATTERY
Willard L. Reinhardt, Shaker Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Original application March 9, 1933, Serial No. 660,116. Divided and this application September 20, 1933, Serial No. 690,217
7 Claims. (Cl. 136—26)

1. A lead compound for plates of storage batteries of the lead-acid type having distributed therethrough a humic substance and a sulphate of an alkaline earth metal.



2,030,718
SKYLIGHT OR FLOORLIGHT CONSTRUCTION
Joshua M. Richards, Brookline, Mass.
Application December 28, 1932, Serial No. 704,620
20 Claims. (Cl. 94—23)

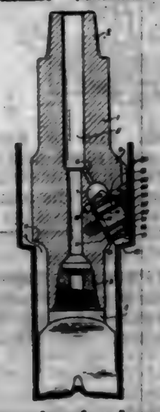
1. In a skylight or floorlight construction, the combination with a reinforced concrete framework comprising a solid portion and a portion provided with at least one opening, a light transmitting pane for the opening, and a pane-receiving shield anchored in the concrete about the opening spaced from the solid portion so as to leave the concrete adjacent thereto exposed, of means adapted to engage the pane and the shield for covering the exposed concrete.

2,030,719
DOOR LATCH
Holden W. Rightmyer, Toledo, Ohio, assignor to The American Swing Company, Toledo, Ohio, a corporation of Ohio
Application March 2, 1934, Serial No. 713,738
2 Claims. (Cl. 70—89)

1. In a door latch, having a case plate and a tensioned latch bolt carried thereby, a roll back for retracting the bolt, and means for dogging the roll back including an arm pivoted between its ends to the plate, one end of the arm having a part to engage and dog the roll back and also having a stop member which lies adjacent to and engages an edge of the plate to limit swinging of the arm, said arm having an inclined slot in its opposite end, and a key-operated lock mounted on the case plate and having a member extending inwardly therefrom and received in said slot for operating the arm.

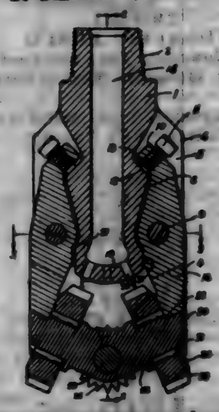
2,030,720
WALLPAPER REMOVER
Ethan A. Schaeffer, Jr., Springfield, Ohio
Application February 25, 1935, Serial No. 7,998
6 Claims. (Cl. 216—3)

1. In a wall paper remover, the combination of a pan open at one end, a steam jet carried by said pan and having an axially arranged orifice and a plurality of lateral orifices, and a connection for supplying steam under pressure to said jet.



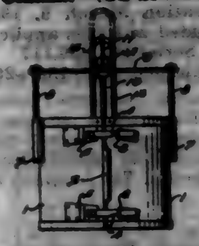
2,030,721
HYDRAULIC PUNCH
Floyd L. Scott, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a corporation of Texas
Application August 4, 1930, Serial No. 473,169
8 Claims. (Cl. 78—96)

1. A hod to receive a billet from a furnace, means to lower said hod and move it into a predetermined angular position, and arms mounted pivotally at opposed sides of said hod, a yoke on said arms below said hod so as to be engaged



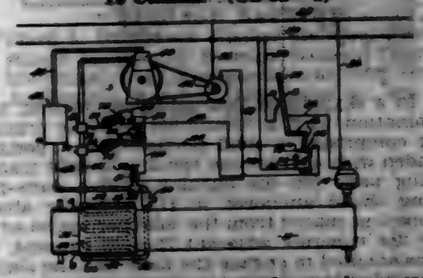
thereby and means automatically operable responsive to the lowering of said hod to clamp said arms upon said billet in said hod.

2,030,722
CUTTER ASSEMBLY
Floyd L. Scott, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a corporation of Texas
Application December 1, 1933, Serial No. 700,503
7 Claims. (Cl. 255—73)



1. A bit having a head, a lower shoulder thereon, an upwardly and inwardly directed cutter slot in said shoulder, a cutter bushing, bearings thereon, a cutter on said bearings, means on said bushing to retain said bearings and cutter thereon, a cutter shaft adapted to be screwed into said head at one end and support said bushing and cutter in said slot and a removable plate in a recess in said slot adjacent said bushing to support the outer end of said shaft.

2,030,723
CUTTER SUPPORTING MEANS FOR WELL DRILLS
Floyd L. Scott and Lewis E. Garfield, Houston, Tex., assignors to Hughes Tool Company, Houston, Tex., a corporation of Texas
Application June 27, 1935, Serial No. 28,598
10 Claims. (Cl. 255—71)

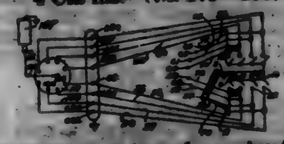


1. A well drill including a head, a diametrical cross shaft at the forward end thereof, a side cutter shaft at right angles to said cross shaft and shaped with its ends inclined upwardly from the center, a row of disc shaped cutters on said cross shaft, a pair of side cutters on said side cutter shaft, and arms pivotally attached to said head to support the ends of said shafts.

2,030,724
CONCRETE TILE MOLD
Fay E. Smith, Fenton, Mich.
Application December 14, 1934, Serial No. 757,442
6 Claims. (Cl. 25—120)

1. In a concrete tile mold, a core member comprising a series of three-sided segments, a tongue extending inwardly from each segment at the top and bottom, each tongue being provided with a slot, a rod extending through the slots of the several tongues and the segments being assembled on the rod in overlapping relation to form an octagon, a plunger movable longitudinally of the rod between the top and bottom of the segments, each segment being provided with a sloping rib extending longitudinally thereof, means for moving the plunger longitudinally of the rod, a series of springs tending to contract the segments and the arrangement being such that as the plunger is moved downwardly in engagement with the sloping ribs the segments are expanded against the tension of the springs and as the plunger is moved upwardly the segments are contracted by the springs and means for locking the plunger from upward movement when in the lowermost position.

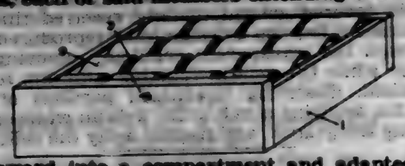
2,030,725
MEANS FOR CONTROLLING TEMPERATURES IN THE REFRIGERATING SYSTEMS OF PACKAGE SEALING MACHINES
Merlin A. Stiedler, Kansas City, Mo., assignor of one-half to William Stoneman, Jr., Kansas City, Mo.
Application November 16, 1934, Serial No. 753,270
15 Claims. (Cl. 62—4)



1. A refrigerating system for package sealing machines comprising evaporation means disposed in heat-exchanging relation with the packages being moved through the machine; means for supplying a refrigerant to the evaporation means; means for conveying refrigerant from the evaporation means; electrically operated means, having an electrical circuit, for operating the sealing machine to convey packages therethrough; a switch to open and close the said circuit; a pair of thermostats each responsive to a predetermined different temperature in connection with the means for conveying the refrigerant from the evaporation means; a switch operable by each thermostat respectively; an electrical circuit for each switch respectively; an electrically operated valve for stopping the supply of refrigerant to the evaporation means when the circuit supplying energy thereto is open; and means for automatically rendering said valve operable by one thermostatically operated switch when the sealing machine operating means is in operation and for automatically rendering said valve operable by the other thermostatically operated switch circuit when the sealing machine operating means is idle.

2,030,726
ADJUSTABLE MOLD FOR BATTERY CELL CONNECTERS
William L. Strock and Edward C. Strock, Los Angeles, Calif.
Application March 6, 1934, Serial No. 714,500
8 Claims. (Cl. 22—136)

1. A mold comprising: stationary and movable mold sections, said stationary section having a channel adjacent the movable section, a die slidable in said channel, a relatively narrow channel formed in the bottom of said first mentioned channel, an ejector adjustable in said narrow channel to correspond to the adjustment of said die in said other channel, and an operating member pivotally held in said narrow channel and engaging said ejector, for reciprocating the ejector relative to the die in an ejecting operation.



2,030,727
TESTING DEVICE FOR INTERNAL COMBUSTION ENGINES
Price G. Turner, Yorkville, N. Y., assignor of one-half to John C. McMurray, Winthrop, Mass.
Application June 23, 1933, Serial No. 677,281
4 Cla'ms. (Cl. 175—183)

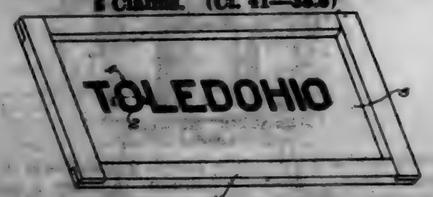
4. A tester for internal combustion engines comprising a supporting base, a plurality of circuit connections leading from the base and adapted to be connected to the spark plugs of the engine, a ground connection, a plurality of switch elements by which each circuit connection can be connected to the ground connection, a swinging arm pivoted to said base, and a neon gas tube carried by said arm and adapted by the swinging movement thereof to be brought into flashing relation to any one of the circuit connections.

2,030,728
FILING DEVICE
Herman M. Uhlig, Cedarburg, Wis.
Application October 8, 1934, Serial No. 747,257
3 Claims. (Cl. 129—14)

1. A filing device consisting of a holding case, having longitudinal and transverse partitions forming compartments, a plurality of elements each having a resilient member attached thereto, and means provided on some of the partitions for receiving and frictionally holding said elements, each of said members extending over and

downward into a compartment and adapted to press the contents against one side thereof.

2,030,729
MANUFACTURE OF RUBBER FILMS
Parke H. Watkins, Naugatuck, Conn., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 10, 1933, Serial No. 675,295
4 Claims. (Cl. 18—58)



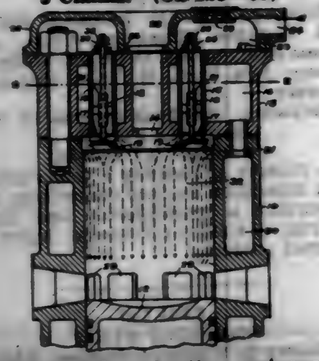
1. The process of forming a removable rubber film on a deposition surface comprising applying to the surface a hypochlorite, and depositing rubber from a rubber-containing liquid on the thus treated surface.

2,030,730
MOLDING STRIP
Walter E. Wilson, Columbus, Ohio
Application May 23, 1935, Serial No. 23,058
3 Claims. (Cl. 311—107)

1. An extruded molding strip of a light weight metal for protecting table or desk edges comprising an elongated metallic body formed to be secured to an adjoining vertical wall of a desk or table, one of the longitudinal edges of the body of the strip terminating in a ledge projecting rearwardly and laterally with respect to the general plane of the strip body to overlie the horizontal upper surface of the associated article of furniture, the front of said strip being provided with a shallow dove-tail groove, and a strip of finishing material arranged to occupy said groove and to conceal from exterior view the major portion of said strip.

2,030,731
PROCESS FOR MAKING PHOTOGRAPHIC STENCIL SCREENS
Earl E. Young, Toledo, Ohio, assignor to The Toledo Porcelain Enamel Products Company, Toledo, Ohio, a corporation of Ohio
Application April 1, 1935, Serial No. 14,669
5 Claims. (Cl. 41—38.6)

1. A process for making photographic stencil screens which includes the steps of applying a



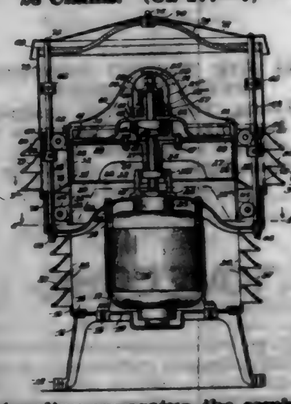
thin sheet of transparent celluloid to the gelatin side of a gelatin-coated tissue, exposing the celluloid covered gelatin to light received through an element bearing a design to be reproduced and through the transparent celluloid, removing the tissue while the gelatin remains adhering to the celluloid, dissolving unexposed portions of the gelatin, applying a web to the gelatin while damp, drying the gelatin, and peeling away the celluloid.

2,030,732

INTERNAL COMBUSTION ENGINE

Karl Angel, Montreal, Quebec, Canada

Application September 26, 1932, Serial No. 634,815
3 Claims. (Cl. 123—65)



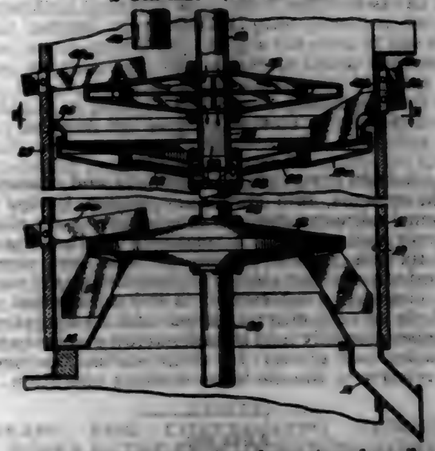
1. In an internal combustion engine, a cylinder forming a combustion chamber having a fuel inlet and exhaust ports, a valve block forming a head for said cylinder, and a pressure air chamber capping said head, a safety valve to said air chamber and communicating with said cylinder through said valve block and automatically scavenging said combustion chamber, valves in the communication passages resiliently suspended and susceptible to said air pressure, and a piston operating in said combustion chamber and adapted to expose the exhaust ports for scavenging, thereby relieving the pressure from under the valves to allow passage of the air under pressure from the air chamber to the combustion chamber.

2,030,733

SIGNALING DEVICE

Merton C. Armstrong, Rochester, N. Y., assignor to The Sterling Siren Fire Alarm Company Inc., Rochester, N. Y., a corporation of New York

Application February 20, 1931, Serial No. 517,177
28 Claims. (Cl. 177—7)



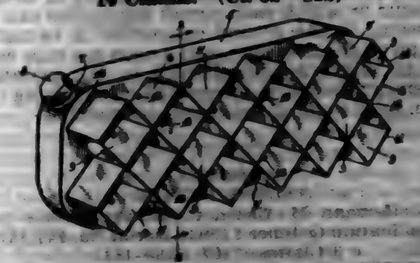
28. In signaling apparatus, the combination of rotor and stator elements, means for supporting said elements for movement one relative to another from a normal inoperative position to cooperative signaling position, said stator element having walls forming a fluid pressure chamber means for establishing communication between said chamber and the rotor element upon operation of the latter whereby the rotor element will serve to discharge fluid to said chamber under pressure sufficient to effect movement of one of said elements to cooperative signaling position relative to the other.

2,030,734

FURNACE CONSTRUCTION

Dudley Baird, Berkeley, Calif., assignor to Nichols Copper Company, New York, N. Y., a corporation of New York

Application June 18, 1932, Serial No. 617,985
2 Claims. (Cl. 34—23)



1. In a furnace of the character described, a hollow rotatable shaft, an annular hollow hearth, hollow spokes communicating with the hollow interior of said hearth, a hollow hub communicating with said spokes, and a web construction within said hub whereby heating fluid conducted through said shaft against said web will be directed through some of said spokes into the hollow interior of said hearth and returned through other spokes into said hub and said shaft.

2,030,735

ICE CUBER

Charles F. Belshaw and William J. La Casse, Duluth, Minn., assignors to The Cocleraler Company, a corporation of Minnesota

Application August 5, 1933, Serial No. 683,732
10 Claims. (Cl. 62—112)

1. An ice cuber adapted to be placed on an ice cake for forming ice cubes and comprising a tank for carrying a fluid heating medium, and a grid arranged beneath the tank to conduct heat from said heating medium to said ice cake.

2,030,736

PROCESS OF PRODUCING DISILANE-RAYON

Rudolph S. Bley, Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application October 22, 1934, Serial No. 749,425
6 Claims. (Cl. 106—40)

1. A spinning solution for the manufacture of soft-lustre products comprising a solution of the group consisting of viscose and cuprammonium cellulose together with an alkyl derivative of disilane having the structure $R.H_2Si.SiH_2R_1$, in which R and R_1 represent an alkyl radical, said derivative being liquid and stable in said spinning solution.

2,030,737

CELLULOSIC SPINNING SOLUTIONS CONTAINING AROMATIC SILICON DERIVATIVES

Rudolph S. Bley, Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application October 22, 1934, Serial No. 749,424
10 Claims. (Cl. 106—40)

1. A spinning solution for the manufacture of soft-lustre products comprising a solution of the group consisting of viscose and cuprammonium cellulose together with a phenyl-silicon derivative, said derivative being stable in said spinning solution.

2,030,738

CELLULOSIC SPINNING SOLUTIONS CONTAINING ALIPHATIC SILICON COMPOUNDS

Rudolph S. Bley, Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application October 22, 1934, Serial No. 749,427
8 Claims. (Cl. 106—40)

1. A spinning solution for the manufacture of soft-lustre products comprising a solution of the group consisting of viscose and cuprammonium cellulose and silico-acetic acid, said acid being stable in said solution.

2,030,739

PROCESS OF PRODUCING SILICON-RAYON

Rudolph S. Bley, Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application October 22, 1934, Serial No. 749,428
8 Claims. (Cl. 106—40)

1. A spinning solution for the manufacture of soft-lustre products comprising a solution of the group consisting of viscose and cuprammonium cellulose and a silicon compound having the structure $R.SiH_3$, in which R represents an alkyl radical, said compound being liquid and stable in said spinning solution.

2,030,740

SOFT-LUSTER RAYON

Rudolph S. Bley, Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application October 25, 1934, Serial No. 749,815
6 Claims. (Cl. 106—40)

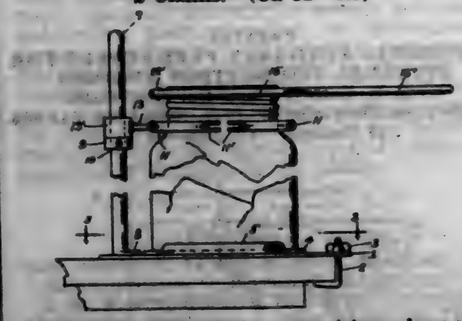
1. A spinning solution for the manufacture of soft-luster, ultra-violet ray-filtering artificial silk comprising a solution of the group consisting of viscose and cuprammonium cellulose and a compound of the group consisting of triphenyl stibine, triphenyl bismuthine, phthalimide and p-aminobenzoic acid.

2,030,741

ARTICLE DISPLAY AND CONVEYING EQUIPMENT

Walter M. Bodine, Kansas City, Mo.

Application March 22, 1935, Serial No. 13,662
5 Claims. (Cl. 211—121)



1. Display and conveying equipment of the character described comprising a pair of opposed, spaced-apart, endless chains disposed in like circumscribing paths; shelves pivotally supported by the chains therebetween; and means for maintaining the shelves in a horizontal plane as they are being carried through their entire path of travel, said shelves being successively directly engaged by yieldable contacting members as they travel through a portion of their path of travel to limit swinging of the shelves about their pivotal connections with the chains to an amount sufficient to allow reversal of the direction of travel of the chain at its point of connection with the respective shelf without tipping that shelf out of a horizontal plane.

2,030,742

SAFETY JAR HOLDER

Emaretto Cantini, Hollidays Cove, W. Va.

Application April 30, 1935, Serial No. 19,095
2 Claims. (Cl. 81—3.3)

1. A jaw holding device comprising a base plate having a resilient member thereon, a post rising from the base plate, a collar slidably arranged on the post, means for holding the collar in adjusted position, a pair of arcuate shaped jaws

pivotally connected together at one end and handles connected to the other ends, a projection extending outwardly of an intermediate part of one jaw and having a hole therein for receiving a portion of the post, whereby the jaws are rotatably supported by the post, the projection resting on the collar.

2,030,743

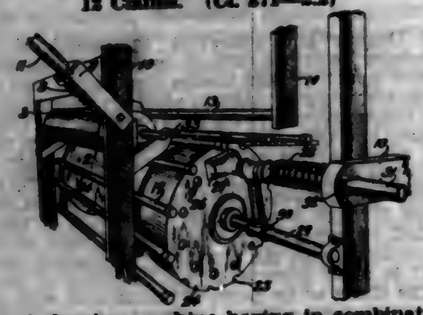
ADHESIVE OR BINDER

Richard P. Carlton, St. Paul, Minn., assignor to Minnesota Mining and Manufacturing Company, St. Paul, Minn., a corporation of Minnesota

No Drawing. Original application December 29, 1923, Serial No. 683,522. Divided and this application May 22, 1925, Serial No. 32,445

12 Claims. (Cl. 134—33)

1. A waterproof binder for sandpaper which includes substantially forty parts of a solution of a cellulosic compound, three parts of resin, and one part of gum camphor and two parts of an oil.



2,030,744

DRAPING MACHINE

Edward H. Clark, Reading, Mass., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey

Application December 9, 1929, Serial No. 412,763

12 Claims. (Cl. 271—2.3)

1. A draping machine having in combination, means for conveying the drapes, means for supplying the material to be draped to the first mentioned means, and means for applying suction at the points where the material contacts against the conveying means to prevent slipping of the material relative to the conveying means during formation of the drape.

2,030,745

AUTOMATIC AUXILIARY FUEL SUPPLY FOR INTERNAL COMBUSTION ENGINES

Irven E. Coffey, Playa Del Rey, Calif.

Application December 6, 1932, Serial No. 645,960

37 Claims. (Cl. 123—127)

1. In a device as described, the combination of an engine having a fuel intake subject to engine suction, an auxiliary valve having means to supply fuel thereto, a connection from the valve to the intake, means acted upon by the suction of the engine tending to close the said valve, a spring means tending to open the valve, and a thermostatic means operable to both open and close the valve in accordance with the temperature, an electrical heating element in the valve between the fuel opening of the valve and the connection to the intake, and electrical connections to energize said heating element.

2,030,746

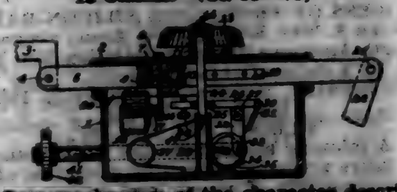
CRINKLED SHEET MATERIAL AND METHOD OF MAKING SAME

James J. Gailliard, Providence, R. I., and Fred O. Thornton, Jr., Jackson Heights, N. Y., assignors, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey

Application August 18, 1934, Serial No. 740,224

12 Claims. (Cl. 154—3)

11. The method of making an elastic sheet material which comprises superposing sheets of rubber-like material with an interposed sheet of elastic fabric, uniting all of said sheets over a plurality of closely spaced small areas while one of said rubber-like sheets and the fabric sheet are under tension and stretched, and releasing the tension to thereby permit the fabric to contract and the unconnected areas of the rubber-like sheets to pucker.



2,030,747

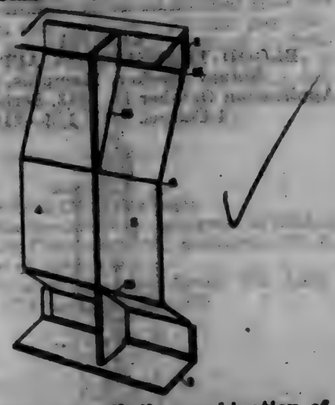
TIMER FOR CONCRETE MIXERS

Ernest C. Garber and Harold E. Bidlemeyer, Waterloo, Iowa, assignors to Construction Machinery Company, Waterloo, Iowa

Application January 23, 1933, Serial No. 653,106

15 Claims. (Cl. 32—73)

1. In a mechanism of the character described, a resiliently controlled reciprocatory bar having a side lug, a reciprocatory standard, resiliently controlled, mounted alongside said bar to cross the path of the lug in a direction at a right angle to the bar, a rock-arm having relatively staggered jaws loosely embracing said standard to grip and move and then release it by steps, said bar being controlled to cause said lug to and-engage and fractionally brake the standard to hold the latter at times when it is released by said jaws, and said lug being adapted to be released from the standard when the latter has passed from its path to permit the resilient control of the bar to propel it across the adjacent end of the standard in unlocking the bar.



2,030,748

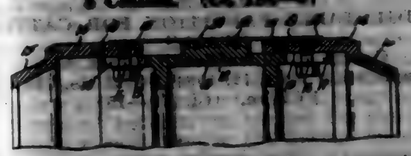
RAILWAY CAR STRUCTURE

Garth G. Gilpin, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a corporation of Delaware

Application August 16, 1934, Serial No. 740,078

24 Claims. (Cl. 105—409)

1. In a railway car wall, the combination of a frame member, and an offset panel, said offset panel comprising a metallic plate having a body portion, spaced apart slits in said plate extending from one edge of the plate, webs formed by bending the plate on lines substantially in alignment with said slits, said webs extending substantially to said edge of the plate with the intermediate portion of the plate between the slits bent in the same direction as the webs and the side edges of said intermediate portion being welded to the sides of the webs, said webs being secured to said frame member.



2,030,749

TIRE BUILDING DRUM

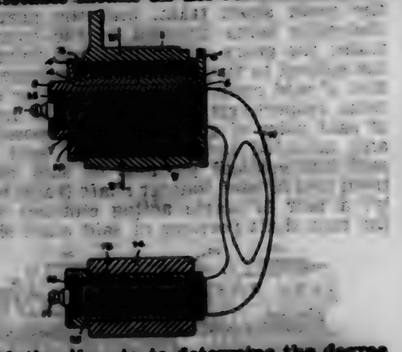
Allen L. Heston, Columbiana, Ohio, assignor to National Rubber Machinery Company, Akron, Ohio, a corporation of Ohio

Application May 15, 1930, Serial No. 452,638

3 Claims. (Cl. 154—9)

1. A collapsible tire building drum comprising sections each including a central member, the periphery of which is reduced at each side thereof, side members formed with reduced bead-receiving seats slidably mounted on the reduced portions of said central member, means for securing said side members in adjusted positions on the central member, and a gap shield of light gauge sheet metal secured to the central member and resting on the side members in all positions of adjustment thereof to cover gaps between the central and side members.

2,030,750



RESILIENT JOINT

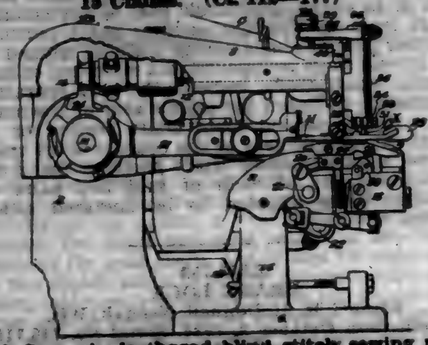
John Wycliffe Leighton, Port Huron, Mich.

Application September 22, 1934, Serial No. 745,040

6 Claims. (Cl. 287—85)

4. In a resilient joint of the type in which a resilient bushing is compressed about a bearing bushing, a bearing bushing, constrictable bushing-compressing means mounted on said bearing bushing and separating the latter from contact with said resilient bushing, means for adjusting said constrictable means on the rotation of said

bushing relative thereto to determine the degree of compression of said resilient bushing, and a member oscillatably mounted in said bearing bushing.



2,030,751

BLIND STITCH SEWING MACHINE

Joseph Mann, Philadelphia, Pa., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo., a corporation of Maine

Application January 17, 1925, Serial No. 2,257

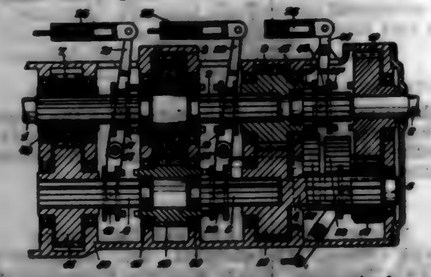
15 Claims. (Cl. 112—177)

1. In a single thread blind stitch sewing machine, the combination with a frame including a standard and a laterally extending arm supported thereby, of a presser foot mounted on said arm and having an opening, a threaded needle mounted on the arm above the foot for reciprocations transversely across the presser foot opening, a ridge forming element for projecting a ridge of fabric upwardly through the opening into needle penetrating position, means for intermittently feeding the fabric to the needle, and a non-threaded loop taker supported on the arm and located above the foot and operating entirely on that side of the ridge forming element opposite the point of needle penetration in the fabric for engaging the needle thread loop and holding the same for re-entrance by the needle.

2,030,752

CHANGE SPEED GEAR

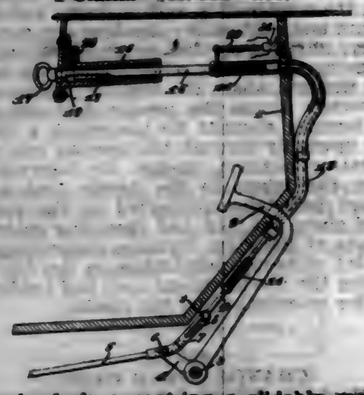
Karl Maybach, Friedrichshafen, Bodensee, Germany, assignor to Maybach-Motorenbau G. m. b. H., Friedrichshafen, Bodensee, Germany



Application November 1, 1934, Serial No. 751,943

In Germany November 1, 1933

2 Claims. (Cl. 74—363)

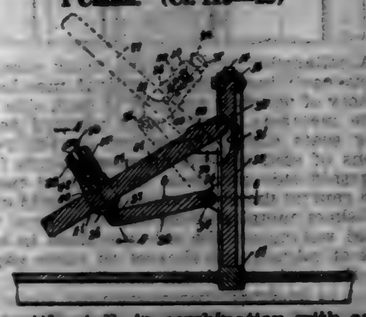


1. A change speed gear comprising: a main shaft train made up of more than two shaft por-

tions; a counter shaft train made up also of more than two portions; three pairs of constantly meshing gears, one gear of each being situated in the main shaft train, and the gear meshing therewith being situated in the counter shaft train; the gears of the first and third pair being splined to the first and an intermediate portion of said main and of said counter shaft portions, respectively; the gears of the middle pair of said pairs of gears being interposed between and mounted independently of said first and said intermediate portions of said main shaft train and of said counter shaft train, respectively; a pair of single acting clutches splined to the first shaft portions of said main shaft train

and said counter shaft train, respectively, and operative alternately to clutch the middle gear of the main train to the first main shaft portion or to clutch the middle gear of the counter shaft train to the first counter shaft portion; another pair of single acting clutches splined to the second shaft portions of said main and of said counter shaft train, respectively, and operative alternately to clutch the middle gear of the main train to the second main shaft portion or to clutch the middle gear of the counter shaft train to the second counter shaft portion; the individual clutches of each of said two pairs of clutches being adapted to be operated alternately.

2,030,753
BRAKE LOCK
Samuel M. McDonnell, Neenah, Wis.
Application October 2, 1934, Serial No. 746,719
1 Claim. (Cl. 188—241)



A brake lock comprising a slidably mounted rack bar, a keeper to be engaged by said rack bar for holding the latter in adjusted positions, a rod including adjustably connected sections and one of said sections being of flexible construction and connected to the rack bar, a flexible housing for supporting the flexible section of said rod, and a limited slidable connection connecting said rod to the brake rigging of the service brake pedal of an automobile whereby said brake rigging may be actuated by the service brake pedal during one position of the rack bar without interference from the latter and permit operation of the brake rigging to apply brakes by other positions of said rack bar.

2,030,754
BLOOD TRANSFUSION APPARATUS
Sidney Blocker, Memphis, Tenn.
Application October 13, 1933, Serial No. 693,261
4 Claims. (Cl. 128—214)

2. In an apparatus of the character described, a passageway adapted to place the veins of the donor and recipient in communication, a plurality of syringes, a shiftable valve joining said syringes and interposed in said passageway to allow blood to be continuously fed from the donor to the recipient, and means controlled by the same valve for introducing a clotting preventative into the veins of the recipient independently of said syringes.

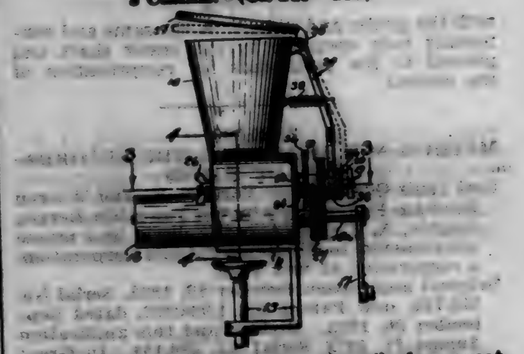
2,030,755
ADJUSTABLE PARTITION FOR CATTLE STALLS
George A. Miller, South Gilboa, N. Y.
Application April 12, 1934, Serial No. 720,290
1 Claim. (Cl. 119—15)

In a cattle stall, in combination with an upright front wall, spaced ears projecting outwardly from said wall, the wall provided with an arcuate recess between said ears, a partition bar pivoted intermediate of its ends between the outer portions of said ears and having one end movable in said arcuate recess, said arcuate recess providing means permitting swinging of the partition bar in a vertical plane only, and also

providing means whereby the partition bar is effectively held from sidewise movement, the partition bar being provided with sockets in its upper face, a sleeve slidably mounted on said partition bar, a latch member carried by said sleeve and cooperating with said sockets selectively, and a brace bar pivotally connecting said sleeve and front wall, the sockets being so located that the sleeve is held in one position with the partition bar and brace bar downwardly inclined to confine an animal in its stall and that the sleeve is held in another position with the partition bar and brace bar upwardly inclined to provide for ingress and egress relatively to the stall.

2,030,756
NECKTIE HOLDER
Edwin S. Mix, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a corporation of New York
Application January 26, 1935, Serial No. 3,850
20 Claims. (Cl. 24—40)

1. A necktie holder comprising a clasp including a bar and a spring pressed clasping lever pivoted thereto, said clasp being of a length less than the width of a tied four in hand necktie for concealment behind the necktie in one of the herein mentioned uses of the necktie holder, a flexible member connected at one end to one end of the bar, a loop member connected to the opposite end of the flexible member for detachable connection with said bar to suspend and display the flexible member entirely across the front of the necktie and of a length to permit small relative movement between the tie and the shirt of the wearer without placing the flexible member under tension or for passage with a portion of the flexible member through the buttonhole of a button fastening of the wearer's shirt for connection with said bar to positively lock the tie to the shirt and permit display of a portion of the flexible member over the front of the necktie and permit of small relative movement between the tie and shirt of the wearer without placing the flexible member under tension.

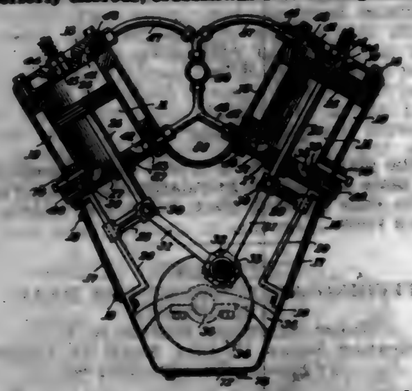


2,030,757
AUTOMOBILE SIGNAL
Walter A. Moffat, Meridian, Miss., assignor to Auto Headlight Signal Company, Meridian, Miss., a corporation of Mississippi
Application December 26, 1934, Serial No. 758,269
1 Claim. (Cl. 40—131)

An indicator for headlights comprising a plate to overlie a portion of a lens of a headlight and having stenciled letters spelling either the word "left" or "right" adapted to permit light rays of the headlight to pass therethrough to render said words readable at night time, and means for securing said plate to the headlight for support-

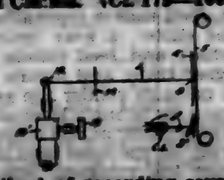
ing the plate in front of a lens of the headlight, said plate having an angularly disposed portion at the edge of said plate below the letters to form a visor.

2,030,758
FEEDING ATTACHMENT FOR MEAT GRINDERS
Walter Naturkacz, Buffalo, N. Y.
Application August 15, 1934, Serial No. 739,986
3 Claims. (Cl. 146—181)



1. In a device of the class described, a meat grinder including a spiral cutter, an operating shaft therefor, feed rollers journalled above and laterally of the cutter, a gear train interposed between the shaft and feed rollers, a two-part clutch in the gear train, and means for separating the clutch parts to render the gear train inactive, said means including a lever pivoted on the upper end of the grinder at the outer side thereof, a ring carried by the lever and overlying the grinder adjacent the marginal edge thereof, a connection between the other end of the lever and one of the clutch parts and a spring connection between the lever and grinder for normally holding the clutch parts in engagement for operation of the gear train.

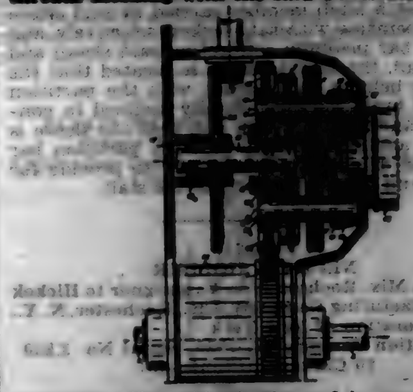
2,030,759
COMPRESSOR UNIT
Bob Neal, Arkadelphia, Ark.
Application January 9, 1934, Serial No. 705,964
1 Claim. (Cl. 230—187)



In a structure of the kind described, a V-shaped cylinder block provided with upwardly divergent cylinders, end heads fitted to said cylinders at opposite ends thereof, each head having valved inlets and outlets, a main outlet lead between the cylinders of the block for a storage tank and having lateral branches to the outlets at the inner sides of said heads, one inlet being located at the center of each head at the outer ends of said cylinders while the remaining inlets are at the outer sides of the heads at the inner ends of said cylinders, a substantially V-shaped crank case fitted to the block beneath the cylinders, a counterbalanced crank shaft journaled in the crank case, pistons operating in the cylinders

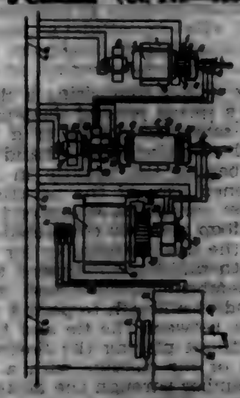
and having rods extended into the crank case, crossbead guides fitted to the sides of said case interiorly thereof, crossheads connecting the rods

with the guides and slidable on the same and connecting rods operated by the crank shaft and pivoted to the crossheads for reciprocation of the pistons.



2,030,760
METHOD AND MEANS FOR THE RECORDATION OF SOUND
Carl Louis Oswald, New York, N. Y., and Warren Dunham Foster, Washington Township, Bergen County, N. J., assignors, by direct and mesne assignments, to Klangfilm Patents Corporation, a corporation of New York
Original application October 29, 1928, Serial No. 315,761, now Patent No. 1,925,252, dated September 26, 1933. Divided and this application August 21, 1933, Serial No. 686,154. In Great Britain October 26, 1929
31 Claims. (Cl. 179—100.3)

1. The method of recording sound which consists in the exposure of photo-sensitive material to light of approximately 4000 Angstrom units varying the light for implanting latent images thereon in accordance with the variation of the sound which is being recorded, and developing said latent images into black and white visible images.



2,030,761
DIFFERENTIAL SPEED CHANGING GEAR
Alexandre Pétroumenko, Alger, Algeria
Application August 18, 1934, Serial No. 739,334
In France October 4, 1933
3 Claims. (Cl. 74—333)

1. In a differential speed-changing gear for automobiles, a driving shaft, two driving axles for the road wheels of the vehicle, a differential means connecting the two driving axles of the road wheels, a sun pinion wheel keyed to the driving shaft, two planet pinions engaging the sun pinion wheel, two shafts on which the planet pinion wheels are mounted, a bush turning freely around the driving shaft and carrying the shafts of the planet pinion wheels, a toothed crown wheel external to the bush and meshing with the differential means for the actuation of the axles of the road wheels, two worm wheels keyed to the shafts on which the planet pinion wheels are mounted, an irreversible worm with two opposite threads meshing with the said worm wheels and

preventing the said wheels, and in consequence the shafts on which they are mounted, from turning in order to make the bush interlocked with the driving shaft and to actuate the road wheels of the vehicle.

2,030,762
ELECTRICAL APPARATUS FOR THE TRANSMISSION OF ANGULAR MOVEMENTS
Giuseppe Massimo Pastarini, Sheffield, England
Application December 11, 1933, Serial No. 702,453
In Great Britain December 23, 1932
5 Claims. (Cl. 172—239)

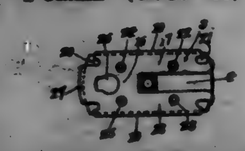
3. Equipment for transmission of a sum of angular movements, comprising transmitting apparatus and receiving apparatus electrically connected together, the transmitting apparatus comprising a plurality of electrical machines, one machine for each angular movement, each unit comprising a rotor with winding and commutator, driven at substantially constant speed, and a stator merely affording a path for the flux created by the rotor ampere turns, the commutator of the machine being associated with two sets of brushes, one set, called primary, carrying direct current at constant voltage, and the other set, called secondary, collecting a polyphase current, the primary set being rotated at an angular speed which is the sum of the angular speed corresponding to the preceding units, and the secondary set being rotated at the angular speed corresponding to the actual unit, and supplying polyphase current to the receiving apparatus.

2,030,763
FILE WIRE
Oliver J. Pickard and Fred Pickard, Philadelphia, Pa.
Application June 28, 1934, Serial No. 732,934
1 Claim. (Cl. 129—44)

A pile wire comprising a substantially U-shaped end portion, and a filler piece secured between the sides of said U-shaped end portion and being recessed at the top to afford a pocket for reception of a primary cutting blade, the end of said filler piece adjoining the extremity of the wire being of increased height to provide a projection at the upper edge of the wire shank next at the inner side and constituting an auxiliary cutting blade, the ends of said pocket being undercut to prevent retraction of said primary blade from the top of the pocket, a section of one side wall of said U-shaped portion being partially severed to provide an integral flexible tongue displaceable from the normal plane to afford access to said pocket for insertion and withdrawal of said primary blade.

2,030,764
COIL WINDING MACHINE
Lora E. Poole, Anderson, Ind., assignor, by mesne assignments to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 14, 1932, Serial No. 598,822
31 Claims. (Cl. 242—9)

1. In a coil winding machine, the combination of a rotatable head for drivingly supporting a form; a rotatable member movable axially toward or away from a form for retaining the latter on the head; a reciprocable wire feeder, said feeder being operative only during movement toward the head; power means for moving the wire feeder away from the head; and a controller operated in response to movement of the form retaining member into retaining position for causing the power means to move the feeder away from the head.

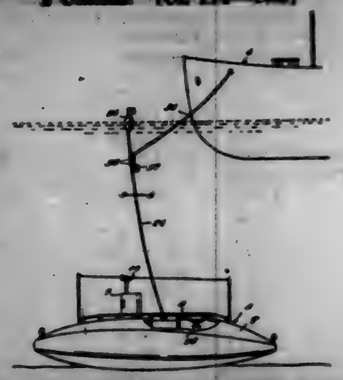


30. In a coil winding machine, the combination of a rotatable winding head; a straight track through which a supply wire is guided to the head; a wire cutting device including a stationary shearing edge in the track and a rotary member having a plurality of equi-angularly spaced shearing edges adapted to cooperate with the stationary shearing edge, the axis of rotation of said member being inclined with respect to the track so that only that shearing edge of the member which presently cooperates with the stationary shearing edge may contact the wire; a ratchet carried by the member; and a linearly movable pawl cooperating with the ratchet for rotating the member so as to bring consecutive shearing edges of the member into cooperation with the stationary shearing edges.

2,030,765
COVER FOR LOOSE LEAF BOOKS
John J. Eichert, Elmsere, N. J., assignor to Beerum & Ponse Company, Brooklyn, N. Y., a corporation of New York
Application June 28, 1934, Serial No. 732,933
7 Claims. (Cl. 129—24)

1. In a loose leaf book having rings, a cover comprising a back, a side cover and a hinge, in combination with a reinforcing strip lying between said side cover and its point of contact with a ring and secured to said side cover, and means securing the hinge to the side cover passing through said reinforcing strip.

2,030,766
SAFETY RAZOR
Frank F. Schlattau, Los Angeles, Calif.
Application October 19, 1933, Serial No. 694,366
1 Claim. (Cl. 30—45)

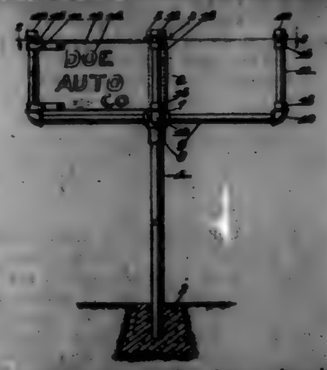


In a safety razor, a handle formed with a socket for a part of its length, said socket of two different diameters, the portion of smallest diameter being threaded, the portion of largest diameter opening at the forward end of the handle, a guard formed with a centrally arranged polygonal shaped opening and lengthwise extending grooves adjacent its side edges, a holder having an integral stem formed of a polygonal shaped forward part having a pair of spaced side faces parallel to the edges of the holder and extending through said opening and into said portion of largest diameter, said stem having a reduced peripherally threaded rear part engaging with the aforesaid threaded socket portion, a reversible blade positioned between the holder and guard, said blade being formed with a lengthwise furcation for inserting it in position from corresponding ends of said holder and guard, said furcation having parallel side walls for contacting said pair of spaced side faces for guiding the blade during its lengthwise insertion between the holder and guard, opening at one end of and having its base disposed between the transverse median and the other end of the blade, said base opposing in close relation another side face of the said forward part, and said holder, guard and blade having coacting intervengaging blade positioning means disposed inwardly adjacent respec-

tively to the side edges of the holder, to the grooves of the guard and to the side edges of the blade.

2,030,767
PROCESS FOR IMPROVING MAGNESIUM ALLOYS, ESPECIALLY IN SHAPED FORMS
Walther Schmidt, Paul Spitaler, and Werner Schultze, Bitterfeld, Germany, assignors, by mesne assignments, to Magnesium Development Corporation, a corporation of Delaware
No Drawing. Application August 11, 1932, Serial No. 628,294. In Germany April 25, 1929
2 Claims. (Cl. 148—31.3)

1. A process for improving the physico-mechanical properties of a magnesium alloy containing about 8.2 per cent of aluminum, which process comprises heating the alloy at 410° C. for 72 hours and then cooling the alloy down to 100° C. in a furnace within about 24 hours, the temperature drop being so arranged that the time allowed for traversing the temperature zone between 300° and 100° C. is at least about 18 hours.



2,030,768
LIFESAVING EQUIPMENT FOR MARINE VESSELS
William R. Shutts, Lewisburg, Pa.
Application February 14, 1935, Serial No. 6,542
2 Claims. (Cl. 114—16.5)

1. A buoy comprising a floatable body, a reel mounted in the body, a frame in the body for supporting the wheel, said frame being provided with a weight at one end, and a rockable flagstaff provided with a flag at the opposite end of the frame.

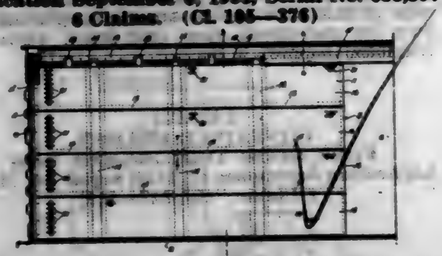
2,030,769
ADVERTISING DEVICE
Henry A. Slattengren, Oak Park, Ill., assignor of one-fifth to Julia C. Barck, Lindstrom, one-fifth to Maria E. Slattengren, Chicago City, one-fifth to Esther O. Alida Davidson, St. Paul, and two-fifths to Hattie J. E. Slattengren, Lindstrom, Minn.
Application February 26, 1935, Serial No. 8,376
2 Claims. (Cl. 40—39)

1. An advertising device comprising a fixed center post, a rotor rotatably mounted on the post, said rotor consisting of a center sleeve structure fitted down over the post, a cap included in said structure and a thrust bearing between the cap and the post, radial arms attached to the sleeve structure, outer posts in upright positions on the radial arms; and vanes carried by the outer posts, each vane having hinge means by which it is turnably carried by the respective post, said vane having sufficient distance between the hinge means and the center post so that the free

end of the vane contacts the sleeve structure during a portion of the rotation of the rotor.

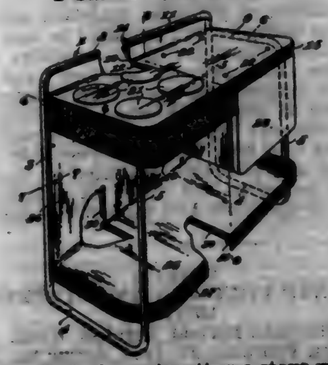
2,030,770
WEED PULLER
Robert L. Smith, Lynchburg, Va., assignor of forty-nine per cent to Edgar M. Shaner, Lynchburg, Va.
Application May 11, 1935, Serial No. 21,617
5 Claims. (Cl. 55—65)

1. A weed extractor comprising a shank having spaced slots formed therein, cutting blades secured to one end of the shank, a sleeve slidably mounted on the shank and normally closing the slots therein, an ejector mounted for reciprocation between the blades, a pin carried by the sleeve and having its intermediate portion anchored to the ejector and its opposite ends projected laterally to form operating pins for moving the ejector to extended position, and a spring disposed within the shank and operatively connected with the ejector for returning the ejector to retracted position.



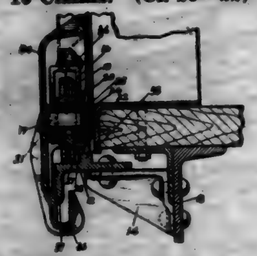
2,030,771
APPARATUS FOR THE EXPANSION OF HYDROCARBONS FOR CRACKING AND DISTILLATION
Carl Still, Recklinghausen, Germany
Application July 27, 1933, Serial No. 682,482
In Germany August 5, 1932
4 Claims. (Cl. 196—104)

4. Apparatus for the expansion of hydrocarbon after heating under pressure for cracking and distillation thereof, comprising in combination an expansion chamber, an inlet and an outlet therefor, a pipe connected to said inlet and supported in said chamber for conducting hydrocarbon under pressure to said chamber, a valve seat on said pipe, a valve member adapted to rest on said seat to close said inlet, a freely slidable shaft rotatably supported in said chamber, a universal



joint connecting said shaft and said valve member, a scraper fixed to said valve member and protruding into said inlet pipe, and driving means connected with said shaft to effect rotation of the shaft, valve member, and scraper whereby said valve seat and inlet pipe are kept free from residual deposits.

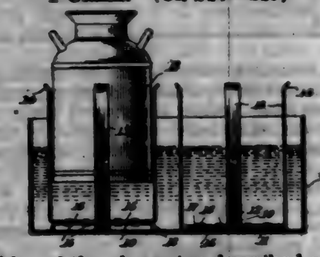
2,030,772
BOX CAR
William L. Thomas, Haverstraw, N. Y., assignor to The New York Central Railroad Company, a corporation of New York
Application September 6, 1933, Serial No. 688,297
6 Claims. (Cl. 105—376)



1. In a box type freight car, the combination of a car body having oppositely disposed walls, each wall comprising spaced outer and inner vertical wall sections, said inner wall sections extending substantially from roof to floor, the inner wall sections of the walls being provided throughout the wall sections with correspondingly arranged vertical and horizontal rows of openings therein, a plurality of supports adapted to be extended between and mounted upon the inner wall sections of said oppositely disposed walls for supporting therefrom horizontally arranged vertical load carrying shelves and vertically arranged load carrying partitions or load displacement preventing abutments at different points in horizontally and vertically spaced relationship to each other on said walls, said supports having engaging elements interchangeably engageable with the openings in the inner wall sections to mount the individual supports at different points in horizontally or vertically spaced relationship to each other on the opposed walls, and reinforcing and bracing means in the spaces between the outer and inner wall sections of the respective walls rigidly uniting the inner and outer wall sections of each wall and sustaining the inner wall sections against distortion or collapse under the strains of the load weights supported by the mounted supports therefrom.

2,030,773
METHOD OF CONSTRUCTING STOVES AND RANGES
Jacob Teller, New Rochelle, N. Y., assignor to Teller Stove Designing Corporation, New York, N. Y., a corporation of New York
Application September 22, 1933, Serial No. 690,698
1 Claim. (Cl. 29—148)

The method of constructing a stove which consists in bending a continuous metallic strip or rod to provide a horizontal rear member and perpendicular rear parallel supporting vertical members, then bending the lower portion of said rear parallel members forwardly to provide supporting feet, then bending the extremities of said supporting feet members first upwardly and then rearwardly to provide respectively front supporting members parallel with the back vertical supporting members, and horizontal cooking top supporting members, then securing a cooking top on its supporting members, and a lower horizontal shelf portion and an upwardly bent rear portion to said rear and front vertical members.



2,030,774
DOOR CONSTRUCTION
George R. Treptow, Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application August 15, 1934, Serial No. 739,893
10 Claims. (Cl. 20—22)

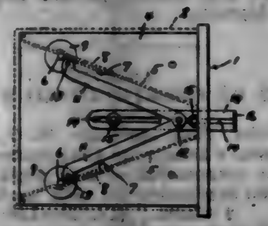
1. In a railway freight car having a door opening in a side thereof, a track secured to said car adjacent to the lower horizontal margin of said opening, a slidable door supported upon said track for closing said opening, means at least co-extensive with said margin of the door opening disposed vertically between said track and the lower edge of said door for continuously

and frictionally supporting said door in the lowered and closed position thereof, thereby preventing cinders, dust and the like from passing below and across said door from the outside thereof and into said car through the door opening, said means being narrower than the lower edge of said door and means for supporting said door for movement upon said track when said frictional support is broken.

2,030,775
CONTAINER HOLDER
Frank Jerome Twiss, Swanton, Ohio
Application September 17, 1934, Serial No. 744,469
1 Claim. (Cl. 248—149)

A holder of the character described comprising a pair of crossed pivotally connected members, interfitted raised portions about the pivotal connection of said members and coacting to frictionally hold the same when swung in parallel relation to each other or at right angles to one another, pairs of arms having inturned lower ends overlapping the said members on opposite sides of the pivotal connection thereof, rivets fixed in the lower inturned ends of said arms and slidably connected with the members for the spreading apart and the bringing together of the said arms with relation to their pairs and downwardly curled ends on the uppermost member for steadying the members when in crossed relation to each other and at rest.

2,030,776
FOLDING GRANDSTAND
Forrest C. Vance, Champaign, Ill.
Application July 2, 1935, Serial No. 29,556
16 Claims. (Cl. 189—1)

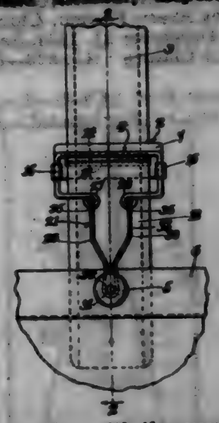


1. In a foldable grandstand opposed sets of vertical uprights for seat members one set being fixed, another set being movable to a position to an angle to said fixed set and the others of said sets being vertically movable relative to the fixed set, carriers for a foot-rest member connecting the said another set to one of the sets of the said other sets, a set of links for pivotally connecting the said others of said sets together, a lower set of combined bracing and supporting elements pivotally connecting one of the sets of the said other sets to said fixed set, a set of upper combined bracing and supporting elements pivotally connecting another of the sets of the said other sets to said fixed set, means in connection with said upper and lower sets of elements acting to maintain the grandstand in extended position, foot-rest member supporting means pivotally connected to a set of the said other sets and adapted to be supported by said lower set of elements when the grandstand is extended, and foot-rest member supporting means pivotally connected to said fixed set and adapted to be supported by said upper elements when the grandstand is extended.

2,030,777
METHOD OF DRILLING WELLS
Harold L. Woods, Monroe, La.
No Drawing. Application June 6, 1934, Serial No. 729,343
6 Claims. (Cl. 255—1)

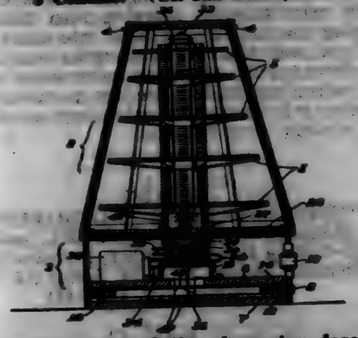
1. In well drilling operations, the method of opening the pores of porous producing formations, which comprises removing the mud circulating fluid upon reaching said formation, introducing an acid solution into the well and conducting the drilling operation in the producing formation in the presence of said acid solution.

2,030,778
CAMERA
Robert B. Armstrong, Rossdale, Ind.
Application January 10, 1935, Serial No. 1,251
2 Claims. (Cl. 95—31)



1. A camera of the class described comprising, a case, an exposure box mounted in said case, a pair of shafts journaled in the exposure box adjacent the exposure area, shutters fixed on the shafts for varying the size of the exposure area, disks fixed on the shafts, a bar slidably mounted on the exposure box, and links pivotally connected, at one end, to an intermediate portion of the bar and pivotally connected at their other ends off center to the disks for actuating the shutters to operative and inoperative position.

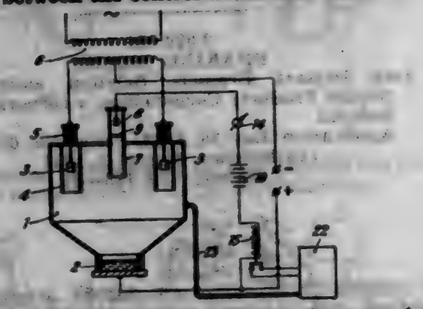
2,030,779
COMBINED COUPLING AND SUSPENSION DEVICE
Sherman Belveal, Delphos, Kans.
Application February 27, 1934, Serial No. 713,192
1 Claim. (Cl. 24—73)



In a combined coupling, adjusting and suspension device, a combined pressure applying and coupling means consisting of an upper skeleton member and a lower skeleton member, said upper member being of greater width and of less length than said lower member, said upper member being formed with an opening and the central portion of its bottom with a passageway leading to said opening and depending eyes extending in opposite lateral directions from the sides of said opening and bordering said passageway, said lower member being open at its upper end and having a contracted lower portion, the upper end of the sides of said lower member being in the form of

outwardly directed eyes depending from the upper terminus of said member, disposed at right

angles to and coacting with the eyes of the upper member for loosely connecting said members together.

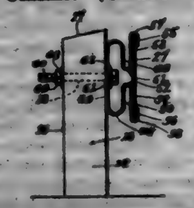


2,030,780
REFRIGERATING DISPLAY CABINET
Ralph N. Bicknell, Bangor, Maine
Application February 23, 1935, Serial No. 7,760
5 Claims. (Cl. 312—99.5)

4. In a show case of the character described, the combination of a casing having transparent portions, a display structure in said casing, means supporting said structure for rotation relatively to said casing, power driven mechanism for revolving said structure, and a mechanical refrigerating system revolving with said structure and serving to cool the goods supported on it, said display structure comprising shelves mounted one above another to rotate about a common upright axis and in which refrigerating coils forming part of said refrigerating system are spaced along said shelves, the power unit for said refrigerating system being contained in a compartment separate from that in which the display structure is mounted.

2,030,781
ARRANGEMENT FOR SUPERVISING THE VACUUM, I. E., THE GAS OR VAPOR PRESSURE, IN VACUUM DISCHARGE APPARATUS
Walter Dällenbach, Berlin-Charlottenburg, Germany
Application July 8, 1935, Serial No. 30,136
In Germany July 9, 1934
10 Claims. (Cl. 175—363)

1. In an arrangement for supervising the vacuum in vacuum discharge apparatus, a main anode, a cathode, means for effecting a principal discharge between the main anode and the cathode, a control anode, a screen arranged ahead of the control anode and partitioning the chamber of the control anode from the interior of the apparatus, means for effecting an auxiliary discharge between the control anode and the cath-



ode at current intensities at which the space in the chamber of the control anode becomes poor in ions, and the current intensity in the auxiliary discharge tends to assume a saturation value which is a function of the vacuum in the apparatus, a circuit connected to the control anode, and means in the circuit for regulating the vacuum in the apparatus.

2,030,782
GUARD DEVICE
John P. Dennebaum, Scranton, Pa.
Application June 12, 1935, Serial No. 26,231
12 Claims. (Cl. 256—13.1)

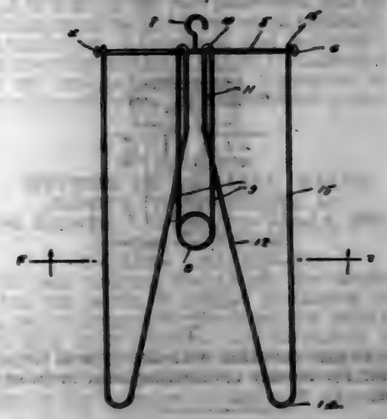
1. In a guard device, a resilient element adapted to have its outer portion abut the inner face of a guard rail, means for anchoring said element directly against and in lateral suspended relation to an upstanding support, a coupling element adapted to abut the outer face of the guard rail, said elements having coacting interengaging parts at their upper ends for quickly detachably connecting them together to bear against the faces of the guard rail, and means carried by and coacting with said elements independently of the guard rail for clamping said elements and rail together to resiliently suspend the latter.

2,030,783
GUARD DEVICE
John P. Dennebaum, Scranton, Pa.
Application September 5, 1935, Serial No. 39,381
9 Claims. (Cl. 256—13.1)

1. In a guard device, an extendible and contractible open front and closed rear guard rail clamping and suspension element having oppo-

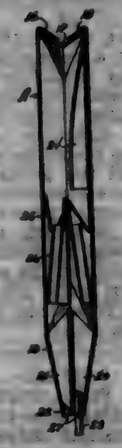
sitely disposed superposed spaced clamping jaws at its front for clamping the rail against said element, said element having parts coacting with said jaws to provide upper and lower oppositely disposed spaced aligning channels for receiving respectively the top and bottom of the rail.

2,030,754
BRAKING MEANS
Jean Dessart, Brussels, Belgium, assignor to Bendix Products Corporation, a corporation of Indiana
Application July 30, 1932, Serial No. 626,630
In Belgium August 1, 1931
2 Claims. (Cl. 188—3)



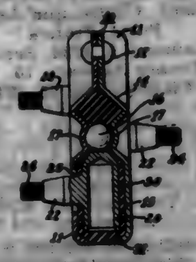
1. In a braking means for controlling the brakes of a vehicle being towed from a towing vehicle, comprising a reservoir on a towed vehicle, a power cylinder on a towed vehicle, a distributor controlling communication between the reservoir and power cylinder, a lever for operating the distributor, a second lever for actuating the brakes, the first mentioned lever being pivotally supported by the second lever and having limited free movement relative thereto, an auxiliary cylinder, a piston in said cylinder connected to said first mentioned lever, a spring in the auxiliary cylinder for operating the piston in one direction, a suction pipe communicating with said cylinder, the suction in said pipe operating on the piston in the auxiliary cylinder in opposition to the spring therein, and a pipe connection between the suction pipe and the reservoir.

2,030,785
ARTIFICIAL HAND
David W. Derrance, San Jose, Calif.
Application April 16, 1935, Serial No. 16,684
1 Claim. (Cl. 3—12)



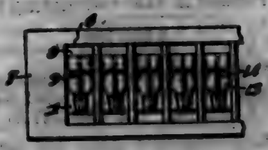
In an artificial hand of the kind described, relatively movable fingers, curved tips on said fingers and disposed at an acute angle thereto, shoulders formed on the inner faces of the tips and interfitted with each other, pincer jaws extended from the fingers at right angles thereto at the point of merger of said fingers and tips, a hook extending from one of the pincer jaws and lying in the plane thereof and projected at right angles thereto, a ball bearing equipped pivot connecting the fingers for swinging movement relative to each other, shoulders formed on the fingers close to the said pivot, tensioning means encircling the fingers and abutting the said shoulders, the fingers at the shoulders being provided with opposed confronting seating notches, and forks on said fingers in opposite relation to each other next to the shoulders.

2,030,786
PANTS HANGER
James Avery French, Chicago, Ill.
Application December 21, 1934, Serial No. 758,571
2 Claims. (Cl. 223—63)



1. A device of the class described comprising a rod having heads on the ends thereof, a hook extending from the central portion of the rod, and a strand of resilient material curved intermediate its ends so as to provide a coil from which extends arms merging into bights overhanging the rod and merging into arms depending from said bights and merging into obliquely and downwardly diverging extensions which in turn merge into bights, the last mentioned bights merging into upwardly extending arms having eyes slidable over the rod.

2,030,787
POWDER PACKAGE AND DISPENSER
John Edgar Garnet, Allentown, Pa., assignor of one-half to David Williamer, Pottstown, Pa.
Application August 14, 1934, Serial No. 739,775
3 Claims. (Cl. 43—146)



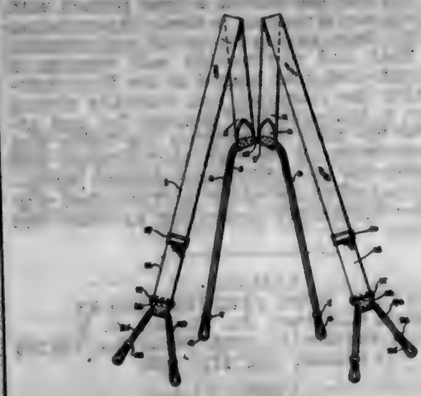
1. An article of the character described comprising a body having a bellows formation at its bottom and sides, outwardly tapered spouts formed from said body at one end thereof and one operating as a dispensing tip and the other as a breathing tip, a check valve within the latter tip, a spring holder interiorly of the body, and a bellows spring within said holder.

2,030,788
RESILIENT UNIVERSAL JOINT
Harvey D. Geyer, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 15, 1933, Serial No. 689,641
8 Claims. (Cl. 64—14)

1. A resilient universal joint comprising: four trunnions lying substantially in a plane and arranged radially 90 degrees apart, each of said trunnions having a lateral projection rigid therewith, two of said projections on aligned trunnions projecting from one side of said plane and the other two projections projecting from the opposite side of said plane, a metal housing encasing said four trunnions in spaced relation therewith and having holes in each opposed side thereof through which said projections project without normally contacting said housing, a central metal ball adapted to bear upon the inner ends of said four trunnions, and resilient non-metallic material separating said trunnions and housing.

2,030,789
KEYBOARD CAM
Frederick D. Harris, Miami, Fla.
Application February 21, 1935, Serial No. 7,853
3 Claims. (Cl. 200—6)

3. A keyboard cam arm bearing comprising an elongated bearing extension having its side faces tapered inwardly from the top to present a blunt wedge shape in end elevation, said bearing extension being provided with a bearing recess extending longitudinally in the middle portion thereof and opening through the tapered faces, and an antifriction roller revolubly mounted in the recess and having its sides extending through the openings of the tapered faces, said roller being of a diameter corresponding substantially to the widest portion of the bearing extension.

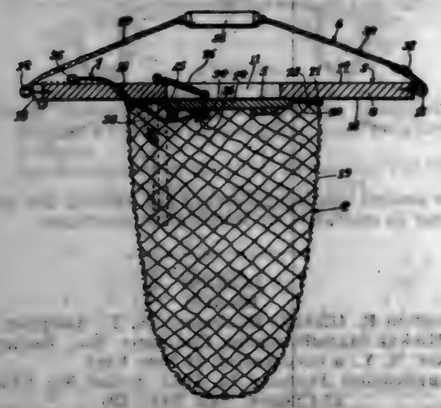


2,030,790
EAR MUFF
Emil W. Hermann, Kenmore, N. Y.
Application March 12, 1935, Serial No. 10,719
3 Claims. (Cl. 2—209)

1. An ear muff comprising a covering for the ear, a frame for the covering, trunnions included in said frame, means to be detachably secured to a garment of the user and having the trunnions mounted therein for pivotal movement, means formed on the trunnions, and means arranged in the first mentioned means for engagement with

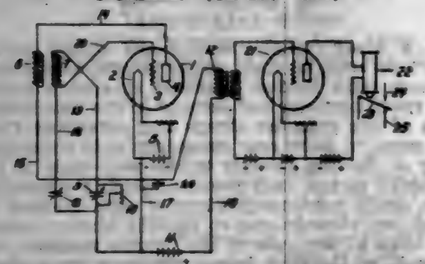
the second mentioned means for holding the covering in operative or inoperative positions.

2,030,791
BRACE
Stephen R. Hickok, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a corporation of New York
Application January 14, 1935, Serial No. 1,740
12 Claims. (Cl. 241—19)



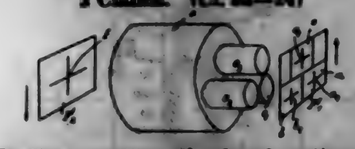
1. A brace comprising shoulder straps spaced apart throughout their entire length, and a continuous light flexible member extending across the space between and secured to the rear terminals of the shoulder straps and extending from the same to form rear suspender ends connected only at the top directly to the rear ends of the shoulder straps, said flexible member consisting of a single continuous piece of cord doubled to form two strands and to provide button engaging loops at the ends of the flexible member, the strands of the cord being contiguous throughout the entire length of the member between the said button engaging loops.

2,030,792
WATER-MISCIBLE VITAMIN PREPARATIONS CONTAINING VITAMIN D
Charles W. Hooper, Sharon, Conn., assignor to Winthrop Chemical Company, Inc., New York, N. Y., a corporation of New York
No Drawing. Application December 4, 1935, Serial No. 52,827. In Canada February 15, 1935
10 Claims. (Cl. 167—81)



1. A vitamin D stable water-miscible vitamin preparation containing an antirachitic vitamin D dissolved in a solvent selected from the group consisting of the propanediols, 1,2-butanediols 1,2-butanediol, 2,3-butanediol, 1,4-butanediol and 2-methyl-1,2-propanediol.

2,030,782
FISH BAG OR HOLDER
Otto Horn, Ionia, Mich.
Application May 3, 1935, Serial No. 19,665
8 Claims. (Cl. 43—55)

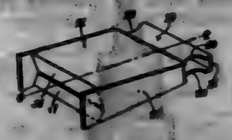


1. A fish bag comprising a float formed with an opening and a channel, a mesh-like container of bag-like form having its mouth end attached to the float and surrounding said opening, a spring controlled door hinged to the float shiftable within the container and normally closing the door, a latchable pull member for and attached to the door for opening the latter and extending outwardly through said channel, and a combined tow line and handle element permanently attached at one end to and provided with means for detachably connecting its other end to the float.

2,030,794
VACUUM TUBE PERIODIC RELAY
Gilbert E. Barton, Jr., Hewlett, N. Y.
Application October 26, 1934, Serial No. 750,248
5 Claims. (Cl. 175—320)

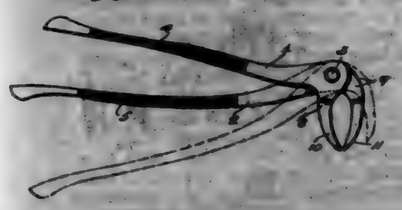
1. A system for producing a relatively low frequency variation of the average current in the primary winding of a transformer comprising a thermionic tube having a cathode, an anode and a control electrode, a source of potential connected so as to energize said cathode, a source of anode potential, an inductance coil, means connecting said source of anode potential, the primary winding of said transformer and the inductance coil in series between the cathode and the anode of said tube, a second inductance coil closely coupled to said first mentioned inductance coil, a condenser of relatively small capacity, a condenser of relatively large capacity shunted by a resistance of relatively large also, means connecting the condenser of relatively small capacity between the control electrode and the cathode of said tube, means connecting one of the ends of said second inductance coil to the control electrode, and means connecting the other end of said second inductance coil to the cathode of said tube, said last means including the combination of relatively large capacity shunted by said resistance of relatively large size whereby the potentials induced in the secondary of said transformer are of relatively low frequency.

2,030,795
COLOR CINEMATOGRAPHY
Victor Hudelay, Cloby, and Jean Lagrave, Paris, France
Application January 8, 1934, Serial No. 705,600
In France January 10, 1933
3 Claims. (Cl. 88—24)



1. In the recording of colored motion pictures on a lenticular film employing the intermediate steps of recording three individual partial trichrome images on an intermediate film and transferring and superposing said three images in exact registry on a single frame of said lenticular film notwithstanding shrinkage of said intermediate film, and employing a single front lens in the original taking ahead of three color-selecting objectives, and employing in transfer three adjustably positioned selecting objectives, a principal objective, and a collimating lens comprising a crossed-line figure formed therein, the method of securing exact registry of said three partial images on a single frame of said lenticular film which consists in exposing a crossed-line figure in the focal plane of said single front lens during the original taking of a preliminary frame on said intermediate film, viewing before transfer in said collimating lens the three crossed-line figures formed on said partial images on said intermediate film, and adjusting the positions of said three selecting objectives employed in transfer until said three crossed-line figures formed on said partial images coincide with said crossed-line figure formed in said collimating lens.

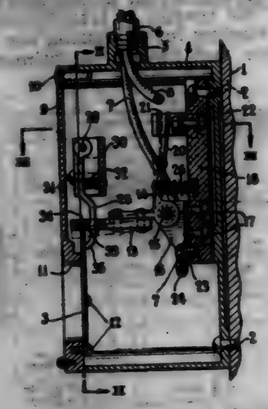
2,030,796
SCOOTER
Earl P. Kanzenbier, Youngstown, Ohio
Application May 23, 1934, Serial No. 725,838
5 Claims. (Cl. 280—87.5)



1. In combination with a scooter having a wheeled main frame and having a wheeled steering frame connected with the main frame, a rocker arm carried by said main frame; a lever loosely pivoted intermediate its ends on said arm, eccentric means connected with said lever and operated by the rear wheel, and an animal-like figure carried by the lever whereby when the vehicle is moved the figure will be given a compound motion resembling an animal in the act of running.

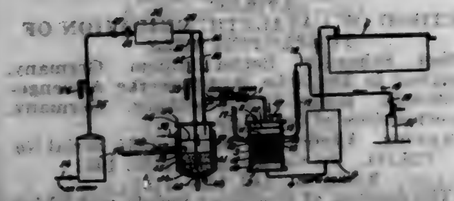
2,030,797
MATCH BOX
George R. Knauth, Reno, Nev.
Application June 10, 1935, Serial No. 25,963
6 Claims. (Cl. 206—33.4)

1. A match box comprising a container portion for the matches open at its sides and having an outer end wall, a closure portion encompassing said container portion formed with closed sides open at its outer end, compressible and extendible hinged means at the inner ends of said portions for coupling them together and providing when compressed for the partly extending of the container portion from the outer end of the closure portion for disposing a match in position to be extracted, said hinge means forming the inner end walls of said portions and when extended retaining the container portion closed, and a foldable counting member secured to said means exteriorly of the closure portion and bodily moving with said means.



2,030,798
DENTAL FORCEPS
George C. Krajicki, Philadelphia, Pa.
Application February 12, 1934, Serial No. 710,911
1 Claim. (Cl. 32—62)

Dental forceps, comprising a pair of pivotally connected members, formed at one end to provide handles and at the other end to provide gripping jaws, and having their pivot aligned with said handles and in the common plane thereof, said jaws being bent beyond the pivot so as to extend laterally from the said common plane of the handles, and beaks extending from the lateral portions of the jaws at right angles to the handles and lying in a plane parallel to the plane of the handles, said beaks being arranged to operate in a direction parallel to the longitudinal axis of the instrument and perpendicular to the direction of operation of the handles.

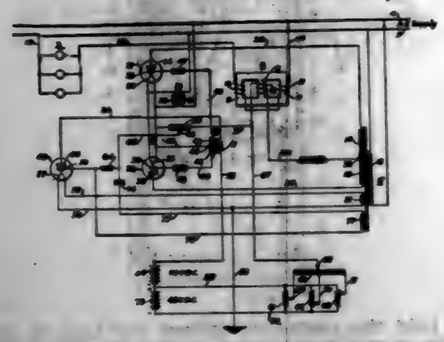


2,030,799
EMERGENCY CIRCUIT CONTROLLER
Robert J. Parsons, Schenectady, N. Y., assignor to Consolidated Car-Heating Company, Inc., Albany, N. Y., a corporation of New York
Application May 9, 1934, Serial No. 724,715
9 Claims. (Cl. 246—122)

1. In an emergency circuit controller, in combination: a biased circuit controller formed with an arm whereby the controller may be moved and held against its bias; walls forming an enclosed space, one of said walls provided with an opening; a frangible sheet covering said opening and extending into the path of said arm whereby when the frangible sheet is in place the arm is held so as to hold the controller against its bias and whereby when the frangible sheet is destroyed the controller assumes the biased position; and a member adapted to be set manually

to hold the controller against the bias, in the absence of a frangible sheet, said member being automatically rendered inoperative with relation to said controller upon replacement of a frangible sheet.

2,030,800
METHOD OF VAPOR PHASE OXIDATION
Rowen Riegler, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a corporation of New York
Application March 28, 1929, Serial No. 350,524
7 Claims. (Cl. 260—123)



1. In the vaper-phase catalytic partial oxidation of an organic compound in which a gaseous reaction mixture containing the organic compound in the vapor phase and free oxygen in a predetermined proportion is passed in contact with a heated catalyst, the improvement in the method of controlling the proportion of organic compound to free oxygen in the gaseous reaction mixture which comprises saturating a gas containing free oxygen with the vaper of said organic compound at a known temperature, and admixing said saturated gas with an amount of gas containing free oxygen adapted to reduce the proportion of organic compound to free oxygen to said predetermined value.

2,030,801
REMOTE CONTROL FOR THEATER LIGHTS
Robert D. Ross, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Application May 7, 1930, Serial No. 450,584
9 Claims. (Cl. 171—119)

1. Means for controlling current in an electrical circuit including, a reactor having a control winding, a source of alternating current, a source of direct current, a three-electrode valve

having its hot cathode energized from the alternating current source, a three-electrode grid-glow valve having its input circuit energized from the alternating current source and having its output circuit connected to energize the control winding of the reactor, a transformer having a secondary winding for energizing the grid of the second valve and having its primary winding

connected in the output circuit of the first valve and to the direct current source, means for displacing the phase relation of the potential impressed on the second valve, an adjustable means for regulating the break down potential of the grid-glow valve, and means for impressing variable potential values upon the grid of the first valve for controlling the current output of the grid-glow valve and the said reactor.

2,030,802

METHOD OF CATALYTIC OXIDATION OF TURPENTINE OILS

Walther Schrauth, Berlin-Dahlem, Germany, assignor to Deutsche Hydrierwerke Aktiengesellschaft, Berlin-Charlottenburg, Germany, a corporation of Germany

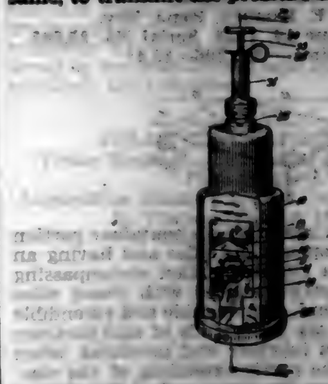
No Drawing. Application May 18, 1934, Serial No. 726,201. In Germany May 29, 1933

9 Claims. (Cl. 260—116)

1. The method of producing maleic acid which comprises mixing turpentine oil vapor with air in excess of that required for the re-action and contacting the mixture with an oxidising catalyst selected from the group consisting of the oxides of vanadium, molybdenum, tungsten, uranium, manganese, and tin having acid character and the metal salts of the acids of said oxides to oxidise the turpentine oil to maleic acid.

9. The method of producing maleic acid which comprises reacting turpentine oil in the vapor phase with oxygen at a temperature of 250 to 500° C. in the presence of a catalyst comprising a metal salt of vanadic acid.

2,030,803



COMPRESSING DEVICE

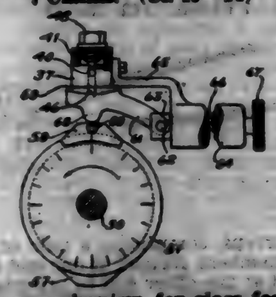
Robert Temple, Jr., Denver, Colo., assignor to Robert Temple, Inc., Denver, Colo.

Application August 18, 1931, Serial No. 557,857

21 Claims. (Cl. 140—113)

1. A press comprising a frame having complemental die elements shaped to receive a piece of work therebetween, one of said elements being movable relative to the other element, means in said frame to receive an explosive charge, means to detonate said charge, and means, comprising a piston normally separated from the movable die-element and adapted to engage the same, to transmit the pressure of expansive force

resulting from the detonation of the charge to the movable die element.



2,030,804

TIMING MECHANISM FOR GLASS FEEDERS

Oliver M. Tucker and William A. Reeves, Columbus, Ohio, assignors to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware

Original application October 24, 1913, Serial No. 797,067. Divided and this application November 17, 1926, Serial No. 148,985

7 Claims. (Cl. 65—14)

1. Timing mechanism for glass feeding apparatus or the like, comprising a rotary cam disk, a cam element carried by said disk and adjustable circumferentially thereon, a valve-actuating member pivotally mounted at one of its ends and adapted to be rocked upon its pivotal axis by said cam element, and means for adjusting the pivot of said valve-actuating member to change the position of said valve-actuating member with respect to the path of said cam element, and for thereby changing the time, in the cycle of rotation of said cam element, at which said cam element engages and moves said valve-actuating member.

2,030,805

GASEOUS ELECTRIC DISCHARGE LAMP

Kurt Wiegand, Berlin-Neu-Tempelhof, Germany, assignor to General Electric Company, a corporation of New York

Application March 28, 1935, Serial No. 12,935

In Germany March 28, 1934

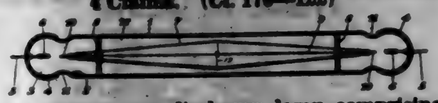
3 Claims. (Cl. 176—124)

1. A lamp unit comprising in combination a gaseous electric discharge lamp comprising a container, electrodes sealed therein, a gaseous atmosphere therein and a phosphorescent material

associated with said container, two of said electrodes being cold electrodes, another of said electrodes being a thermionic electrode, said cold electrodes being mounted on opposite sides of and at equal distances from said thermionic electrode, the rays emitted by said gaseous atmosphere, when excited by the passage of a dis-

charge between said electrodes, causing said phosphorescent material to emit light and an alternating current source for said lamp, said current source being a transformer, said thermionic electrode being connected to the mid-point of said transformer and said cold electrodes being connected to opposite ends of said transformer.

2,030,906



GASEOUS ELECTRIC DISCHARGE DEVICE

Kurt Wiegand, Berlin-Neu-Tempelhof, Germany, assignor to General Electric Company, a corporation of New York

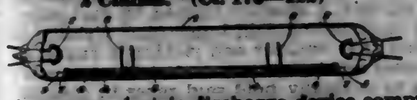
Application March 25, 1935, Serial No. 12,987

In Germany March 29, 1934

4 Claims. (Cl. 176—122)

1. A gaseous arc discharge lamp comprising a tubular container, electrodes sealed therein, a gaseous atmosphere therein comprising a metal vapor and a closed tube in said container, a high electrical resistance conductor in said tube the ends of said conductor protruding from said tube and being adjacent said electrodes to facilitate the starting of the discharge therebetween, the longitudinal axis of said tube being in the longitudinal axis of said container and the outside diameter of said tube being less than the inside diameter of said container to permit the passage of the arc discharge between said electrodes.

2,030,907



GASEOUS ELECTRIC DISCHARGE LAMP DEVICE

Kurt Wiegand, Berlin-Neu-Tempelhof, Germany, assignor to General Electric Company, a corporation of New York

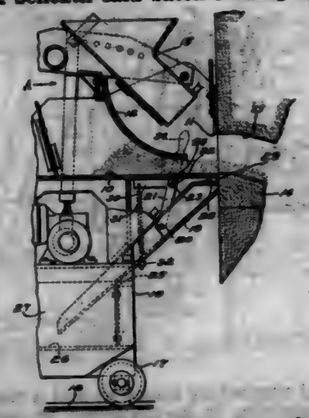
Application June 7, 1935, Serial No. 25,495

In Germany June 15, 1934

2 Claims. (Cl. 176—122)

1. A gaseous electric discharge device comprising an envelope, electrodes sealed therein, a gaseous atmosphere therein, an elongated tube in said envelope, said tube comprising an element of conducting material extending along the discharge path between said electrodes and terminating adjacent said electrodes and a quantity of vaporizable material in said tube.

2,030,908



STILLED BATCH CATCHER

Charles H. Wise, Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware

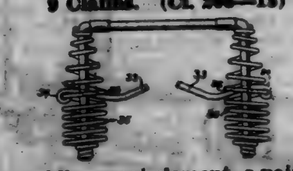
Application December 15, 1934, Serial No. 757,592

5 Claims. (Cl. 214—18)

1. The combination with a batch feeding apparatus having a feed outlet and mounted for movement to and from position to dispose said feed outlet in batch feeding relation with an inlet passage in a wall of a glass melting furnace or like structure, a loose batch catcher movably supported beneath said batch feeding apparatus

when the latter is in batch feeding relation with said inlet passage, and means acting automatically to position said loose batch catcher beneath the gap created between the feed outlet and said inlet passage when said batch feeding apparatus is moved away from said wall.

2,030,909



SADDLE

John W. Brandt, Elyria, Ohio

Application July 13, 1932, Serial No. 622,235

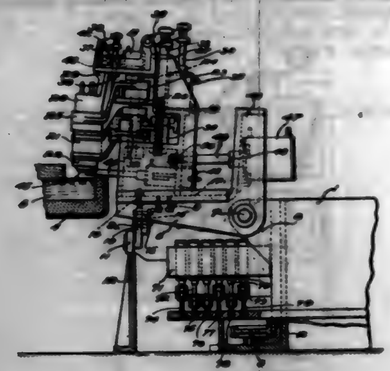
Renewed July 1, 1935

9 Claims. (Cl. 266—15)

1. In a saddle, a seat element, a pair of laterally spaced rods depending from said seat element and being pivotally secured thereto, each of said rods having a coiled spring associated therewith, each spring being secured at its lower end to its associated rod element, and a forwardly and rearwardly extending reach element, the forward end of said reach element being slidably secured to the seat element, the reach element terminating rearwardly in a pair of divergent arms, the end of each of said arms being intertwined with an intermediate convolution of one of said springs whereby the weight on the seat in use compresses the upper coils of the springs and exerts tensile stress on the lower coils.

2,030,910

GLASS GATHERING AND FORMING MACHINE



Robert W. Caulfield, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a corporation of Delaware

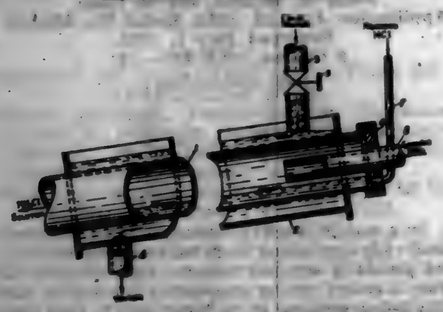
Application March 8, 1929, Serial No. 345,316

3 Claims. (Cl. 49—5)

2. In a glass forming machine, a carrier mounted to rotate about a vertical axis, a substantially radial rigid supporting member connected at its inner end with said carrier to travel with the latter and to swing angularly about a horizontal

axis, a radially movable glass gathering and partition forming unit mounted on said rigid supporting member, a cam roller, a vertically adjustable arm supporting said roller and attached to

said radial supporting member, and a closed cam track in position to be traversed by said roller during the rotation of said carrier about said vertical axis.



2,030,811

PROCESS FOR MAKING AMMONIUM SALTS

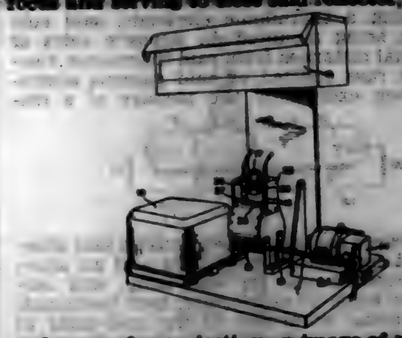
Russell R. Cushing, Haddonfield, N. J., assignor to Pennsylvania Salt Manufacturing Co., Philadelphia, Pa., a corporation of Pennsylvania

Application December 16, 1933, Serial No. 702,712

13 Claims. (Cl. 23—100)

1. A method of preparing ammonium salts from ammonia and the corresponding acid, which consists in causing a stream of one of the reagents in concentrated solution to flow continuously through a long narrow tube, passing the other reagent in gaseous form continuously into the tube above the stream of the other reagent and cooling the outside of the tube to reduce the temperature of the reaction mixture as it travels toward the outlet of the tube.

2,030,812



PROJECTION SYSTEM

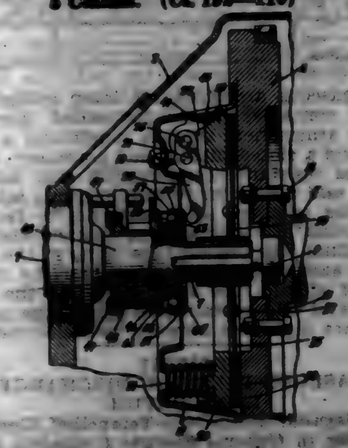
Robert F. Dirkes, Jamaica, and Robert Steeneck, New York, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York

Application January 23, 1934, Serial No. 707,972

13 Claims. (Cl. 88—24)

1. A projecting apparatus comprising a source of light, an elongated object to be illuminated, an elliptical cylinder reflector positioned with one linear focus intersecting said light source, a support for said object extending across said reflector substantially in the plane of the other linear focus and serving to close said reflector, a screen,

and means for projecting an image of said object on said screen.



2,030,813

THRUST BEARING

John Dolza, Flint, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application February 25, 1933, Serial No. 658,582

5 Claims. (Cl. 199—110)

1. A bearing having an outer race with a spherical surface, an inner race having a circular ball-receiving recess formed therein, a plurality of balls in said recess engaging said spherical surface, a retainer carried by said outer race and surrounding said inner race, yielding means within said retainer and yieldingly engaging said retainer and inner race, said yielding means operable to normally hold said races in coaxial relation.

2,030,814

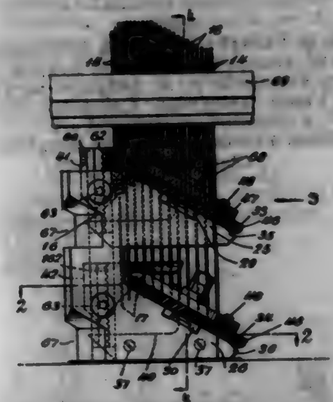
TESTING THE SUSCEPTIBILITY OF TELEGRAPH LINES TO INTERFERENCE

George L. Erickson, Hasbrouck Heights, N. J., and John J. Christoffel, Chicago, Ill., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York

Application June 2, 1932, Serial No. 615,920

8 Claims. (Cl. 175—39)

1. The method of determining the susceptibility of a telegraph line to interfering currents comprising applying signals to the line circuit, consisting of alternate marking and spacing conditions of uniform period, biasing said line circuit to simulate a definite level of interference, repeating the signals, measuring the effect of said bias on the circuit by integrating the difference produced thereby in the marking and spacing conditions and utilizing said measurement to compute the departure of said signals from their original length due to said simulated interference.



2,030,815

KNITTING MACHINE

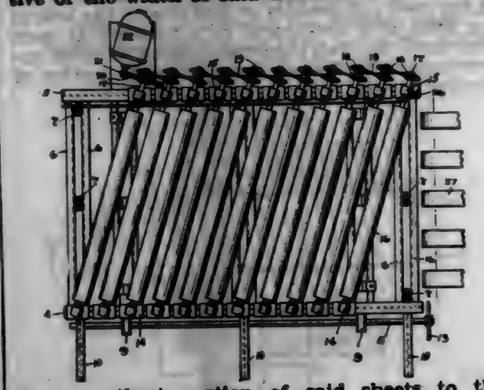
Henry Feinman, Brooklyn, N. Y.

Application December 12, 1934, Serial No. 757,134

4 Claims. (Cl. 66—50)

1. A circular knitting machine of the character described having a circular bank of knitting needles, said knitting needles being arranged in groups or series alternately provided with butts at different elevations and a plurality of corresponding superimposed pattern wheels with cams cooperating with said butts, said pattern wheels being arranged in corresponding series at different levels, the upper pattern wheels being arranged to act upon the higher butts of one group or series composed of alternate needles and the lower pattern wheels being arranged to act upon lower butts of the other group or series composed of intermediate needles.

2,030,816



FEED TABLE FOR SHEETS

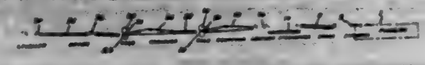
Ray M. Fenton, Youngstown, Ohio, assignor to Newton Steel Company, Youngstown, Ohio, a corporation of Ohio

Application May 19, 1934, Serial No. 452,593

1 Claim. (Cl. 90—46)

In apparatus of the character described a feed table for a rolling mill comprising a stationary base, and a laterally movable structure mounted on said base, said structure comprising a series of feed rolls located angularly with respect to the longitudinal extent of said base, means for driving said feed rolls, and guide means at one longitudinal side of said series of rolls, said movable structure being laterally movable with respect to said rolling mill and being manually controlled whereby sheets passing over said feed rolls may be fed to the center of said rolling mill irrespective of the width of said sheets thus presenting

the smoothest portion of said sheets to the smoothest portion of said rolls.



2,030,817

APPARATUS FOR FINISHING SHEETS

Ray M. Fenton, Youngstown, Ohio, assignor to The Newton Steel Company, Youngstown, Ohio, a corporation of Ohio

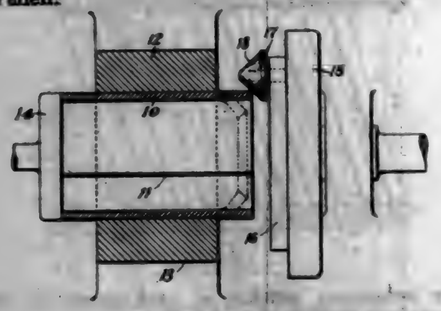
Application July 7, 1930, Serial No. 466,147

1 Claim. (Cl. 29—17)

In a machine for automatically imparting a full finish to steel sheets, in combination, a continuous pickler; a scrubber, a dryer, and a straightener, said scrubber, dryer and straightener being in an operative alignment and adapted to receive sheets automatically from said pickler and advance them through the said devices in the order stated at an increasing rate of speed; a leveler adapted to automatically receive sheets discharged from said straightener; a conveyor, a stand of cold rolls, a second conveyor, a second stand of cold rolls and a discharge conveyor, said conveyors and rolls being synchronized to advance a sheet received from said leveler at a decidedly higher, substantially uniform, speed, a dryer and a leveler, said devices being synchronized to substantially uniform speed materially less than that of the cold rolls, and aligned for the automatic passage of sheets through the several devices in the order named.

2,030,818

METHOD OF FORMING A PRESSURE VESSEL



Isaac Harter, New York, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a corporation of New Jersey

Application March 7, 1932, Serial No. 597,325

9 Claims. (Cl. 29—148.3)

1. The method of making a heavy-wall cylindrical pressure vessel with an integral head, which comprises forming a cylindrical shell with one or more longitudinal arc welds connecting edges of the parent metal of the shell and with the wall thickness of the shell substantially uniform, then heating to forging heat the end portion of the shell, and then applying pressure by a rotating tool, capable of adjustment radially and axially of the shell, around successive zones at the heated end portion of the shell beginning at the outer edge of the head, to form a head integral

with the cylindrical walls of the shell, the pressure being applied at each zone to cause the metal of the shell end portion to flow toward the axis of the shell, and continuing such pressure at each zone until the wall thickness thereof is equal approximately to that of the cylindrical portion of the shell.

4. The method of making a cylindrical pressure vessel with an integral head having a manhole therein and an internal manhole cover seat, which comprises forming a cylindrical shell having an integral head thereon with a relatively small central opening through the head and then applying the pressure of a rotating tool against the edges of said opening and axially of the cylinder to bend the edges of the opening inwardly of the cylinder, and then applying the pressure radially outward to further enlarge the opening.

2,039,819

PROCESS FOR PREPARATION OF LEATHER-LIKE FLEXIBLE AND PLIABLE MATERIAL FROM WOOD SHEETS

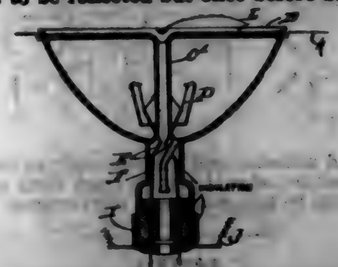
Reginald Oliver Herzog, Berlin-Steglitz, and Alfred Burgeni, Berlin-Lichterfelde-West, Germany, assignors to Wallwood Corporation, New York, N. Y., a corporation of New York

No Drawing. Application December 3, 1930, Serial No. 499,846. In Germany December 5, 1929

4 Claims. (Cl. 91—68)

1. The process of making a thin piece of wood soft and permanently flexible which comprises subjecting it to the action of an alkali solution of such a strength and for such a time that the natural wood structure is swollen and loosened without being destroyed and without destruction of the characteristic wood grain thereof, washing, and then saturating with a water-soluble substance such as glycerol, likewise of such a strength and for such a time as to avoid destruction of the natural wood structure and characteristic grain thereof.

2,039,820



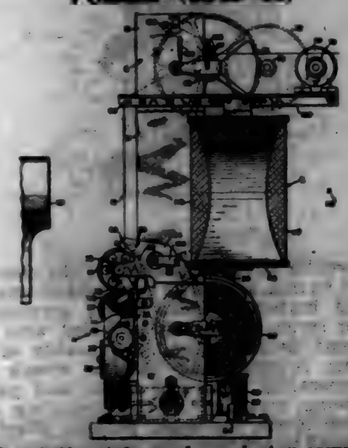
ELECTRIC HEATER

Robert F. James, Detroit, Mich., assignor, by mesne assignments, to Westinghouse Lamp Company, Bloomfield, N. J., a corporation of Pennsylvania

Application December 5, 1931, Serial No. 579,232

4 Claims. (Cl. 219—34)

1. An electric heater comprising a hermetically sealed bulb having a portion of concave configuration provided with a reflecting surface on the interior wall thereof, an end wall integral with said concave portion constituting a heat absorption body adapted to be disposed in surface-engagement with an object to be heated, an electrically heated radiant element integral with said bulb comprising a filament symmetrically disposed about and extending longitudinally of the normal vertical axis of said concave portion of said bulb and positioned substantially at the focus thereof in order to cause the majority of all radiant energy reflected by said reflecting surface to be reflected but once before being absorbed by the heat absorption end wall of said bulb and those radiations striking said reflecting surface whose angle of incidence is substantially 90° with respect thereto to be confined to a minimum.



2,039,821

PAGE PROJECTOR FOR RECORDERS

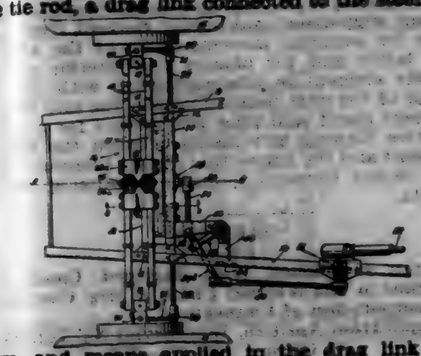
James W. Lang, Plainfield, and Evan R. Wheeler, North Plainfield, N. J., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York

Application February 20, 1931, Serial No. 517,353

7 Claims. (Cl. 88—24)

1. A printing telegraph projector comprising a type printing mechanism, a transparent or translucent web, means for printing transversely of said web in successive lines, a projecting apparatus disposed above said printing mechanism and arranged to project light through said web and means for feeding said web so as to bring each line of printing in a single step directly from the printing position into the field of said projector.

2,039,822



STEERING MECHANISM

Oscar F. Lundelius and Melvin N. Lofler, Los Angeles, Calif., assignors to Lundelius & Ecclesine Motors Corporation, Los Angeles, Calif., a corporation of Delaware

Application February 18, 1932, Serial No. 687,372

3 Claims. (Cl. 280—95)

1. In a vehicle having a frame including a pair of longitudinal side rails and a pair of dirigible wheels, a tie rod interconnecting said wheels, a horizontally swinging steering arm pivotally mounted on one of said side rails, a transversely extending rod connecting said steering arm with the tie rod, a drag link connected to the steering

arm, and means applied to the drag link for reciprocating it.

2,039,823

NITROANTHRAQUINONE-AZOLES

Paul Nawiasky, Ludwigshafen-on-the-Rhine, Berthold Stein, Mannheim, and Erich Berthold and Robert Zell, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

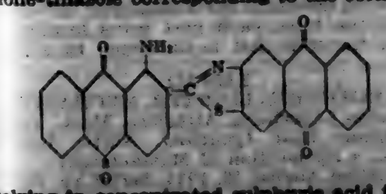
No Drawing. Application September 18, 1933, Serial No. 690,824. In Germany September 23, 1932

4 Claims. (Cl. 260—44)

3. Compounds of the group consisting of 1-nitroanthraquinone-azoles corresponding to the formula

in which X stands for a member of the group consisting of —O—, —S— and —NH— and C_1 and C_2 are members of an anthraquinone nucleus standing in ortho position to each other, and such aforementioned nitroanthraquinone-azoles wherein the anthraquinone nucleus is substituted by a substituent selected from the group consisting of halogen, and the hydroxy group.

2,039,824



1-AMINO-2-ANTHRAQUINONYL-ANTHRAQUINONE-AZOLES

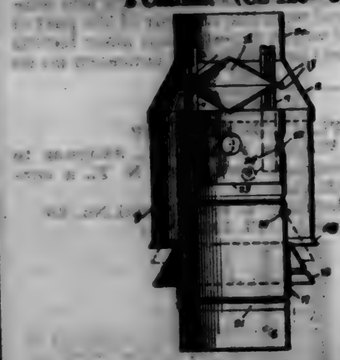
Paul Nawiasky, Ludwigshafen-on-the-Rhine, Berthold Stein, Mannheim, and Erich Berthold and Robert Zell, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application September 18, 1933, Serial No. 690,825. In Germany September 23, 1932

1 Claim. (Cl. 260—44)

1 - amino -2- anthraquinonyl-2',3'(S)-anthraquinone-thiazole corresponding to the formula

dissolving in concentrated sulphuric acid to give a yellow solution and dyeing cotton bluish red shades from a violet vat.



2,039,825

DRAFT CONTROL

George F. Pembroke, Los Angeles, Calif.

Application February 6, 1933, Serial No. 655,266

3 Claims. (Cl. 126—307)

1. In a device of the character described, a pair of axially alined upper and lower cylindrical flue sections having their opposed ends spaced apart, a jacket having a portion about and annularly spaced from the lower section and extending downwardly from the upper end thereof, and having another portion extending from the first mentioned portions of the lower end of the upper section, a transverse baffle in the space between the section ends, said baffle being in axial alinement with and of no greater diameter than the lower section and being supported with its marginal edge spaced from the opposed ends of the sections, the lower section and the lower end of the jacket defining an annular intake opening, and means for regulating the effective size of said opening, said means embodying a sleeve slidable on the lower section and having an upwardly converging conical flange underlying the annular space between the lower section and the jacket.

2,039,826

UNDERGARMENT

Henry Schoebel, Hempstead Gardens, Long Island, N. Y., assignor to Model Brassiere Co., Inc., Brooklyn, N. Y., a corporation of New York

Application February 9, 1925, Serial No. 5,711

3 Claims. (Cl. 2—36)

1. An undergarment having an elongated plate of a material of limited flexibility but of sufficient rigidity to maintain substantially its original shape and contour, said plate being of substantial

width and being secured to the undergarment in a portion thereof overlying the hypogastric region of the body of the wearer, said plate having a curved portion contiguous its lower extremity, the curvature of said portion being inward and substantially identical with the contour of the part of the body against which it rests, said plate having the upper portion thereof slightly concaved on its inner surface.

2,030,827

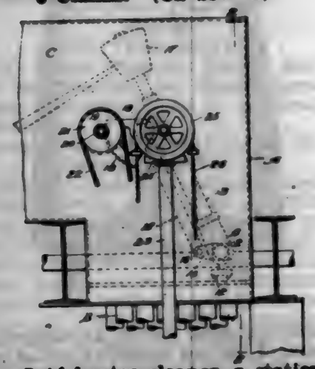
DISPLACEMENT PUMP

Roy E. Wight, Wichita Falls, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

Application January 2, 1935, Serial No. 2

8 Claims. (Cl. 103—234)

1. In a displacement pump an outer casing, a centrally disposed tube, a port located in said tube, a cylindrical chamber connected with said tube, a piston adapted to operate in said chamber, means controlled by the piston for controlling said port, an aperture in said control means giving access to the upper surface of the piston, means for maintaining a predetermined pressure on the lower surface of the piston and a check valve seated in the lower end of said control means.



2,030,828

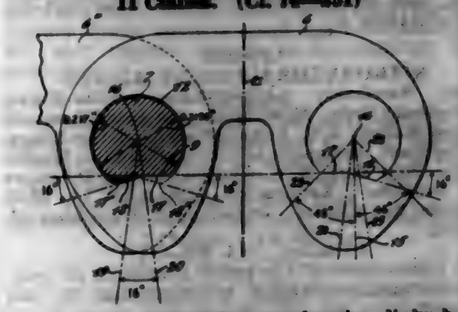
SWINGING SOOT BLOWER

Fred C. Arey, Oak Park, Ill., and De Les E. Hibner, Jr., Du Bois, Pa., assignors to Vulcan Soot Blower Corporation, a corporation of Pennsylvania

Application June 22, 1935, Serial No. 27,934

6 Claims. (Cl. 257—1)

1. In a fluid heater cleaner, a stationary pipe for supplying cleaning fluid, a tubular blower element spaced apart from and paralleling said pipe, means supporting said blower element from said pipe for swinging movements about the axis of the latter and for placing the interior of the blower element in communication with the interior of the pipe, means for swinging said blower element about said pipe, and means for causing relative turning movements between the blower element and the supporting means therefor while the blower element is making swinging movements.



2,030,829

CHAIN

Warren J. Belcher, West Hartford, Conn., assignor to The Whitney Chain & Mfg. Company, a corporation of Connecticut

Application April 25, 1934, Serial No. 722,249

11 Claims. (Cl. 74—251)

1. A chain comprising overlapping links having aligned holes therein, said holes having walls of cylindrical form towards the back of the chain and with two abutments towards the front of the chain, said abutments making an angle with each other, a pin extending through said holes transversely of the length of the chain, said pin having a bearing surface of cylindrical form in sliding contact with, but of less circumferential extent than, the cylindrically shaped walls of said holes, whereby said links may turn on said pin, and abutments on said pin extending lengthwise of the chain and adapted to engage the abutments on the hole walls to limit said turning of the links on the pin.

2,030,830

SOOT BLOWING TUBE

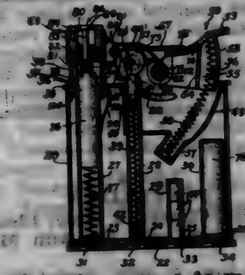
De Les E. Hibner, Jr., Du Bois, Pa., assignor to Vulcan Soot Blower Corporation, a corporation of Pennsylvania

Application July 5, 1934, Serial No. 733,716

4 Claims. (Cl. 122—392)

1. A soot blowing tube or the like of steel alloy having oppositely-disposed longitudinal ribs and there being discharge ports extending through the wall of the tube, each port being located in a part of the wall that is thickened by a rib.

2,030,831



PYROPHORIC LIGHTER MECHANISM

Carl Julius Lagerheim, Attleboro, Mass., assignor to Evans Case Company, North Attleboro, Mass., a corporation of Massachusetts

Application August 16, 1932, Serial No. 628,208

23 Claims. (Cl. 67—7.1)

4. In a lighter, a burner, a snuffer mounted over said burner, a latch holding a piece of fuel in said burner, connections between said snuffer and said latch to hold the latch out of engagement with the combustible material when the snuffer

is down, and spring means to move said latch into engagement with said combustible material when the snuffer is raised.

2,030,832

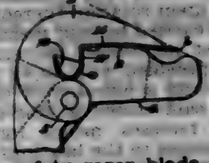
SYNTHETIC LUBRICATING OILS

Frederick H. MacLaren, Calumet City, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

No Drawing. Application December 1, 1932, Serial No. 643,249

9 Claims. (Cl. 87—9)

1. The method of making synthetic oils substantially free from resinous and pour point depressor materials which comprises condensing chlorinated hydrocarbon wax and about 5 to 25 parts of diphenyl in the presence of about 1 to 15 parts aluminum chloride per 100 parts of chlorinated wax.



2,030,833

RAZOR BLADE

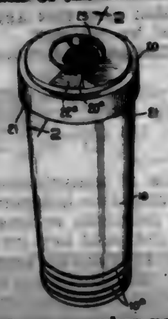
Ralph E. Thompson, Brookline, Mass., assignor to Emerson Apparatus Company, Melrose, Mass., a corporation of Rhode Island

Application August 19, 1932, Serial No. 629,451

3 Claims. (Cl. 30—92)

1. A flexible safety razor blade comprising a relatively thin metal body provided with a hardened and sharpened edge, said body having a groove extending along the margin thereof opposite to said edge, and the walls of said groove being resilient, whereby the resiliency of said walls may be utilized in anchoring the blades in its holder.

2,030,834



COCKTAIL SHAKER

Samuel Cominsky, Trenton, N. J., assignor to Efcolite Corporation, Trenton, N. J., a corporation of New York

Application May 4, 1934, Serial No. 723,826

5 Claims. (Cl. 215—83)

1. A shaker for cocktails and other liquid refreshments, comprising a shaker body of vitreous or other fragile material, said shaker body being provided with locking means adjacent its mouth, and closure means for the mouth of the shaker body, said closure means including a cap member of vitreous or other fragile material fitting within and around the top of said shaker body, said closure means further including a casing member displacingly enclosing said cap member, resilient means interposed between said cap member and said casing member and locking means carried by said closure means cooperating with said locking means of said shaker body, said locking means carried by said closure means including peripherally spaced elements respectively cooperating with said locking means of the shaker body and loose-

ly engaging said cap member peripherally and at its lower edge, whereby the cap member and its interposed resilient means are retained as a unit within the casing member of the closure means upon removal of the closure means from the shaker body.

2,030,835

PREPARATION OF ESTERS

Henry L. Cox, South Charleston, and Paul S. Greer, Charleston, W. Va., assignors, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York

No Drawing. Application October 26, 1934, Serial No. 750,152

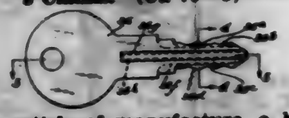
16 Claims. (Cl. 260—106)

1. The process of preparing organic esters which comprises reacting an unsubstituted lower dialkyl ether with an aliphatic lower monocarboxylic acid, in the presence of catalytic proportions of a strong non-volatile acid.

2,030,836

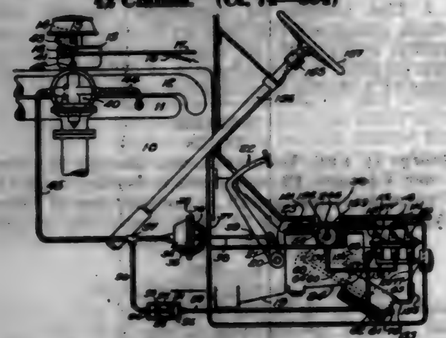
LOCK

George D. Full, Winnetka, and Joseph M. Muntner, Chicago, Ill., assignors to Dudley Lock Corporation, Chicago, Ill., a corporation of Illinois



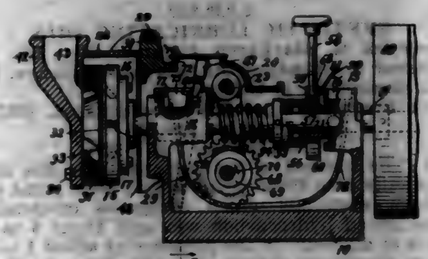
Application March 12, 1934, Serial No. 715,102

24 Claims. (Cl. 70—46)



1. In a lock, the combination of a casing, a cylinder rotatable in the casing and provided with a longitudinally extending key slot, two sets of independent tumbler elements slidably mounted in said cylinder for normally locking it against rotation in the casing, the tumbler elements of the respective sets being arranged in pairs in the same transaxial planes at opposite sides of the key slot, and the alternate tumbler elements of the respective sets being provided with abutment surfaces facing in the same direction, the abutment surfaces of said alternate tumblers of each of the respective sets being engageable by independent cam surfaces formed on the same surface of the key, when it is inserted in the slot, for positively withdrawing said alternate tumblers from locking engagement with the casing.

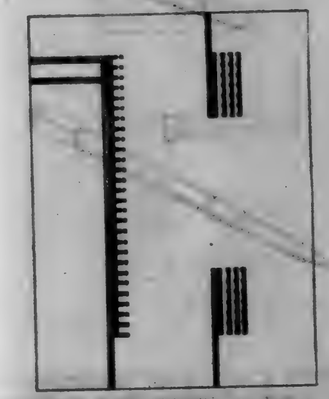
2,030,237
LOCK KEY
George D. Full, Winnetka, and Joseph M. Muntner, Chicago, Ill., assignors to Dudley Lock Corporation, Chicago, Ill., a corporation of Illinois
Original application March 13, 1934, Serial No. 715,102. Divided and this application August 24, 1934, Serial No. 741,218
8 Claims. (Cl. 70—9)



1. As an article of manufacture, a key for a cylinder lock having two independently operable sets of tumbler elements arranged on opposite sides of the key slot, said key including an operating portion of substantial length having two substantially flat side surfaces, and one edge of the operating portion of the key being formed with two longitudinally extending, unrelated cam surfaces transversely spaced apart by a longitudinally extending groove, said cam surfaces being shaped respectively for engagement with abutment surfaces of the corresponding sets of tumbler elements for shifting them from locking position.

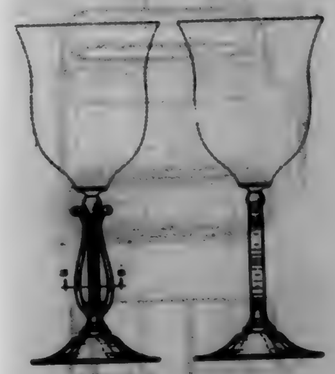
2,030,238
GEAR SHIFTING MECHANISM FOR MOTOR VEHICLES
Edward G. Hill and Henry W. Hey, Richmond, Va., assignors to Automobile Shifters, Inc., Richmond, Va., a corporation of Virginia
Application April 11, 1935, Serial No. 15,904
42 Claims. (Cl. 74—334)

1. In combination with a motor vehicle including a clutch and a transmission provided with shifting means, a gear shifting assembly comprising power means operative for moving said shifting means selectively to a plurality of operative positions, control mechanism including a plurality of control devices for rendering said power means operative, fluid pressure means for selectively actuating said control devices, and means operative upon disengagement of the clutch for rendering said control mechanism operative.



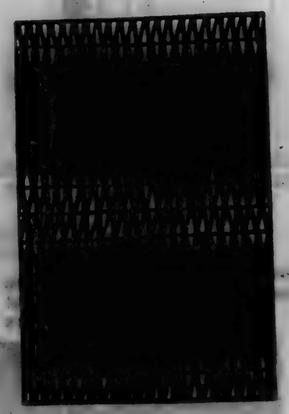
2,030,239
PULVERIZER
Franklin M. Iler, Cleveland, Ohio; Eleanor C. Iler administratrix of said Franklin M. Iler, deceased
Application June 8, 1932, Serial No. 615,545
8 Claims. (Cl. 83—16)

1. In a machine of the character described, the combination of a frame, a plurality of bosses formed integral with said frame, a shaft rotatably supported in said bosses, a pulverizing disc carried by said shaft, a member pivotally supported by said frame, means operatively connected to said shaft for oscillating said member about its pivotal support upon rotation thereof, a second pulverizing disc carried by said member cooperating with the first mentioned pulverizing disc, said frame being provided with an oil reservoir in the base thereof and a plurality of oil receiving recesses above said bosses, a tube connecting said oil receiving recesses, means for delivering oil from said recesses to the bearings for said shaft, a reciprocating pump for pumping oil from said reservoir into one of said oil receiving recesses, and means for operatively connecting said pump and said member whereby said pump is actuated by the oscillation of said member.



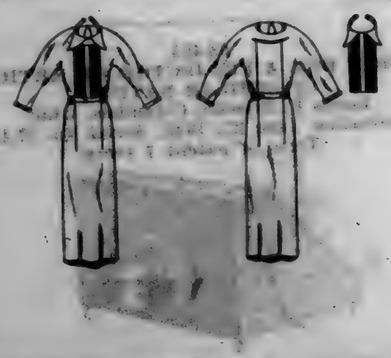
DESIGNS
FEBRUARY 11, 1936

98,489
DESIGN FOR A RUG
Alfons Bach, New York, N. Y., assignor to Bigelow Sanford Carpet Co., Inc., a corporation of Massachusetts
Application December 8, 1934, Serial No. 54,362
Term of patent 7 years



The ornamental design for a rug, substantially as shown and described.

98,490
DESIGN FOR A GOBLET OR SIMILAR ARTICLE
Arthur J. Bennett, Cambridge, Ohio
Application December 7, 1935, Serial No. 59,950
Term of patent 7 years



The ornamental design for a goblet or similar article, substantially as shown.

98,491
DESIGN FOR AN EMBROIDERED TEXTILE FABRIC
George Bischof, New York, N. Y.
Application January 6, 1936, Serial No. 60,427
Term of patent 3½ years

The ornamental design for an embroidered textile fabric, substantially as shown.

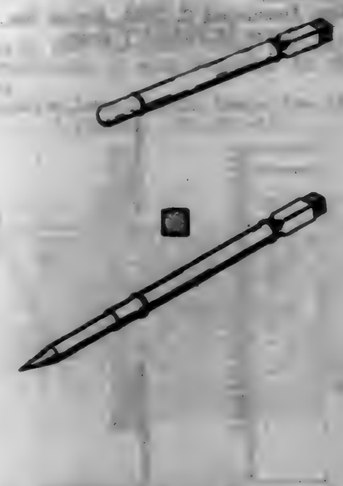
98,492
DESIGN FOR A DRESS OR SIMILAR ARTICLE
Claudia Block, New York, N. Y.
Application November 22, 1935, Serial No. 59,699
Term of patent 3½ years

The ornamental design for a dress or similar article substantially as shown and described.

98,493
DESIGN FOR A FOUNTAIN PEN
William Bewker, Newark, and Rene P. Piperoux, Radburn, N. J., assignors to Celluloid Corporation, a corporation of New Jersey
Application November 24, 1934, Serial No. 54,151
Term of patent 14 years

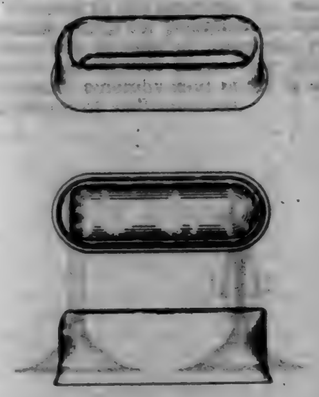
The ornamental design for a fountain pen, substantially as shown and described.

98,494
DESIGN FOR LACE
George D. Reynes, Philadelphia, Pa.
Application January 16, 1936, Serial No. 60,611
Term of patent 3½ years



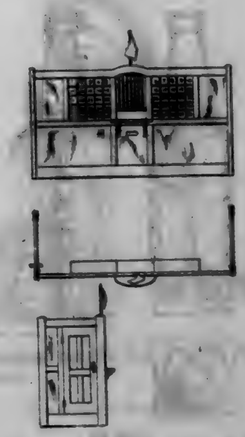
The ornamental design for lace, substantially as shown.

98,495
DESIGN FOR A PROJECTOR OR ARTICLE OF SIMILAR NATURE
James F. Brischo, Columbus, Ohio
Application June 27, 1935, Serial No. 57,435
Term of patent 7 years



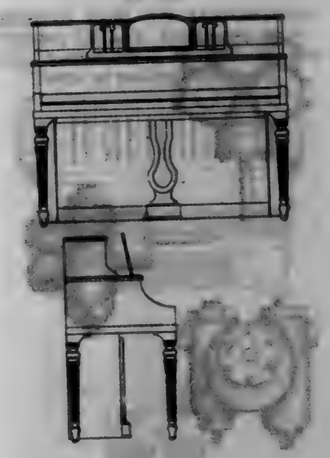
The ornamental design for a projector or article of similar nature, as shown and described.

98,496
DESIGN FOR A PENCIL
Edward J. Britton, St. Louis, Mo., assignor to St. Louis Pencil Company, St. Louis, Mo., a corporation of Missouri
Application July 16, 1935, Serial No. 57,672
Term of patent 7 years



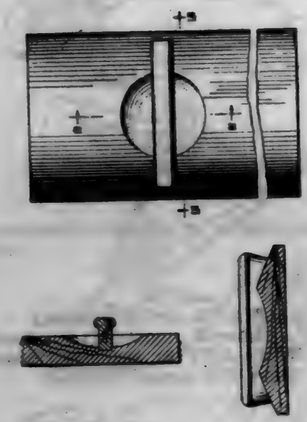
The ornamental design for a pencil substantially as shown.

98,497
DESIGN FOR A TREATMENT TUB
Charles R. Clarke, Cranston, R. I.
Application November 9, 1935, Serial No. 59,459
Term of patent 14 years



The ornamental design for a treatment tub substantially as shown.

98,498
DESIGN FOR A MINIATURE POST OFFICE BUILDING UNIT
Orley D. Clements, Elmwood, Nebr.
Application June 18, 1935, Serial No. 57,320
Term of patent 7 years



The ornamental design for a miniature post office building unit as shown.

98,499
DESIGN FOR A PIANO CASE
Wilbur M. Day, Cincinnati, Ohio, assignor to The Baldwin Company, Cincinnati, Ohio
Application January 2, 1936, Serial No. 60,276
Term of patent 3½ years

The ornamental design for a piano case, as shown and described.

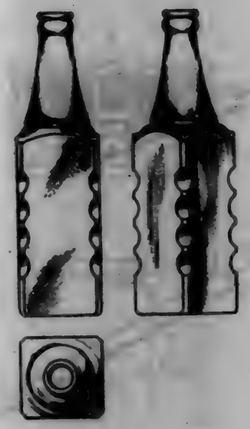
98,500
DESIGN FOR A COMBINED HANDLE AND FRONT DRAWER PANEL
Herman E. De Vries, New York, N. Y., assignor to H. T. Cushman Mfg. Co., North Bennington, Vt.
Application November 11, 1935, Serial No. 59,480
Term of patent 3½ years

The ornamental design for a combined handle and front drawer panel substantially as shown.

98,501
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Newton Elkin, Philadelphia, Pa.
Application December 26, 1935, Serial No. 60,286
Term of patent 3½ years

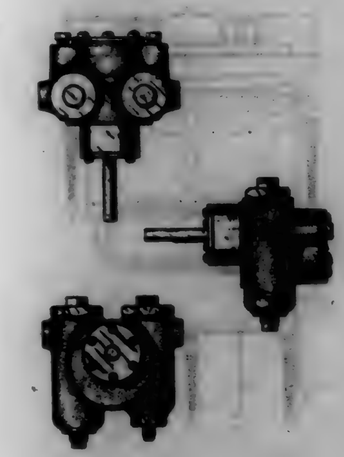
The ornamental design for a shoe or similar article, substantially as shown.

98,502
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Newton Elkin, Philadelphia, Pa.
Application December 26, 1935, Serial No. 60,257
Term of patent 3½ years



The ornamental design for a shoe or similar article, substantially as shown.

98,503
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Newton Elkin, Philadelphia, Pa.
Application December 26, 1935, Serial No. 60,225
Term of patent 3½ years



The ornamental design for a shoe or similar article, substantially as shown.

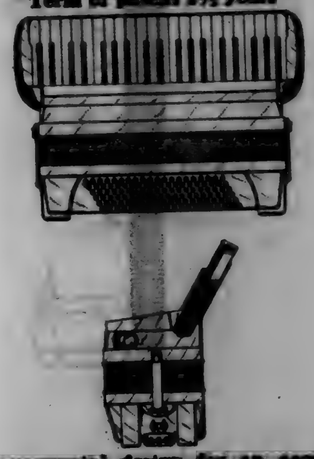
98,504
DESIGN FOR A KETCHUP BOTTLE
Harry Emsower, Harrington Park, N. J.
Application August 14, 1935, Serial No. 58,114
Term of patent 7 years

The ornamental design for a ketchup bottle, substantially as shown.

98,505
DESIGN FOR A FUEL SUPPLY UNIT FOR OIL BURNERS
Harrison E. Fellows, Racine, Wis., assignor to Webster Electric Company, Racine, Wis., a corporation of Wisconsin
Application December 21, 1935, Serial No. 60,320
Term of patent 14 years

The ornamental design for a fuel supply unit for oil burners as shown.

98,506
DESIGN FOR A BOOK END
Edwin W. Fuerst, Toledo, Ohio, assignor to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application January 2, 1936, Serial No. 60,532
Term of patent 14 years



The ornamental design for a book end substantially as shown.

98,507
DESIGN FOR A BUCKLE
John B. Freysinger, New Britain, Conn.
Application November 22, 1935, Serial No. 59,761
Term of patent 3½ years

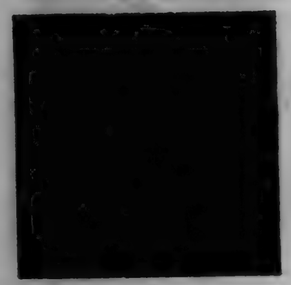
The ornamental design for a buckle as shown.

98,508
DESIGN FOR AN ACCORDION
Robert Galanti, Elmhurst, N. Y.
Application November 7, 1935, Serial No. 59,430
Term of patent 3½ years

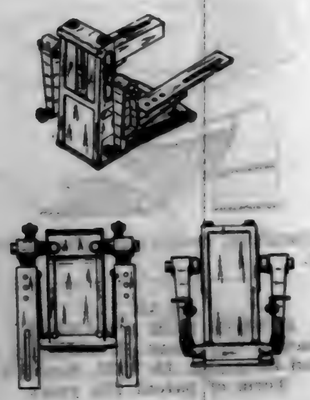
The ornamental design for an accordion as shown.

98,509
DESIGN FOR A SHOE
Leon Goldberg, New York, N. Y.
Application December 26, 1935, Serial No. 60,282
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

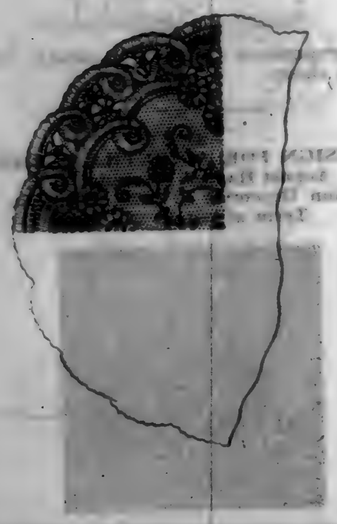


98,510
DESIGN FOR A SANDAL
Emanuel Grossman, Brooklyn, N. Y.
Application December 16, 1935, Serial No. 60,097
Term of patent 3½ years



The ornamental design for a sandal, substantially as shown.

98,511
DESIGN FOR A TEXTILE FABRIC
August Hafner, Flushing, N. Y.
Application December 7, 1935, Serial No. 59,946
Term of patent 3½ years

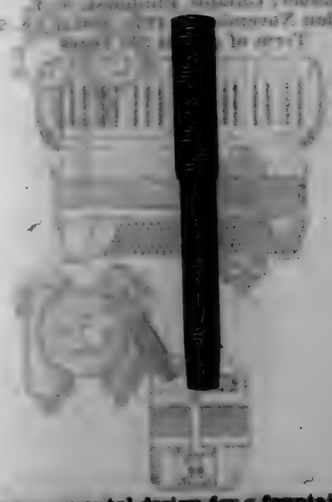


The ornamental design for a textile fabric, substantially as shown.

88,512
DESIGN FOR A MOUNTING FOR A PULLEY-CARRYING MOTOR
William D. Hamerstadt, Indianapolis, Ind., assignor to General Fibre Products, Incorporated, Indianapolis, Ind., a corporation of Indiana
Application September 9, 1935, Serial No. 58,480
Term of patent 14 years

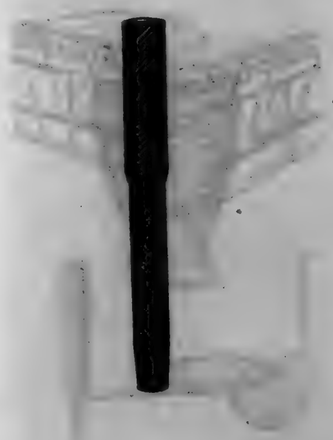
The ornamental design for a mounting for a pulley-carrying motor, as shown.

88,513
DESIGN FOR A DOILY
Kenneth C. Hamilton, Milwaukee, Wis., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis., a corporation of Wisconsin
Application January 28, 1936, Serial No. 60,698
Term of patent 14 years



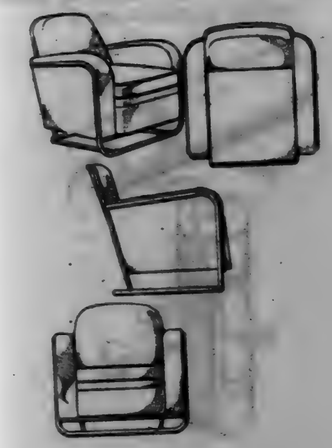
The ornamental design for a doily, substantially as shown and described.

88,514
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Lillian V. M. Helander, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a corporation of New Jersey
Application December 5, 1935, Serial No. 59,511
Term of patent 7 years



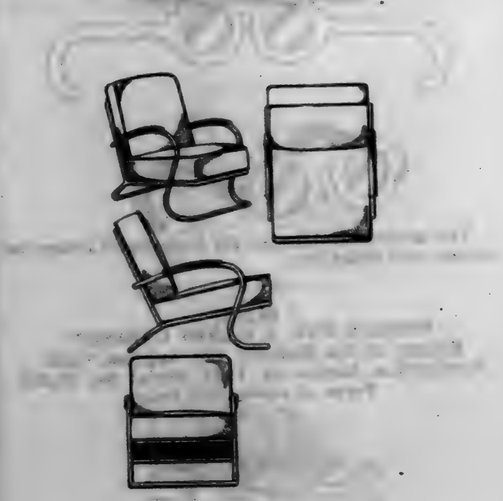
The ornamental design for a spoon or other article of flatware, substantially as shown and described.

88,515
DESIGN FOR A FOUNTAIN PEN
John Hill, Hillside, N. J., assignor to Celluloid Corporation, a corporation of New Jersey
Application November 16, 1934, Serial No. 54,043
Term of patent 14 years



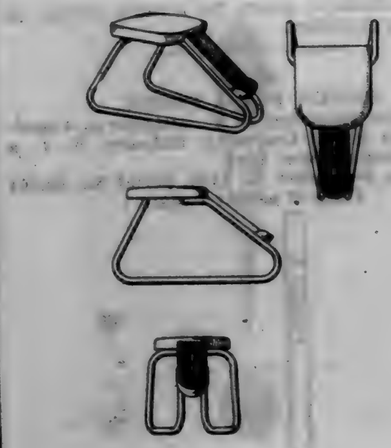
The ornamental design for a fountain pen, substantially as shown and described.

88,516
DESIGN FOR A FOUNTAIN PEN
John Hill, Hillside, N. J., assignor to Celluloid Corporation, a corporation of New Jersey
Application November 16, 1934, Serial No. 54,044
Term of patent 14 years



The ornamental design for a fountain pen, substantially as shown and described.

88,517
DESIGN FOR A LOUNGE CHAIR
Wolfgang Hoffmann, Batavia, Ill., assignor to The Howell Company, St. Charles, Ill., a corporation of Illinois
Application December 24, 1935, Serial No. 60,263
Term of patent 3½ years

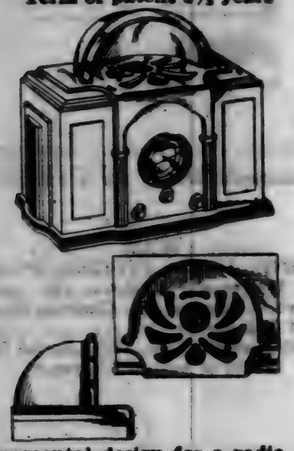


The ornamental design for a lounge chair, as shown.

88,518
DESIGN FOR A LOUNGE CHAIR
Wolfgang Hoffmann, Batavia, Ill., assignor to The Howell Company, St. Charles, Ill., a corporation of Illinois
Application December 24, 1935, Serial No. 60,264
Term of patent 3½ years

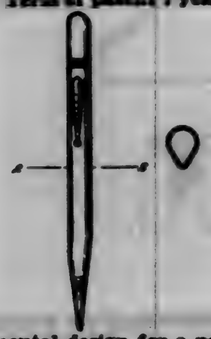
The ornamental design for a lounge chair, as shown.

88,519
DESIGN FOR A FITTING STOOL
Wolfgang Hoffmann, Batavia, Ill., assignor to The Howell Company, St. Charles, Ill., a corporation of Illinois
Application December 24, 1935, Serial No. 60,265
Term of patent 3½ years



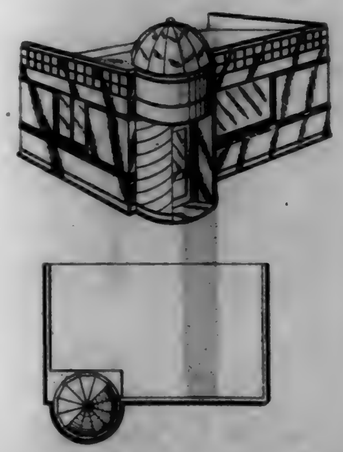
The ornamental design for a fitting stool, as shown.

98,520
DESIGN FOR A SPECTACLE FRAME
Alfred C. Houser, Highland Park, Ill., assignor to Rosenow Company, Chicago, Ill., a corporation of Illinois
Application November 23, 1934, Serial No. 54,190
Term of patent 7 years



The ornamental design for a spectacle frame, as shown and described.

98,521
DESIGN FOR A RADIO CABINET
Robert Childs Hulbert, Los Angeles, Calif.
Application August 10, 1935, Serial No. 53,069
Term of patent 3½ years

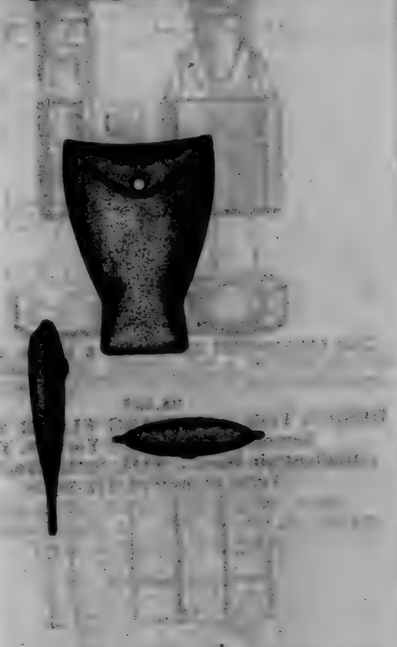


The ornamental design for a radio cabinet as shown and described.

98,522
DESIGN FOR A PENCIL
David Jucius, Brooklyn, N. Y., assignor to American Lead Pencil Company, Hoboken, N. J., a corporation of New York
Application December 16, 1935, Serial No. 60,101
Term of patent 7 years

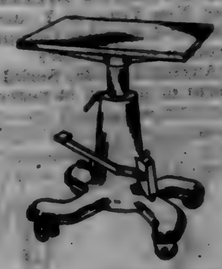
The ornamental design for a pencil, as shown.

98,523
DESIGN FOR A RESTAURANT BUILDING
Louis F. Kerlsbergue, Columbus, Ohio, assignor to P. A. Colgosta, Columbus, Ohio
Application December 12, 1935, Serial No. 60,035
Term of patent 14 years



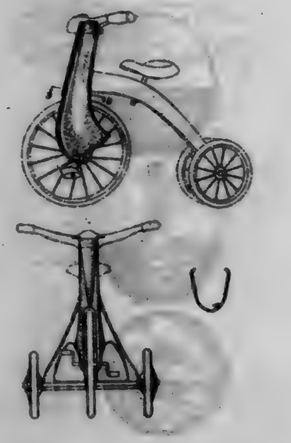
The ornamental design for a restaurant building, as shown and described.

98,524
DESIGN FOR A FREEZING DEVICE FOR EDIBLES
Fred H. Kaap and Floyd H. Kinyoun, Omaha, Nebr.
Application April 19, 1935, Serial No. 56,472
Term of patent 14 years



The ornamental design for a freezing device for edibles, substantially as shown.

98,525
DESIGN FOR A TOBACCO POUCH
Walter P. Koeller, Chicago, Ill., assignor to Press-To-Fill Products Company, Chicago, Ill., a corporation of Illinois
Application October 28, 1934, Serial No. 52,781
Term of patent 7 years



The ornamental design for a tobacco pouch as shown.

98,526
DESIGN FOR A TABLE
Oscar A. Koegler, Dayton, Ohio, assignor to The Midwest Tool & Engineering Company, Dayton, Ohio, a corporation of Ohio
Application November 20, 1935, Serial No. 59,818
Term of patent 7 years

The ornamental design for a table, as shown.

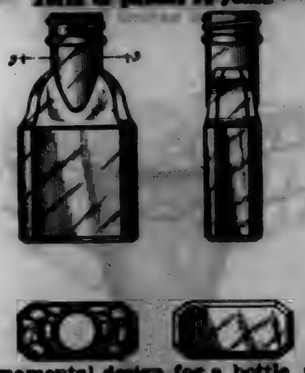
98,527
DESIGN FOR A VELOCIPEDE
Herman L. Kraeft, Cleveland Heights, Ohio, assignor to The Murray-Ohio Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application December 23, 1935, Serial No. 60,243
Term of patent 7 years

The ornamental design for a velocipede, substantially as shown and described.

98,528
DESIGN FOR A CHRISTMAS TREE ORNAMENT
Philip Kranz and Albert P. Schmid, Philadelphia, Pa., assignors to Bernard Wilmsen, Philadelphia, Pa.
Application January 3, 1936, Serial No. 60,405
Term of patent 14 years

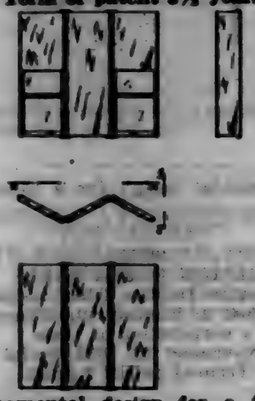
The ornamental design for a christmas tree ornament, as shown.

88,529
DESIGN FOR A CHRISTMAS TREE ORNAMENT
Philip Kram and Albert P. Schmid, Philadelphia, Pa., assignors to Bernard Wilmsen, Philadelphia, Pa.
Application January 2, 1936, Serial No. 60,466
Term of patent 14 years



The ornamental design for a Christmas tree ornament, as shown.

88,530
DESIGN FOR A TEXTILE FABRIC
William A. Landry, White Plains, N. Y., assignor to Deering Millikan & Co. Incorporated, Manhattan, N. Y.
Application December 6, 1935, Serial No. 59,933
Term of patent 3½ years

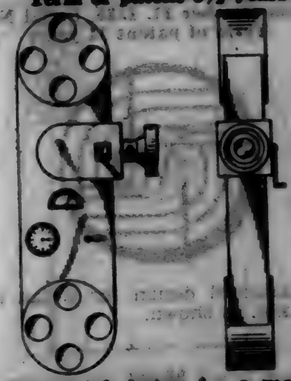


The ornamental design for a textile fabric substantially as shown.

88,531
DESIGN FOR A BOTTLE
Walter R. Leach, Baltimore, Md., assignor to Cary-Lowrey Glass Co., Baltimore, Md.
Application December 19, 1935, Serial No. 60,181
Term of patent 14 years

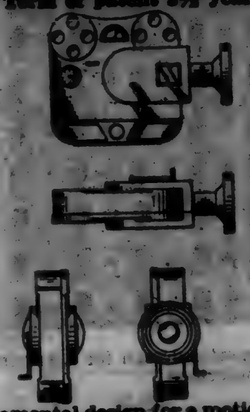
The ornamental design for a bottle, as shown.

88,532
DESIGN FOR A FOLDING FLOOR SCREEN
Semon S. Lewis, New York, N. Y.
Application June 1, 1935, Serial No. 57,090
Term of patent 3½ years



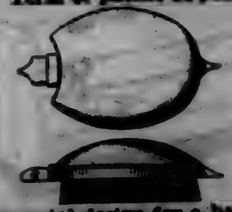
The ornamental design for a folding floor screen as shown.

88,533
DESIGN FOR A POCKET BILLIARD TABLE
William Leecase, New York, N. Y., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a corporation of Delaware
Application August 1, 1935, Serial No. 57,898
Term of patent 14 years



The ornamental design for a pocket billiard table as shown and described.

88,534
DESIGN FOR A MOTION PICTURE FILM VIEWING MACHINE
Walter J. Lambkowy, Los Angeles, Calif.
Application April 19, 1935, Serial No. 56,464
Term of patent 3½ years



The ornamental design for a motion picture film viewing machine, as shown and described.

88,535
DESIGN FOR A MOTION PICTURE FILM VIEWING MACHINE
Walter J. Lambkowy, Los Angeles, Calif.
Application April 19, 1935, Serial No. 56,465
Term of patent 3½ years

The ornamental design for a motion picture film viewing machine, as shown and described.

88,536
DESIGN FOR A HAND BRUSH
Elizabeth M. Maher, New York, N. Y., assignor to Pro-phy-lac-tic Brush Company, Northampton, Mass., a corporation of Delaware
Application December 23, 1935, Serial No. 60,316
Term of patent 14 years

The ornamental design for a hand brush, substantially as shown.

88,537
DESIGN FOR A SHOE
Joseph Massell, New York, N. Y.
Application December 16, 1935, Serial No. 60,154
Term of patent 3½ years

The ornamental design for a shoe as shown.

88,538
DESIGN FOR A DRESS
Delmar Meyer Mayeshoff, Norwalk, Conn.
Application December 14, 1935, Serial No. 60,074
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

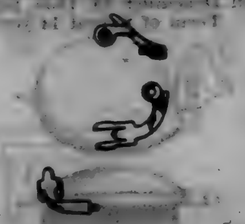
98,539
DESIGN FOR A GOBLET OR SIMILAR ARTICLE
Will Cameron McCartney, Cambridge, Ohio.
Application December 16, 1935, Serial No. 60,094
Term of patent 7 years

The ornamental design for a goblet or similar article, substantially as shown.

98,540
DESIGN FOR A HANGER OR SIMILAR ARTICLE
Bernard Meyer, New York, N. Y.
Application January 2, 1936, Serial No. 60,385
Term of patent 3½ years

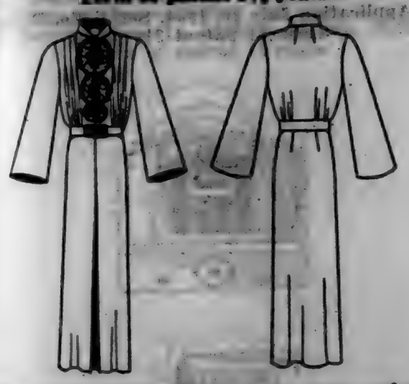
The ornamental design for a hanger or similar article as shown.

98,541
DESIGN FOR A FAN GUARD OR SIMILAR ARTICLE
Carl E. Meyerhoefer, New York, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y., a corporation of New York
Application October 17, 1935, Serial No. 59,091
Term of patent 14 years



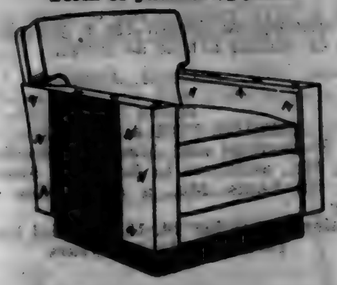
The ornamental design for a fan guard or similar article, as shown.

98,542
DESIGN FOR A KNITTED FABRIC
Jack Mizell, Brooklyn, N. Y.
Application December 21, 1935, Serial No. 60,215
Term of patent 3½ years



The ornamental design for a knitted fabric, as shown and described.

98,543
DESIGN FOR AN ENDPIECE FOR AN OPHTHALMIC MOUNTING
George E. Nersey, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a corporation of Maine
Application September 28, 1935, Serial No. 59,154
Term of patent 14 years



The ornamental design for an endpiece for an ophthalmic mounting as shown.

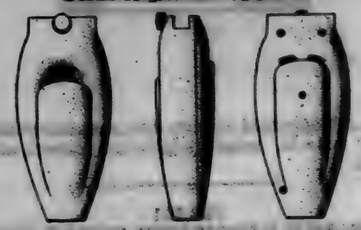
98,544
DESIGN FOR A DRESS
David William Price, New York, N. Y.
Application January 6, 1936, Serial No. 60,529
Term of patent 3½ years

The ornamental design for a dress, substantially as shown, and described.

98,545
DESIGN FOR A CHAIR
Marshall C. Pumphrey, Los Angeles, Calif., assignor to Barker Bros. Incorporated, Los Angeles, Calif.
Application November 11, 1935, Serial No. 59,498
Term of patent 3½ years

The ornamental design for a chair as shown and described.

98,546
DESIGN FOR A SOFA OR SIMILAR ARTICLE
Marshall C. Pumphrey, Los Angeles, Calif., assignor to Barker Bros. Incorporated, Los Angeles, Calif.
Application November 26, 1935, Serial No. 59,774
Term of patent 3½ years

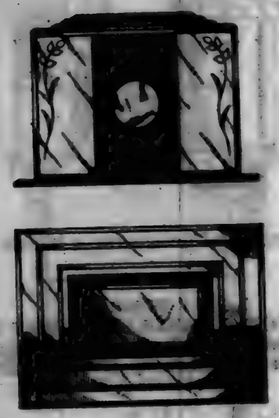


The ornamental design for a sofa or similar article as shown and described.

98,547
DESIGN FOR A BUCKLE
Solomon Putnam, Newark, N. J.
Application December 28, 1935, Serial No. 60,186
Term of patent 3½ years

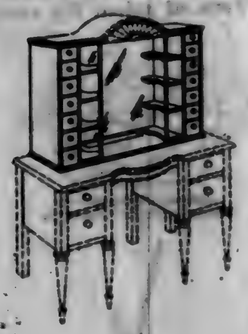
The ornamental design for a buckle as shown.

98,548
DESIGN FOR A HANDLE FOR DRY SHAVERS
Jacob Schink, Stamford, Conn.
Application November 29, 1935, Serial No. 59,782
Term of patent 3½ years



The ornamental design for a handle for dry shavers, as shown.

98,549
DESIGN FOR A MIRROR FLORAL DISPLAY DEVICE
Ruth C. Sharp, Islip, N. Y.
Application October 25, 1935, Serial No. 59,210
Term of patent 3½ years

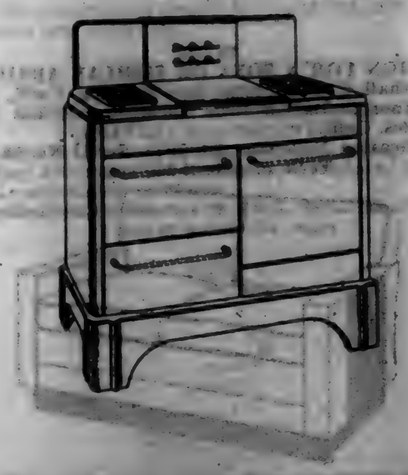


The ornamental design for a mirror floral display device, as shown.

96,539
DESIGN FOR A RADIO CABINET OR SIMILAR ARTICLE
Raymond Silverstein, Chicago, Ill., assignor of one-third to Harold Rosen and one-third to Joe Herwich, both of Chicago, Ill.
Application January 2, 1936, Serial No. 60,575
Term of patent 3½ years

The ornamental design for a radio cabinet or similar article, substantially as shown and described.

96,551
DESIGN FOR A COMBINED TOILET CABINET AND BUREAU OR THE LIKE
Irving H. Stern, Boston, Mass.
Application February 21, 1935, Serial No. 55,547
Term of patent 7 years

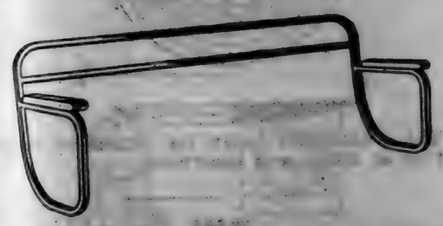


The ornamental design for a combined toilet cabinet and bureau or the like, as shown and described.

96,552
DESIGN FOR A PORTABLE RADIO CABINET OR SIMILAR ARTICLE
Raymond Franklin Stewart, South Pasadena, Calif.
Application July 20, 1934, Serial No. 33,647
Term of patent 3½ years

The ornamental design for a portable radio cabinet or similar article as shown.

96,553
DESIGN FOR A RANGE
Arthur Stockstrom and Almer H. Brodbeck, St. Louis, Mo., assignors to American Stove Company, St. Louis, Mo., a corporation of New Jersey
Application November 14, 1935, Serial No. 50,574
Term of patent 14 years



The ornamental design for a range, substantially as shown and described.

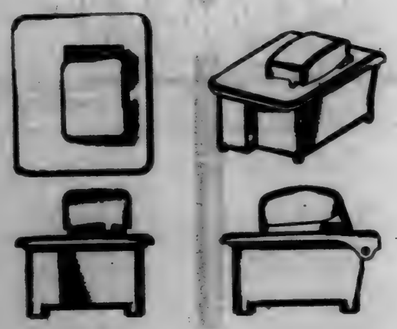
96,554
DESIGN FOR A CASING FOR FLEXIBLE MEASURING RULES
Austin L. Stowell, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a corporation of Connecticut
Application June 14, 1935, Serial No. 57,269
Term of patent 14 years

The ornamental design for a casing for flexible measuring rules, as shown.

96,555
DESIGN FOR A BACK REST FOR A STUDIO COUCH OR SIMILAR ARTICLE OF FURNITURE
Charles A. Stuart, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a corporation of Delaware
Application November 29, 1935, Serial No. 50,816
Term of patent 14 years

The ornamental design for a back rest for a studio couch or similar article of furniture, substantially as shown.

96,556
DESIGN FOR A PULL TAB FOR SLIDE FASTENERS
Alex Walker, New York, N. Y.
Application August 12, 1935, Serial No. 52,995
Term of patent 3½ years



The ornamental design for a pull tab for slide fasteners as shown and described.

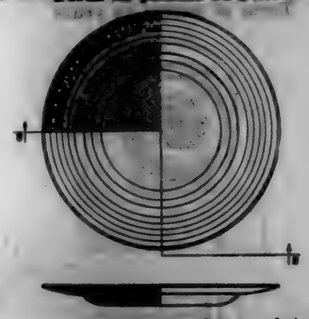
96,557
DESIGN FOR A SHOE
William Weidmer, New York, N. Y., assignor to The G. Edwin Smith Shoe Company, Columbus, Ohio, a corporation of Ohio
Application March 26, 1935, Serial No. 56,859
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown and described.

96,558
DESIGN FOR A SEWING MACHINE CASING
John P. Weis, Nyack, N. Y.
Application December 14, 1935, Serial No. 60,662
Term of patent 14 years

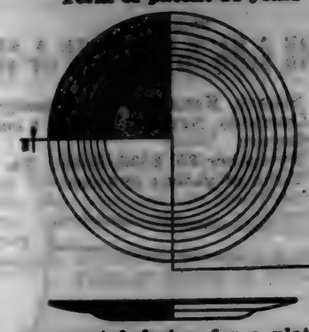
The ornamental design for a sewing machine casing substantially as shown.

98,559
DESIGN FOR A WATER HEATER CABINET
Ellis H. Wilkinson, Pottstown, Pa.
Application June 22, 1935, Serial No. 57,451
Term of patent 14 years



The ornamental design for a water heater cabinet, substantially as shown.

98,560
DESIGN FOR A FOUNTAIN PEN OR SIMILAR ARTICLE
Arthur Winter, Weehawken, N. J.
Application December 31, 1935, Serial No. 60,370
Term of patent 14 years



The ornamental design for a fountain pen or similar article as shown and described.

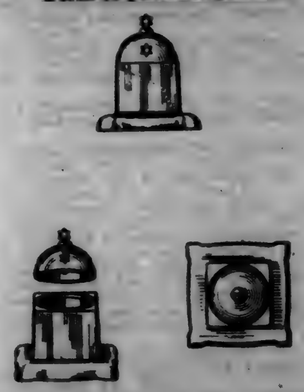
98,561
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Harry Francis Wood, Jr., Burslem, England, assignor to Continental Ceramics Corporation, New York, N. Y., a corporation of New York
Application May 4, 1935, Serial No. 56,699
Term of patent 14 years

The ornamental design for a plate or similar article as shown and described.

98,562
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Harry Francis Wood, Jr., Burslem, England, assignor to Continental Ceramics Corporation, New York, N. Y., a corporation of New York
Application May 4, 1935, Serial No. 56,700
Term of patent 14 years

The ornamental design for a plate or similar article as shown and described.

98,563
DESIGN FOR A COMBINATION ASH TRAY, CIGARETTE HOLDER, AND SMOKER
George E. Wymer, Dayton, Ohio
Application November 8, 1935, Serial No. 59,453
Term of patent 3½ years

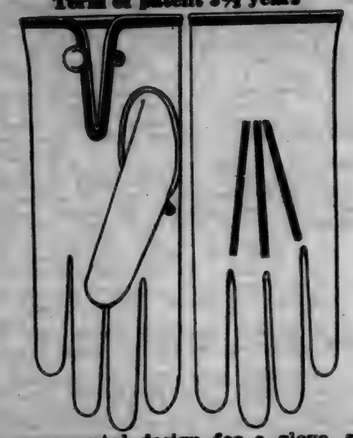


The ornamental design for a combination ash tray, cigarette holder and smoker, as shown.

98,564
DESIGN FOR A CANDLELIGHT OR SIMILAR ARTICLE
Joseph Zeitlin, New York, N. Y.
Application May 17, 1935, Serial No. 56,878
Term of patent 7 years

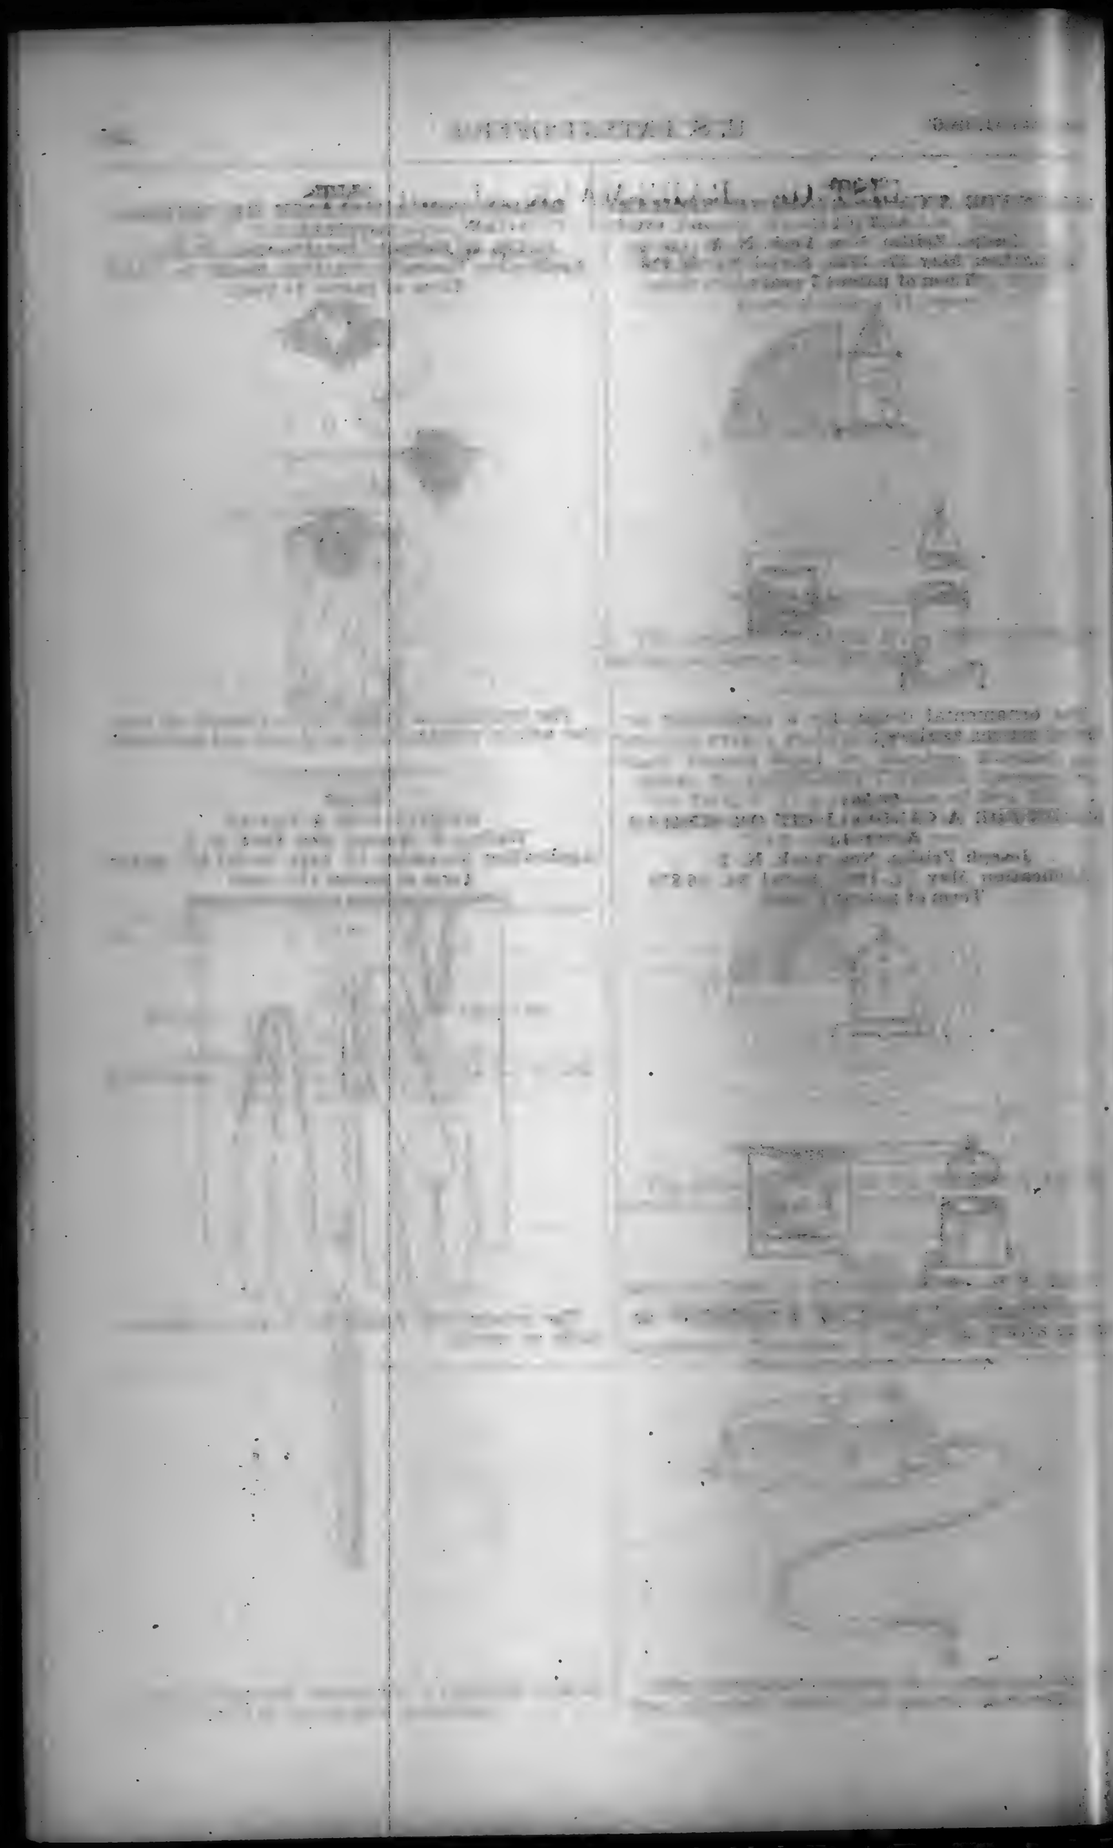
The ornamental design for a candlelight or similar article, as shown.

98,565
DESIGN FOR A CANDLELIGHT OR SIMILAR ARTICLE
Joseph Zeitlin, New York, N. Y.
Application May 17, 1935, Serial No. 56,879
Term of patent 7 years



The ornamental design for a candlelight or similar article, as shown.

98,566
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Leo B. Helfgott, Brightwaters, N. Y.
Application November 26, 1935, Serial No. 59,765
Term of patent 14 years



The ornamental design for a sweater or similar article, substantially as shown and described.

98,567
DESIGN FOR A GLOVE
Wallace E. Meyers, New York, N. Y.
Application November 12, 1935, Serial No. 59,517
Term of patent 3½ years

The ornamental design for a glove, substantially as shown.

Mascall, Joseph, New York, N. Y. Shoe. 98,537; Feb. 11.
Mayshoff, Delmar M., Norwalk, Conn. Dress. 98,538; Feb. 11.
McCartney, Will C., Cambridge, Ohio. Goblet or similar article. 98,539; Feb. 11.
Meyer, Bernard, New York, N. Y. Hanger or similar article. 98,540; Feb. 11.
Meyerhoefer, Carl E., New York, N. Y., assignor to E. A. Laboratories, Inc., Brooklyn, N. Y. Fan guard or similar article. 98,541; Feb. 11.
Meyers, Wallace E., New York, N. Y. Glove. 98,567; Feb. 11.
Midwest Tool & Engineering Company, The. (See Kooger, Oscar A., assignor.)
Milwaukee Lace Paper Company. (See Hamilton, Kenneth C., assignor.)
Minoff, Jack, Brooklyn, N. Y. Knitted fabric. 98,542; Feb. 11.
Murray-Ohio Manufacturing Company, The. (See Kraeft, Herman L., assignor.)
Nerney, George E., assignor to Bay State Optical Company, Attleboro, Mass. Endpiece for an ophthalmic mounting. 98,543; Feb. 11.
Oelgoetz, F. A. (See Karlsberger, Louis F., assignor.)
Owens-Illinois Glass Company. (See Fuerst, Edwin W., assignor.)
Piperoux, Rene P. (See Bowker, W., and Piperoux.)
Press-To-Fill Products Company. (See Koeller, Walter P., assignor.)
Price, David W., New York, N. Y. Dress. 98,544; Feb. 11.
Pro-phy-lac-tic Brush Company. (See Maher, Elizabeth M., assignor.)
Pumphrey, Marshall C., assignor to Barker Bros. Incorporated, Los Angeles, Calif. Chair. 98,545; Feb. 11.
Pumphrey, Marshall C., assignor to Barker Bros. Incorporated, Los Angeles, Calif. Sofa or similar article. 98,546; Feb. 11.
Putman, Solomon, Newark, N. J. Buckle. 98,547; Feb. 11.
Rosen, Harold, et al. (See Silverstein, Raymond, assignor.)
Rosenow Company. (See Hosmer, Alfred C., assignor.)
St. Louis Pencil Company. (See Britton, Edward J., assignor.)
Schick, Jacob, Stamford, Conn. Handle for dry shavers. 98,548; Feb. 11.
Schmid, Albert F. (See Kraus, P., and Schmid.)
Sharp, Ruth C., Islip, N. Y. Mirror floral display device. 98,549; Feb. 11.
Silverstein, Raymond, assignor of one-third to H. Rosen and one-third to J. Horwich, Chicago, Ill. Radio cabinet or similar article. 98,550; Feb. 11.
Simmons Company. (See Stuart, Charles A., assignor.)
Smith, G. Edwin, Shoe Company, The. (See Weidner, William, assignor.)
Stanley Works, The. (See Stowell, Austin L., assignor.)
Stern, Irving H., Boston, Mass. Combined toilet cabinet and bureau or the like. 98,551; Feb. 11.
Stewart, Raymond F., South Pasadena, Calif. Portable radio cabinet or similar article. 98,552; Feb. 11.
Stockstrom, Arthur, and A. H. Brodbeck, assignors to American Stove Company, St. Louis, Mo. Range. 98,553; Feb. 11.
Stowell, Austin L., assignor to The Stanley Works, New Britain, Conn. Casing for flexible measuring rules. 98,554; Feb. 11.
Stuart, Charles A., Kenosha, Wis., assignor to Simmons Company, New York, N. Y. Back rest for a studio couch or similar article of furniture. 98,555; Feb. 11.
Walker, Alex, New York, N. Y. Pull tab for slide fasteners. 98,556; Feb. 11.
Webster Electric Company. (See Fellows, Harrison E., assignor.)
Weidner, William, New York, N. Y., assignor to The G. Edwin Smith Shoe Company, Columbus, Ohio. Shoe. 98,557; Feb. 11.
Weis, John P., Nyack, N. Y. Sewing machine casing. 98,558; Feb. 11.
Wilkinson, Ellis H., Pottstown, Pa. Water heater cabinet. 98,559; Feb. 11.
Wilmsen, Bernard. (See Kraus, P., and Schmid, assignors.)
Winter, Arthur, Weehawken, N. J. Fountain pen or similar article. 98,560; Feb. 11.
Wood, Harry F., Jr., Burslem, England, assignor to Continental Ceramics Corporation, New York, N. Y. Plate or similar article. 98,561; Feb. 11.
Wood, Harry F., Jr., Burslem, England, assignor to Continental Ceramics Corporation, New York, N. Y. Plate or similar article. 98,562; Feb. 11.
Wymer, George E., Dayton, Ohio. Combination ash tray, cigarette holder, and smoker. 98,563; Feb. 11.
Zeitlin, Joseph, New York, N. Y. Candlelight or similar article. 98,564; Feb. 11.
Zeitlin, Joseph, New York, N. Y. Candlelight or similar article. 98,565; Feb. 11.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 11TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Aamodt, Thoralf, Westerleigh, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Tuned vibrating system. 2,030,421; Feb. 11.
Abadie, Jean-Baptiste J. M., Paris, France. Device for applying luminescent tubes to power transmission lines. 2,030,491; Feb. 11.
Abrahams, Jacob M. (See Gottschalk, M., and Abrahams.)
Abrams, John M., Brooklyn, N. Y. Safetypin. 2,030,674; Feb. 11.
Adams, James L., Jr., Youngstown, Ohio. Screw pump. 2,030,560; Feb. 11.
Ad-Here Paper Company. (See Carpenter, Harry E., assignor.)
Adolf, Gustav. (See Haas, J., and Adolf.)
Aeckerle, Emil, assignor to the firm Chemische Fabrik Joh. A. Benckiser G. m. b. H., Ludwigshafen-on-the-Rhine, Germany. Making anhydrous citric acid. 2,030,419; Feb. 11.
Agfa Ansco Corporation. (See Ulrich, H., and Saurwein, assignors.)
Ahlenius, Marie, assignor of one-third to M. H. Herman, Chicago, Ill. Punching device. 2,030,846; Feb. 11.
Allen, Herbert, Houston, assignor, by mesne assignments, to Stephens Pump Company, Round Rock, Tex. Pump. 2,030,041; Feb. 11.
Allis-Chalmers Manufacturing Company. (See Hedtke, Joseph B., assignor.)
Allis-Chalmers Manufacturing Company. (See Sillers, Thomas G. A., assignor.)
American Automatic Devices Co. (See Howard, Frank C., assignor.)
American Brass Company, The. (See Maxwell, James C. G., assignor.)
American Cyanamid Company. (See Watson, Philip B., assignor.)
American Laundry Machinery Company, The. (See Johnson, George W., assignor.)
American Oxythermic Corporation. (See Frisch, Mathias, assignor.)
American Sealcone Corporation. (See Winton, Lewis B., assignor.)
American Seating Company. (See Barrett, Glenn J., assignor.)
American Slicing Machine Company. (See Campbell, William J., assignor.)
American Steel Foundries. (See Lamont, John A., assignor.)
American Steel Foundries. (See Oelkers, Alfred H., assignor.)
American Steel & Wire Company. (See Cosmos, Frank, assignor.)
American Swiss Company, The. (See Eichmyer, Holden W., assignor.)
American Telephone and Telegraph Company. (See Potter, Ralph K., assignor.)
American Type Founders Company. (See Kelly, William M., assignor.)
American Window Glass Company. (See Dennis, Edie, assignor.)
Anderau, Walter, Basel, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Colored oxide film of aluminium. 2,030,256; Feb. 11.
Anderson, Roy F., Auburn, assignor, by mesne assignments, to Indianapolis Corporation, Indianapolis, Ind. Window for vehicles. 2,030,089; Feb. 11.
Anderson, William C. (See Stanley, E., and Anderson.)
Andrew, Victor J., Upper Montclair, N. J., assignor to Westinghouse Lamp Company. X-ray tube. 2,030,561; Feb. 11.
Angel, Karl, Montreal, Quebec, Canada. Internal combustion engine. 2,030,732; Feb. 11.
Anthony, Benjamin F. (See Burich, R. H., and Anthony.)
Apple, Edward M., executors of, et al. (See Apple, Vincent G.)
Apple, Herbert F., executors, et al. (See Apple, Vincent G.)
Apple, Vincent G., deceased, by H. F. Apple, E. M. Apple and G. Darroch, executors, Dayton, Ohio. Mold for making commutators. 2,030,132; Feb. 11.
Applebaum, David, Los Angeles, Calif. Glow tube control system. 2,030,402; Feb. 11.
Arbuckle, Samuel F., and G. H. Coulter, Highland Park, assignor to United Lens Corporation, Detroit, Mich. Lighting system and apparatus. 2,030,620; Feb. 11.
Ard, Charles E., Birmingham, Ala., assignor to F. C. Fantz, Webster Groves, Mo. Return bend for cracking stills. 2,030,496; Feb. 11.
Arey, Fred C., Oak Park, Ill., and De L. B. Illmer, Jr., Du Bois, Pa., assignors to Vulcan Soot Blower Corporation. Swinging soot blower. 2,030,618; Feb. 11.
Arkenburgh, Weber H., Schenectady, N. Y., assignor to General Electric Company. Block signal system. 2,030,675; Feb. 11.
Armacost, Wilbur H., assignor to The Superheater Company, New York, N. Y. Superheater. 2,030,422; Feb. 11.
Armstrong, Merton C., assignor to The Sterling Siren Fire Alarm Company Inc., Rochester, N. Y. Signaling device. 2,030,732; Feb. 11.
Armstrong, Robert R., Rochdale, Ind. Camera. 2,030,775; Feb. 11.
Arnold, Arthur A., assignor to The A. C. Gilbert Company, New Haven, Conn. Bearing structure. 2,030,192; Feb. 11.
Atchison, Leonard W., Schenectady, N. Y., assignor to General Electric Company. Refrigerating system. 2,030,676; Feb. 11.
Atmospheric Nitrogen Corporation. (See Brown, Ralph L., assignor.)
Atmospheric Nitrogen Corporation. (See De Rewal, Frank J., assignor.)
Austin, Oaias, Brooklyn, N. Y. Apparatus for decorating objects. 2,030,042; Feb. 11.
Austin, William E., New York, N. Y., assignor to Bank of The Manhattan Company. Alkyl resorcinols. 2,030,423; Feb. 11.
Auto Headlight Signal Company. (See Moffat, Walter A., assignor.)
Automatic Shifters, Inc. (See Hill, E. G., and Hey, assignors.)
Avels, Albert E., Indianapolis, Ind., assignor to General Motors Corporation, Detroit, Mich. Doorlock. 2,030,677; Feb. 11.
Beede, William G., Woodland, assignor of one-third to C. C. McDonald and one-third to J. A. Murray, Woodland, Calif. Direction signal for vehicles. 2,030,043; Feb. 11.
Babcock & Wilcox Company, The. (See Harter, Isaac, assignor.)
Bacigalupi, Edgar J., Red Bank, N. J. Sand trap rake. 2,030,424; Feb. 11.
Back, William E., Oulton Broad, England. Toy aeroplane. 2,030,347; Feb. 11.
Baird, Dudley, Berkeley, Calif., assignor to Nichols Copper Company, New York, N. Y. Furnace construction. 2,030,734; Feb. 11.
Baker, George M. (See Van Vorst, J., and Baker.)
Baker, Thomas T., Hatch End, Middlesex, assignor to Dufaycolor Limited, London, England. Color photography. 2,030,163; Feb. 11.
Bank of The Manhattan Company. (See Austin, William E., assignor.)
Barck, Julia C., et al. (See Slattengren, Henry A., assignor.)
Barnes, Gladeon M., United States Army, Hastings, Mich. Emplacing member for gun carriages and mounts. 2,030,051; Feb. 11.
Barnes, Hope, executrix. (See Barnes, J. S., and Guiri.)
Barnes, John S., deceased, by H. Barnes, executrix, and P. E. Guiri, assignors to W. F. & John Barnes Company, Rockford, Ill. Metal working apparatus. 2,030,563; Feb. 11.
Barnes, Lawrence J., Dee Why, New South Wales, Australia. Strap fastener. 2,030,543; Feb. 11.
Barnes, W. F. & John, Company. (See Barnes, J. S., and Guiri, assignors.)
Barrett Company, The. (See Ellms, Edward H., assignor.)
Barrett Company, The. (See Miller, Stuart P., assignor.)
Barrett, Glenn J., assignor to American Seating Company, Grand Rapids, Mich. Desk. 2,030,348; Feb. 11.
Berthold, Erich. (See Nawiasky, P., Stein, Berthold, and Zeil.)
Baruch, Sydney M., New York, N. Y., assignor to Radio Corporation of America. Phase controlled oscillating system. 2,030,009; Feb. 11.
Batcick Company, The. (See Herold, Walter F., assignor.)
Baxter, Berry A., assignor to G. C. Baxter, Altadena, Calif. Vacuum cleaner. 2,030,128; Feb. 11.
Baxter, Gladys G. (See Baxter, Berry A., assignor.)
Beal, Walter H., trustees, et al. (See Starkey, William C., assignor.)
Beck, Ernest J., and C. A. Van Derzee, Michigan City, Ind., and E. Karpen, Chicago, Ill., assignors to S. Karpen & Bros. Revolving car seat. 2,030,621; Feb. 11.
Becker, Edmund H. (See Martus, M. L., Becker, and Rost.)

Beers, Joseph L. (See Beniston, W. J., and Beers.)
Bephetti, Peter, San Francisco, Calif. Printing stamp. 2,030,044; Feb. 11.
Behringer, Frances, New York, N. Y. Infant's garment. 2,030,061; Feb. 11.
Belcher, Warren J., West Hartford, Conn., assignor to The Whitney Chain & Mfg. Company. Chain. 2,030,829; Feb. 11.
Bell, John C. (See Brittain, R. J., Jr., and Bell.)
Bell Telephone Laboratories, Incorporated. (See Aamodt, Thoralf, assignor.)
Bell Telephone Laboratories, Incorporated. (See Morton, Edmund E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Roscue, Victor E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Stearn, Franklin A., assignor.)
Bell Telephone Laboratories, Incorporated. (See Vibbard, Edward L., assignor.)
Bell Telephone Laboratories, Incorporated. (See Williams, Samuel B., assignor.)
Bell, Walter H., New York, N. Y. Tank washing and watering device. 2,030,194; Feb. 11.
Belshaw, Charles F., and W. J. La Casse, Duluth, Minn., assignors to The Coolerator Company. Ice cuber. 2,030,735; Feb. 11.
Belveal, Sherman, Delphos, Kans. Combined coupling and suspension device. 2,030,779; Feb. 11.
Bendix Aviation Corporation. (See Smith, Stuyvesant C., assignor.)
Bendix Products Corporation. (See Dessart, Jean, assignor.)
Beniston, William J., Sesford, N. Y., and J. L. Beers, Bloomfield, N. J., assignors to Julius Kayser & Company, Brooklyn, N. Y. Speed indicator and tension regulator for warp knitting machines. 2,020,126; Feb. 11.
Benoit, Leon, New York, N. Y. Cushion support for eggs and the like. 2,030,564; Feb. 11.
Benson, Ralph L., Toledo, Iowa, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Automatic dishwasher. 2,030,092; Feb. 11.
Bergman, Sven E., Nahant, Mass., assignor to General Electric Company. Dynamo electric machine. 2,030,678; Feb. 11.
Bernitz, Ernest, Fr., La Mesa, assignor of one-half to W. A. Smith, Vista, Calif. Apparatus for ridding trees of insects. 2,030,052; Feb. 11.
Bicknell, Ralph N., Bangor, Maine. Refrigerating display cabinet. 2,030,780; Feb. 11.
Bilde, Tord E. D., Stockholm, Sweden, assignor to Electrolux Corporation, Dover, Del. Vacuum cleaner. 2,030,565; Feb. 11.
Billings & Spencer Company, The. (See Coyle, John H., assignor.)
Billings & Spencer Company, The. (See Moore, Walter E., assignor.)
Billings, Wilfred A., Shrewsbury, Mass. Trench digger and back-filling machine. 2,030,045; Feb. 11.
Bireley, Bertha M., and C. E. Bireley, Hollywood, Calif. Cleaning device. 2,030,494; Feb. 11.
Bireley, Charles E. (See Bireley, Bertha M. and C. E.)
Bley, Rudolph S., Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y. Producing diethine-rayon. 2,030,736; Feb. 11.
Bley, Rudolph S., Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y. Cellulosic spinning solutions containing aromatic silicon derivatives. 2,030,737; Feb. 11.
Bley, Rudolph S., Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y. Cellulosic spinning solutions containing aliphatic silicon compounds. 2,030,738; Feb. 11.
Bley, Rudolph S., Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y. Producing silicon-rayon. 2,030,739; Feb. 11.
Bley, Rudolph S., Elizabethton, Tenn., assignor to North American Rayon Corporation, New York, N. Y. Softluster rayon. 2,030,740; Feb. 11.
Blok, Lourens, Eindhoven, Netherlands, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,030,426; Feb. 11.
Blomberg, Martin P. (See Mussey, W. H., and Blomberg.)
Bloss, Richard R., Columbus, Ohio, assignor to International-Stacey Corporation, Columbus, Ohio. Crank counterbalance. 2,030,046; Feb. 11.
Blume, Louis F., Pittsfield, Mass., assignor to General Electric Company. Protection of electric circuits. 2,030,679; Feb. 11.
Bodenweiser, Aaron, assignor to Rotary Brush Company, Chicago, Ill. Advertising display device. 2,030,680; Feb. 11.
Bodine, Walton M., Kansas City, Mo. Article display and conveying equipment. 2,030,741; Feb. 11.
Boehringer, C. F., & Soehne G. m. b. H. (See Müller, H., Schenck, and Wirbatz, assignors.)
Boeing Airplane Company. (See Haberlin, John F., assignor.)
Bommer, Max. (See Hauser, H., and Bommer.)
Bomster, Cyril I. (See Rivard, L. I., and Bomster.)
Bonniksen, Cyril W., Leamington Spa, England. Production of films. 2,030,566; Feb. 11.
Bonsagni, Leo A., Brookline, and A. Govoni, Somerville, Mass., Combination broiler and toaster. 2,030,047; Feb. 11.
Boorum & Pease Company. (See Rickert, John J., assignor.)
Bousquet, Euclid W., G. D. Graves, and P. L. Salzberg, Wilmington, Del., assignors, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio. Parasiticide. 2,030,093; Feb. 11.
Bowen, Edson R., Greenwich, assignor to The Pate-Root-Heath Company, Plymouth, Ohio. Tractor plow. 2,030,847; Feb. 11.
Boykin, Burwell, Jr. (See Pranger, A., and Boykin.)
Bradley, Thomas B., Du Bois, Pa. Baking pan supporting rack. 2,030,849; Feb. 11.
Bradshaw, William M., and W. G. Mylius, Summit, N. J., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Meter mounting. 2,030,904; Feb. 11.
Brandt, John W., Elyria, Ohio. Saddle. 2,030,809; Feb. 11.
Breese, Edmund L., Beverly Hills, Calif. Nested tables and chairs. 2,030,196; Feb. 11.
Bremser, Albert T., Westmont, N. J., assignor of fifty-two percent to C. G. Fisher, Miami Beach, Fla. Solar operated refrigerating system. 2,030,350; Feb. 11.
Bren, Boestech C., Cedar Grove, N. J., assignor to Dupont Viscoloid Company, Wilmington, Del. Laminated record. 2,030,568; Feb. 11.
Brennan, Daniel A., Chicago, Ill. Fastener. 2,030,096; Feb. 11.
Bretschneider, Max, Plauen, Germany. Embroidering machine. 2,030,498; Feb. 11.
Brewster, Morris B., Co. Inc. (See White, William H., assignor.)
Bristol Company, The. (See Kerr, W. J., and Miller, assignors.)
Brittain, Richard J., Jr., Newark, and J. C. Bell, Lyndhurst, N. J., assignors to General Motors Corporation, Detroit, Mich. Gauging machine. 2,030,237; Feb. 11.
Brock, Nicholas V. D., Santa Ana, Calif. Dispensing apparatus for charged beverages. 2,030,569; Feb. 11.
Brooks, Clarence W., Jr., Woodbury, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Black powder composition. 2,030,096; Feb. 11.
Brown Company. (See Richter, George A., assignee.)
Brown Le Roy O., assignor to Justrite Manufacturing Company, Chicago, Ill. Torch support bale. 2,030,228; Feb. 11.
Brown, Ralph L., Syracuse, assignor to Atmospheric Nitrogen Corporation, New York, N. Y. Production of oxygenated organic compounds. 2,030,048; Feb. 11.
Buchanan, Vita, New York, N. Y. Hose attaching device. 2,030,819; Feb. 11.
Büche, Karl. (See Wiedbrauck, R., and Büche.)
Buczkowski, Julia. (See Gorski, Frank, assignor.)
Budd Wheel Company. (See Ekszergian, Caroline L., assignor.)
Budd Wheel Company. (See Weightman, William A., assignor.)
Buffalo Brake Beam Company. (See Busch, Charles R., assignor.)
Buhler, Eugen, Binghamton, assignor to International Business Machines Corporation, New York, N. Y. Tabulating machine. 2,030,427; Feb. 11.
Burgener, John A., Hinsdale, Ill. Covering device. 2,030,134; Feb. 11.
Burgeni, Alfred. (See Herzog, R. O., and Burgeni.)
Busch, Charles R., Orange, N. J., assignor to Buffalo Brake Beam Company, New York, N. Y. Spring means for car truck bolsters. 2,030,681; Feb. 11.
Busch, John S. (See Weyerbacuser, F., and Busch.)
Buxton, Warner R., Longmeadow, Mass. Flexible pocket receptacle. 2,030,496; Feb. 11.
Byers, William B., Kansas City, Mo. Treating vermiculites. 2,030,289; Feb. 11.
Calarco, Albert. (See Ricci, Massino, assignor.)
Camel Pen Company. (See Kingman, Russell B., assignor.)
Campbell, Argyle, assignor to Enterprise Railway Equipment Company, Chicago, Ill. Car door locking means. 2,030,549; Feb. 11.
Campbell, Eugene G., Pittsburgh, Pa. Apparatus for treating or sampling substances. 2,030,833; Feb. 11.
Campbell, William J., Indianapolis, Ind., assignor to American Slicing Machine Company, Chicago, Ill. Slicing machine. 2,030,196; Feb. 11.
Campbell, William J., Indianapolis, Ind., assignor to American Slicing Machine Company, Chicago, Ill. Slicing machine. 2,030,197; Feb. 11.
Camps, Juan P., Sabadell, Spain. Feeler device for looms. 2,030,497; Feb. 11.
Canadian Atlas Steels Limited. (See Morley, Harry C., assignor.)
Canfield, Robert W., West Hartford, assignor to Hartford-Empire Company, Hartford, Conn. Glass gathering and forming machine. 2,030,810; Feb. 11.
Cantini, Emanetto, Holidays Cove, W. Va. Safety jar holder. 2,030,742; Feb. 11.
Carlton, Richard P., assignor to Minnesota Mining and Manufacturing Company, St. Paul, Minn. Adhesive or binder. 2,030,743; Feb. 11.
Carney, Bernard E. (See Crosby, R. H., and Carney.)

Carpenter, Harry E., Los Angeles, Calif., assignor to Adhere Paper Company. Adhesive mailt. 2,030,135; Feb. 11.
Carr, George W., North Shields, England. Ship's davit. 2,030,136; Feb. 11.
Carter, Lionel A., Webster Groves, Mo. Setting and indicating device for geared lathe headstocks. 2,030,097; Feb. 11.
Carter, Ralph H. (See Oppenlaender, O., Gellong, and Carter.)
Case Research Laboratory, Incorporated. (See Case, Theodore W., assignor.)
Case, Theodore W., Auburn, assignor to Case Research Laboratory, Incorporated, Auburn, N. Y. Sound picture record. 2,030,098; Feb. 11.
Case, W. A., & Son Mfg. Co. (See Zwermann, Carl H., assignor.)
Catland, Alfred C. (See Howard, J. H., and Catland.)
Cawley, George, Upper Montclair, N. J. Valve operating mechanism. 2,030,571; Feb. 11.
Ceglowski, Stanley, Hillside, N. J. Propeller, fan, and exhauster. 2,030,022; Feb. 11.
Celanese Corporation of America. (See Dickie, W. A., and Gentle, assignors.)
Celanese Corporation of America. (See Hale, F. C., and Tyce, assignors.)
Celanese Corporation of America. (See Jenett, Henry, assignor.)
Celanese Corporation of America. (See Knight, Albert W., assignor.)
Celanese Corporation of America. (See Kinsella, R., and Riley, assignors.)
Celanese Corporation of America. (See Taylor, William I., assignor.)
Celloseal Company. (See Whitney, Alvin M., assignor.)
Cement Wrapped Pipe Company. (See Kramer, Warren A., assignor.)
Cerf, Marcel B., San Francisco, assignor to L. Blake Smith, San Francisco, Calif. Electrical dehydration of oils. 2,030,198; Feb. 11.
Chalmers, David. (See Roberts, L. V., and Chalmers.)
Chamberlain, Thomas R., Wilkeson, Wash. Head surface mixer. 2,030,683; Feb. 11.
Chambers, Irl M., Los Angeles, Calif., assignor, by mesne assignments, to Western Electric Company, Incorporated. Sound recording system. 2,030,428; Feb. 11.
Channell, James W., Southgate, Calif. Splicing method. 2,030,082; Feb. 11.
Charman, Walter M., Cleveland Heights, Ohio. Mold extension for ingot molds. 2,030,190; Feb. 11.
Chase-Shawmut Company, The. (See Taylor, Elmer H., assignor.)
Chemische Fabrik Joh. A. Benckiser G. m. b. H. (See Aeckerle, Emil, assignor.)
Chevigny, Hedwidge, née Roy, deceased, by E. Chevigny, administrator, L'Assomption, Quebec, Canada. Burglar alarm. 2,030,049; Feb. 11.
Chevigny, Robert, administrator. (See Chevigny, Hedwidge, née Roy.)
Chicago Railway Equipment Company. (See Teld, Arnold H., assignor.)
Chicago Telephone Supply Co. (See Schellenger, Newton C., assignor.)
Chmurski, Anton J., Milwaukee, Wis. Towel rack. 2,030,498; Feb. 11.
Choate, Roy E., and W. E. Bodler, assignors to La Plant-Choate Mfg. Co. Inc., Cedar Rapids, Iowa. Wagon. 2,030,137; Feb. 11.
Choate, Roy E., and W. E. Bodler, assignors to La Plant-Choate Manufacturing Company, Inc., Cedar Rapids, Iowa. Earth moving device. 2,030,353; Feb. 11.
Christian, Neil H. (See Luth, A. J., Nugent, and Christian.)
Christoffel, John J. (See Erickson, G. L., and Christoffel.)
Church, Walter L., Houston, Tex. Slip. 2,030,499; Feb. 11.
Cincinnati Butchers' Supply Company, The. (See Schmidt, Oscar C., assignor.)
Clark, Edward H., Reading, Mass., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y. Draping machine. 2,030,744; Feb. 11.
Cleveland Rock Drill Company, The. (See Curtis, John C., assignor.)
Cleveland Tractor Company, The. (See Hemlet, James G., assignor.)
Clifford, Sydney G., assignor to Waterlow & Sons Limited, London, England. Applying protective coloring in the printing of documents representing value. 2,030,251; Feb. 11.
Cloutier, Arthur N. (See Lawson, R. H., Cloutier, and Hutton.)
Clum Manufacturing Company. (See Pease, Frederick J., assignor.)
Clum Manufacturing Company. (See Winning, Robert K., assignor.)
Coberly, Clarence J., Los Angeles, assignor to Kobe, Inc., Huntington Park, Calif. Cutting stock. 2,030,050; Feb. 11.
Coffey, Irven E., Playa Del Rey, Calif. Automatic auxiliary fuel supply for internal combustion engines. 2,030,745; Feb. 11.
Cole, George H., Lakeland, Fla. Paper stacking clamp. 2,030,253; Feb. 11.
Coleman, Nelson R., Asheville, assignor to Sayles Biltmore Bleacheries, Inc., Biltmore, N. C. Automatic cut-off for cloth batchers. 2,030,684; Feb. 11.
Colonial Trust Company, The, executors, et al. (See Summey, David L.)
Colwell, Archie T., assignor to Thompson Products Incorporated, Cleveland, Ohio. Making hollow head valves. 2,030,500; Feb. 11.
Cominsky, Samuel, assignor to Micolite Corporation, Trenton, N. J. Cocktail shaker. 2,030,834; Feb. 11.
Comeau, Stanley, Winnipeg, Manitoba, Canada. Playing bar for Hawaiian steel guitars. 2,030,241; Feb. 11.
Consolidated Car-Heating Company. (See Parsons, Robert J., assignor.)
Consolidated Packaging Machinery Corporation. (See Smith, Harry D., assignor.)
Construction Machinery Company. (See Garber, E. C., and McDermott, assignors.)
Continental Motors Corporation. (See Kinnucan, J. W., and Fink, assignors.)
Cook, George A. (See LeFevre, George L., assignor.)
Coolerator Company, The. (See Belshaw, C. F., and La Casse, assignors.)
Cornish, Harry S., Los Angeles, Calif. Carbon dioxide ice cooling system. 2,030,242; Feb. 11.
Corts, Gottfried F. A., Goteborg, Sweden. Wheel tire. 2,030,243; Feb. 11.
Costello, William F., assignor to The New Britain Machine Company, New Britain, Conn. Tool set and container therefor. 2,030,138; Feb. 11.
Coubrough, George B., Long Beach, Calif., assignor to The Lummus Company, New York, N. Y. Fractionating petroleum mixtures. 2,030,281; Feb. 11.
Coulter, Guy H. (See Arbuckle, S. F., and Coulter.)
Cox, Albert B., Wilmington, assignor to Shell Development Company, San Francisco, Calif. Caliper. 2,030,244; Feb. 11.
Cox, Henry L., South Charleston, and P. S. Greer, Charleston, W. Va., assignors, by mesne assignments, to Union Carbide and Carbon Corporation. Preparation of esters. 2,030,835; Feb. 11.
Corhead, Ralph C., Corporation. (See Spalose, Frank, assignor.)
Coyle, John H., Hartford, Conn., assignor to The Billings & Spencer Company. Wrench clip. 2,030,148; Feb. 11.
Creative Industries, Inc. (See Severy, Victor H., assignor.)
Crosby, John D. (See Shreve, R. N., Pritchard, Farr, Still, and Crosby.)
Crosby, Ralph H., Hammond, and B. R. Carney, East Chicago, Ind. Treating mineral oil distillates. 2,030,245; Feb. 11.
Crown Stove Works. (See Rogers, Charles J., and W. F., assignors.)
Crumley, James A., Charleston, W. Va. Fluid release packer head. 2,030,164; Feb. 11.
Cummins, Walter E., Boulder City, Nev. Pump jack. 2,030,282; Feb. 11.
Cumpston, Edward H. (See Schlenker, Vesper A., assignor.)
Cunningham, David H., Haddonfield, N. J., assignor to Radio Corporation of America. Loudspeaker cone diaphragm and producing same. 2,030,501; Feb. 11.
Cuomo, Michele, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Method of and apparatus for attaching shoe heels. 2,030,139; Feb. 11.
Curtis, John C., Garfield Heights, Ohio, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Feeding mechanism for rock drills. 2,030,685; Feb. 11.
Cushing, Russell E., Haddonfield, N. J., assignor to Pennsylvania Salt Manufacturing Co., Philadelphia, Pa. Making ammonium salts. 2,030,811; Feb. 11.
Cutler-Hammer, Inc. (See Russell, Frank J., assignor.)
Czamba, Frank, Duluth, Minn., assignor to American Steel & Wire Company, Chicago, Ill. Vernier gauge. 2,030,254; Feb. 11.
Dahl, Edward T., Randolph, assignor, by mesne assignments, to E. Macleod, Westwood, F. A. Morrison, Newton, Mass., and C. Macleod, Berwyn, Pa., L. Soule, Dedham, S. A. Sargent, Jr., Needham, Mass., trustees, doing business as Mason-Neilan Regulator Company, Boston, Mass. Control mechanism. 2,030,502; Feb. 11.
Daimler-Benz Aktiengesellschaft. (See Wagner, Max, assignor.)
Dillenbach, Walter, Berlin-Charlottenburg, Germany. Arrangement for supervising the vacuum, i. e., the gas or vapor pressure, in vacuum discharge apparatus. 2,030,781; Feb. 11.
Daniels Fred H., assignor to Riley Stoker Corporation, Worcester, Mass. Steam boiler. 2,030,503; Feb. 11.
Darroch, Gourley, executors, et al. (See Apple, Vincent G.)
Da Silva, Antonio M., Rio de Janeiro, Brazil. Compressed air water elevator. 2,030,429; Feb. 11.
Davidson, Esther O. A., et al. (See Slatteagren, Henry A., assignor.)
Davies, Leonard J., C. Gilson, and W. J. Scott, Rugby, England, assignors to General Electric Company. Electric lamp. 2,030,430; Feb. 11.
Davis, Ernest W., Oak Park, assignor to Stewart-Warner Corporation, Chicago, Ill. Lubrication and apparatus therefor. 2,030,504; Feb. 11.
Davis, Henry E., West Haven, Conn. Signaling system for automobiles and other vehicles. 2,030,246; Feb. 11.

Davis, Lewis K., Hampton, N. J. Impact device. 2,030,689; Feb. 11.

Davis, Norman C., Baltimore, Md. Bathtub. 2,030,687; Feb. 11.

Dawson, John W., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrical apparatus. 2,030,099; Feb. 11.

Dawson, John W., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electric discharge apparatus. 2,030,100; Feb. 11.

Day, Luther F., assignor to Webster Engineering Company, Tulsa, Okla. Apparatus for proportioning the flow of gases. 2,030,140; Feb. 11.

Dearborn Chemical Company. (See Horstmann, Frederick E., assignor.)

Delaney, John M. (See Story, H. J., and Delaney.)

De Lanty, Loren J., Spring Valley, assignor to Sperry Products, Inc., Brooklyn, N. Y. Detecting flaws in electrical conductors. 2,030,101; Feb. 11.

De Laval Separator Company, The. (See Hapgood, Cyrus H., assignor.)

De Laval Separator Company, The. (See Stresynski, George J., assignor.)

Delfs, Detlef, Leverkusen-I. G.-Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Azodyestuffs and their production. 2,030,355; Feb. 11.

Denenbaum, John P., Scranton, Pa. Guard device. 2,030,782; Feb. 11.

Denenbaum, John P., Scranton, Pa. Guard device. 2,030,783; Feb. 11.

Dennison Manufacturing Company. (See Flood, Carl A., assignor.)

De Rewal, Frank J., Camillus, assignor to Atmospheric Nitrogen Corporation, New York, N. Y. Catalyst and process for the decomposition of hydrocarbons. 2,030,282; Feb. 11.

De Roulet, Henry, Los Angeles, Calif., assignor to 20th Century Advertising, Inc. Outdoor advertising structure. 2,030,506; Feb. 11.

Desmit, Jean, Brussels, Belgium, assignor to Bendix Products Corporation. Braking means. 2,030,784; Feb. 11.

Dessau, George, Jr., Huntington, N. Y. Closure device. 2,030,084; Feb. 11.

Detroit Hydrostatic Brake Corporation. (See Saumedde, Claude, assignor.)

Deutsche Gold- und Silber Scheideanstalt vormals Roessler. (See Jaeger, Gustav, assignor.)

Deutsche Hydrierwerke Aktiengesellschaft. (See Schrauth, Walther, assignor.)

Development Associates, Inc. (See Stridsberg, Richard, assignor.)

Diamond Alkali Company. (See Elledge, H. G., and Hirsch, assignors.)

Dibb, Joseph W., Milwaukee, Wis. Collection box. 2,030,254; Feb. 11.

Di Biase, Frank J., Brooklyn, N. Y. Coat construction. 2,030,431; Feb. 11.

Dickie, William A., and A. H. Gentle, Spondon, near Derby, England, assignors to Celanese Corporation of America. Textile operations. 2,030,102; Feb. 11.

Dickinson, Arthur H., Brooklyn, assignor to International Business Machines Corporation, New York, N. Y. Punching mechanism. 2,030,422; Feb. 11.

Dictaphone Corporation. (See Johnson, Arthur A., assignor.)

Diggs, Sterling H., Casper, Wyo., assignor to Standard Oil Company, Chicago, Ill. Solvent recovery in oil extraction processes. 2,030,284; Feb. 11.

Dill Manufacturing Company, The. (See Tobold, Ewald F., assignor.)

Dilworth, Richard M., Lakewood, Ohio, assignor to General Motors Corporation, Detroit, Mich. Oil engine. 2,030,247; Feb. 11.

Dinyer, George, St. Louis, Mo. Cauterizing instrument. 2,030,258; Feb. 11.

Dirbee, Robert F., Jamaica, and R. Stoneck, assignors to The Western Union Telegraph Company, New York, N. Y. Projection system. 2,030,812; Feb. 11.

Dixon, Ted G., Brooklyn, N. Y. Nonslippery floor wax. 2,030,055; Feb. 11.

Dobson, William A., Wethersfield, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,030,056; Feb. 11.

Dodge, Sherwood O., Medford, assignor to Guaranteed Parts, Inc., Allston, Mass. Feeler mechanism for looms. 2,030,658; Feb. 11.

Dolza, John. (See Gove, W. D., and Dolza.)

Dolza, John, Flint, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Thrust bearing. 2,030,813; Feb. 11.

Donatal, Edlo, Jeumette, assignor to American Window Glass Company, Pittsburgh, Pa. Apparatus for the manufacture of laminated glass. 2,030,572; Feb. 11.

Doom, Ernest F., Niagara Falls, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Removing tin from columbium alloys. 2,030,247; Feb. 11.

Dorgelo, Eduard G. (See Uyterhoeven, W., Verburg, and Dorgelo.)

Dorgelo, Eduard G., Eindhoven, Netherlands, assignor to General Electric Company. Gaseous electric discharge device. 2,030,433; Feb. 11.

Dorgelo, Eduard G., Eindhoven, Netherlands, assignor to General Electric Company. Gaseous electric discharge device. 2,030,434; Feb. 11.

Dorrance, David W., San Jose, Calif. Artificial heat. 2,030,783; Feb. 11.

Dorrance, Harold J., Pittsburgh, Pa. Apparatus for treating soot. 2,030,536; Feb. 11.

Dorrat, James A., Manchester, England, assignor to General Electric Company. Welding apparatus. 2,030,035; Feb. 11.

Downs, Charles R., Old Greenwich, Conn., and R. P. Weiss, assignors to Weiss and Downs, Inc., New York, N. Y. Tar acid product and producing it. 2,030,280; Feb. 11.

Driescher, Fritz, Rheydt, Germany. Distribution board with fuses adapted to be cut out by hand. 2,030,306; Feb. 11.

Driggs, Louis L., assignor to R. W. Driggs, New Rochelle, N. Y. Gun of the mortar howitzer type. 2,030,567; Feb. 11.

Driggs, Robert W. (See Driggs, Louis L., assignor.)

Dudley Lock Corporation. (See Full, G. D., and Muntner, assignors.)

Duferycolor Limited. (See Baker, Thomas T., assignor.)

Duffendack, Owe S. (See Randolph, D. W., Duffendack, and Wolfe.)

Dull, Marshall L., Catonsville, assignor to Dull Radio Laboratories, Inc., Baltimore, Md. Electrical reproducer. 2,030,513; Feb. 11.

Dull, Marshall L., Catonsville, assignor to Dull Radio Laboratories, Inc., Baltimore, Md. Electrical reproducer. 2,030,574; Feb. 11.

Dull Radio Laboratories, Inc. (See Dull, Marshall L., assignor.)

Dunlop, James, Park Ridge, assignor to Westinghouse Electric Elevator Company, Chicago, Ill. Moving stairway. 2,030,108; Feb. 11.

Du Pont, E. I. de Nemours & Company. (See Brooks, Clarence W., Jr., assignor.)

Du Pont, E. I. de Nemours & Company. (See Rankin, D. A., and Uhler, assignors.)

Du Pont Viscoloid Company. (See Dees, Hoestock C., assignor.)

Dyer, Leonard H., New York, N. Y. Hand baggage. 2,030,358; Feb. 11.

Dyer, Leonard H., New York, N. Y. Hand baggage. 2,030,360; Feb. 11.

Eastern Rolling Mill Company, The. (See Hazlett, Adam J., assignor.)

Eastwood-Nealley Corporation. (See Webb, Nelson W., assignor.)

Eaton, Reginald O., Erie, Pa., assignor to General Electric Company. Electric switch. 2,030,681; Feb. 11.

Eden, James A., Springfield, Mass. Laminated paper barrel. 2,030,695; Feb. 11.

Edwards, William J., Whittier Falls, Tex. Attachment for spudding and drilling. 2,030,693; Feb. 11.

Ercolite Corporation. (See Cosmosky, Samuel, assignor.)

Eggleston, Oliver D., Carlton, Kans. Highway guard post. 2,030,628; Feb. 11.

Eisen- u Stahlwerk Walter Peyinghaus. (See Lehmann, Walter.)

Eitel, William W., and J. McCullough, San Bruno, assignors to Heintz & Kaufman, Ltd., San Francisco, Calif. Electrode mounting. 2,030,361; Feb. 11.

Eitel, William W., and J. McCullough, San Bruno, assignors to Heintz & Kaufman, Ltd., San Francisco, Calif. Space discharge device. 2,030,362; Feb. 11.

Ek, Arthur E. (See Ek, Emil, and A. E.)

Ek, Emil, and A. E., Portland, Maine. Counting device. 2,030,624; Feb. 11.

Elmendorf, Carsten L., Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa. Roller bearing for rolling mills. 2,030,104; Feb. 11.

Eldridge, Leonard C., and B. G. Symon, St. Louis, Mo., assignors to Shell Development Company, San Francisco, Calif. Indexing service board. 2,030,517; Feb. 11.

Electric Household Utilities Corporation. (See Howe, John T., assignor.)

Electrolux Corporation. (See Hildt, Tord B. D., assignor.)

Elledge, Harvey G., and A. Hirsch, assignors to Diamond Alkali Company, Painesville, Ohio. Purification of caustic soda. 2,030,694; Feb. 11.

Ellis, George H., St. Paul, assignor to The Insulite Company, Minneapolis, Minn. Apparatus for and process of making synthetic products. 2,030,420; Feb. 11.

Ellis, George H., St. Paul, assignor to The Insulite Company, Minneapolis, Minn. Fibrous product and making the same. 2,030,520; Feb. 11.

Elmo, Edward H., Fairlawn, N. J., assignor to The Barrett Company, New York, N. Y. Pitch product and preparing same. 2,030,575; Feb. 11.

Emerson Apparatus Company. (See Thompson, Ralph L., assignor.)

Enterprise Aluminum Company, The. (See Wilson, Albert C., assignor.)

Enterprise Railway Equipment Company. (See Campbell, Argyle, assignor.)

Eppler, Andrew, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Trimming machine. 2,030,007; Feb. 11.

Equitable Paper Bag Co. Inc. (See Poppe, George W., assignor.)

Erbele, William S., Ervin, N. Dak. Liquefy box. 2,030,058; Feb. 11.

Erber, Bernhard, Vienna, Austria. Electric lamp. 2,030,695; Feb. 11.

Eremeeff, Ivan, Philadelphia, Pa. Apparatus for producing synthetic electronic sound. 2,030,343; Feb. 11.

Erickson, Charles, Kirkland Lake, Ontario, Canada. Replaceable bit rock drill. 2,030,576; Feb. 11.

Erospha, Inc. (See Wiche, Alois, assignor.)

Erickson, George L., Hasbrouck Heights, and J. J. Christoffel, Chicago, Ill., assignors to The Western Union Telegraph Company, New York, N. Y. Testing the susceptibility of telegraph lines to interference. 2,030,314; Feb. 11.

Estate Stove Company, The. (See Kahn, Lucian L., assignor.)

Evrich, Richard H., and R. F. Anthony, assignors to The Youngstown Sheet and Tube Company, Youngstown, Ohio. Stop-off for centrifugal casting molds. 2,030,105; Feb. 11.

Evans Case Company. (See Lagerbohm, Carl J., assignor.)

Evans, R. S., & Sons. (See Evans, Robert S., assignor.)

Evans, Leonard T., Indianapolis, Ind. Renovating oil. 2,030,577; Feb. 11.

Evans, Robert D., Grosse Pointe, Mich., assignor to R. S. Evans & Sons. Windshield wiper mechanism. 2,030,236; Feb. 11.

Falconer, William R., Preston East, near Melbourne, assignor to International Motor Patents Proprietary Limited, Melbourne, Victoria, Australia. Fuel preheating and mixing apparatus for internal combustion engines. 2,030,506; Feb. 11.

Family Laundry Co., et al. (See Pierce, Lucien, assignor.)

Fantz, Fred C. (See Ard, Charles E., assignor.)

Farr, Henry V. (See Shreve, R. N., Pritchard, Farr, Still, and Crosby.)

Fate-Root-Heath Company. (See Bowen, Edson E., assignor.)

Fehse, Adolf, Berlin, and H. Kreft, Berlin-Friedrichshagen, Germany, assignors to General Electric Company. Gaseous electric discharge lamp device. 2,030,435; Feb. 11.

Feineman, Henry, Brooklyn, N. Y. Knitting machine. 2,030,815; Feb. 11.

Fenton, Ray M., assignor to Newton Steel Company, Youngstown, Ohio. Feed table for sheets. 2,030,816; Feb. 11.

Fenton, Ray M., assignor to The Newton Steel Company, Youngstown, Ohio. Apparatus for finishing sheets. 2,030,817; Feb. 11.

Ferngren, Enoch T., Toledo, Ohio. Plastic wall structure. 2,030,039; Feb. 11.

Ferranti Electric Inc. (See Norris, Eric D. T., assignor.)

Fevold, Harry L. (See Hisaw, F. L., and Fevold.)

Field, Crosby, Brooklyn, N. Y., assignor to Flakice Corporation, Wilmington, Del. Heat exchange apparatus. 2,030,660; Feb. 11.

Fink, James O. (See Klaassen, J. W., and Fink.)

Fisher, Carl G. (See Bremser, Albert T., assignor.)

Fitchburg Paper Company. (See Gong, Dong D., assignor.)

Fitzpatrick, Jeremiah, East Weymouth, Mass. Method of and machine for reforming lasts. 2,030,141; Feb. 11.

Flakice Corporation. (See Field, Crosby, assignor.)

Fletcher, Harold W. (See McKellar, M. S., Sherman, and Fletcher.)

Fletcher, Harold W., and R. Meahana, assignors to Hughes Tool Company, Houston, Tex. Plunger lift control. 2,030,436; Feb. 11.

Flettner, Anton, Berlin, Germany. Aircraft. 2,030,578; Feb. 11.

Flood, Carl A., assignor to Dennison Manufacturing Company, Framingham, Mass. Tag fastener. 2,030,363; Feb. 11.

Florman, Irving, New York, N. Y. Cigarette lighter. 2,030,364; Feb. 11.

Foote Bros. Gear & Machine Co. (See Lewis, Otis L., assignor.)

Forster, John K., assignor of one-half to R. Schmidt, Pittsburgh, Pa. Dispensing container. 2,030,698; Feb. 11.

Fortes, James A., St. Louis, Mo. Egg holder. 2,030,106; Feb. 11.

Foster, Warren D. (See Oswald, C. L., and Foster.)

Foster Wheeler Corporation. (See Wallis, John S., assignor.)

Francis, Victor J., and J. W. Ryde, Middlesex, England, assignors to General Electric Company. Electric discharge device. 2,030,437; Feb. 11.

Frankl, Mathias, Augsburg, Germany, assignor to American Oxythermic Corporation, New York, N. Y. Process and apparatus for cooling gaseous mixtures. 2,030,509; Feb. 11.

Franz, Erwin H., Crawford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for handling strands. 2,030,498; Feb. 11.

Frazier, James W., San Antonio, Tex. Dispensing device for a collapsible container. 2,030,579; Feb. 11.

Freeman, Horace, Shawinigan Falls, Quebec, Canada, assignor to Nichols Engineering & Research Corporation of Canada, Limited. Roasting iron oxide and sulphur dioxide from iron sulphide ores. 2,030,637; Feb. 11.

Freeman, Horace, assignor to Nichols Engineering & Research Corporation of Canada, Limited, Montreal, Quebec, Canada. Flash roasting. 2,030,638; Feb. 11.

Freeman, Walter R., assignor to Wagner Electric Corporation, St. Louis, Mo. Brake control mechanism. 2,030,287; Feb. 11.

Freeman, Walter R., assignor to Wagner Electric Corporation, St. Louis, Mo. Brake control mechanism. 2,030,288; Feb. 11.

French, James A., Chicago, Ill. Pants hanger. 2,030,786; Feb. 11.

Friedman, John H., assignor to The National Machinery Company, Tiffin, Ohio. Method and apparatus for making headed blanks and resultant article. 2,030,290; Feb. 11.

Friedmann, Albert, Wyomissing, Pa., assignor to Louis Hirsch Textile Machines, Inc., New York, N. Y. Knitting machine. 2,030,697; Feb. 11.

Fritze, Otto. (See Rüttenauer, A., and Fritze.)

Fritze, Otto, Berlin, and A. Rüttenauer, Berlin-Halensee, Germany, assignors to General Electric Company. Manufacture of fabricated glass articles. 2,030,439; Feb. 11.

Fritze, Otto, Berlin, and A. Rüttenauer, Berlin-Halensee, Germany, assignors to General Electric Company. Manufacture of fabricated glass articles. 2,030,440; Feb. 11.

Full, George D., Winnetka, and J. M. Muntner, assignors to Dudley Lock Corporation, Chicago, Ill. Lock. 2,030,636; Feb. 11.

Full, George D., Winnetka, and J. M. Muntner, assignors to Dudley Lock Corporation, Chicago, Ill. Lock bay. 2,030,637; Feb. 11.

Fuller Lehigh Company. (See Hardgrove, Ralph M., assignor.)

Fuller, Warren C., Mansfield, Ohio. Refrigerator construction. 2,030,291; Feb. 11.

Galdies, Georg. (See Pirani, M., and Galdies.)

Galligan, James J., Providence, R. I., and F. O. Thornton, Jr., Jackson Heights, assignors, by mesne assignments, to United States Rubber Company, New York, N. Y. Crinkled sheet material and making same. 2,030,746; Feb. 11.

Gallup, John L., Newark, N. J., assignor to Radio Corporation of America. Ceramic object and making the same. 2,030,206; Feb. 11.

Ganz, Joseph, Frankfort-on-the-Main, Germany. Steering device for vehicles. 2,030,441; Feb. 11.

Garber, Ernest C., and H. R. McDermott, assignors to Construction Machinery Company, Waterloo, Iowa. Timer for concrete mixers. 2,030,747; Feb. 11.

Garfield, Lewis E. (See Scott, F. L., and Garfield.)

Garfield, Lewis E., and F. L. Scott, assignors to Hughes Tool Company, Houston, Tex. Roller bearing bit. 2,030,442; Feb. 11.

Garnet, John E., Allentown, assignor of one-half to D. Williamer, Pottstown, Pa. Powder package and dispenser. 2,030,787; Feb. 11.

Gary, Wright W., Great Neck, N. Y., assignor to Gasoline Products Company, Inc., Newark, N. J. Treatment of hydrocarbon oil. 2,030,865; Feb. 11.

Gasoline Products Company. (See Gary, Wright W., assignor.)

Geisler, Ottmar, Nuremberg, Germany, assignor to Western Electric Company, Incorporated, New York, N. Y. Solid rectifying element. 2,030,443; Feb. 11.

General Aniline Works, Inc. (See Delfs, Detlef, assignor.)

General Aniline Works, Inc. (See Nawiasky, P., Stein, Berthold, and Zell, assignors.)

General Aniline Works, Inc. (See Schrader, G., and Zerweck, assignors.)

General Chemical Company. (See Simpson, George S., assignor.)

General Chemical Company. (See Tiley, George E., assignor.)

General Electric Company. (See Akrenburgh, Weber H., assignor.)

General Electric Company. (See Atchison, Leonard W., assignor.)

General Electric Company. (See Bergman, Sven E., assignor.)

General Electric Company. (See Blok, Lourens, assignor.)

General Electric Company. (See Blume, Louis F., assignor.)

General Electric Company. (See Davies, L. J., Gilson, and Scott, assignors.)

General Electric Company. (See Dorgelo, Eduard G., assignor.)

General Electric Company. (See Dorrat, James A., assignor.)

General Electric Company. (See Eaton, Reginald O., assignor.)

General Electric Company. (See Fehse, A., and Kreft, assignors.)

General Electric Company. (See Francis, V. J., and Ryde, assignors.)

General Electric Company. (See Fritze, O., and Rüttenauer, assignors.)

General Electric Company. (See Goosbens, Henricus, assignor.)

General Electric Company. (See Hales, George J., assignor.)

General Electric Company. (See Hatay, Charles, assignor.)

General Electric Company. (See Hencke, A., and Kreft, assignors.)

General Electric Company. (See Hertz, Gustav L., assignor.)

General Electric Company. (See Hoxie, Merrill C., assignor.)
General Electric Company. (See Johnson, Wilfrid B., assignor.)
General Electric Company. (See Meissner, Alexander, assignor.)
General Electric Company. (See Navias, Louis, assignor.)
General Electric Company. (See Pearce, Arthur G., assignor.)
General Electric Company. (See Pirani, M., and Gaidies, assignors.)
General Electric Company. (See Pirani, M., and Roger, assignors.)
General Electric Company. (See Reynolds, Neil B., assignor.)
General Electric Company. (See Rompe, Robert, assignor.)
General Electric Company. (See Ruff, Harold R., assignor.)
General Electric Company. (See Rüttenauer, Alfred, assignor.)
General Electric Company. (See Rüttenauer, A., and Fritze, assignors.)
General Electric Company. (See Ryde, J. W., and Jenkins, assignors.)

General Electric Vapor Lamp Company. (See Randall, Eugene F., assignor.)
General Motors Corporation. (See Avels, Albert R., assignor.)
General Motors Corporation. (See Brittain, R. J., Jr., and Bell, assignors.)
General Motors Corporation. (See Dilworth, Richard M., assignor.)
General Motors Corporation. (See Dolza, John, assignor.)
General Motors Corporation. (See Geyer, Harvey D., assignor.)
General Motors Corporation. (See Gove, W. D., and Dolza, assignors.)
General Motors Corporation. (See McMillin, B. M., and Taub, assignors.)
General Motors Corporation. (See Poole, Lora E., assignor.)
General Motors Corporation. (See Rasweiler, G. M., and Martin, assignors.)
General Motors Corporation. (See Stone, Donald D., assignor.)
General Motors Corporation. (See Summers, Caleb E., assignor.)
General Motors Corporation. (See White, John W., assignor.)
General Railway Signal Company. (See Nilson, Frederick C., assignor.)
Gentle, Alexander H. (See Dickie, W. A., and Gentle.)
Gerda von der Lippen. (See von der Lippen, Paul, assignor.)
Geyer, Harvey D., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Resilient universal joint. 2,030,788; Feb. 11.
Giger-Knüsli, Ernst, Zurich-Hongg, Switzerland. Valve. 2,030,143; Feb. 11.
Gilbert, A. C., Company, The. (See Arnold, Arthur A., assignor.)
Gilbert, A. C., Company, The. (See Gilbert, Alfred C., assignor.)
Gilbert, Alfred C., North Haven, assignor to The A. C. Gilbert Company, New Haven, Conn. Toy locomotive. 2,030,201; Feb. 11.
Gilbert, William N., Hudson Heights, N. J., assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y. Weighing and counting scale. 2,030,444; Feb. 11.
Gillick, Lawrence H., Evanston, and E. A. Russell, assignors to Vapor Car Heating Company, Inc., Chicago, Ill. Vapor regulator. 2,030,580; Feb. 11.
Gilpin, Garth G., Riverside, assignor to Union Metal Products Company, Chicago, Ill. Railway car structure. 2,030,748; Feb. 11.
Gilson, Charles. (See Davies, L. J., Gilson, and Scott.)
Globe Casket Manufacturing Company. (See White, Byron E., assignor.)
Globe-Oil Tools Company. (See Howard, J. H., and Catland, assignors.)
Godsey, Frank W., Jr., New Haven, Conn., assignor to The Safety Car Heating & Lighting Company. Apparatus for electrical control. 2,030,202; Feb. 11.
Goldberg, Lillian, Madison, N. J. Plant support. 2,030,249; Feb. 11.
Goldschmit, Th., A. G. (See Wiedhrauck, R., and Bücks, assignors.)
Gollong, Richard J. (See Oppenlaender, O., Gollong, and Carter.)
Goodman Manufacturing Company. (See McCarthy, Timothy F., assignor.)
Goodman Manufacturing Company. (See Pratt, Charles A., assignor.)
Goodman Manufacturing Company. (See Sloane, William W., assignor.)
Goodrich, B. F., Company, The. (See Harrison, Marion M., assignor.)
Goodrich, B. F., Company, The. (See Newton, Edwin B., assignor.)
Goodwin, William N., Jr., assignor to Weston Electrical Instrument Corporation, Newark, N. J. Light target for illumination meters. 2,030,250; Feb. 11.
Gooskens, Henricus, Eindhoven, Netherlands, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,030,445; Feb. 11.
Gorski, Frank, assignor of one-half to J. Buczkowski, Portland, Oreg. Variable pitch propeller. 2,030,629; Feb. 11.
Gottschalk, Morris, Belleville, and J. M. Abrahams, Bloomfield, N. J. Health shirt and combination garment. 2,030,581; Feb. 11.
Gove, Winfield D., Detroit, and J. Dolza, Flint, assignors to General Motors Corporation, Detroit, Mich. Torque loading lash adjusting device for friction roller transmissions. 2,030,208; Feb. 11.
Govoni, Auguste. (See Bonsagni, L. A., and Govoni.)
Gracey, Frank T., Eddyville, Ky. Device for making cigarettes. 2,030,061; Feb. 11.
Gram, William A., Wainfleet Township, Ontario, Welland County, Canada. Doorlatch. 2,030,630; Feb. 11.
Grasselli Chemical Company, The. (See Bousquet, E. W., Graves, and Salzberg, assignors.)
Grave, Otto, Berlin, Germany. Electric vacuum cleaner. 2,030,366; Feb. 11.
Grave, Otto, Berlin, Germany. Electric vacuum cleaner. 2,030,367; Feb. 11.
Graves, George D. (See Bousquet, E. W., Graves, and Salzberg.)
Graves, Herbert C., Jr., East Bradford Township, Chester County, assignor to I-T-E Circuit Breaker Company, Philadelphia, Pa. Circuit controlling method and apparatus. 2,030,582; Feb. 11.
Gray, Dale B., Kansas City, assignor to Gray & Terry Manufacturing Co., Kansas City, Mo. Collapsible basket. 2,030,204; Feb. 11.
Gray, Daniel M. (See Greene, M. A., and Gray.)
Gray & Terry Manufacturing Co. (See Gray, Dale B., assignor.)
Green, Ray M., Cleveland, Ohio. Draft controller. 2,030,209; Feb. 11.
Greene, Michael A., and D. M. Gray, assignors to Hazel-Atlas Glass Co., Wheeling, W. Va. Closure for bottles and jars. 2,030,062; Feb. 11.
Greener, Charles E., Birmingham, England. Emulsifying machine. 2,030,251; Feb. 11.
Greer, Paul S. (See Cox, H. L., and Greer.)
Gretener, Edgar, Berlin-Siemensstadt, Germany, assignor to Opticolor Aktiengesellschaft, Glarus, Switzerland. Apparatus for use in color photography. 2,030,446; Feb. 11.
Gretener, Edgar, Berlin-Siemensstadt, Germany, assignor to Opticolor Aktiengesellschaft, Glarus, Switzerland. Multicolor-screen for use with lenticulated films. 2,030,447; Feb. 11.
Griffiths, William U., Philadelphia, Pa. Faucet. 2,030,510; Feb. 11.
Groene, William F., and G. W. Luning, assignors to The H. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Chuck. 2,030,142; Feb. 11.
Gruber, Earl B., Wauwatosa, assignor to The Heil Co., Milwaukee, Wis. Motion-transmitting mechanism. 2,030,511; Feb. 11.
Guaranteed Parts, Inc. (See Dodge, Sherwood O., assignor.)
Guglielotta, Martin, Dillinger, Pa. Braking apparatus. 2,030,292; Feb. 11.
Guilbert, Francis W., Beverly Hills, Calif. Concrete construction. 2,030,518; Feb. 11.
Guirl, Paul R. (See Barnes, J. S., and Guirl.)
Gulliksen, Finn H., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electronic relay. 2,030,107; Feb. 11.
Gwinn, Joseph M., Jr., Buffalo, N. Y. Aircraft. 2,030,631; Feb. 11.
H & B American Machine Company. (See Jackson, John F., assignor.)
Haas, Julius, Kassel-Wilhelmshöhe, and G. Adolf, Stockhausen, near Sonderhausen, assignors to Wintershall Aktiengesellschaft, Kassel, Germany. Avoiding setting phenomena in commercially prepared salts. 2,030,583; Feb. 11.
Haberlin, John F., assignor to Boeing Airplane Company, Seattle, Wash. Retractable landing gear for geared propeller airplanes. 2,030,293; Feb. 11.
Hagenbook, Thurlee H. (See Shields, J. W., and Hagenbook.)
Hale, Frank C., and G. C. Tyce, Spondon, near Derby, England, assignors to Celanese Corporation of America. Manufacture of textile materials. 2,030,252; Feb. 11.

Hales, George J., Rocky River, Ohio, assignor to General Electric Company. Immersion tube type furnace. 2,030,698; Feb. 11.
Halleck, Frank A., Chicago, Ill., assignor to Sullivan Machinery Company. Loading machine. 2,030,083; Feb. 11.
Hamilton, Clyde C., Highland Park, N. J. Insecticide. 2,030,584; Feb. 11.
Hamilton, Karl M., Chicago, Ill. Heat distributing means. 2,030,510; Feb. 11.
Hampton, Calvin G., Rio Vista, Calif. Pruning shears. 2,030,585; Feb. 11.
Hanley, Lawrence, and W. C. Anderson, Kansas City, Mo. Camera. 2,030,206; Feb. 11.
Hansen, Charles C., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Mounting for rock drills. 2,030,512; Feb. 11.
Hapgood, Cyrus H., Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y. Valve for controlling flow of milk and air in milking machines. 2,030,513; Feb. 11.
Harding, Samuel R., Aberdeen, S. Dak. Educational test checking machine. 2,030,207; Feb. 11.
Hardgrove, Ralph M., Bethlehem, assignor to Fuller Lehigh Company, Fullerton, Pa. Feed control for mills. 2,030,448; Feb. 11.
Harris, Frederick D., Miami, Fla. Keyboard cam. 2,030,789; Feb. 11.
Harrison, Marion M., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Making elastic thread and reticulated sheets of rubber or similar material. 2,030,208; Feb. 11.
Harrison, Wilbur A., Danville, Ill. Wireless corn planter. 2,030,368; Feb. 11.
Harter, Isaac, New York, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J. Forming a pressure vessel. 2,030,818; Feb. 11.
Hartford-Empire Company. (See Canfield, Robert W., assignor.)
Hartford-Empire Company. (See Tucker, O. M., and Reeves, assignors.)
Hartford-Empire Company. (See Wise, Charles H., assignor.)
Haris, Bernard, Chrisney, Ind. Separation of garlic and onion seed from wheat. 2,030,632; Feb. 11.
Hatay, Charles, Berlin-Charlottenburg, Germany, assignor to General Electric Company. Mercury switch. 2,030,449; Feb. 11.
Hathaway, Clarence B., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Generator. 2,030,108; Feb. 11.
Haucke, Artur, Berlin, and H. Kreft, Berlin-Friedrichshafen, Germany, assignors to General Electric Company. Electric gaseous discharge device. 2,030,450; Feb. 11.
Hauser, Hermann, Basel, and M. Bommer, Rieben, near Basel, assignors to firm Society of Chemical Industry in Basle, Basel, Switzerland. Anthraquinone derivatives. 2,030,253; Feb. 11.
Haws, Alpheus G., Berkeley, Calif. Drinking fountain apparatus. 2,030,289; Feb. 11.
Hazel-Atlas Glass Co. (See Greene, M. A., and Gray, assignors.)
Hazel, Leo L., Portland, Oreg. Stain cover. 2,030,294; Feb. 11.
Hazlett, Adam J., assignor to The Eastern Rolling Mill Company, Baltimore, Md. Method and apparatus for rolling. 2,030,586; Feb. 11.
Heaslet, James G., Cleveland, assignor to The Cleveland Tractor Company, Cuyahoga County, Ohio. Tuber harvester. 2,030,587; Feb. 11.
Hedeen, Elmer N., and H. B. Turner, Mansfield, Ohio. Casket crypt. 2,030,588; Feb. 11.
Hedlund, Nels J., Minneapolis, Minn. Churn. 2,030,641; Feb. 11.
Heil Co., The. (See Gruber, Earl B., assignor.)
Heimrath, Gus, New Waterford, Ohio. Power plane. 2,030,520; Feb. 11.
Heintz & Kaufman, Ltd. (See Bitel, W. W., and McCullough, assignors.)
Heintz & Kaufman, Ltd. (See Heintz, Ralph M., assignor.)
Heintz and Kaufman, Ltd. (See Sherwood, Ralph C., assignor.)
Heintz, Ralph M., Palo Alto, assignor to Heintz & Kaufman, Ltd., San Francisco, Calif. Variable inductor. 2,030,389; Feb. 11.
Hemphill Company. (See Lawson, R. H., Cloutier, and Hutton, assignors.)
Hensel, Bernhard, K. Hess, and J. Richter, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Tube socket. 2,030,254; Feb. 11.
Herman, Maurice H. (See Ahlenius, Marie, assignor.)
Hermann, Emil W., Kenmore, N. Y. Ear muff. 2,030,790; Feb. 11.
Herold, Walter F., assignor to The Bassick Company, Bridgeport, Conn. Cushion slide for furniture. 2,030,699; Feb. 11.
Hertz, Gustav L., Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company. Electric discharge tube. 2,030,521; Feb. 11.
Herzog, Reginald O., Berlin-Steglitz, and A. Burssni, Berlin-Lichterfelde-West, Germany, assignors to Wallwood Corporation, New York, N. Y. Preparation of leather-like flexible and pliable material from wood sheets. 2,030,810; Feb. 11.
Hess, Kurt. (See Hessel, B. Hess, and Richter.)
Heston, Allen L., Columbiana, assignor to National Rubber Machinery Company, Akron, Ohio. Tire building drum. 2,030,749; Feb. 11.
Hexcel Radiator Company. (See Opitz, Fred M., assignor.)
Hey, Henry W. (See Hill, E. G., and Hey.)
Hibberd, Frederick H., Bayside, N. Y., G. H. Woodard, Phillipsburg, N. J., and J. Kirgan, Easton, Pa., assignors to Ingersoll-Rand Company, Jersey City, N. J. Refrigerating construction. 2,030,514; Feb. 11.
Hibner, De Los E., Jr. (See Arey, F. C., and Hibner.)
Hibner, De Los E., Jr., Du Bois, Pa., assignor to Vulcan Soot Blower Corporation. Soot blowing tube. 2,030,830 Feb. 11.
Hickok Manufacturing Company. (See Hickok, Stephen R., assignor.)
Hickok Manufacturing Company. (See Mix, Edwin S., assignor.)
Hickok, Stephen R., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Brace. 2,030,791; Feb. 11.
Hile, Leslie M. (See Newhouse, W. F., and Hile.)
Hill, Edward G., and H. W. Hey, assignors to Automatic Shifters, Inc., Richmond, Va. Gear shifting mechanism for motor vehicles. 2,030,838; Feb. 11.
Hirsch, Alfred. (See Elledge, H., and Hirsch.)
Hirsch, Louis, Textile Machines, Inc. (See Friedmann, Albert, assignor.)
Hisaw, Frederick L., and H. L. Fevold, assignors to Wisconsin Alumni Research Foundation, Madison, Wis. Isolation and purification of hormones. 2,030,209; Feb. 11.
Hisaw, Frederick L., and H. L. Fevold, assignors to Wisconsin Alumni Research Foundation, Madison, Wis. Isolation and purification of the gonad stimulating hormone. 2,030,210; Feb. 11.
Hodge, Alfred E., Kenilworth, Ill. Container. 2,030,295; Feb. 11.
Hodgson, Charles R., Atlanta, Ga., and H. H. Knowles, Birmingham, and C. N. Lemmon, Homewood, Ala. Electrical control equipment. 2,030,589; Feb. 11.
Hodtum, Joseph B., Bellevue, Pa., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Bushing assembly. 2,030,370; Feb. 11.
Holcomb, Harry E., Stratford, Conn., assignor to Johns-Manville Corporation, New York, N. Y. Adhesive composition and making the same. 2,030,633; Feb. 11.
Holloway, Arthur V., assignor to Thomas W. Royal Co., Philadelphia, Pa. Envelope structure. 2,030,634; Feb. 11.
Holman, Arthur T. (See Holman, John L., and A. T.)
Holman Brothers Limited. (See Holman, John L. and A. T., assignors.)
Holman, John L., Carbis Bay, and A. T. Holman, Callestick, Cornwall, assignors to Holman Brothers Limited, Camborne, Cornwall, England. Haulage apparatus for operating soil scrapers, plows, reaping machines, and the like. 2,030,590; Feb. 11.
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining apparatus. 2,030,064; Feb. 11.
Holmes, Morris P., Claremont, N. H., assignor to Sullivan Machinery Company. Mining apparatus. 2,030,065; Feb. 11.
Holmquist, Albert, Holmquist, S. Dak. Seed mixer and agitator. 2,030,591; Feb. 11.
Hooper, Charles W., Sharon, Conn., assignor to Winthrop Chemical Company, Inc., New York, N. Y. Water-miscible vitamin preparations containing vitamin D. 2,030,792; Feb. 11.
Hooper, George W., et al. (See Pierce, Lucien, assignor.)
Hopwood, John A., Great Neck, N. Y. Delivery box. 2,030,109; Feb. 11.
Hopwood, John M. (See Miller, Paul S., assignor.)
Horn, Otto, Ionia, Mich. Fish bag or holder. 2,030,793; Feb. 11.
Horstmann, Frederick B., assignor to Dearborn Chemical Company, Chicago, Ill. Pump. 2,030,296; Feb. 11
Horton, Gilbert E., Jr., Hewlett, N. Y. Vacuum tube periodic relay. 2,030,794; Feb. 11.
Horwitt, Nathan G., and M. Katcher, assignors, by mesne assignments, to E. Pincus, New York, N. Y. Chair. 2,030,635; Feb. 11.
Hosking, Oakley W., Monroe, N. Y. Automatic tire inflater. 2,030,502; Feb. 11.
Hosking, Oakley W., Monroe, N. Y. Automatic tire inflater. 2,030,503; Feb. 11.
Howard, Frank C., assignor to American Automatic Devices Co., Chicago, Ill. Bumper guard. 2,030,255; Feb. 11.
Howard, John H., Huntington Park, and A. C. Catland, Alhambra, assignors to Globe Oil Tools Company, Los Nietos, Calif. Core catcher. 2,030,297; Feb. 11.
Howard, John H., Huntington Park, and A. C. Catland, Alhambra, said Catland assignor to Globe Oil Tools Company, Los Nietos, Calif. Core drill head. 2,030,298; Feb. 11.
Hoxie, Merrill C., Bridgeport, Conn., assignor to General Electric Company. Reduction drive mechanism. 2,030,780; Feb. 11.
Hubbell, Harvey, Incorporated. (See Von Holtz, Charles T., assignor.)
Huck, Louis C., Grosse Pointe Village, assignor to Huxon Holding Corporation, Detroit, Mich. Rivet and setting the same. 2,030,165; Feb. 11.

Huck, Louis C., Grosse Pointe, assignor to Huron Holding Corporation, Detroit, Mich. Rivet and setting the same. 2,030,168; Feb. 11.

Huck, Louis C., Grosse Pointe, assignor to Huron Holding Corporation, Detroit, Mich. Rivet. 2,030,169; Feb. 11.

Huck, Louis C., Grosse Pointe, assignor to Huron Holding Corporation, Detroit, Mich. Rivet. 2,030,170; Feb. 11.

Huck, Louis C., Detroit, Mich., assignor to Huron Holding Corporation. Manufacturing rivets. 2,030,171; Feb. 11.

Hudelay, Victor, Clichy, and J. Lagrave, Paris, France. Color cinematography. 2,030,795; Feb. 11.

Hughes Tool Company. (See Fletcher, H. W., and Neuhaus, assignors.)

Hughes Tool Company. (See Garfield, L. E., and Scott, assignors.)

Hughes Tool Company. (See McKellar, M. E., Sherman, and Fletcher, assignors.)

Hughes Tool Company. (See Scott, Floyd L., assignor.)

Hughes Tool Company. (See Scott, F. L., and Garfield, assignors.)

Hughes Tool Company. (See Sherman, Ralph F., assignor.)

Hulse, George E., New Haven, Conn., assignor to The Safety Car Heating & Lighting Company. Apparatus for making helical carbon piles. 2,030,211; Feb. 11.

Humath Co. (See Marshall, Henry H., Jr., assignor.)

Hume, John T., assignor to Electric Household Utilities Corporation, Chicago, Ill. Hydraulic actuating mechanism for domestic laundry appliances. 2,030,256; Feb. 11.

Hume, John T., assignor to Electric Household Utilities Corporation, Chicago, Ill. Hydraulic actuating mechanism for domestic laundry appliances. 2,030,257; Feb. 11.

Hutton, Alfred L., Jr. (See Lawson, R. H., Cloutier, and Hutton.)

Huron Holding Corporation. (See Huck, Louis C., assignor.)

Huron Holding Corporation. (See Miller, Ralph A., assignor.)

Hyde, Ralph E., Cleveland, and H. A. Maurer, Novelty, assignors to The Oster Manufacturing Company, Cleveland, Ohio. Assembly table. 2,030,594; Feb. 11.

Hyman, Henry. (See Muldoon, Bernard F., assignor.)

I-T-E Circuit Breaker Company. (See Graves, Herbert C., Jr., assignor.)

Iler, Eleanor C., administratrix. (See Iler, Franklin M.)

Iler, Franklin M., deceased, Cleveland, Ohio, E. C. Iler, administratrix. Pulverizer. 2,030,839; Feb. 11.

Illian, Jacob J., Chicago, Ill. Bottle capping and closing machine. 2,030,371; Feb. 11.

Imperial Chemical Industries Limited. (See Knight, Arthur H., assignor.)

Indianapolis Corporation. (See Anderson, Roy F., assignor.)

Ingersoll-Rand Company. (See Hansen, Charles C., assignor.)

Ingersoll-Rand Company. (See Hibberd, F. H., Woodard, and Kirgan, assignors.)

International Business Machines Corporation. (See Buhler, Eugen, assignor.)

International Business Machines Corporation. (See Dickinson, Arthur H., assignor.)

International Business Machines Corporation. (See Gilbert, William N., assignor.)

International Business Machines Corporation. (See Larrabee, Clinton E., assignor.)

International Business Machines Corporation. (See Schaaff, John T., assignor.)

International Door Company. (See Shields, J. W., and Hagenbook, assignors.)

International Motor Patents Proprietary Limited. (See Falconer, William R., assignor.)

International Paper Company. (See Quinn, Robert G., assignor.)

International-Stacey Corporation. (See Bloss, Richard H., assignor.)

International-Stacey Corporation. (See Pranger, A., and Boykin, assignors.)

Insulite Company, The. (See Ellis, George H., assignor.)

Jack, Robert K., Lansing, Mich. Hydraulic transmission. 2,030,299; Feb. 11.

Jackman, Fred W., Beverly Hills, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y. Composite photography. 2,030,300; Feb. 11.

Jackson, John F., assignor to H & B American Machine Company, Pawtucket, R. I. Bobbin clutch for rotatable spindles. 2,030,301; Feb. 11.

Jacobs Bros. Co. Inc., The. (See Walker, Harold L., assignor.)

Jaeck, Wolfgang. (See Reid, H., and Jaeck.)

Jaeger, Gustav, Neu-Isenburg, assignor to Deutsche Gold und Silber Scheideanstalt vormals Roessler, Frankfort-on-the-Main, Germany. Production of practically iron-free compounds of the earth metals, alkaline earth metals, rare earth metals, earth acids, or the like. 2,030,872; Feb. 11.

James, Robert F., Detroit, Mich., assignor, by mesne assignments, to Westinghouse Lamp Company, Bloomfield, N. J. Electric heater. 2,030,820; Feb. 11.

Jeffrey Manufacturing Company, The. (See Jeffrey, Robert K., assignor.)

Jeffrey, Robert K., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Drill mechanism. 2,030,696; Feb. 11.

Jeffrey, Robert K., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Drill mechanism. 2,030,697; Feb. 11.

Jenett, Henry, Cumberland, Md., assignor to Celanese Corporation of America. Plastic material and melting same. 2,030,806; Feb. 11.

Jenkins, Henry G. (See Ryde, J. W., and Jenkins.)

Johansson, Ernest G., Watertown, assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass. Test-block for electric meters. 2,030,822; Feb. 11.

Johns-Manville Corporation. (See Holcomb, Harry E., assignor.)

Johnson, Arthur A., assignor to Dictaphone Corporation, Bridgeport, Conn. Phonograph. 2,030,638; Feb. 11.

Johnson, George W., Norwood, assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Pressing machine. 2,030,696; Feb. 11.

Johnson, George W., assignor to The American Laundry Machinery Company, Cincinnati, Ohio. Pressing element for pressing machines. 2,030,698; Feb. 11.

Johnson, Gunnar E., East Milton, Mass. Feed cam attachment. 2,030,697; Feb. 11.

Johnson, Treat B., Bethany, Conn., assignor to Winthrop Chemical Company, Inc., New York, N. Y. Derivatives of thiazole and preparing the same. 2,030,573; Feb. 11.

Johnson, Wilfrid E., Schenectady, N. Y., assignor to General Electric Company. Compressor and balancing device therefor. 2,030,701; Feb. 11.

Jones, Walter L., Kenmore, N. Y. Spinning top. 2,030,302; Feb. 11.

Justrite Manufacturing Company. (See Brown, Lelloy O., assignor.)

Kahn, Lucian L., assignor to The Estate Stove Company, Hamilton, Ohio. Stove. 2,030,639; Feb. 11.

Kanengeiser, Earl P., Youngstown, Ohio. Scooter. 2,030,796; Feb. 11.

Karpen, King. (See Beck, E. J., and Van Derveer, and Karpen.)

Karpen, S., & Bros. (See Beck, E. J., Van Derveer, and Karpen, assignors.)

Katcher, Morris. (See Horwitt, N. G., and Katcher.)

Kaufman, Carl C., Conshohocken, Pa. Safety belt. 2,030,172; Feb. 11.

Kayser, Julius, & Company. (See Bankton, W. J., and Beers, assignors.)

Knight, Albert W., Cumberland, Md., assignor to Celanese Corporation of America. Apparatus for manufacturing twisted artificial yarns or threads. 2,030,110; Feb. 11.

Keller, John D., Pittsburgh, Pa. Carbon pile meter. 2,030,523; Feb. 11.

Kelly, William M., Westfield, assignor to American Type Foundery Company, Elizabeth, N. J. Printing press. 2,030,173; Feb. 11.

Kempton, Herbert E., assignor to Tuthill Pump Company, Chicago, Ill. Seal for rotary engines. 2,030,305; Feb. 11.

Kenty, Carl E., Jersey City, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Gaseous electric discharge device. 2,030,378; Feb. 11.

Kerr, William J., Waterbury, and H. C. Miller, Naugatuck, assignors to The Bristol Company, Waterbury, Conn. Time-cycle controller. 2,030,451; Feb. 11.

Kinatome Patents Corporation. (See Oswald, C. L., and Foster, assignors.)

Kingman, Russell B., Orange, N. J., assignor, by mesne assignments, to Camel Pen Company, Soluble ink fountain pen. 2,030,452; Feb. 11.

Kinnucan, James W., and J. O. Fink, assignors to Continental Motors Corporation, Detroit, Mich. Engine. 2,030,213; Feb. 11.

Kinsella, Edward, and R. H. J. Riley, Spondon, near Derby, England, assignors to Celanese Corporation of America. Production of artificial materials. 2,030,212; Feb. 11.

Kinzel, Augustus B., Beechhurst, Long Island, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Portable testing machine. 2,030,640; Feb. 11.

Kirgan, John. (See Hibberd, F. H., Woodard, and Kirgan.)

Kirton, Thomas A., Jacksonville, Fla. License tag. 2,030,702; Feb. 11.

Klaus, Herman L., Houston, Tex. Drill bit. 2,030,834; Feb. 11.

Knauth, George E., Reno, Nev. Match box. 2,030,797; Feb. 11.

Knecht, Albert, Wilen, Switzerland. Wind screen. 2,030,258; Feb. 11.

Knight, Arthur H., Ashton-on-Mersey, England, assignor to Imperial Chemical Industries Limited. Azo dyes and their preparation. 2,030,214; Feb. 11.

Knowles, Harry H. (See Hodgson, C. R., Knowles, and Lemmens.)

Knowlton, Theodore E., New York, N. Y. Printing. 2,030,304; Feb. 11.

Kohn, Inc. (See Coberly, Clarence L., assignor.)

Koehler, Edwin H., New York, N. Y. Accessories container. 2,030,298; Feb. 11.

Kort, Ludwig, Hannover, Germany. Combined device of a ship's propeller enclosed by a nozzle. 2,030,848; Feb. 11.

Krajecki, George C., Philadelphia, Pa. Dental forceps. 2,030,796; Feb. 11.

Kraner, Warren A., assignor to Cement Wrapped Pipe Company, Ltd., San Francisco, Calif. Manufacturing noncorrective armored metal pipe. 2,030,515; Feb. 11.

Krefft, Hermann. (See Fehse, A., and Krefft.)

Krefft, Hermann. (See Hancke, A., and Krefft.)

Kremmling, Aribert, Hammersleben, near Oschersleben, Germany. Mold for molding or embossing or the like plastic material such as dough. 2,030,642; Feb. 11.

Kresser, Leo, assignor to United American Bosch Corporation, Springfield, Mass. Humidifier. 2,030,453; Feb. 11.

Kresser, Leo, assignor to United American Bosch Corporation, Springfield, Mass. Humidifier apparatus. 2,030,454; Feb. 11.

Kreutz, Frank E., San Diego, Calif. Vehicle wheel tire. 2,030,215; Feb. 11.

Kroll, Philip J., Tulsa, Okla. Vehicle rocking machine. 2,030,174; Feb. 11.

Kuhni, Leopold K., Bridgeport, Conn., assignor to Magazine Repeating Razor Company, New York, N. Y. Razor. 2,030,708; Feb. 11.

Küppenbender, Heinz, and M. Nowicki, assignors to Ikon Aktiengesellschaft Dresden, Dresden, Germany. Combined objective and exposure meter for photographic or cinematographic exposing apparatus. 2,030,643; Feb. 11.

La Casse, William J. (See Bolsinaw, C. F., and La Casse.)

Lagerholm, Carl J., Attleboro, assignor to Evans Case Company, North Attleboro, Mass. Pyrophoric lighter mechanism. 2,030,831; Feb. 11.

Lagrave, Jean. (See Hudelay, V., and Lagrave.)

Lain, Mary E., San Francisco, Calif. Attachment for women's garments. 2,030,206; Feb. 11.

Lambert, Raynor, Brooklyn, N. Y. Orthodontia molding device. 2,030,536; Feb. 11.

Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Truck. 2,030,144; Feb. 11.

Langford, George, assignor to McKenna Process Company of Illinois, Joliet, Ill. Repairing a rail joint in track. 2,030,704; Feb. 11.

La Plant-Choate Mfg. Co. Inc. (See Choate, R. E., and Rodler, assignors.)

La Plant-Choate Manufacturing Company. (See Choate, R. E., and Rodler, assignors.)

Larrabee, Clinton E., Binghamton, assignor, by mesne assignments, to International Business Machines Corporation, New York, N. Y. Electric clock system. 2,030,455; Feb. 11.

Lavitt, Albert E., and H. L. Pearson, Denver, Colo. Insecticide sprayer. 2,030,259; Feb. 11.

Lawson, Robert H., Pawtucket, A. N. Cloutier, and A. L. Hutton, Jr., Lonsdale, assignors to Hemphill Company, Pawtucket, R. I. Jacquard pattern mechanism for knitting machines and patterning effected thereby. 2,030,516; Feb. 11.

Le Blond, R. K., Machine Tool Company, The. (See Groene, W. F., and Luning, assignors.)

Ledin, Charles, assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Lock. 2,030,456; Feb. 11.

Le Fevre, George L., Clarendon, Va., assignor of one-half to G. A. Cook, Washington, D. C. Educational device. 2,030,175; Feb. 11.

Lefler, Melvin N. (See Lundellius, O. F., and Lefler.)

Lehmann, Walter, Wuppertal-Elberfeld, assignor to W. Peyinghaus, trading as Elsen-u Stahlwerk Walter Peyinghaus, Egge, near Volmarstein, a. d. Ruhr, Germany. Axle bearing lubrication device. 2,030,644; Feb. 11.

Leighton, John W., Port Huron, Mich. Resilient joint. 2,030,750; Feb. 11.

Lemmens, Hendricus J. (See Straub, W. F., and Lemmens.)

Lemmon, George N. (See Hodgson, C. R., Knowles, and Lemmon.)

Lewis Invisible Stitch Machine Company. (See Mann, Joseph, assignor.)

Lewis, Otto L., assignor to Foote Bros. Gear & Machine Co., Chicago, Ill. Motorized reduction gear assembly. 2,030,260; Feb. 11.

Lewis, Robert E., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa. Universal testing machine. 2,030,457; Feb. 11.

Libbey Glass Manufacturing Company, The. (See Schutz, Harold E., assignor.)

Liles, Cecile F., Independence, Mo. Pastry making machine. 2,030,598; Feb. 11.

Linsert, Otto, Wuppertal-Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Irradiation of vitamin D and product thereof. 2,030,577; Feb. 11.

Lippold, Frederick A., assignor to Reliance Advertising Co., Chicago, Ill. Swing check for signs. 2,030,378; Feb. 11.

Lippold, Frederick A., assignor to Reliance Advertising Co., Chicago, Ill. Suspension means for swing signs. 2,030,379; Feb. 11.

Litchfield, Isaac W., Medfield, Mass., assignor, by mesne assignment, to Baranac Machine Company, Benton Harbor, Mich. Bag sealing machinery. 2,030,607; Feb. 11.

Llewellyn, Rees S., Glen Ellyn, Ill. Window catch. 2,030,705; Feb. 11.

Lockridge, Bennett R., and L. W. Mayer, Petoskey, Mich. Drying and raising mechanism. 2,030,645; Feb. 11.

Lombardi Knitting Machine Co. Inc. (See Lombardi, Vincent, assignor.)

Lombardi, Vincent, Garden City, assignor to Lombardi Knitting machine Co. Inc., New York, N. Y. Yarn controlling member. 2,030,561; Feb. 11.

Long, James W., Plainfield, and E. R. Wheeler, North Plainfield, N. J., assignors to The Western Union Telegraph Company, New York, N. Y. Page projector for recorders. 2,030,521; Feb. 11.

Long, Spencer W. (See Young, F. J., Long, and Morgan.)

Long, Spencer W., Redondo Beach, Calif., assignor to The National Superior Company, Toledo, Ohio. Spider. 2,030,111; Feb. 11.

Longo, Joseph, Syracuse, N. Y. Lubricating device. 2,030,646; Feb. 11.

Lorain Steel Company, The. (See Steward, D. F., and Stewart, assignors.)

Love, Solomon A., Decatur, Ga. Closure cap. 2,030,380; Feb. 11.

Lowe, Rudy, Chicago, Ill. assignor to Proportioneers, Inc. Providence, R. I. Apparatus for metering fluids. 2,030,581; Feb. 11.

Lowry, Erwin F., Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company. Alloy. 2,030,112; Feb. 11.

Lowry, Jesse W. (See Watts, W. H. and Lowry.)

Lummus Company, The. (See Conbrough, George R., assignor.)

Lundellius & Eccleston Motors Corporation. (See Lundellius, O. F. and Lefler, assignors.)

Lundellius, Oscar F., and M. N. Lefler, assignors to Lundellius & Eccleston Motors Corporation, Los Angeles, Calif. Steering mechanism. 2,030,822; Feb. 11.

Lundgren, Johan R., Superior, Wis. Milk bottle weir. 2,030,706; Feb. 11.

Luning, George W. (See Groene, W. F. and Luning.)

Luth, Arno J., Port Edwards, R. A. Nugent, Nekoosa, and N. H. Christian, Port Edwards, assignors to Nekoosa-Edwards Paper Company, Port Edwards, Wis. Treating pulp. 2,030,382; Feb. 11.

Luth, Arno J., Port Edwards, R. A. Nugent, Nekoosa, N. H. Christian, Port Edwards, assignors to Nekoosa-Edwards Paper Company, Port Edwards, Wis. Treating pulp. 2,030,383; Feb. 11.

Luth, Arno J., Port Edwards, R. A. Nugent, Nekoosa, and N. H. Christian, Port Edwards, assignors to Nekoosa-Edwards Paper Company, Port Edwards, Wis. Bleaching pulp. 2,030,384; Feb. 11.

Lyle, Frederick W., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electric control system. 2,030,113; Feb. 11.

MacLaren, Frederick H., Calumet City, assignor to Standard Oil Company, Chicago, Ill. Manufacture of pour point depressors. 2,030,307; Feb. 11.

MacLaren, Frederick H., Calumet City, assignor to Standard Oil Company, Chicago, Ill. Synthetic lubricating oils. 2,030,832; Feb. 11.

MacLean-Fogg Lock Nut Company. (See MacLean, John A., assignor.)

MacLean, John A., assignor to MacLean-Fogg Lock Nut Company, Chicago, Ill. Floor clip. 2,030,210; Feb. 11.

Macleod, Cameron, et al, trustees. (See Dahl, Edward T., assignor.)

Macleod, Hiden, et al., trustees. (See Dahl, Edward T., assignor.)

Maddock, Thomas, Phoenix, Ariz. Truss or bridge. 2,030,262; Feb. 11.

Magazine Repeating Razor Company. (See Kuhni, Leopold K., assignor.)

Magnesium Development Corporation. (See Schmidt, W., Spitaler, and Schultze, assignors.)

Mallinckrodt Chemical Works. (See Shreve, R. N., Pritchard, Farr, Still, and Crosby, assignors.)

Mann, Arthur H., Nyack, assignor to Morse Boulger Destructor Company, Inc., New York, N. Y. Destructor. 2,030,114; Feb. 11.

Mann, Joseph, Philadelphia, Pa., assignor to Lewis Invisible Stitch Machine Company, St. Louis, Mo. Blind stitch sewing machine. 2,030,751; Feb. 11.

Manson Chemical Company. (See Manson, George J., assignor.)

Manson, George J., Hawkesbury, Ontario, Canada, assignor, by mesne assignments, to Manson Chemical Company, Montclair, N. J. Emulsions. 2,030,385; Feb. 11.

Marks, Herbert E., Sewickley, Pa. Well construction. 2,030,217; Feb. 11.

Marsh, Howard R., Ventura, Calif. Hydraulic brake. 2,030,208; Feb. 11.

Marshall, Henry H., Jr., Garden City, assignor to Humath Co., Inc., New York, N. Y. Applicator for powdered medicaments. 2,030,176; Feb. 11.

Martin, Edward J. (See Rasweiler, G. M., and Martin.)

Martin, Floyd L., Lacona, Wis. Inclinometer. 2,030,065; Feb. 11.

Martinez, Marie, Memphis, Tenn. Curtain fixture. 2,030,309; Feb. 11.

Martus, Martin L., Woodbury, H. H. Becker, and J. G. Ross, Waterbury, Conn. Primary cell. 2,030,177; Feb. 11.

Mason, Charles R. (See Traver, O. C., and Mason.)
Mason-Neilan Regulator Company. (See Dahl, Edward T.)
Maurer, Harry A. (See Hyde, R. E., and Maurer.)
Maurin, Vicente L., Habana, Cuba. Locking mechanism. 2,030,599; Feb. 11.
Maxwell, James C. G., assignor to The American Brass Company, Waterbury, Conn. Flexible hose support. 2,030,218; Feb. 11.
Maybach, Karl, assignor to Maybach-Motorenbau G. m. b. H., Friedrichshafen, Bodensee, Germany. Change speed gear. 2,030,752; Feb. 11.
Maybach-Motorenbau G. m. b. H. (See Maybach, Karl, assignor.)
Mayfield, Harry F., Anderson, S. C. Towel vending machine. 2,030,525; Feb. 11.
Maypole, Geo ge, et al. (See Spear, John E., assignor.)
McCarthy, Timothy F., Indiana, Pa., assignor to Goodman Manufacturing Company, Chicago, Ill. Loading apparatus. 2,030,145; Feb. 11.
McCullough, Jack. (See Eitel, W. W., and McCullough.)
McCullough, Paul J., assignor to Scullin Steel Co., St. Louis, Mo. Automatic control apparatus. 2,030,146; Feb. 11.
McDaniel, James W., Pomona, N. C. Auxiliary pull-down motion for looms. 2,030,600; Feb. 11.
McDermott, Harold R. (See Garber, E. C., and McDermott.)
McDonald, C. C., et al. (See Baade, William G., assignor.)
McDonald, Guy A., Chicago Heights, Ill., assignor to Victor Chemical Works. Rustproofing composition and coating iron and steel. 2,030,601; Feb. 11.
McDonnell, Samuel M., Neenah, Wis. Brake lock. 2,030,753; Feb. 11.
McDonough, Ambrose A., and C. D. Vickers, Chicago, and C. Schaumburg, Oak Park, Ill., said Schaumburg assignor to said McDonough and said Vickers. Paper holder. 2,030,602; Feb. 11.
McElhannon, James H. (See Wills, Edward K., assignor.)
McKellar, Marion S., R. P. Sherman, and H. W. Fletcher, assignors to Hughes Tool Company, Houston, Tex. Resilient seat for valves. 2,030,458; Feb. 11.
McKenna Process Company of Illinois. (See Langford, George, assignor.)
McLaughlin, May L., Fairfield, Conn. Face lifter. 2,030,603; Feb. 11.
McLean, Lee R., assignor to The Toledo Porcelain Enamel Products Company, Toledo, Ohio. Burning bar. 2,030,707; Feb. 11.
McMillin, Robert M., and A. Taub, assignors to General Motors Corporation, Detroit, Mich. Splash oiling system. 2,030 647; Feb. 11.
McMurray, John C. (See Turner, Price G., assignor.)
McWilliams, Leigh B., and L. V. McWilliams, Whittier, Calif. Apparatus for destroying insects. 2,030,310; Feb. 11.
McWilliams, Lyle V. (See McWilliams, Leigh B. and L. V.)
Meeker, Sidney, Memphis, Tenn. Blood transfusion apparatus. 2,030,754; Feb. 11.
Mellink, Charles F., Toledo, Ohio. Protective receptacle. 2,030,219; Feb. 11.
Meinig, Ernst R., Wyomissing, Pa. Milanese cloth. 2,030,459; Feb. 11.
Meissner, Alexander, Berlin-Dahlem, Germany, assignor to General Electric Company. Magnet system. 2,030,648; Feb. 11.
Meissner Manufacturing Company. (See Schaper, William A., assignor.)
Melzer, Carl G. R., Langenberg, Germany. Concentrating all kinds of precious metal ores by froth flotation. 2,030,526; Feb. 11.
Mercer, George A., Jr., Savannah, Ga. Yielding support for vehicles. 2,030,263; Feb. 11.
Mesnick, Kirwan Y., Clarendon, Va. Combined road and rail vehicle. 2,030,311; Feb. 11.
Meyer, Hans, Altona-Bahrenfeld, Germany. Device for simultaneously regulating the pressure of a series of pressure rolls adjacent a heating table. 2,030,527; Feb. 11.
Meyer, Louis W. (See Lockridge, E. R., and Meyer.)
Middleby-Marshall Oven Co. (See O'Brien, Thomas, assignor.)
Miller, Edward C. (See Kerr, W. J., and Miller.)
Miller, George A., South Gilboa, N. Y. Adjustable partition for cattle stalls. 2,030,755; Feb. 11.
Miller, Julius J., St. Joseph, Mich. Container cover fastener. 2,030,069; Feb. 11.
Miller, Paul S., New York, N. Y., assignor to J. M. Hopwood, Dormont, Pa. Combustion control system. 2,030,386; Feb. 11.
Miller, Ralph A., assignor, by mesne assignments, to Huxon Holding Corporation, Detroit, Mich. Rivet. 2,030,167; Feb. 11.
Miller, Ralph A., Detroit, Mich., assignor to Huxon Holding Corporation. Rivet. 2,030,168; Feb. 11.
Miller, Robert E., Bronxville, N. Y. Furniture leg shoe. 2,030,649; Feb. 11.
Miller, Robert N., Altoona, Pa. Trolley patrol car. 2,030,650; Feb. 11.
Miller, Stuart P., Englewood, N. J., assignor to The Barrett Company, New York, N. Y. Blended pitch product and method of making. 2,030,528; Feb. 11.
Minkow, Julius M., New York, N. Y. Safety guard for box ending machines. 2,030,604; Feb. 11.
Minnesota Mining and Manufacturing Company. (See Carlton, Richard P., assignor.)
Miranda, Francisco Q. Cordoba, Argentina. Mute for sextuple musical instruments. 2,030,250; Feb. 11.
Mitchell, Courtney N., Strongsville, Ohio. Drainage receptacle. 2,030,709; Feb. 11.
Mitz, Edwin S., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Necktie holder. 2,030,756; Feb. 11.
Model Brassiere Co. (See Schoebel, Henry, assignor.)
Moffat, Walter A., assignor to Auto Headlight Signal Company, Meridian, Miss. Automobile signal. 2,030,757; Feb. 11.
Mohawk Asphalt Heater Company. (See Van Vorst, J. and Baker, assignors.)
Molin, Louis A., Chicago, Ill. Hydraulic press. 2,030,307; Feb. 11.
Moore, Ninian R., Du Bois, Pa. Lawn sprinkler. 2,030,605; Feb. 11.
Moore, Walter E., West Hartford, Conn., assignor to The Billings & Spencer Company. Wrench clip. 2,030,147; Feb. 11.
Morgan, John S., Jr. (See Young, F. J., Long and Morgan.)
Morrell, Jacque C., assignor to Universal Oil Products Company, Chicago, Ill. Manufacture of acetylene. 2,030,070; Feb. 11.
Morris, G., Woodson. (See Ruhlmann, Frederick C., assignor.)
Morrison, Frank A., et al., trustees. (See Dahl, Edward T., assignor.)
Morse Boulger Destructor Company. (See Mann, Arthur H., assignor.)
Morton, Edmund R., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electric resistance device. 2,030,460; Feb. 11.
Mosler Safe Co. (See Murtaugh, John J., Jr., assignor.)
Moss, Henry V., St. Louis, Mo., assignor to Swann Research, Incorporated. Granular product conditioner and products made therewith. 2,030,461; Feb. 11.
Mossberg, Iver O., West Haven, assignor to O. F. Mossberg & Sons, Inc., New Haven, Conn. Firearm sight. 2,030,312; Feb. 11.
Mossberg, O. F., & Sons, Inc. (See Mossberg, Iver O. assignor.)
Mossberg, O. F., & Sons, Inc. (See Mossberg, Oscar F. assignor.)
Mossberg, Oscar F., assignor to O. F. Mossberg & Sons, Inc., New Haven, Conn. Upture-and-pullback bolt-action firearm. 2,030,149; Feb. 11.
Mueller, Erwin H., Detroit, Mich. Valve. 2,030,150; Feb. 11.
Muirhead, David P. (See Muirhead, James and D. P.)
Muirhead, James and D. P., Glasgow, Scotland. Air or gas extractor for vehicles or buildings. 2,030,288; Feb. 11.
Muldoon, Bernard J., Mountain View, N. J., assignor to H. Hyman, Brooklyn, N. Y. Electric plug. 2,030,115; Feb. 11.
Müller, Richard, Heidelberg, and M. Schenck, Mannheim, and W. Wirbatz, assignors to C. F. Boehringer & Soehne G. m. b. H., Mannheim-Waldhof, Germany. Producing plastic masses etc., containing cellulose ester. 2,030,221; Feb. 11.
Muntner, Joseph M. (See Full, G. D., and Muntner.)
Munz, Lewis E., assignor of one-half to E. H. Sheldon & Company, Muskegon, Mich. Coating composition and applying. 2,030,709; Feb. 11.
Murray, J. A., et al. (See Baade, William G., assignor.)
Murtaugh, John J., Jr., Floral Park, N. Y., assignor to Mosler Safe Co., Hamilton, Ohio. Depository. 2,030,313; Feb. 11.
Muscey, William H., and M. P. Blomberg, assignors to Pullman-Standard Car Manufacturing Company, Chicago, Ill. Vehicle end framing. 2,030,462; Feb. 11.
Myers, James E., Whitefish Bay, and W. F. Simonsen, Milwaukee, Wis. Sterilizing apparatus. 2,030,314; Feb. 11.
Mylius, Walter G. (See Bradshaw, W. M., and Mylius.)
Nash, Archibald F., Kingston Hill, England. Safety device for cranes and the like. 2,030,529; Feb. 11.
National Aniline & Chemical Co. (See Riegler, Riewa, assignor.)
National Blank Book Company. (See Schade, Frank J. assignor.)
National Blank Book Company. (See Schade, John, assignor.)
National Machinery Company, The. (See Friedman, John H., assignor.)
National Rubber Machinery Company. (See Heston, Allen L., assignor.)
National Superior Company, The. (See Long, Spencer W. assignor.)
National Superior Company, The. (See Young, F. J., Long, and Morgan, assignors.)
Naturkacz, Walter, Buffalo, N. Y. Feeding attachment for meat grinders. 2,030,758; Feb. 11.
Navias, Louis, Schenectady, N. Y., assignor to General Electric Company. Sodium resistant glass. 2,030,289; Feb. 11.
Navias, Louis, Schenectady, N. Y., assignor to General Electric Company. Glass. 2,030,290; Feb. 11.

Nawiasky, Paul, Ludwigshafen-on-the-Rhine, B. Stein, Mannheim, and E. Berthold and R. Keil, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Nitroanthraquinone-azoles. 2,030,523; Feb. 11.
Nawiasky, Paul, Ludwigshafen-on-the-Rhine, and B. Stein, Mannheim, and E. Berthold and R. Keil, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. 1-amino-2-anthraquinonoyl-anthraquinone-azoles. 2,030,524; Feb. 11.
Neal, Bob, Arkadelphia, Ark. Compressor unit. 2,030,759; Feb. 11.
Nein, William C., White Plains, N. Y., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Detachable watt-hour meter. 2,030,116; Feb. 11.
Nekoosa-Edwards Paper Company. (See Luth, A. J., Nugent, and Christian, assignors.)
Nelms, Homer L., Albany, N. Y. Fish bearing device. 2,030,463; Feb. 11.
Neuhaus, Ralph. (See Fletcher, H. W., and Neuhaus.)
New Britain Machine Company, The. (See Costello, William F., assignor.)
New Haven Clock Company, The. (See Whitehead, Richard H., assignor.)
Newhouse, Walter F., and L. M. Hile, Benton Harbor, Mich. Machinery for making receptacles. 2,030,071; Feb. 11.
Newton, Edwin B., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Stable aqueous dispersion. 2,030,222; Feb. 11.
Newton Steel Company. (See Fenton, Ray M., assignor.)
New York Central Railroad Company, The. (See Thomas, William L., assignor.)
Nichols Copper Company. (See Baird, Dudley, assignor.)
Nichols Engineering & Research Corporation of Canada, Limited. (See Freeman, Horace, assignor.)
Nilson, Frederick C., assignor to General Railway Signal Company, Rochester, N. Y. Testing device for threaded articles. 2,030,464; Feb. 11.
Nist, Joseph T., Canton, Ohio. Receptacle for motion picture films. 2,030,465; Feb. 11.
Noble, Robert J., Glendale, Calif. Rodding and tamping machine for concrete. 2,030,315; Feb. 11.
Nold, Hans, and W. Jaeck, Basel, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Fast colored lacquer. 2,030,264; Feb. 11.
Norley, Harry C., Peterboro, Ontario, Canada, assignor to Canadian Atlas Steels Limited, Welland, Ontario, Canada. Drill. 2,030,530; Feb. 11.
Norris, Eric D. T., Hollinwood, England, assignor to Ferranti Electric Inc., New York, N. Y. Moving coil voltage regulator. 2,030,606; Feb. 11.
North American Rayon Corporation. (See Bley, Rudolph S., assignor.)
North American Rayon Corporation. (See Oppenlaender, O., Gollong, and Carter, assignors.)
Nowicki, Martin. (See Küppenbender, H., and Nowicki.)
Nugent, Richard A. (See Luth, A. J., Nugent, and Christian.)
Nygaard, Johan O., Oslo, Norway. Water tube boiler. 2,030,265; Feb. 11.
O'Brien, Thomas, assignor to Middleby-Marshall Oven Co., Chicago, Ill. Oven door construction. 2,030,223; Feb. 11.
Oelkers, Alfred H., assignor to American Steel Foundries, Chicago, Ill. Antifriction wheel and axle assembly. 2,030,151; Feb. 11.
Ohlsson, Charles J., Brooklyn, N. Y. Oil burner. 2,030,531; Feb. 11.
Okonite Company, The. (See Waldron, Richard C., assignor.)
O'Neill, Robert F. (See Rust, H. M., and O'Neill.)
Opitz, Fred M., assignor to Herzel Radiator Company, Milwaukee, Wis. Air conditioning device. 2,030,316; Feb. 11.
Opolo, Charles, Culver City, Calif. Flexible axle for vehicles. 2,030,710; Feb. 11.
Oppenlaender, Oscar, Elisabethton, E. J. Gollong and E. H. Carter, Johnson City, Tenn., assignors to North American Rayon Corporation, New York, N. Y. Treating apparatus. 2,030,711; Feb. 11.
Opticolor Aktiengesellschaft. (See Gretener, Edgar, assignor.)
Oster Manufacturing Company, The. (See Hyde, R. E., and Maurer, assignors.)
Oswald, Carl L., New York, N. Y., and W. D. Foster, Washington Township, Bergen County, N. J., assignors to Kinatome Patents Corporation. Recordation of sound. 2,030,760; Feb. 11.
Ott, Reuben, Buffalo, assignor to Worthington Pump and Machinery Corporation, New York, N. Y. Silencer. 2,030,291; Feb. 11.
Pace, Edwin W., assignor to Pace Manufacturing Company, Chicago, Ill. Concealed coin drawer. 2,030,712; Feb. 11.
Pace Manufacturing Company. (See Pace, Edwin W., assignor.)
Packard Motor Car Company. (See Williams, Ralph M., assignor.)
Packard Motor Car Company. (See Woolson, Lionel M., assignor.)
Page, Luther T., Richmond, Va. Windshield heater. 2,030,117; Feb. 11.
Palmer Electric & Manufacturing Co., The. (See Johansson, Ernest G., assignor.)
Paper Service Company, The. (See Rowe, William W., assignor.)
Paris, Israel E., Washington, D. C. Double dummy bridge game. 2,030,468; Feb. 11.
Park, Carl P., Manchester, N. H., assignor to U. S. Bobbin & Shuttle Company 1920, Providence, R. I. Shuttle pin lock. 2,030,718; Feb. 11.
Parkinson, James A., Topeka, Kans., assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for the control of highway crossing signals. 2,030,532; Feb. 11.
Parsons, Robert J., Schenectady, assignor to Consolidated Car-Heating Company, Inc., Albany, N. Y. Emergency circuit controller. 2,030,760; Feb. 11.
Pate, Robert L., Jr., Pittsburg, Kans. Automatic lubricating mechanism. 2,030,533; Feb. 11.
Pearce, Arthur G., Middlesex, England, assignor to General Electric Company. Manufacture of electric discharge tubes. 2,030,392; Feb. 11.
Pearce, Herbert P., London, England. Rainwater trap. 2,030,467; Feb. 11.
Pearson, Homer L. (See Lavitt, A. R., and Pearson.)
Pease, Benjamin F., Silver Lake, Ohio. Hypogastric supporter. 2,030,224; Feb. 11.
Pease, Frederick J., Wauwatosa, assignor to Clum Manufacturing Company, Milwaukee, Wis. Storage battery charge indicator. 2,030,651; Feb. 11.
Pédemonte, Alexandre, Alger, Algeria. Differential speed changing gear. 2,030,761; Feb. 11.
Pegler, Joseph L. (See Pegler, Walter, assignor.)
Pegler, Walter, Parramatta, assignor to J. L. Pegler, Beecroft, New South Wales, Australia. Producing nonshatterable glass. 2,030,607; Feb. 11.
Pelzer, Harry L., Houston, Tex., assignor to Sinclair Refining Company, New York, N. Y. Cracking hydrocarbons. 2,030,393; Feb. 11.
Pembroke, George F., Los Angeles, Calif. Draft control. 2,030,823; Feb. 11.
Pennsylvania Salt Manufacturing Co. (See Cushing, Russell K., assignor.)
Perkins Glue Company. (See Pierson, Gordon G., assignor.)
Peschel, Joseph K., Bradley, Ill. Making metal panels. 2,030,072; Feb. 11.
Pestarini, Giuseppe M., Grant City, N. Y. Direct electric current transformer device. 2,030,652; Feb. 11.
Pestarini, Giuseppe M., Sheffield, England. Electrical apparatus for the transmission of angular movements. 2,030,762; Feb. 11.
Peyinghaus, Walter. (See Lehmann, Walter, assignor.)
Pfeil, Fred C., Ennertsville, N. Y. Apparatus for dispensing liquid. 2,030,534; Feb. 11.
Phillips, John A., Nottingham, England. Machine for the production of knitted fabrics. 2,030,317; Feb. 11.
Pickard, Fred. (See Pickard, Oliver J., and F.)
Pickard, Oliver J., and F., Philadelphia, Pa. Pile wire. 2,030,763; Feb. 11.
Pierce, Lucien, assignor of one-half to Family Laundry Co., Malden, and one-half to G. W. Hooper, Salem, Mass. Method of and apparatus for washing fabrics. 2,030,394; Feb. 11.
Pierson, Gordon G., Lansdale, Pa., assignor to Perkins Glue Company. Adhesive composition and making same. 2,030,073; Feb. 11.
Pike, Earle E., Corsicana, Tex. Quilting frame. 2,030,608; Feb. 11.
Pimentel, Thomas, Campinas, Brazil. Automatic typewriting marginator. 2,030,395; Feb. 11.
Pincus, Ethel. (See Horwitt, N. G., and Katcher, assignors.)
Pirani, Marcello, Berlin-Wilmersdorf, and G. Gaidies, Berlin-Pankow, Germany, assignors to General Electric Company. Alkali metal vapor resistant glass. 2,030,714; Feb. 11.
Pirani, Marcello, Berlin-Wilmersdorf, and M. Reger, Berlin, Germany, assignors to General Electric Company. Gaseous electric discharge lamp device. 2,030,715; Feb. 11.
Platt Iron Works, Inc. (See Wells, Edward C., assignor.)
Poeggel, Erich, Remscheid, Germany. Cutting, setting, and sharpening circular saws. 2,030,225; Feb. 11.
Pollock, Harry L., Wilkinsburg, Pa. Vessel cover. 2,030,266; Feb. 11.
Poole, Lora E., Anderson, Ind., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich. Coil winding machine. 2,030,764; Feb. 11.
Poole, Roy B., Dayton, Ohio. Universal joint. 2,030,074; Feb. 11.
Poppe, George W., assignor to Equitable Paper Bag Co. Inc., Brooklyn, N. Y. Process and machine for long lip bags. 2,030,118; Feb. 11.
Post, Claude L., Chicago, Ill. Feeding device. 2,030,152; Feb. 11.
Potter, Ralph K., Madison, N. J., assignor to American Telephone and Telegraph Company. Electrical circuit arrangement. 2,030,178; Feb. 11.
Potter, Ralph K., Madison, N. J., assignor to American Telephone and Telegraph Company. Electrical circuit arrangement. 2,030,179; Feb. 11.
Potter, Ralph K., Madison, N. J., assignor to American Telephone and Telegraph Company. Electrical circuit arrangement. 2,030,180; Feb. 11.

Potter, Ralph K., Madison, N. J., assignor to American Telephone and Telegraph Company. Directional radio signaling. 2,030,181; Feb. 11.

Powers, Frank B., Forest Hills, and C. C. Whittaker, Pittsburgh, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Control system. 2,030,119; Feb. 11.

Pranger, Albert, and B. Boykin, Jr., Beaumont, Tex., assignors, by mesne assignments, to International-Stacey Corporation, Columbus, Ohio. Well boring apparatus. 2,030,315; Feb. 11.

Pratt, Charles A., assignor to Goodman Manufacturing Company, Chicago, Ill. Mining machine. 2,030,535; Feb. 11.

Pratt, Edward B., West Medford, Mass. Fertilized mulch paper. 2,030,267; Feb. 11.

Pritchard, William N., Jr. (See Shreve, R. N., Pritchard, Farr, Still, and Crosby.)

Proportioneers, Inc. (See Lowe, Rudy, assignor.)

Pruitt, Raymond S., trustees, et al. (See Starkey, William C., assignor.)

Pullman-Standard Car Manufacturing Company. (See Mussey, W. H., and Blomberg, assignors.)

Quinn, Robert G., Glens Falls, assignor to International Paper Company, New York, N. Y. Fireproofing. 2,030,655; Feb. 11.

Quittner, Heinrich, Vienna, Austria. Closure device. 2,030,609; Feb. 11.

Radio Corporation of America. (See Baruch, Sydney N., assignor.)

Radio Corporation of America. (See Cunningham, David L., assignor.)

Radio Corporation of America. (See Gallup, John L., assignor.)

Radio Corporation of America. (See Rose, George M., Jr., assignor.)

Radio Corporation of America. (See Rust, N. M., and O'Neill, assignors.)

Radio Corporation of America. (See Salzberg, Bernard, assignor.)

Radio Corporation of America. (See Straub, W. F., and Lemmens, assignors.)

Radio Corporation of America. (See Usselman, George L., assignor.)

Radley, Fred T., Ceres, Calif. Self-watering seed pan. 2,030,268; Feb. 11.

Rahlmann, Frederick C., assignor of fifteen one-hundredths to G. W. Morris, San Antonio, Tex. Fire extinguisher. 2,030,468; Feb. 11.

Rambert, Arthur F., Irondequoit, N. Y. Cigarette and making the same. 2,030,319; Feb. 11.

Randall, Eugene F., Medford, Mass., assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Rectifier and the like. 2,030,286; Feb. 11.

Randall, Norman E., Shannock, R. I. Elastic yarn and making same. 2,030,610; Feb. 11.

Randolph, Donald W., Flint, O. S. Duffendack, and R. A. Wolfe, Ann Arbor, Mich. Spark generating system. 2,030,228; Feb. 11.

Rankin, Donald A., and F. G. Uhler, Newburgh, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Casein dispersion. 2,030,228; Feb. 11.

Rasweiler, Gerald M., and H. J. Martin, assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich. Oscillograph. 2,030,654; Feb. 11.

Reeves, William A. (See Tucker, O. M., and Reeves.)

Reger, Martin. (See Pirani, M., and Reger.)

Rego, Charles E., East Boston, Mass. Safety device for manhole covers. 2,030,536; Feb. 11.

Reinhardt, Willard L., Shaker Heights, assignor to Willard Storage Battery Company, Cleveland, Ohio. Storage battery. 2,030,716; Feb. 11.

Reinhardt, Willard L., Shaker Heights, assignor to Willard Storage Battery Company, Cleveland, Ohio. Storage battery. 2,030,717; Feb. 11.

Reliance Advertising Co. (See Lippold, Frederick A., assignor.)

Reynolds, Neil B., Scotia, N. Y., assignor to General Electric Company. Composite glass container. 2,030,397; Feb. 11.

Ricci, Massipo, assignor of one-half to A. Calaroa, Seneca Falls, N. Y. Precision instrument. 2,030,320; Feb. 11.

Rich, Chester A., assignor to The Rich Pump & Ladder Company, Cincinnati, Ohio. Leaning board. 2,030,697; Feb. 11.

Rich Pump & Ladder Company, The. (See Rich, Chester A., assignor.)

Richards, Joshua M., Brookline, Mass. Skylight or floorlight construction. 2,030,718; Feb. 11.

Richards, Vernon J., Gary, Ind., and J. M. Werner, Aurora, Ill. Soap shredder. 2,030,182; Feb. 11.

Richardson, Annie, Los Angeles, Calif. Molar band. 2,030,227; Feb. 11.

Richardson, Roger W., Wilmington, Del. Continuous filter. 2,030,535; Feb. 11.

Richter, George A., Berlin, assignor to Brown Company, Berlin, N. H. Manufacture of parchment papers. 2,030,469; Feb. 11.

Richter, Johann. (See Hensel, B., Hess, and Richter.)

Rickert, John J., Elmore, N. Y., assignor to Boorum & Pease Company, Brooklyn, N. Y. Cover for loose leaf books. 2,030,765; Feb. 11.

Ricks, Fred, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J. Abrading machine. 2,030,154; Feb. 11.

Riegler, Blossom, Buffalo, assignor to National Aniline & Chemical Co., Inc., New York, N. Y. Vapor phase oxidation. 2,030,260; Feb. 11.

Rightmyer, Holden W., assignor to The American Swiss Company, Toledo, Ohio. Doorlatch. 2,030,719; Feb. 11.

Riley, John, assignor of one-half to A. J. Berzinsky, Chicago, Ill. Mason's line holding trig. 2,030,539; Feb. 11.

Riley, Reginald H. J. (See Kinsella, E., and Riley.)

Riley Stoker Corporation. (See Daniels, Fred H., assignor.)

Ritzert, Robert W., Dayton, Ohio. Maintaining the freshness of bread and the like, and apparatus used in the practice of the method. 2,030,154; Feb. 11.

Rivard, Lionel L., and C. L. Bemister, New Haven, Conn. Apparatus for cleaning pipes. 2,030,393; Feb. 11.

Roberts, Louis V., and D. Chalmers, Kansas City, Mo. Humidifier. 2,030,155; Feb. 11.

Robinson, Joseph, New York, N. Y. Vaporizer device. 2,030,075; Feb. 11.

Roch, Henry. (See Roch, Rudolf, and H.)

Roch, Rudolf and H., Dresden, Germany. Combined billiard table and expanding table. 2,030,155; Feb. 11.

Roche, Thomas T., Hartford, Conn. Window sash holder. 2,030,269; Feb. 11.

Roequin, Wenceslaus G., New Orleans, La., assignor to Valley Manufacturing Corporation. Rake. 2,030,183; Feb. 11.

Rodler, Waldo B. (See Choate, R. K., and Rodler.)

Rogers, Charles J., and W. F. Rogers, assignors to Crown Stove Works, Cicero, Ill. Stove construction. 2,030,540; Feb. 11.

Rogers, Walter F. (See Rogers, Charles J., and W. F.)

Rompe, Robert, Berlin, Germany, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,030,320; Feb. 11.

Rose, Alfred G., assignor to Rose Brothers (Gainsborough) Limited, Gainsborough, England. Apparatus for delivering powdery material. 2,030,541; Feb. 11.

Rose Brothers (Gainsborough) Limited. (See Rose, Alfred G., assignor.)

Rose, George M., Jr., Orange, N. J., assignor to Radio Corporation of America. Tube base. 2,030,184; Feb. 11.

Rose, George M., Jr., Orange, N. J., assignor to Radio Corporation of America. Stem for electron discharge device. 2,030,185; Feb. 11.

Rose, George M., Orange, N. J., assignor to Radio Corporation of America. Stem making apparatus. 2,030,186; Feb. 11.

Rose, James G. (See Martus, M. L., Becker, and Rose.)

Rose, Oscar A., New York, N. Y. Heating system. 2,030,542; Feb. 11.

Rose, Oscar A., New York, N. Y. Heating. 2,030,543; Feb. 11.

Rose, Oscar A., New York, N. Y. Heating system. 2,030,544; Feb. 11.

Ross, Robert D., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Remote control for theater lights. 2,030,801; Feb. 11.

Roseme, Victor E., Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Control circuit. 2,030,400; Feb. 11.

Rossmann, Rudolf, Gauting, near Munich, Germany, assignor to firm Tufag Textil-Finanz A. G. Zurich, Switzerland. Loom for weaving. 2,030,270; Feb. 11.

Rotary Brush Company. (See Bodenweiser, Aaron, assignor.)

Rowe, William W., Cincinnati, assignor to The Paper Service Company, Lockland, Ohio. Coating creped papers and the product thereof. 2,030,156; Feb. 11.

Royal, Thomas M., & Co. (See Holloway, Arthur V., assignor.)

Royster, David O., Overland, Mo. Mechanism for assembling and inserting inclosures in envelopes. 2,030,656; Feb. 11.

Ruckloe, Edward H., Arcadia, Calif. Double acting garden rake. 2,030,321; Feb. 11.

Ruff, Harold E., Rugby, England, assignor to General Electric Company. Electric gaseous discharge device. 2,030,401; Feb. 11.

Russell, Edward A. (See Gillick, L. H., and Russell.)

Russell, Frank J., Wauwatosa, assignor to Cutler-Hammer Inc., Milwaukee, Wis. Motor control. 2,030,470; Feb. 11.

Rust, Neil M., and R. F. O'Neill, Chelmsford, England, assignors to Radio Corporation of America. Superregenerative receiving system. 2,030,130; Feb. 11.

Rüttenauer, Alfred. (See Fritze O., and Rüttenauer.)

Rüttenauer, Alfred, Berlin-Halensee, Germany, assignor to General Electric Company. Gaseous electric discharge lamp. 2,030,402; Feb. 11.

Rüttenauer, Alfred, Berlin-Halensee, and O. Fritze, Berlin, Germany, assignors to General Electric Company. Gaseous electric discharge lamp. 2,030,404; Feb. 11.

Ryde, John W. (See Francis, T. J., and Ryde.)

Ryde, John W., London, and H. G. Jenkins, Hatch End, England, assignors to General Electric Company. Electric discharge device. 2,030,404; Feb. 11.

Sabins, George G., Glendale, assignor to Samuels-Kleiner, Ltd., Los Angeles, Calif. Separable fastener. 2,030,471; Feb. 11.

Safety Car Heating & Lighting Company, The. (See Godsey, Frank W., Jr., assignor.)

Safety Car Heating & Lighting Company, The. (See Hulse, George E., assignor.)

Salzberg, Bernard, New York, N. Y., assignor to Radio Corporation of America. Short wave tube. 2,030,187; Feb. 11.

Salzberg, Paul L. (See Bousquet, E. W., Graves, and Salzberg.)

Samuels-Kleiner, Ltd. (See Sabins, George G., assignor.)

Saranac Machine Company. (See Litchfield, Isaac W., assignor.)

Sargent, Sullivan A., Jr., et al., trustees. (See Dahl, Edward T., assignor.)

Saurwein, Karl. (See Ulrich, H., and Saurwein.)

Sausedde, Claude, Detroit, Mich., assignor to Detroit Hydrostatic Brake Corporation. Wheel. 2,030,076; Feb. 11.

Sayles Biltmore Bleacheries, Inc. (See Coleman, Nelson R., assignor.)

Schaaff, John T., deceased, by L. A. Schaaff, executrix, Washington, D. C., assignor to International Business Machines Corporation, New York, N. Y. Record perforating machine. 2,030,405; Feb. 11.

Schaaff, Lillian A., executrix. (See Schaaff, John T.)

Schade, Frank S., assignor to National Blank Book Company, Holyoke, Mass. Book construction. 2,030,472; Feb. 11.

Schade, John, assignor to National Blank Book Company, Holyoke, Mass. Loose leaf book. 2,030,473; Feb. 11.

Schaeffer, Ethan A., Jr., Springfield, Ohio. Wallpaper remover. 2,030,720; Feb. 11.

Schantz, Edward W., Newark, N. J. Tool for making snap fasteners for bag frames. 2,030,406; Feb. 11.

Schaper, William A., assignor to Meissner Manufacturing Company, Chicago, Ill. Radio apparatus. 2,030,271; Feb. 11.

Schaumburg, Charles. (See McDonough, A. A., Vickers, and Schaumburg, assignors.)

Schellenger, Newton C., assignor to Chicago Telephone Supply Co., Elkhart, Ind. Switch. 2,030,657; Feb. 11.

Schenck, Martin. (See Müller, R., Schenck, and Wirbats.)

Scherer, Henry B., South St. Paul, Minn. Game apparatus. 2,030,322; Feb. 11.

Schlattau, Frank F., Los Angeles, Calif. Safety razor. 2,030,766; Feb. 11.

Schlenker, Vesper A., Orange, N. J., assignor of one-half to E. H. Cumpston, Brighton, N. Y. Acoustic construction. 2,030,157; Feb. 11.

Schlunegger, Arnold J., San Bernardino, Calif. Ore mill. 2,030,323; Feb. 11.

Schmidt, Henry F., Lansdowne, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Blower. 2,030,474; Feb. 11.

Schmidt, Henry F., Lansdowne, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Lubricating system. 2,030,611; Feb. 11.

Schmidt, Oscar C., assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio. Actuating means for closures, such as doors, lids, and the like. 2,030,324; Feb. 11.

Schmidt, Raymond. (See Forster, John S., assignor.)

Schmidt, Walther, P. Spitaler, and W. Schultze, Bitterfeld, Germany, assignors, by mesne assignments, to Magnesium Development Corporation. Improving magnesium alloys, especially in shaped forms. 2,030,767; Feb. 11.

Schnell, Steve, Overland, assignor to Wagner Electric Corporation, St. Louis, Mo. Brake actuating mechanism. 2,030,272; Feb. 11.

Schodlbauer, Erwin, New York, N. Y. Safety razor. 2,030,658; Feb. 11.

Schoebel, Henry, Hempstead Gardens, Long Island, N. Y., assignor to Model Brassiere Co., Inc., Brooklyn, N. Y. Undergarment. 2,030,826; Feb. 11.

Schrader, Gerhard, Opladen, near Cologne, and W. Zerweck, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Waterinsoluble azodyestuffs. 2,030,327; Feb. 11.

Schrauth, Walther, Berlin-Dahlem, assignor to Deutsche Hydrierwerke Aktiengesellschaft, Berlin-Charlottenburg, Germany. Catalytic oxidation of turpentine oils. 2,030,802; Feb. 11.

Schulze, Hermann, Leipsig, Germany. Porous boot or shoe sole. 2,030,545; Feb. 11.

Schutz, Harold E., Ottawa Hills, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio. Glass working apparatus. 2,030,328; Feb. 11.

Schultze, Werner. (See Schmidt, W., Spitaler, and Schultze.)

Schwarzkopf, Paul, Reutte/Tyrol, Austria. Making compound structural material and shaped articles thereof. 2,030,229; Feb. 11.

Schwimmer, Oscar, Los Angeles, Calif. Device for making cream. 2,030,158; Feb. 11.

Scott, Bernard H., Glendale, Calif. Automatic control system for atomizing and lifting oil with gas. 2,030,159; Feb. 11.

Scott, Floyd L. (See Garfield, L. E., and Scott.)

Scott, Floyd L., assignor to Hughes Tool Company, Houston, Tex. Hydraulic punch. 2,030,721; Feb. 11.

Scott, Floyd L., assignor to Hughes Tool Company, Houston, Tex. Cutter assembly. 2,030,722; Feb. 11.

Scott, Floyd L., and L. E. Garfield, assignors to Hughes Tool Company, Houston, Tex. Cutter supporting means for well drills. 2,030,723; Feb. 11.

Scott, William J. (See Davies, L. J., Gilson, and Scott.)

Scovill Manufacturing Company. (See Summey, David L., assignor.)

Scullin Steel Co. (See McCullough, Paul J., assignor.)

Serbinsky, Adam J. (See Riley, John, assignor.)

Serisky, Harry, Brooklyn, N. Y. Baby carriage. 2,030,407; Feb. 11.

Severy, Victor H., Los Angeles, Calif., assignor, by mesne assignments, to Creative Industries, Inc. Split phase impulser for musical instruments. 2,030,230; Feb. 11.

Shaffer, Charles A., Allegan, Mich. Display container. 2,030,546; Feb. 11.

Shaner, Edgar M. (See Smith, Robert L., assignor.)

Shehan, William E., Los Angeles, Calif. Roller coating machine. 2,030,325; Feb. 11.

Sheldon, E. H., & Company. (See Munz, Lewis E., assignor.)

Shell Development Company. (See Cox, Albert B., assignor.)

Shell Development Company. (See Eldridge, I. C., and Symon, assignors.)

Sherman, Ralph P. (See McKellar, M. S., Sherman, and Fletcher.)

Sherman, Ralph P., assignor to Hughes Tool Company, Houston, Tex. Lubricated plug valve. 2,030,408; Feb. 11.

Shermund, Ralph C., assignor to Heintz and Kaufman, Ltd., San Francisco, Calif. Filament support. 2,030,326; Feb. 11.

Shields, John W., and T. M. Hagenbook, assignors, by mesne assignments, to International Door Company, Evansville, Ind. Braceless panic release, roller latching, revolving door hardware. 2,030,547; Feb. 11.

Shoe Lace Company. (See Titcomb, William S., assignor.)

Shore, Albert F., New York, N. Y. Penetrator-stem for hardness-indicating apparatus. 2,030,475; Feb. 11.

Shreve, Randolph N., and W. N. Pritchard, Jr., West Lafayette, Ind., H. V. Farr, Ferguson, and A. J. Still, St. Louis, Mo., and J. D. Crosby, Arlington, N. J., assignors to Mallinckrodt Chemical Works, St. Louis, Mo. Manufacturing soluble salts of barium and strontium. 2,030,659; Feb. 11.

Shultz, William R., Lewisburg, Pa. Lifesaving equipment for marine vessels. 2,030,768; Feb. 11.

Siemens & Halske, Aktiengesellschaft. (See Strehmel, Paul, assignor.)

Sillers, Thomas, G. A., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Pressure relief valve. 2,030,121; Feb. 11.

Simons, James E., San Francisco, Calif. Apparatus for comparing colors. 2,030,329; Feb. 11.

Simonsen, William F. (See Myers, J. E., and Simonsen.)

Simpson, George S., Plainfield, N. J., assignor to General Chemical Company, New York, N. Y. Purification of materials contaminated with ammonium salts. 2,030,273; Feb. 11.

Sinclair Refining Company. (See Pelzer, Harry L., assignor.)

Skiles, Ira T., Pasadena, Calif. Refuse catching and removing device for floors. 2,030,077; Feb. 11.

Slattengren, Hattie J. E., et al. (See Slattengren, Henry A., assignor.)

Slattengren, Henry A., Oak Park, Ill., assignor of one-fifth to J. C. Barck, Lindstrom, one-fifth to M. B. Slattengren, Chicago City, one-fifth to E. O. A. Davidson, St. Paul, and two-fifths to H. J. B. Slattengren, Lindstrom, Minn. Advertising device. 2,030,706; Feb. 11.

Slattengren, Maria E., et al. (See Slattengren, Henry A., assignor.)

Sloane, William W., assignor to Goodman Manufacturing Company, Chicago, Ill. Drive mechanism for shaker conveyers. 2,030,330; Feb. 11.

Smeets, Herman R. M. G., Roermond, Netherlands. Truck or tractor with two rear axles. 2,030,548; Feb. 11.

Smith, Fay E., Fenton, Mich. Concrete tile mold. 2,030,724; Feb. 11.

Smith, Harry D., Buffalo, N. Y., assignor to Consolidated Packaging Machinery Corporation. Magnetic capping chuck. 2,030,188; Feb. 11.

Smith, Harry E., assignor to F. D. Snell, Brooklyn, N. Y. Producing mirrors. 2,030,476; Feb. 11.

Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,030,409; Feb. 11.

Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,030,410; Feb. 11.

Smith, Joseph F., Fort Wayne, Ind. Game. 2,030,549; Feb. 11.

Smith, Justin L., Watertown, assignor to Seymour Smith & Son, Inc., Oakville, Conn. Jointed pole for tree pruners. 2,030,550; Feb. 11.

Smith, L. Blake. (See Cerf, Marcel H., assignor.)

Smith, Robert L., assignor of forty-nine per cent to E. M. Shaner, Lynchburg, Va. Weed puller. 2,030,770; Feb. 11.

Smith, Seymour, & Son, Inc. (See Smith, Justin L., assignor.)

Smith, Stuyvesant C., assignor to Bendix Aviation Corporation, South Bend, Ind. Carburetor. 2,030,881; Feb. 11.

Smith, William A. (See Bernitz, Ernest, Sr., assignor.)

Snader, Howard B., Temple, assignor to Vanity Fair Silk Mills, Reading, Pa. Full fashioned hosiery knitting machine. 2,030,477; Feb. 11.

Snell, Foster D. (See Smith, Harry R., assignor.)

Snyder, Edward, Fort Wayne, Ind. Winding apparatus. 2,030,660; Feb. 11.

Society of Chemical Industry in Basle. (See Anderau, Walter, assignor.)

Society of Chemical Industry in Basle. (See Hauser, H., and Bommer, assignors.)

Society of Chemical Industry in Basle. (See Nold, H., and Jaeck, assignors.)

Softened Rubber Limited. (See Ungar, Ralph M., assignor.)

Soule, Leslie, et al., trustees. (See Dahl, Edward T., assignor.)

Spalding, Frank, Hoboken, N. J., assignor, by mesne assignments, to Ralph C. Coxhead Corporation, New York, N. Y. Carriage driving and hammer returning mechanism. 2,030,411; Feb. 11.

Spear, John E., assignor of one-third to G. Maypole, and one-third to E. Werner, Helena, Mont. Valve. 2,030,332; Feb. 11.

Sperry Products, Inc. (See De Lanty, Lorea J., assignor.)

Spinner, Isidore, Chicago, and P. V. Spinner, Wilmette, Ill. Binding books. 2,030,478; Feb. 11.

Spinner, Philip V. (See Spinner, Isidore, and P. V.)

Standard Oil Company. (See Dirgo, Sterling H., assignor.)

Standard Oil Company. (See MacLaren, Frederick B., assignor.)

Starkey, William C., assignor, by mesne assignments, to W. C. Starkey, Indianapolis, Ind., R. S. Pruitt, and W. H. Beal, Chicago, Ill., trustees. Clutch spring. 2,030,325; Feb. 11.

Stearn, Franklin A., Westfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone exchange system. 2,030,412; Feb. 11.

Steeneck, Robert. (See Dirkes, R. F., and Steeneck.)

Stein, Berthold. (See Nawiasky, P., Stein, Berthold, and Zell.)

Stephens Pump Company. (See Allen, Herbert, assignor.)

Sterling Siren Fire Alarm Company Inc. (See Armstrong, Merton C., assignor.)

Steward, Douglas P., and J. V. Stewart, Johnstown, assignors to The Lorain Steel Company, Johnstown, Pa. Frog and switch track work. 2,030,231; Feb. 11.

Stewart, John V. (See Steward, D. P., and Stewart.)

Stewart, Marion S., Wellesley, Mass. Food strainer. 2,030,274; Feb. 11.

Stewart-Warner Corporation. (See Davis, Ernest W., assignor.)

Sticelber, Merlin A., Kansas City, assignor of one-half to W. Stoneman, Jr., Kansas City, Mo. Controlling temperatures in the refrigerating systems of package sealing machines. 2,030,725; Feb. 11.

Still, Arthur J. (See Shreve, H. N., Pritchard, Farr, Still, and Crosby.)

Still, Carl, Recklinghausen, Germany. Apparatus for the production of coke and gas in horizontal chamber ovens. 2,030,324; Feb. 11.

Still, Carl, Recklinghausen, Germany. Apparatus for the expansion of hydrocarbons for cracking and distillation. 2,030,771; Feb. 11.

Stone, Abraham, Brooklyn, N. Y. Clothing container. 2,030,661; Feb. 11.

Stone, Donald D., Flint, assignor to General Motors Corporation, Detroit, Mich. Bearing lubrication. 2,030,232; Feb. 11.

Stone, James A., Philadelphia, Pa. Refrigerator. 2,030,413; Feb. 11.

Stoneman, William, Jr. (See Sticelber, Merlin A., assignor.)

Story, Ernst J., and J. M. Delaney, Cincinnati, Ohio. Shoe construction. 2,030,276; Feb. 11.

Straub, Willem F., and H. J. Lemmens, Eindhoven, Netherlands, assignors to Radio Corporation of America. Electrolytic condenser. 2,030,122; Feb. 11.

Strauss, Joseph B., San Francisco, Calif. Recording mechanism. 2,030,479; Feb. 11.

Strawbridge, Tern A., Corunna, Mich. Ventilator. 2,030,551; Feb. 11.

Strehmel, Paul, Berlin-Siemensstadt, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Shielding device. 2,030,215; Feb. 11.

Strezynski, George J., Poughkeepsie, assignor to The De Laval Separator Company, New York, N. Y. Reclaiming oil containing carbon. 2,030,480; Feb. 11.

Strindberg, Richard, assignor to Development Associates, Inc., Worcester, Mass. Dry type self-cleaning air filter. 2,030,552; Feb. 11.

Strock, Edward C. (See Strock, William L. and E. C.)

Strock, William L. and E. C., Los Angeles, Calif. Adjustable mold for battery cell connectors. 2,030,730; Feb. 11.

Stuhlmacher, Richard, Siegmar, near Chemnitz, assignor to Wanderer-Werke vorm. Winklhofer & Jaenicke Akt.-Ges., Schonau-Chemnitz, Germany. Machine tool, particularly milling machine having a counter support. 2,030,481; Feb. 11.

Sturtevant Mill Company. (See Sturtevant, Thomas J., assignor.)

Sturtevant, Thomas J., Wellesley, assignor to Sturtevant Mill Company, Boston, Mass. Air separator. 2,030,612; Feb. 11.

Sults, Chauncey G., Madison, Wis., assignor to General Electric Company, Block signal system. 2,030,693; Feb. 11.

Sullivan Machinery Company. (See Hallock, Frank A., assignor.)

Sullivan Machinery Company. (See Holmes, Morris P., assignor.)

Summers, Caleb E., Pontiac, assignor to General Motors Corporation, Detroit, Mich. Venturi type cylinder head. 2,030,663; Feb. 11.

Summey, David L., deceased, Waterbury, Conn., The Colonial Trust Company and R. F. W. Summey, executors, assignors to Scovill Manufacturing Company, Waterbury, Conn. Metallurgical apparatus. 2,030,482; Feb. 11.

Summey, Richard F. W., executors et al. (See Summey, David L.)

Superheater Company, The. (See Armacost, Wilbur H., assignor.)

Svenson, Ernest J., Rockford, Ill. Material working apparatus. 2,030,235; Feb. 11.

Swann Research, Incorporated. (See Moss, Henry V., assignor.)

Symon, Benjamin G. (See Eldridge, L. C., and Symon.)

Taub, Alex. (See McMillin, B. M., and Taub.)

Taylor, Elmer H., assignor to The Chase-Shawmut Company, Newburyport, Mass. Electric fuse. 2,030,611; Feb. 11.

Taylor, Eugene S., Chicago, Ill. Torque motor. 2,030,277; Feb. 11.

Taylor, William L., Spondon, near Derby, England, assignor to Celanese Corporation of America. Production of artificial materials. 2,030,189; Feb. 11.

Tefag Textil-Finanz A. G. (See Rossmann, Rudolf, assignee.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Hansel, B., Hess, and Richter, assignors.)

Teller, Jacob, New Rochelle, assignor to Teller Stove Designing Corporation, New York, N. Y. Constructing stoves and ranges. 2,030,772; Feb. 11.

Teller Stove Designing Corporation. (See Teller, Jacob, assignor.)

Temple, Robert, Inc. (See Temple, Robert, Jr., assignor.)

Temple, Robert, Jr., assignor to Robert Temple, Inc., Denver, Colo. Compressing device. 2,030,803; Feb. 11.

Texas Company, The. (See Wight, Roy E., assignor.)

Theilacker, Hans F., South Bend, Ind. Flashing signal system for motor vehicles. 2,030,664; Feb. 11.

Thoma, Gerald F., Canton, Ohio. Freezing apparatus. 2,030,323; Feb. 11.

Thomas, William L., Haverstraw, N. Y., assignor to The New York Central Railroad Company. Box car. 2,030,773; Feb. 11.

Thompson Products Incorporated. (See Colwell, Archie T., assignor.)

Thompson, Ralph E., Brookline, assignor to Emerine Apparatus Company, Melrose, Mass. Razor blade. 2,030,823; Feb. 11.

Thorne, Ward, Chicago, Ill. Fertilizer mixer and sprayer. 2,030,278; Feb. 11.

Thornton, Fred O., Jr. (See Galligan, J. J., and Thornton.)

Tiffany, Homer A., Clifton, N. J. Rotary projector head for oil burners. 2,030,123; Feb. 11.

Tiffany, Homer A., Glen Rock, N. J. Burning liquid fuels. 2,030,124; Feb. 11.

Tiley, George E., Woodhaven, assignor to General Chemical Company, New York, N. Y. Railway car. 2,030,553; Feb. 11.

Tinius Olsen Testing Machine Company. (See Lewis, Robert E., assignor.)

Tinius Olsen Testing Machine Company. (See Warner, David M., assignor.)

Titcomb, William S., Andover, assignor to Shoe Lace Company, Boston, Mass. Covering articles. 2,030,160; Feb. 11.

Tobold, Ewald F., assignor to The Dill Manufacturing Company, Cleveland, Ohio. Heater. 2,030,614; Feb. 11.

Told, Arnold H., assignor to Chicago Railway Equipment Company, Chicago, Ill. Railroad signal. 2,030,199; Feb. 11.

Toledo Porcelain Enamel Products Company, The. (See McLean, Lee E., assignor.)

Toledo Porcelain Enamel Products Company, The. (See Young, Earl E., assignor.)

Toscano, Francisco, Los Banos, Calif. Electric signal. 2,030,279; Feb. 11.

Traver, Oliver C., Drexel Hill, and C. R. Mason, Media, Pa., assignors to General Electric Company. Protective apparatus. 2,030,665; Feb. 11.

Treptow, George E., Chicago, Ill., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio. Door construction. 2,030,774; Feb. 11.

Tucker, Oliver M., and W. A. Reeves, Columbus, Ohio, assignors to Hartford-Empire Company, Hartford, Conn. Timing mechanism for glass feeders. 2,030,804; Feb. 11.

Turner, Howard B. (See Hedeen, R. N., and Turner.)

Turner, Price G., Yorkville, N. Y., assignor of one-half to J. C. McMurray, Winthrop, Mass. Testing device for internal combustion engines. 2,030,727; Feb. 11.

Turner Tanning Machinery Company, The. (See Whitney, Robert F., assignor.)

Tuthill Pump Company. (See Kempton, Herbert E., assignor.)

20th Century Advertising, Inc. (See de Roulet, Henry, assignor.)

Twiss, Frank J., Swanton, Ohio. Container holder. 2,030,775; Feb. 11.

Tyce, George C. (See Hale, F. C., and Tyce.)

Uhler, Frank G. (See Rankin, D. A., and Uhler.)

Uhlig, Herman M., Cedarburg, Wis. Filing device. 2,030,728; Feb. 11.

Ulrich, Heinrich, and K. Saurwein, Ludwigshafen-on-the-Rhine, Germany, assignors to Agfa Ansco Corporation, Binghamton, N. Y. Photographic developer. 2,030,326; Feb. 11.

Underwood Elliott Fisher Company. (See Dobson, William A., assignor.)

Underwood Elliott Fisher Company. (See Smith, Jesse A. B., assignor.)

Ungar, Ralph M., London, assignor to Softened Rubber Limited, Manchester, England. Manufacture of rubber. 2,030,191; Feb. 11.

Union Carbide and Carbon Corporation. (See Cox, H. L., and Greer, assignors.)

Union Carbide and Carbon Corporation. (See Doom, Ernest F., assignor.)

Union Carbide and Carbon Corporation. (See Kinsel, Augustus B., assignor.)

Union Carbide and Carbon Corporation. (See Wiesler, William A., assignor.)

Union Metal Products Company. (See Gilpin, Garth G., assignor.)

Union Switch & Signal Company, The. (See Parkinson, James A., assignor.)

United American Bosch Corporation. (See Kreeger, Leo, assignor.)

United Lens Corporation. (See Arbuckle, S. F., and Coulter, assignors.)

United Shoe Machinery Corporation. (See Cuomo, Michele, assignor.)

United Shoe Machinery Corporation. (See Eppler, Andrew, assignor.)

United Shoe Machinery Corporation. (See Ricks, Fred, assignor.)

U. S. Bobbin & Shuttle Company 1929. (See Park, Carl P., assignor.)

United States Rubber Company. (See Clark, Edward H., assignor.)

United States Rubber Company. (See Galligan, J. J., and Thornton, assignors.)

United States Rubber Company. (See Watkins, Parke H., assignor.)

Universal Oil Products Company. (See Morrell, Jacque C., assignor.)

Uong, Diong D., assignor to Fitchburg Paper Company, Fitchburg, Mass. Manufacture of coated paper. 2,030,483; Feb. 11.

Uselman, George L., Port Jefferson, N. Y., assignor to Radio Corporation of America. Frequency modulation apparatus. 2,030,125; Feb. 11.

Uyterhoeven, Willem C. Verburg, and H. G. Dorgelo, Eindhoven, Netherlands, assignors to General Electric Company. Gaseous electric discharge device. 2,030,414; Feb. 11.

Valley Manufacturing Corporation. (See Bocquin, Wenceslaus G., assignor.)

Vance, Forrest C., Champaign, Ill. Folding grandstand. 2,030,776; Feb. 11.

Van Derveer, Clarence A. (See Beck, R. J., Van Derveer, and Karpen.)

Vanity Fair Silk Mills. (See Snader, Howard B., assignor.)

Van Sciver, Walter M., Lansdowne, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Cabinet construction. 2,030,554; Feb. 11.

Van Vorst, John, Schenectady, and C. M. Baker, Scotia, assignors, by mesne assignments, to Mohawk Asphalt Heater Company, Frankfort, N. Y. Vehicle for road building and repairing. 2,030,555; Feb. 11.

Vapor Car Heating Company. (See Gillick, L. H., and Russell, assignors.)

Vaughn, Sidney P., United States Navy, Ackerman, Miss. Helicopter. 2,030,078; Feb. 11.

Veltung, Ernest, New York, N. Y. Linoleum tile or the like. 2,030,556; Feb. 11.

Verburg, Cornelis. (See Uyterhoeven, W., Verburg, and Dorgelo.)

Vereinigte Deutsche Metallwerke A. G. (See von Forster, Hermann, assignor.)

Vibbard, Edward L., St. Albans, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,030,415; Feb. 11.

Vibbard, Edward L., St. Albans, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,030,416; Feb. 11.

Vickers, Charles D. (See McDonough, A. A., Vickers, and Schaumburg.)

Victor Chemical Works. (See McDonald, Guy A., assignor.)

Vigliano, Joseph, New York, N. Y. Cloth drilling machine. 2,030,280; Feb. 11.

Villaloboe, Julio, Buenos Aires, Argentina. Blind. 2,030,234; Feb. 11.

Vogt, Clarence W., assignor, by mesne assignments, to Vogt Processes, Incorporated, Louisville, Ky. Favor-carrying ice cream cone. 2,030,126; Feb. 11.

Vogt Processes, Incorporated. (See Vogt, Clarence W., assignor.)

Von der Lippen, Paul, Ohligs, Germany, assignor to Gerda von der Lippen, Highland Park, Ill. Sharpener for the blades of edged tools. 2,030,161; Feb. 11.

Von Forster, Hermann, Niedersursel, near Frankfort-of-the-Main, assignor to Vereinigte Deutsche Metallwerke A. G., Einsal, near Altena, Germany. Internally insulated and waterproofed structure. 2,030,417; Feb. 11.

Von Holtz, Charles T., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn. Receptacle for attachment plug caps. 2,030,079; Feb. 11.

Von Issendorff, Jürgen, Berlin-Siemensstadt, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Grid-controlled electric vacuum discharge apparatus. 2,030,127; Feb. 11.

Vulcan Soot Blower Corporation. (See Arey, F. C., and Hibner, assignor.)

Wagner Electric Corporation. (See Freeman, Walter R., assignor.)

Wagner Electric Corporation. (See Schnell, Steve, assignor.)

Wagner, Max, Stuttgart, assignor to Daimler-Benz Aktiengesellschaft, Stuttgart-Unterturkheim, Germany. Vehicle suspension. 2,030,557; Feb. 11.

Waldron, Richard C., Clifton, assignor to The Okonite Company, Passaic, N. J. Cable splice. 2,030,080; Feb. 11.

Walen, George, Tyner, Saskatchewan, Canada. Clothes wringer. 2,030,387; Feb. 11.

Walker, Harold L., assignor to The Jacobs Bros. Co., Inc., Brooklyn, N. Y. Scale. 2,030,666; Feb. 11.

Walker, Harold L., assignor to The Jacobs Bros. Co., Inc., Brooklyn, N. Y. Scale. 2,030,667; Feb. 11.

Waller, Fred G., East St. Louis, Mo. Shaping machine. 2,030,484; Feb. 11.

Wallis, John S., assignor to Foster Wheeler Corporation, New York, N. Y. Oil distillation. 2,030,485; Feb. 11.

Wallwood Corporation. (See Hersog, H. O., and Burgeni, assignors.)

Walton, George W., London, England. Optical valve. 2,030,235; Feb. 11.

Wanderer-Werke vorm. Winklhofer & Jaenicke Akt. Ges. (See Stuhlmacher, Richard, assignor.)

Waret, Julien Vincennes, France. Heating block for the treatment of hair. 2,030,162; Feb. 11.

Warner Bros. Pictures, Inc. (See Jackman, Fred W., assignor.)

Warner, David M., Dayton, Ohio, assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa. Testing machine. 2,030,416; Feb. 11.

Waterfield, James B., Attleboro, Mass. Last. 2,030,615; Feb. 11.

Waterlow & Sons Limited. (See Clifford, Sydney G., assignor.)

Watkins, Parke H., Naugatuck, Conn., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y. Manufacture of rubber films. 2,030,729; Feb. 11.

Watson, Philip B., New York, N. Y., assignor, by mesne assignments, to American Cyanamid Company. Making urea resin molding powders. 2,030,192; Feb. 11.

Watts, William E., and J. W. Lowry, McCammon, Idaho. Stropper. 2,030,338; Feb. 11.

Webb, Nelson W., assignor to Eastwood-Nealley Corporation, Belleville, N. J. Wire-cloth seam and making same. 2,030,616; Feb. 11.

Webster Engineering Company. (See Day, Luther F., assignor.)

Webster, John R. Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Hoisting apparatus. 2,030,128; Feb. 11.

Weightman, William A., Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa. Jig. 2,030,389; Feb. 11.

Weiss and Downs, Inc. (See Downs, C. R., and Weiss, assignors.)

Weiss, Ernst, Nurembert, Germany. Movement for kicking dolls. 2,030,486; Feb. 11.

Weiss, Robert P. (See Downs, C. R., and Weiss.)

Wells, Edward C., assignor to Platt Iron Works, Inc., Dayton, Ohio. Imprinting apparatus. 2,030,081; Feb. 11.

Werner, Emerson, et al. (See Spear, John E., assignor.)

Werner, John M. (See Richards, V. J., and Werner.)

Western Electric Company. (See Chambers, Irl M., assignor.)

Western Electric Company. (See Frenz, Erwin E., assignor.)

Western Electric Company. (See Geisler, Ottmar, assignor.)

Western Electrical Instrument Corporation. (See Goodwin, William N., Jr., assignor.)

Western Union Telegraph Company, The. (See Dirkes, R. F., and Steeneck, assignors.)
Western Union Telegraph Company, The. (See Erickson, G. L., and Christoffel, assignors.)
Western Union Telegraph Company, The. (See Long, J. W., and Wheeler, assignors.)
Westinghouse Electric Elevator Company. (See Dunlop, James, assignor.)
Westinghouse Electric & Manufacturing Company. (See Benson, Ralph L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Bradshaw, W. M., and Mylius, assignors.)
Westinghouse Electric & Manufacturing Company. (See Dawson, John W., assignor.)
Westinghouse Electric & Manufacturing Company. (See Gulliksen, Finn H., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hathaway, Clarence R., assignor.)
Westinghouse Electric & Manufacturing Company. (See Lowry, Erwin F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Lyle, Frederick W., assignor.)
Westinghouse Electric & Manufacturing Company. (See Nein, William C., assignor.)
Westinghouse Electric & Manufacturing Company. (See Powers, F. B., and Whittaker, assignors.)
Westinghouse Electric & Manufacturing Company. (See Ross, Robert D., assignor.)
Westinghouse Electric & Manufacturing Company. (See Schmidt, Henry F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Van Sciver, Walter M. assignor.)
Westinghouse Electric & Manufacturing Company. (See von Issendorff, Jürgen, assignor.)
Westinghouse Electric & Manufacturing Company. (See Webster, John E., assignor.)
Westinghouse Lamp Company. See Andrew, Victor J., assignor.)
Westinghouse Lamp Company. (See James, Robert F., assignor.)
Weyerhaeuser, Frederick, and J. S. Busch, assignors to Wood Conversion Company, Cloquet, Minn. Insulating walls. 2,030,668; Feb. 11.
Wheeler, Evan R. (See Long, J. W., and Wheeler.)
Wheller, Alfred G., Los Angeles, Calif. Tuning mechanism. 2,030,129; Feb. 11.
White, Byron E., assignor to Glove Casket Manufacturing Company, Kalamazoo, Mich. Surface ornamentation. 2,030,558; Feb. 11.
White, John W., Buffalo, N. Y., assignor, by mesne assignments, to General Motors Corporation. Hydraulic brake system. 2,030,840; Feb. 11.
White, William H., Roanoke, Va., assignor to Morris B. Brewster Co. Inc., Chicago, Ill. Track sander. 2,030,669; Feb. 11.
Whitehead, Richard H., assignor to The New Haven Clock Company, New Haven, Conn. Clock case. 2,030,487; Feb. 11.
Whitney, Alvin M., assignor to Celloseal Company, Bradford, Pa. Nonrefillable bottle. 2,030,617; Feb. 11.
Whitney, Alvin M., assignor to Celloseal Company, Bradford, Pa. Bottle closure. 2,030,618; Feb. 11.
Whitney Chain & Mfg. Company, The. (See Belcher, Warren J., assignor.)
Whitney, Robert F., Winchester, Mass., assignor to The Turner Tanning Machinery Company, Portland, Maine. Machine for operating upon hides, skins, and leather. 2,030,130; Feb. 11.
Whittaker, Charles C. (See Powers, F. B., and Whittaker.)
Wicha, Alois, Dresden, Germany, assignor to Erospha, Inc., Brooklyn, N. Y. Liquid and fluid actuating device. 2,030,131; Feb. 11.
Wiedbrauck, Erich, and K. Büche, assignors to the firm Th. Goldschmit, A-G., Essen-Ruhr, Germany. Making potash. 2,030,082; Feb. 11.
Wiegand, Erich, Berlin-Waidmannslust, Germany, assignor to General Electric Company. Preparing metallic barium for introduction into electric discharge devices. 2,030,670; Feb. 11.
Wiegand, Kurt, Berlin-Neu-Tempelhof, Germany, assignor to General Electric Company. Gaseous electric discharge lamp. 2,030,805; Feb. 11.
Wiegand, Kurt, Berlin-Neu-Tempelhof, Germany, assignor to General Electric Company. Gaseous electric discharge device. 2,030,806; Feb. 11.
Wiegand, Kurt, Berlin-Neu-Tempelhof, Germany, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,030,807; Feb. 11.
Wight, Roy E., Wichita Falls, Tex., assignor to The Texas Company, New York, N. Y. Displacement pump. 2,030,827; Feb. 11.
Wilcox, Albert C., assignor to The Enterprise Aluminum Company, Massillon, Ohio. Steam operated automatic electric switch plug. 2,030,083; Feb. 11.
Willard Storage Battery Company. (See Reinhardt, Willard L., assignor.)
Willauer, David. (See Garnet, John E., assignor.)
Williams, Ernest, Pittsfield, Mass., assignor to General Electric Company. Electric switch. 2,030,671; Feb. 11.
Williams, Ralph M., assignor to Packard Motor Car Company, Detroit, Mich. Circuit breaker. 2,030,488; Feb. 11.
Williams, Samuel B., Brooklyn, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone exchange system. 2,030,419; Feb. 11.
Wills, Edward K., and J. H. McElhannon, Corpus Christi, Tex. Air washer. 2,030,341; Feb. 11.
Wilson, Russell E., Cleveland, Ohio. Projector. 2,030,489; Feb. 11.
Wilson, Walter E., Columbus, Ohio. Molding strip. 2,030,730; Feb. 11.
Winning, Robert K., Wauwatosa, Wis., assignor to Cluss Manufacturing Company, Milwaukee, Wis. Control device. 2,030,672; Feb. 11.
Winterthall Aktiengesellschaft. (See Haas, J., and Adelt, assignors.)
Winthrop Chemical Company. (See Hooper, Charles W., assignor.)
Winthrop Chemical Company. (See Johnson, Treat B., assignor.)
Winthrop Chemical Company. (See Linsert, Otto, assignor.)
Winton, Lewis R., Greenwich, Conn., assignor to American Sealcone Corporation, New York, N. Y. Apparatus for filling receptacles. 2,030,084; Feb. 11.
Wirbatz, Wilhelm. (See Müller, R., Schenck, and Wirbatz.)
Wisconsin Alumni Research Foundation. (See Hisaw, F. L., and Fevold, assignors.)
Wise, Charles H., assignor to Hartford-Empire Company, Hartford, Conn. Spilled batch catcher. 2,030,806; Feb. 11.
Wissler, William A., Flushing, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Alloy. 2,030,342; Feb. 11.
Wissler, William A., Niagara Falls, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Alloys. 2,030,343; Feb. 11.
Wolfe, Ralph A. (See Randolph, D. W., Duffendack, and Wolfe.)
Woodard, George H. (See Hibberd, F. H., Woodard, and Kirgan.)
Woodberry, David L., Edgewood Arsenal, Md. Point-detonating fuse for projectiles. 2,030,085; Feb. 11.
Wood Conversion Company. (See Weyerhaeuser, F., and Busch, assignors.)
Woods, Harold L., Monroe, La. Drilling wells. 2,030,777; Feb. 11.
Woolson, Emma F., executrix. (See Woolson, Lionel M.)
Woolson, Lionel M., deceased, Detroit, by E. F. Woolson, executrix, Bloomfield, assignor to Packard Motor Car Company, Detroit, Mich. Internal combustion engine. 2,030,086; Feb. 11.
Worthington Pump and Machinery Corporation. (See Ott, Reuben, assignor.)
Wünsche, Otto, Berlin-Friedenau, Germany, assignor to General Electric Company. Power system. 2,030,673; Feb. 11.
Yale & Towne Manufacturing Company, The. (See Leslie, Charles, assignor.)
Young, Earl E., assignor to The Toledo Porcelain Enamel Products Company, Toledo, Ohio. Making photographic stencil screens. 2,030,731; Feb. 11.
Young, Forrest J., Los Angeles, S. W. Long, Redondo Beach, and J. S. Morgan, Jr., Inglewood, Calif., assignors, by mesne assignments, to The National Superior Company, Toledo, Ohio. Door type slip elevator. 2,030,087; Feb. 11.
Young, Maude M., Portland, Oreg. Pie pan. 2,030,344; Feb. 11.
Young, William A., Astoria, N. Y. Grommet. 2,030,088; Feb. 11.
Youngstown Sheet and Tube Company, The. (See Burich, R. H., and Anthony, assignors.)
Youngstown Steel Door Company, The. (See Treptow, George E., assignor.)
Zahodiakin, Victor F., New York, N. Y. Valve actuating mechanism. 2,030,345; Feb. 11.
Zecher, Gustav, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company. Electric arc discharge tube. 2,030,420; Feb. 11.
Zeiss Ikon Aktiengesellschaft Dresden. (See Küppenbender, H., and Nowicki, assignors.)
Zell, Robert. (See Nawiasky, P., Stein, Berthold, and Zell.)
Zerweck, Werner. (See Schrader, G., and Zerweck.)
Zinn, Thelma H., Columbus, Ohio. Hair waving appliance. 2,030,490; Feb. 11.
Zwermann, Carl H., deceased, by H. Zwermann, executrix, and C. H. Zwermann, Jr., executor, assignors to W. A. Case & Son Mfg. Co., Robinson, Ill. Water closet. 2,030,559; Feb. 11.
Zwermann, Carl H., Jr., executor. (See Zwermann, Carl H.)
Zwermann, Helene, executrix. (See Zwermann, Carl H.)

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 11TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Chlorine dioxide, Production of. G. L. Cunningham. 19,849; Feb. 11.
Lighting system, Emergency. F. G. Beetem. 19,848; Feb. 11.
Motor controller. C. Stansbury. 19,853; Feb. 11.
Power converting apparatus, Electric. F. W. Frink. 19,850; Feb. 11.
Radio program selecting apparatus. E. A. Kinney and J. W. Galligan. 19,851; Feb. 11.
Spider, Well. H. R. Standlee. 19,852; Feb. 11.

LIST OF DESIGN INVENTIONS

Accordion. R. Galanti. 98,506; Feb. 11.
Back rest for a studio couch or similar article of furniture. C. A. Stuart. 98,555; Feb. 11.
Book end. E. W. Fuerst. 98,506; Feb. 11.
Bottle. W. R. Leach. 98,531; Feb. 11.
Bottle, Ketchup. H. Ennever. 98,504; Feb. 11.
Brush, Hand. E. M. Maher. 98,536; Feb. 11.
Buckle. J. B. Freysinger. 98,507; Feb. 11.
Buckle. S. Putman. 98,547; Feb. 11.
Building, Restaurant. L. F. Karlsberger. 98,523; Feb. 11.
Cabinet and bureau or the like, Combined toilet. I. H. Stern. 98,551; Feb. 11.
Cabinet, Water heater. E. H. Wilkinson. 98,559; Feb. 11.
Candlelight or similar article. J. Zeitlin. 98,564–5; Feb. 11.
Case, Piano. W. M. Day. 98,499; Feb. 11.
Casing for flexible measuring rules. A. L. Stowell. 98,554; Feb. 11.
Casing, Sewing machine. J. P. Weis. 98,558; Feb. 11.
Chair. M. C. Pumphrey. 98,545; Feb. 11.
Chair, Lounge. W. Hoffmann. 98,517–8; Feb. 11.
Doily. K. C. Hamilton. 98,513; Feb. 11.
Dress. D. M. Mayehoff. 98,538; Feb. 11.
Dress. D. W. Price. 98,544; Feb. 11.
Dress or similar article. C. Block. 98,493; Feb. 11.
Endpiece for an ophthalmic mounting. G. E. Nerney. 98,543; Feb. 11.
Fabric, Knitted. J. Minoff. 98,542; Feb. 11.
Freezing device for edibles. F. H. Kaup and F. H. Kinyoun. 98,524; Feb. 11.
Fuel supply unit for oil burners. H. E. Fellows. 98,505; Feb. 11.
Glove. W. B. Meyers. 98,567; Feb. 11.
Goblet or similar article. A. J. Bennett. 98,490; Feb. 11.
Goblet or similar article. W. C. McCartney. 98,539; Feb. 11.
Guard or similar article, Fan. C. E. Meyerhoefer. 98,541; Feb. 11.
Handle and front drawer panel, Combined. H. M. De Vries. 98,500; Feb. 11.
Handle for dry shavers. J. Schick. 98,548; Feb. 11.
Hanger or similar article. B. Meyer. 98,540; Feb. 11.
Lace. G. D. Boyson. 98,494; Feb. 11.
Mirror floral display device. E. C. Sharp. 98,549; Feb. 11.
Mounting for a pulley-carrying motor. W. D. Hamerstadt. 98,512; Feb. 11.
Ornament, Christmas tree. P. Kranz and A. P. Schmid. 98,528–9; Feb. 11.
Pen, Fountain. W. Bowker and R. P. Piperoux. 98,493; Feb. 11.
Pen, Fountain. J. Hill. 98,515–6; Feb. 11.
Pen or similar article, Fountain. A. Winter. 98,560; Feb. 11.
Pencil. E. J. Britton. 98,496; Feb. 11.
Pencil. D. Jueins. 98,522; Feb. 11.
Picture film viewing machine, Motion. W. J. Lumbleau. 98,534–5; Feb. 11.
Plate or similar article. H. F. Wood, Jr. 98,561–2; Feb. 11.
Post office building unit, Miniature. O. D. Clements. 98,498; Feb. 11.
Pouch, Tobacco. W. P. Koeller. 98,525; Feb. 11.
Projector or article of similar nature. J. F. Brischo. 98,495; Feb. 11.
Pull tab for slide fasteners. A. Walker. 98,556; Feb. 11.
Radio cabinet. R. C. Hulbert. 98,521; Feb. 11.
Radio cabinet or similar article. R. Silverstein. 98,550; Feb. 11.
Radio cabinet or similar article, Portable. R. F. Stewart. 98,552; Feb. 11.
Range. A. Stockstrom and A. H. Brodbeck. 98,553; Feb. 11.
Rug. A. Bach. 98,489; Feb. 11.
Sandal. E. Grossman. 98,510; Feb. 11.
Screen, Folding floor. S. S. Lewis. 98,532; Feb. 11.
Shoe. L. Goldberg. 98,509; Feb. 11.
Shoe. J. Mascali. 98,537; Feb. 11.
Shoe. W. Weidner. 98,557; Feb. 11.
Shoe or similar article. N. Elkin. 98,501–3; Feb. 11.
Sofa or similar article. M. C. Pumphrey. 98,546; Feb. 11.
Spectacle frame. A. C. Houser. 98,520; Feb. 11.
Spoon or other article of flatware. L. V. M. Helander. 98,514; Feb. 11.
Stool, Fitting. W. Hoffmann. 98,519; Feb. 11.
Sweater or similar article. L. B. Helfgott. 98,566; Feb. 11.
Table. O. A. Koogler. 98,526; Feb. 11.
Table, Pocket billiard. W. Lescase. 98,533; Feb. 11.
Textile fabric. A. Hafner. 98,511; Feb. 11.
Textile fabric. W. A. Landry. 98,530; Feb. 11.
Textile fabric, Embroidered. G. Blechof. 98,491; Feb. 11.
Tray, cigarette holder, and smoker, Combination ash. G. E. Wymar. 98,563; Feb. 11.
Tub, Treatment. C. R. Clarke. 98,497; Feb. 11.
Velocipede. H. L. Kraeft. 98,527; Feb. 11.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 11TH DAY OF FEBRUARY, 1936

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading machine. F. Ricks. 2,030,153; Feb. 11.
Accessories container. E. H. Koehler. 2,030,305; Feb. 11.
Acetylene, Manufacture of. J. C. Morrell. 2,030,070; Feb. 11.
Acid, Making anhydrous citric. E. Aeckerle. 2,030,619; Feb. 11.
Acoustic construction. V. A. Schlenker. 2,030,157; Feb. 11.
Actuating means for closures, such as doors, lids, and the like. O. C. Schmidt. 2,030,324; Feb. 11.
Adhesive composition and making same. G. G. Pierson. 2,030,073; Feb. 11.
Adhesive composition and making the same. H. E. Holcomb. 2,030,628; Feb. 11.
Adhesive or binder. R. P. Carlton. 2,030,743; Feb. 11.
Adhesive unit. H. E. Carpenter. 2,030,135; Feb. 11.
Advertising device. H. A. Slattengren. 2,030,769; Feb. 11.
Advertising display device. A. Bodenweiser. 2,030,680; Feb. 11.
Advertising structure, Outdoor. H. de Roulet. 2,030,505; Feb. 11.
Air conditioning device. F. M. Opitz. 2,030,316; Feb. 11.
Aircraft. A. Flettner. 2,030,575; Feb. 11.
Aircraft. J. M. Gwinn, Jr. 2,030,631; Feb. 11.
Air filter, Dry type self-cleaning. H. Strindberg. 2,030,552; Feb. 11.
Air or gas extractor for vehicles or buildings. J. and D. P. Muirhead. 2,030,388; Feb. 11.
Air separator. T. J. Sturtevant. 2,030,612; Feb. 11.
Air washer. E. K. Wills and J. H. McElhanson. 2,030,341; Feb. 11.
Air water elevator, Compressed. A. M. da Silva. 2,030,429; Feb. 11.
Alarm, Burglar. H. Chevigny, née Roy. 2,030,049; Feb. 11.
Alloy. E. F. Lowry. 2,030,112; Feb. 11.
Alloys. W. A. Wissler. 2,030,242–3; Feb. 11.
Anthraquinone derivatives. H. Hauser and M. Bommer. 2,030,253; Feb. 11.
Applicator for powdered medicaments. H. H. Marshall, Jr. 2,030,176; Feb. 11.
Aqueous dispersion, Stable. E. B. Newton. 2,030,222; Feb. 11.
Article display and conveying equipment. W. M. Bodine. 2,030,741; Feb. 11.
Articles, Covering. W. S. Titcomb. 2,030,160; Feb. 11.
Assembly table. E. R. Hyde and H. A. Maurer. 2,030,594; Feb. 11.
Attachment for spudding and drilling machines. W. J. Edwards. 2,030,692; Feb. 11.
Automobile signal. W. A. Moffat. 2,030,757; Feb. 11.
Axle bearing lubrication device. W. Lehmann. 2,030,644; Feb. 11.
Axle for vehicles, Flexible. C. Opolo. 2,030,710; Feb. 11.
Azodyestuffs and their production. D. Delfs. 2,030,256; Feb. 11.
Azodyestuffs, Water insoluble. G. Schrader and W. Zerweck. 2,030,327; Feb. 11.
Bag or holder, Fish. O. Horn. 2,030,793; Feb. 11.
Bag sealing machinery. I. W. Litchfield. 2,030,067; Feb. 11.
Bags, Process and machine for long lip. G. W. Poppe. 2,030,118; Feb. 11.
Baggage, Hand. L. H. Dyer. 2,030,359–60; Feb. 11.
Band, Molar. A. Richardson. 2,030,227; Feb. 11.
Bar: *See*—
  Burning bar.
Bar for Hawaiian steel guitars, Playing. S. Comons. 2,030,241; Feb. 11.
Barium for introduction into electric discharge devices, Preparing metallic. E. Weigand. 2,030,670; Feb. 11.
Barrel, Laminated paper. J. A. Eden. 2,030,698; Feb. 11.
Basket, Collapsible. D. B. Gray. 2,030,204; Feb. 11.
Batch catcher, Spilled. C. H. Wise. 2,030,808; Feb. 11.
Battery: *See*—
  Storage battery.
Bathtub. N. C. Davis. 2,030,687; Feb. 11.
Bearing: *See*—
  Thrust bearing
Bearing for rolling mills, Roller. C. L. Ekxergian. 2,030,104; Feb. 11.
Bearing lubrication. D. D. Stone. 2,030,232; Feb. 11.
Bearing structure. A. A. Arnold. 2,030,193; Feb. 11.
Belt, Safety. C. C. Kauffman. 2,030,172; Feb. 11.
Bit: *See*—
  Drill bit. Roller bearing bit.
Bit rock drill, Emplaceable. C. Erickson. 2,030,576; Feb. 11.

Blanks and resultant article, Method and apparatus for making headed. J. H. Friedman. 2,030,290; Feb. 11.
Blind. J. Villalobos. 2,030,234; Feb. 11.
Blood transfusion apparatus. S. Mecker. 2,030,754; Feb. 11.
Blower. H. F. Schmidt. 2,030,474; Feb. 11.
Blower, Swinging soot. F. C. Arey and D. B. Hibner, Jr. 2,030,828; Feb. 11.
Board: *See*—
  Ironing board. Indexing service board.
Board with fuses adapted to be cut out by hand, Distribution. F. Driescher. 2,030,506; Feb. 11.
Bobbin clutch for rotatable spindles. J. F. Jackson. 2,030,301; Feb. 11.
Boiler: *See*—
  Steam boiler. Water tube boiler.
Book construction. F. S. Schade. 2,030,473; Feb. 11.
Book, Loose leaf. J. Schade. 2,030,472; Feb. 11.
Books, Binding. I. and P. V. Spinner. 2,030,478; Feb. 11.
Bottle capping and closing machine. J. J. Illias. 2,030,371; Feb. 11.
Bottle closure. A. M. Whitney. 2,030,618; Feb. 11.
Bottle, Nonrefillable. A. M. Whitney. 2,030,617; Feb. 11.
Box: *See*—
  Collection box. Lip stick box.
  Delivery box. Match box.
Brace. S. E. Hickok. 2,030,791; Feb. 11.
Brake: *See*—
  Hydraulic brake.
Brake actuating mechanism. S. Schnell. 2,030,272; Feb. 11.
Brake control mechanism. W. S. Freeman. 2,030,287–8; Feb. 11.
Brake lock. S. M. McDougall. 2,030,753; Feb. 11.
Brake system, Hydraulic. J. W. White. 2,030,340; Feb. 11.
Braking apparatus. M. Guglielotta. 2,030,296; Feb. 11.
Braking means. J. Demart. 2,030,784; Feb. 11.
Bread and the like, and apparatus used in the practice of the method, Maintaining the freshness of. E. W. Ritzert. 2,030,154; Feb. 11.
Broiler and toaster, Combination. L. A. Bonnagni and A. Govoni. 2,030,047; Feb. 11.
Burner: *See*—
  Oil burner.
Burning bar. L. R. McLean. 2,030,707; Feb. 11.
Bushing assembly. J. B. Hodtum. 2,030,570; Feb. 11.
Cabinet construction. W. M. Van Sciver. 2,030,554; Feb. 11.
Cabinet, Refrigerating display. E. N. Bicknell. 2,030,780; Feb. 11.
Cable splice. R. C. Waldron. 2,030,060; Feb. 11.
Caliper. A. B. Cox. 2,030,244; Feb. 11.
Camera. E. B. Armstrong. 2,030,775; Feb. 11.
Camera. L. Hanley and W. C. Anderson. 2,030,206; Feb. 11.
Can attachment, Food. G. E. Johnson. 2,030,597; Feb. 11.
Car, Box. W. L. Thomas. 2,030,773; Feb. 11.
Car, Railway. G. E. Tiley. 2,030,553; Feb. 11.
Car seat, Revolving. E. J. Beck, C. A. Van Derveer, and K. Karpen. 2,030,621; Feb. 11.
Car structure, Railway. O. G. Gilpin. 2,030,748; Feb. 11.
Car, Trolley patrol. E. N. Miller. 2,030,650; Feb. 11.
Carbon dioxide ice cooling system. H. S. Cornish. 2,030,243; Feb. 11.
Carbon pile meter. J. D. Keller. 2,030,523; Feb. 11.
Carbon piles, Apparatus for making helical. G. E. Hulse. 2,030,211; Feb. 11.
Carbon, Reclaiming oil containing. G. J. Streyanski. 2,030,480; Feb. 11.
Carburetor. S. C. Smith. 2,030,381; Feb. 11.
Carriage, Baby. H. Serisky. 2,030,407; Feb. 11.
Carriage driving and hammer returning mechanism. F. Spaloss. 2,030,411; Feb. 11.
Case: *See*—
  Clock case.
Casein dispersion. D. A. Rankin and F. G. Uhler. 2,030,226; Feb. 11.
Catalyst and process for the decomposition of hydrocarbons. F. J. DeRewal. 2,030,283; Feb. 11.
Catch, Window. R. S. Llewellyn. 2,030,705; Feb. 11.
Cauterizing instrument. G. Dinyer. 2,030,285; Feb. 11.
Cellulosic spinning solutions containing aliphatic silicon compounds. R. S. Bley. 2,030,738; Feb. 11.
Cellulosic spinning solutions containing aromatic silicon derivatives. R. S. Bley. 2,030,737; Feb. 11.
Ceramic object and making the same. J. L. Gallup. 2,030,200; Feb. 11.

Chain. W. J. Belcher. 2,030,829; Feb. 11.
Chair. N. G. Herwitt and M. Katcher. 2,030,696; Feb. 11.
Change speed gear. K. Maybach. 2,030,782; Feb. 11.
Chuck. W. F. Greene and G. W. Leming. 2,030,142; Feb. 11.
Chuck, Magnetic capping. H. D. Smith. 2,030,188; Feb. 11.
Churn. N. J. Hedlund. 2,030,641; Feb. 11.
Cigarette and making the same. A. F. Rambert. 2,030,319; Feb. 11.
Cigarettes, Device for making. F. T. Gracey. 2,030,051; Feb. 11.
Circuit arrangement, Electrical. R. K. Potter. 2,030,178–80; Feb. 11.
Circuit breaker. R. M. Williams. 2,030,488; Feb. 11.
Circuit, Control. V. E. Rosene. 2,030,460; Feb. 11.
Circuit controller, Emergency. R. J. Parsons. 2,030,789; Feb. 11.
Circuit controlling method and apparatus. H. C. Graves, Jr. 2,030,562; Feb. 11.
Circuits, Protection of electric. L. F. Blume. 2,030,670; Feb. 11.
Cisilane-rayon, Producing. R. S. Bley. 2,030,736; Feb. 11.
Clamp: *See*—
  Paper stacking clamp.
Cleaner: *See*—
  Vacuum cleaner.
Cleaning device. B. M. and C. E. Bireley. 2,030,494; Feb. 11.
Clip: *See*—
  Floor clip. Wrench clip.
Clock case. R. H. Whitehead. 2,030,427; Feb. 11.
Clock system, Electric. C. E. Larrabee. 2,030,455; Feb. 11.
Closure cap. E. A. Love. 2,030,380; Feb. 11.
Closure device. G. Deeson, Jr. 2,030,054; Feb. 11.
Closure device. H. Quittner. 2,030,609; Feb. 11.
Closure for bottles and jars. M. A. Greene and D. M. Gray. 2,030,062; Feb. 11.
Cloth drilling machine. J. Vigliano. 2,030,280; Feb. 11.
Cloth, Milanese. E. E. Meinig. 2,030,459; Feb. 11.
Clothing container. A. Stone. 2,030,661; Feb. 11.
Clutch spring. W. C. Starkey. 2,030,333; Feb. 11.
Coat construction. F. J. DiBlasi. 2,030,431; Feb. 11.
Coating composition and method of applying. L. E. Munn. 2,030,709; Feb. 11.
Coil winding machine. L. E. Poole. 2,030,764; Feb. 11.
Coke and gas in horizontal chamber ovens, Apparatus for the production of. C. Still. 2,030,324; Feb. 11.
Collection box. J. W. Dibb. 2,030,359; Feb. 11.
Color cinematography. V. Hudelay and J. Lagrave. 2,030,795; Feb. 11.
Color photography. T. T. Baker. 2,030,163; Feb. 11.
Coloring in the printing of documents representing value, Applying protective. S. G. Clifford. 2,030,351; Feb. 11.
Colors, Apparatus for comparing. J. E. Simons. 2,030,329; Feb. 11.
Combustion control system. P. S. Miller. 2,030,556; Feb. 11.
Composite glass container. H. B. Reynolds. 2,030,397; Feb. 11.
Compressing device. R. Temple, Jr. 2,030,603; Feb. 11.
Compressor and balancing device therefor. W. E. Johnson. 2,030,701; Feb. 11.
Compressor unit. B. Neal. 2,030,759; Feb. 11.
Concrete construction. F. W. Gulbert. 2,030,518; Feb. 11.
Concrete tile mold. F. M. Smith. 2,030,724; Feb. 11.
Condenser: *See*—
  Electrolytic condenser.
Container: *See*—
  Accessories container. Dispensing container.
  Clothing container. Display container.
  Composite glass container.
Container. A. E. Hodge. 2,030,295; Feb. 11.
Container cover fastener. J. J. Miller. 2,030,069; Feb. 11.
Container holder. F. J. Twiss. 2,030,775; Feb. 11.
Continuous filter. R. W. Richardson. 2,030,535; Feb. 11.
Control apparatus, Automatic. P. J. McCullough. 2,030,146; Feb. 11.
Control device. R. K. Winning. 2,030,672; Feb. 11.
Control mechanism. E. T. Dahl. 2,030,502; Feb. 11.
Control system. F. B. Powers and C. C. Whittaker. 2,030,119; Feb. 11.
Control system for atomizing and lifting oil with gas, Automatic. E. H. Scott. 2,030,159; Feb. 11.
Core catcher. J. H. Howard and A. C. Catland. 2,030,297; Feb. 11.
Core drill head. J. H. Howard and A. C. Catland. 2,030,298; Feb. 11.
Counting device. E. and A. H. Ek. 2,030,624; Feb. 11.
Coupling and suspension device, Combined. S. Belveal. 2,030,779; Feb. 11.
Cover: *See*—
  Stain cover. Vessel cover.
Cover for loose leaf books. J. J. Rickert. 2,030,765; Feb. 11.
Covering device. J. A. Bunzener. 2,030,134; Feb. 11.
Crank counterbalance. R. E. Blom. 2,030,046; Feb. 11.
Cream, Device for making. O. Schwimmer. 2,030,158; Feb. 11.
Crypt, Casket. E. N. Hodson and H. B. Turner. 2,030,588; Feb. 11.
Current transformer device, Direct electric. G. M. Pastarini. 2,030,652; Feb. 11.

Curtain fixture. M. Martinez. 2,030,309; Feb. 11.
Cushion slide for furniture. W. F. Herold. 2,030,689; Feb. 11.
Cushion support for eggs and the like. L. Benoit. 2,030,564; Feb. 11.
Cut-off for cloth batchers, Automatic. N. R. Coleman. 2,030,534; Feb. 11.
Cutter assembly. F. L. Scott. 2,030,722; Feb. 11.
Cutter supporting means for well drills. F. L. Scott and L. E. Garfield. 2,030,723; Feb. 11.
Cylinder head, Venturi type. C. E. Summers. 2,030,663; Feb. 11.
Delivery box. J. A. Hopwood. 2,030,100; Feb. 11.
Depository. J. J. Murtaugh, Jr. 2,030,313; Feb. 11.
Depressors, Manufacture of pour point. F. H. MacLaren. 2,030,301; Feb. 11.
Derivatives of thiazole and preparing the same. T. B. Johnson. 2,030,378; Feb. 11.
Desk. G. J. Barrett. 2,030,348; Feb. 11.
Destructor. A. H. Mann. 2,030,114; Feb. 11.
Device for simultaneously regulating the pressure of a series of pressure rolls adjacent a heating table. H. Meyer. 2,030,527; Feb. 11.
Device of a ship's propeller enclosed by a nozzle, Combined. L. Kort. 2,030,376; Feb. 11.
Dishwasher, Automatic. R. L. Benson. 2,030,092; Feb. 11.
Dispensing apparatus for charged beverages. N. V. D. Brock. 2,030,569; Feb. 11.
Dispensing container. J. S. Forster. 2,030,696; Feb. 11.
Dispensing device for a collapsible container. J. W. Frazier. 2,030,579; Feb. 11.
Displacement pump. E. R. Wight. 2,030,827; Feb. 11.
Display container. C. A. Sheffer. 2,030,546; Feb. 11.
Dolls, Movement for kicking. E. Weiss. 2,030,486; Feb. 11.
Door construction. G. R. Treptow. 2,030,774; Feb. 11.
Door construction, Oven. T. O'Brien. 2,030,223; Feb. 11.
Door locking means, Car. A. Campbell. 2,030,240; Feb. 11.
Door type slip elevator. F. J. Young, S. W. Long, and J. S. Morgan, Jr. 2,030,067; Feb. 11.
Doorlatch. W. A. Gram. 2,030,630; Feb. 11.
Doorlatch. H. W. Rightmyer. 2,030,719; Feb. 11.
Doorlock. A. E. Avels. 2,030,677; Feb. 11.
Draft control. G. F. Pembroke. 2,030,825; Feb. 11.
Draft controller. S. M. Green. 2,030,205; Feb. 11.
Drainage receptacle. C. N. Mitchell. 2,030,708; Feb. 11.
Draping machine. E. H. Clark. 2,030,744; Feb. 11.
Drawer, Concealed coin. E. W. Pace. 2,030,712; Feb. 11.
Drill: *See*—
  Bit rock drill.
Drill. H. C. Norley. 2,030,530; Feb. 11.
Drill bit. H. L. Klein. 2,030,374; Feb. 11.
Drill mechanism. R. K. Jeffrey. 2,030,636–7; Feb. 11.
Drive mechanism for shaker conveyers. W. W. Sloane. 2,030,330; Feb. 11.
Drive mechanism, Reduction. M. C. Hoxie. 2,030,700; Feb. 11.
Drying and mixing mechanism. E. B. Lockridge and L. W. Meyer. 2,030,645; Feb. 11.
Dyes and their preparation, Azo. A. H. Knight. 2,030,214; Feb. 11.
Dynamo-electric machine. S. R. Bergman. 2,030,678; Feb. 11.
Earth moving device. R. E. Choate and W. E. Rodler. 2,030,353; Feb. 11.
Educational device. G. L. LeFevre. 2,030,175; Feb. 11.
Educational test checking machine. S. R. Harding. 2,030,207; Feb. 11.
Egg holder. J. A. Fortes. 2,030,106; Feb. 11.
Electric arc discharge tube. G. Zecher. 2,030,420; Feb. 11.
Electric control. M. L. Dull. 2,030,573; Feb. 11.
Electric control system. F. W. Lyle. 2,030,118; Feb. 11.
Electric discharge apparatus. J. W. Dawson. 2,030,100; Feb. 11.
Electric discharge device. V. J. Francis and J. W. Ryde. 2,030,437; Feb. 11.
Electric discharge device. J. W. Ryde and H. G. Jenkins. 2,030,404; Feb. 11.
Electric discharge device, Gaseous. E. G. Dorgelo. 2,030,433–4; Feb. 11.
Electric discharge device, Gaseous. C. E. Kenty. 2,030,376; Feb. 11.
Electric discharge device, Gaseous. W. Uyterhoeven, C. Verburg, and E. G. Dorgelo. 2,030,414; Feb. 11.
Electric discharge device, Gaseous. K. Wiegand. 2,030,806; Feb. 11.
Electric discharge lamp, Gaseous. A. Rüttenauer. 2,030,402; Feb. 11.
Electric discharge lamp, Gaseous. A. Rüttenauer and O. Fritze. 2,030,403; Feb. 11.
Electric discharge lamp, Gaseous. K. Wiegand. 2,030,805; Feb. 11.
Electric discharge tube. G. L. Hertz. 2,030,521; Feb. 11.
Electric heater. R. F. James. 2,030,820; Feb. 11.
Electric lamp. L. J. Davies, C. Gilson, and W. J. Scott. 2,030,480; Feb. 11.
Electric lamp. E. Erber. 2,030,695; Feb. 11.
Electric plug. B. F. Muldoon. 2,030,115; Feb. 11.

Electric resistance device. E. R. Morton. 2,030,460; Feb. 11.
Electric signal. F. Toscano. 2,030,279; Feb. 11.
Electric switch. R. O. Eaton. 2,030,691; Feb. 11.
Electric switch. E. Williams. 2,030,671; Feb. 11.
Electric switch plug, Steam operated automatic. A. C. Wilcox. 2,030,083; Feb. 11.
Electrical apparatus. J. W. Dawson. 2,030,009; Feb. 11.
Electrical apparatus for the transmission of angular movements. G. M. Pestarini. 2,030,762; Feb. 11.
Electrical control, Apparatus for. F. W. Godsey, Jr. 2,030,202; Feb. 11.
Electrical control equipment. C. R. Hodgson, H. H. Knowles, and G. N. Lemmon. 2,030,589; Feb. 11.
Electrical reproducer. M. L. Dull. 2,030,574; Feb. 11.
Electrode mounting. W. W. Eitel and J. McCullough. 2,030,361; Feb. 11.
Electrolytic condenser. W. F. Straub and H. J. Lemmens. 2,030,122; Feb. 11.
Electronic relay. F. H. Gulliksen. 2,030,107; Feb. 11.
Elevator: *See*—
Air water elevator. Door type slip elevator.
Embroidering machine. M. Bretschneider. 2,030,495; Feb. 11.
Emplacing member for gun carriages and mounts. G. M. Barnes. 2,030,051; Feb. 11.
Emulsifying machine. C. E. Greener. 2,030,251; Feb. 11.
Emulsions. G. J. Manson. 2,030,385; Feb. 11.
Engine: *See*—
Internal combustion engine. Oil engine.
Engine. J. W. Kinnucan and J. O. Fink. 2,030,213; Feb. 11.
Engines, Testing device for internal combustion. P. G. Turner. 2,030,727; Feb. 11.
Envelope structure. A. V. Holloway. 2,030,634; Feb. 11.
Esters, Preparation of. H. L. Cox and P. S. Greer. 2,030,835; Feb. 11.
Fabrics, Method of and apparatus for washing. L. Pierce. 2,030,394; Feb. 11.
Face lifter. M. L. McLaughlin. 2,030,603; Feb. 11.
Fastener: *See*—
Container cover fastener. Strap fastener.
Separable fastener. Tag fastener.
Fastener. D. A. Brennan. 2,030,095; Feb. 11.
Faucet. W. U. Griffiths. 2,030,510; Feb. 11.
Feeding attachment for meat grinders. W. Naturkacs. 2,030,758; Feb. 11.
Feeding device. C. L. Post. 2,030,152; Feb. 11.
Feeding mechanism for rock drills. J. C. Curtis. 2,030,685; Feb. 11.
Feeler mechanism for looms. S. O. Dodge. 2,030,688; Feb. 11.
Feet, Apparant for treating. H. J. Dorrance. 2,030,358; Feb. 11.
Fibrous products and making the same. G. H. Ellis. 2,030,626; Feb. 11.
Filament support. R. C. Shermund. 2,030,326; Feb. 11.
Filing device. H. M. Uhlig. 2,030,728; Feb. 11.
Film of aluminium, Colored oxide. W. Anderau. 2,030,286; Feb. 11.
Films, Manufacture of rubber. P. H. Watkins. 2,030,729; Feb. 11.
Filmsy Production of. C. W. Bonniksen. 2,030,506; Feb. 11.
Filter: *See*—
Air filter. Continuous filter.
Firearm sight. I. O. Mossberg. 2,030,812; Feb. 11.
Firearm, Upturn-and-pullback bolt-action. O. F. Mossberg. 2,030,149; Feb. 11.
Fire extinguisher. F. C. Rahlmann. 2,030,468; Feb. 11.
Fireproofing. R. G. Quinn. 2,030,683; Feb. 11.
Fish boning device. H. L. Nelms. 2,030,463; Feb. 11.
Flash roasting. H. Freeman. 2,030,628; Feb. 11.
Flaws in electrical conductors, Detecting. L. J. DeLanty. 2,030,101; Feb. 11.
Flexible pocket receptacle. W. R. Buxton. 2,030,496; Feb. 11.
Floor clip. J. A. MacLean. 2,030,216; Feb. 11.
Fluids, Apparatus for metering. R. Lowe. 2,030,381; Feb. 11.
Forceps, Dental. G. C. Krajeski. 2,030,798; Feb. 11.
Fountain apparatus, Drinking. A. G. Haws. 2,030,280; Feb. 11.
Frame: *See*—
Quilting frame.
Freezing apparatus. G. F. Thoma. 2,030,233; Feb. 11.
Frequency modulation apparatus. G. L. Usselman. 2,030,125; Feb. 11.
Frog and switch track work. D. P. Steward and J. V. Stewart. 2,030,231; Feb. 11.
Fuel preparing and mixing apparatus for internal combustion engines. W. S. Falconer. 2,030,508; Feb. 11.
Fuel supply for internal combustion engines, Automatic auxiliary. I. E. Coffey. 2,030,745; Feb. 11.
Fuels, Burning liquid. H. A. Tiffany. 2,030,124; Feb. 11.
Furnace: *See*—
Immersion tube type furnace.
Furnace construction. D. Baird. 2,030,734; Feb. 11.
Furniture leg shoe. R. E. Miller. 2,030,640; Feb. 11.
Fuse, Electric. E. H. Taylor. 2,030,613; Feb. 11.
Fuse for projectiles, Point-detonating. D. L. Woodberry. 2,030,065; Feb. 11.
Game. J. F. Smith. 2,030,569; Feb. 11.
Game apparatus. H. B. Scherer. 2,030,872; Feb. 11.
Game, Double dummy bridge. I. R. Paris. 2,030,466; Feb. 11.
Garment, Infant's. P. Behringer. 2,030,091; Feb. 11.
Garments, Attachment for women's. M. E. Lala. 2,030,308; Feb. 11.
Gaseous discharge device, Electric. A. Haucke and H. Krefft. 2,030,450; Feb. 11.
Gaseous discharge device, Electric. H. R. Ruf. 2,030,491; Feb. 11.
Gaseous mixtures, Process and apparatus for cooling. M. Frankl. 2,030,500; Feb. 11.
Gases, Apparatus for proportioning the flow of. L. P. Day. 2,030,140; Feb. 11.
Gauge: *See*—
Vernier gauge.
Gauging machine. R. J. Brittain, Jr., and J. C. Bell. 2,030,237; Feb. 11.
Gear: *See*—
Change speed gear. Speed changing gear.
Gear assembly, Motorized reduction. O. L. Lewis. 2,030,260; Feb. 11.
Gear for geared propeller airplanes, Retractable landing. J. F. Haberlin. 2,030,293; Feb. 11.
Gear shifting mechanism for motor vehicles. E. G. Hill and E. W. Hey. 2,030,838; Feb. 11.
Generator. C. R. Hathaway. 2,030,108; Feb. 11.
Glass. L. Navias. 2,030,390; Feb. 11.
Glass, Alkali metal vapor resistant. M. Pirani and G. Galdies. 2,030,714; Feb. 11.
Glass, Apparatus for the manufacture of laminated. E. Donnini. 2,030,572; Feb. 11.
Glass articles, Manufacture of fabricated. O. Fritze and A. Rüttenauer. 2,030,439–40; Feb. 11.
Glass gathering and forming machine. R. W. Caulfield. 2,030,810; Feb. 11.
Glass, Producing nonshatterable. W. Pegler. 2,030,607; Feb. 11.
Glass, Sodium resistant. L. Navias. 2,030,389; Feb. 11.
Glass working apparatus. H. R. Schutz. 2,030,338; Feb. 11.
Glow tube control system. D. Applebaum. 2,030,492; Feb. 11.
Grandstand, Folding. F. C. Vance. 2,030,776; Feb. 11.
Granular product conditioner and products made therewith. H. V. Moss. 2,030,461; Feb. 11.
Grommet. W. A. Young. 2,030,088; Feb. 11.
Guard, Bumper. F. C. Howard. 2,030,255; Feb. 11.
Guard device. J. P. Donnebaum. 2,030,782–3; Feb. 11.
Guard for box ending machines, Safety. J. M. Minkus. 2,030,604; Feb. 11.
Gun of the mortar howitzer type. L. L. Driggs. 2,030,507; Feb. 11.
Hair waving appliance. T. H. Eins. 2,030,490; Feb. 11.
Hand, Artificial. D. W. Dorrance. 2,030,785; Feb. 11.
Hanger: *See*—
Pants hanger.
Hardware, Bracelets panic release, roller latching, revolving door. J. W. Shields and T. M. Hagenbuch. 2,030,547; Feb. 11.
Harvester, Tuber. J. G. Heaslet. 2,030,587; Feb. 11.
Haulage apparatus for operating soil scrapers, plows, reaping machines and the like. J. L. and A. T. Holman. 2,030,590; Feb. 11.
Heat distributing means. K. M. Hamilton. 2,030,519; Feb. 11.
Heat exchange apparatus. C. Field. 2,030,060; Feb. 11.
Heater: *See*—
Electric heater. Windshield heater.
Heater. E. F. Tobold. 2,030,614; Feb. 11.

Heating block for the treatment of hair. J. Warst. 2,030,162; Feb. 11.
Heating system. O. A. Ross. 2,030,542; Feb. 11.
Heating system. O. A. Ross. 2,030,544; Feb. 11.
Helicopter. S. P. Vaughn. 2,030,078; Feb. 11.
Hoisting apparatus. J. E. Webster. 2,030,123; Feb. 11.
Holder: *See*—
Container holder. Paper holder.
Egg holder. Safety jar holder.
Necktie holder. Window sash holder.
Hormone, Isolation and purification of the gonad stimulating. F. L. Hisaw and H. L. Fevold. 2,030,210; Feb. 11.
Hormones, Isolation and purification of. F. L. Hisaw and H. L. Fevold. 2,030,209; Feb. 11.
Hose attaching device. V. Buchanan. 2,030,570; Feb. 11.
Hose support, Flexible. J. C. G. Maxwell. 2,030,218; Feb. 11.
Hosiery knitting machine, Full fashioned. H. B. Scaife. 2,030,477; Feb. 11.
Humidifier. L. Kresser. 2,030,453; Feb. 11.
Humidifier. L. V. Roberts and D. Chalmers. 2,030,151; Feb. 11.
Humidifier apparatus. L. Kresser. 2,030,454; Feb. 11.
Hydraulic actuating mechanism for domestic laundry appliances. J. T. Hume. 2,030,256–7; Feb. 11.
Hydraulic brake. H. E. Marsh. 2,030,308; Feb. 11.
Hydraulic press. L. A. Molin. 2,030,287; Feb. 11.
Hydraulic transmission. R. K. Jack. 2,030,299; Feb. 11.
Hydrocarbons, Cracking. H. L. Palmer. 2,030,293; Feb. 11.
Hydrocarbons for cracking and distillation, Apparatus for the expansion of. C. Still. 2,030,771; Feb. 11.

Hypogastric supporter. B. F. Pease. 2,030,224; Feb. 11.
Ice-cream cone, Favor-carrying. C. W. Vogt. 2,030,126; Feb. 11.
Ice cuber. C. F. Belshaw and W. J. La Casse. 2,030,735; Feb. 11.
Immersion tube type furnace. G. J. Hales. 2,030,098; Feb. 11.
Impact device. L. K. Davis. 2,030,686; Feb. 11.
Imprinting apparatus. E. C. Wells. 2,030,081; Feb. 11.
Impulser for musical instruments, Split phase. V. H. Severy. 2,030,230; Feb. 11.
Inclinometer. F. L. Martin. 2,030,068; Feb. 11.
Inclosures in envelopes, Mechanism for assembling and inserting. D. O. Royster. 2,030,656; Feb. 11.
Indexing service board. L. C. Eldridge and E. G. Symon. 2,030,517; Feb. 11.
Indicator: *See*—
Storage battery charge indicator.
Inductor, Variable. R. M. Heintz. 2,030,360; Feb. 11.
Insecticide. C. C. Hamilton. 2,030,584; Feb. 11.
Insects, Apparatus for destroying. L. B. and L. V. McWilliams. 2,030,310; Feb. 11.
Insulated and waterproofed structure, Internally. H. von Forster. 2,030,417; Feb. 11.
Internal combustion engine. K. Angel. 2,030,732; Feb. 11.
Internal combustion engine. L. M. Woolson. 2,030,086; Feb. 11.
Iron-free compounds of the earth metals, alkaline earth metals, rare earth metals, earth acids, or the like, Production of practically. G. Jaeger. 2,030,372; Feb. 11.
Iron oxide and sulphur dioxide from iron sulphide ores, Making. H. Freeman. 2,030,627; Feb. 11.
Ironing board. C. A. Rich. 2,030,587; Feb. 11.
Jack: *See*—
Pump jack.
Jacquard pattern mechanism for knitting machines and patterning effected thereby. R. H. Lawson, A. N. Cloutier, and A. L. Hutton, Jr. 2,030,516; Feb. 11.
Jig. W. A. Weightman. 2,030,339; Feb. 11.
Joint: *See*—
Resilient joint. Universal joint.
Key, Lock. G. D. Full and J. M. Muntner. 2,030,837; Feb. 11.
Keyboard cam. F. D. Harris. 2,030,789; Feb. 11.
Knitting machine. H. Feineman. 2,030,815; Feb. 11.
Knitting machine. A. Friedmann. 2,030,697; Feb. 11.
Lacquer, Fast colored. H. Neid and W. Jaeck. 2,030,264; Feb. 11.
Ladle, Torch support. L. O. Brown. 2,030,238; Feb. 11.
Lamp: *See*—
Electric discharge lamp. Electric lamp.
Lamp device, Gaseous electric discharge. L. Blok. 2,030,426; Feb. 11.
Lamp device, Gaseous electric discharge. A. Fehse and H. Krefft. 2,030,435; Feb. 11.
Lamp device, Gaseous electric discharge. H. Gooskens. 2,030,445; Feb. 11.
Lamp device, Gaseous electric discharge. M. Pirani. 2,030,715; Feb. 11.
Lamp device, Gaseous electric discharge. R. Rompe. 2,030,399; Feb. 11.
Lamp device, Gaseous electric discharge. K. Wiegand. 2,030,807; Feb. 11.
Last. J. B. Waterfield. 2,030,615; Feb. 11.
Lasts, Method of and machine for reforming. J. Fitzpatrick. 2,030,141; Feb. 11.
Lifesaving equipment for marine vessels. W. R. Shultz. 2,030,768; Feb. 11.
Lifter: *See*—
Face lifter.
Light target for illumination meters. W. N. Goodwin, Jr. 2,030,250; Feb. 11.
Lighter, Cigarette. I. Florman. 2,030,364; Feb. 11.
Lighter mechanism, Pyrophoric. C. J. Lagerholm. 2,030,831; Feb. 11.
Lighting system and apparatus. S. F. Arbuckle and G. H. Coulter. 2,030,620; Feb. 11.
Line holding trig, Mason's. J. Riley. 2,030,539; Feb. 11.
Linoleum tile or the like, E. Veltung. 2,030,556; Feb. 11.
Lip stick box. W. S. Erbele. 2,030,058; Feb. 11.
Liquid and fluid actuating device. A. Wicha. 2,030,131; Feb. 11.
Liquid, Apparatus for dispensing. F. C. Pfeil. 2,030,534; Feb. 11.
Loading apparatus. T. F. McCarthy. 2,030,145; Feb. 11.
Loading machine. F. A. Halleck. 2,030,063; Feb. 11.
Lock: *See*—
Brake lock. Shuttle pin lock.
Lock. G. D. Full and J. M. Muntner. 2,030,836; Feb. 11.
Lock. C. Ledin. 2,030,454; Feb. 11.
Locking mechanism. V. L. Maurin. 2,030,599; Feb. 11.
Loom for weaving. R. Rossmann. 2,030,270; Feb. 11.
Looms, Auxiliary pull-down motion for. J. W. McDaniel. 2,030,000; Feb. 11.
Looms, Feeler device for. J. P. Campo. 2,030,497; Feb. 11.
Loudspeaker cone diaphragm and producing same. D. H. Cunningham. 2,030,501; Feb. 11.
Lubricated plug valve. R. P. Sherman. 2,030,408; Feb. 11.
Lubricating device. J. Longo. 2,030,646; Feb. 11.
Lubricating mechanism, Automatic. R. L. Pate, Jr. 2,030,533; Feb. 11.
Lubricating system. H. F. Schmidt. 2,030,611; Feb. 11.
Lubrication and apparatus therefor. E. W. Davis. 2,030,504; Feb. 11.
Machine for operating upon hides, skins, and leather. R. P. Whitney. 2,030,130; Feb. 11.
Machine for the production of knitted fabrics. J. A. Phillips. 2,030,317; Feb. 11.
Machine tool, particularly milling machine having a counter support. R. Stuhlmacher. 2,030,481; Feb. 11.
Machinery for making receptacles. W. F. Newhouse and L. M. Hile. 2,030,071; Feb. 11.
Magnesium alloys, especially in shaped form, Improving. W. Schmidt, P. Spitaler, and W. Schultze. 2,030,707; Feb. 11.
Magnet system. A. Meissner. 2,030,648; Feb. 11.
Match box. G. E. Knauth. 2,030,797; Feb. 11.
Material from wood sheets, Preparation of leatherlike flexible and pliable. R. O. Herzog and A. Burgeni. 2,030,819; Feb. 11.
Material working apparatus. E. J. Svenson. 2,030,335; Feb. 11.
Materials contaminated with ammonium salts, Purification of. G. S. Simpson. 2,030,273; Feb. 11.
Materials, Manufacture of textile. F. C. Hale and G. C. Tyce. 2,030,252; Feb. 11.
Materials, Production of artificial. E. Kinsella and R. H. J. Riley. 2,030,212; Feb. 11.
Materials, Production of artificial. W. L. Taylor. 2,030,189; Feb. 11.
Mercury switch. C. Hatay. 2,030,449; Feb. 11.
Metal working apparatus. J. S. Barnes. 2,030,562; Feb. 11.
Metallurgical apparatus. D. L. Summey. 2,030,482; Feb. 11.
Meter: *See*—
Carbon pile meter. Watt hour meter.
Meter for photographic or cinematographic exposing apparatus, Combined objective and exposure. H. Küppenbender and M. Nowicki. 2,030,643; Feb. 11.
Mill: *See*—
Ore mill.
Mills, Feed control for. R. M. Hardgrove. 2,030,448; Feb. 11.

Mining machine. C. A. Pratt. 2,030,535; Feb. 11.
Mirrors, Producing. H. E. Smith. 2,030,476; Feb. 11.
Mixer: *See*—
Road surface mixer.
Mixer and sprayer, Fertilizer. W. Thorne. 2,030,278; Feb. 11.
Mold: *See*—
Concrete tile mold.
Mold extension for ingot molds. W. M. Charman. 2,030,199; Feb. 11.
Mold for battery cell connecters, Adjustable. W. L. Strock and E. C. Strock. 2,030,726; Feb. 11.
Mold for making commutators. V. G. Apple. 2,030,132; Feb. 11.
Mold for molding or embossing or the like plastic material such as dough. A. Kremmling. 2,030,642; Feb. 11.
Molding strip. W. E. Wilson. 2,030,730; Feb. 11.
Motion-transmitting mechanism. E. B. Gruber. 2,030,511; Feb. 11.
Motor: *See*—
Torque motor.
Motor control. F. J. Russell. 2,030,470; Feb. 11.
Mounting for rock drills. C. C. Hansen. 2,030,512; Feb. 11.
Mounting, Meter. W. M. Bradshaw and W. G. Mylius. 2,030,094; Feb. 11.
Moving coil voltage regulator. E. D. T. Norris. 2,030,606; Feb. 11.
Muff, Ear. E. W. Hermann. 2,030,790; Feb. 11.
Mute for stringed musical instrument. F. Q. Miranda. 2,030,220; Feb. 11.
Necktie holder. R. E. Mix. 2,030,756; Feb. 11.
Nitroanthraquinone-azoles, P. Nawiasky, B. Stein, E. Berthold, and R. Zell. 2,030,823; Feb. 11.
Objects, Apparatus for decorating. O. Austin. 2,030,042; Feb. 11.
Oil burner. C. J. Ohlsson. 2,030,531; Feb. 11.
Oil distillates, Treating mineral. R. H. Crosby and B. R. Carney. 2,030,245; Feb. 11.
Oil distillation. J. S. Wallis. 2,030,485; Feb. 11.
Oil engine. R. M. Dilworth. 2,030,247; Feb. 11.
Oil, Renovating. L. T. Evans. 2,030,577; Feb. 11.
Oil, Treatment of hydrocarbon. W. W. Gary. 2,030,305; Feb. 11.
Oils, Electrical dehydration of. M. E. Cerc. 2,030,198; Feb. 11.
Oils, Synthetic lubricating. F. H. MacLaren. 2,030,832; Feb. 11.
1-amino-2-anthraquinonyl-anthraquinone-azoles. P. Nawiasky, B. Stein, E. Berthold, and R. Zell. 2,030,824; Feb. 11.
Optical valve. G. W. Walton. 2,030,238; Feb. 11.
Ore mill. A. J. Schlunegger. 2,030,323; Feb. 11.

Ores by froth flotation, Concentrating all kinds of precious metal. C. G. R. Meiser. 2,030,526; Feb. 11.
Organic compounds, Production of oxygenated. R. L. Brown. 2,030,048; Feb. 11.
Orthodontia molding device. R. Lambert. 2,030,524; Feb. 11.
Oscillating system, Phase controlled. S. N. Baruch. 2,030,090; Feb. 11.
Oscillograph. G. M. Rassweiler and S. J. Martin. 2,030,654; Feb. 11.
Packer head, Fluid release. J. A. Crumley. 2,030,164; Feb. 11.
Page projector for recorders. J. W. Long and E. R. Wheeler. 2,030,831; Feb. 11.
Pan, Self-watering seed. F. T. Radley. 2,030,268; Feb. 11.
Pan supporting rack, Baking. T. B. Bradley. 2,030,349; Feb. 11.
Panels, Making metal. J. K. Paschel. 2,030,072; Feb. 11.
Pants hanger. J. A. French. 2,030,788; Feb. 11.
Paper, Fertilized mulch. E. R. Pratt. 2,030,267; Feb. 11.
Paper holder. A. A. McDonough and C. D. Vickers. 2,030,602; Feb. 11.
Paper, Manufacture of coated. D. D. Uong. 2,030,483; Feb. 11.
Paper stacking clamp. G. H. Cole. 2,030,353; Feb. 11.
Papers and the product thereof, Coating creped. W. W. Rowe. 2,030,156; Feb. 11.
Papers, Manufacture of parchment. G. A. Richter. 2,030,469; Feb. 11.
Parasiticide. E. W. Bousquet, G. D. Graves, and P. L. Salzberg. 2,030,083; Feb. 11.
Partition for cattle stalls, Adjustable. G. A. Miller. 2,030,755; Feb. 11.
Pastry making machine. C. F. Liles. 2,030,598; Feb. 11.
Pen, Soluble ink fountain. E. B. Kingman. 2,030,452; Feb. 11.
Penetrator-stem for hardness indicating apparatus. A. F. Shore. 2,030,475; Feb. 11.
Petroleum mixtures, Fractionating. G. B. Coubrough. 2,030,281; Feb. 11.
Phonograph. A. A. Johnson. 2,030,633; Feb. 11.
Photographic developer. H. Ulrich and K. Saurwein. 2,030,336; Feb. 11.
Photography, Apparatus for use in color. E. Gretener. 2,030,446; Feb. 11.
Photography, Composite. F. W. Jackman. 2,030,300; Feb. 11.
Picture record, Sound. T. W. Case. 2,030,098; Feb. 11.
Pie pan. M. M. Young. 2,030,244; Feb. 11.
Pipe, Manufacturing noncorrosive armored metal. W. A. Kraner. 2,030,515; Feb. 11.
Pipes, Apparatus for cleaning. L. I. Rivard and C. I. Bomster. 2,030,398; Feb. 11.
Pitch product and method of making, Blended. S. P. Miller. 2,030,528; Feb. 11.
Pitch product and preparing same. E. H. Ellms. 2,030,575; Feb. 11.
Pitch propeller, Variable. F. Goruki. 2,030,629; Feb. 11.
Plane, Power. G. Heimsath. 2,030,520; Feb. 11.
Plant support. L. Goldberg. 2,030,240; Feb. 11.
Planter, Wireless corn. W. A. Harrison. 2,030,368; Feb. 11.
Plastic masses, etc., containing cellulose esters, Producing. R. Müller, M. Schenck, and W. Wirbatz. 2,030,221; Feb. 11.
Plastic material and making same. H. Jenett. 2,030,066; Feb. 11.
Plow, Tractor. E. B. Bowen. 2,030,567; Feb. 11.
Plug: *See*—
Electric plug. Electric switch plug.
Plunger lift control. H. W. Fletcher and E. Neuhaus. 2,030,436; Feb. 11.
Pole for tree pruners, Jointed. J. L. Smith. 2,030,550; Feb. 11.
Post, Highway guard. O. D. Eggleston. 2,030,623; Feb. 11.
Potash, Making. E. Wiedbrauck and K. Bäche. 2,030,082; Feb. 11.
Powder composition, Black. C. W. Brooks, Jr. 2,030,006; Feb. 11.
Powder package and dispenser. J. E. Garnet. 2,030,787; Feb. 11.
Powdery material, Apparatus for delivering. A. G. Rose. 2,030,541; Feb. 11.
Power system. O. Wünsche. 2,030,673; Feb. 11.
Precision instrument. M. Ricci. 2,030,320; Feb. 11.
Press: *See*—
Hydraulic press. Printing press.
Pressing element for pressing machines. G. W. Johnson. 2,030,596; Feb. 11.
Pressing machine. G. W. Johnson. 2,030,595; Feb. 11.
Pressure relief valve. T. G. A. Sillers. 2,030,121; Feb. 11.
Primary cell. M. L. Martus, E. H. Becker, and J. G. Ross. 2,030,177; Feb. 11.
Printing. T. E. Knowlton. 2,030,304; Feb. 11.
Printing press. W. M. Kelly. 2,030,173; Feb. 11.
Projection system. R. F. Dirkes and R. Stoeneck. 2,030,812; Feb. 11.
Projector. R. E. Wilson. 2,030,490; Feb. 11.
Projector head for oil burners, Rotary. H. A. Tiffany. 2,030,123; Feb. 11.
Propeller, fan, and exhauster. S. Cegiowski. 2,030,622; Feb. 11.
Protective apparatus. O. C. Traver and C. R. Mann. 2,030,665; Feb. 11.
Protective receptacle. C. F. Mallink. 2,030,519; Feb. 11.
Puller: *See*—
Weed puller.
Pulp, Bleaching. A. J. Luth, R. A. Nugent, and N. R. Christian. 2,030,134; Feb. 11.
Pulp, Treating. A. J. Luth, R. A. Nugent, and N. R. Christian. 2,030,382–3; Feb. 11.
Pulverizer. F. M. Iler. 2,030,330; Feb. 11.
Pump: *See*—
Displacement pump. Screw pump.
Pump. H. Allen. 2,030,041; Feb. 11.
Pump. F. S. Horstmann. 2,030,206; Feb. 11.
Pump jack. W. R. Cummins. 2,030,282; Feb. 11.
Punch, Hydraulic. F. L. Scott. 2,030,721; Feb. 11.
Punching device. M. Ahlenius. 2,030,346; Feb. 11.
Punching mechanism. A. H. Dickinson. 2,030,432; Feb. 11.
Quilting frame. E. E. Pike. 2,030,608; Feb. 11.
Rack: *See*—
Pan Supporting rack. Towel rack.
Radio apparatus. W. A. Schaper. 2,030,271; Feb. 11.
Radio signaling, Directional. E. K. Potter. 2,030,131; Feb. 11.
Rail joint in track, Repairing a. G. Langford. 2,030,704; Feb. 11.
Railroad signal. A. H. Told. 2,030,190; Feb. 11.
Rainwater trap. H. P. Pearce. 2,030,467; Feb. 11.
Rake. W. G. Rocquin. 2,030,185; Feb. 11.
Rake, Double acting garden. E. H. Ruckles. 2,030,211; Feb. 11.
Rake, Sand trap. E. J. Bacigalupi. 2,030,424; Feb. 11.
Rayon, Soft-luster. E. S. Bley. 2,030,740; Feb. 11.
Razor. L. K. Kuhni. 2,030,706; Feb. 11.
Razor blade. R. B. Thompson. 2,030,833; Feb. 11.
Razor, Safety. F. F. Schlattau. 2,030,706; Feb. 11.
Razor, Safety. E. Schoedlbauer. 2,030,650; Feb. 11.
Receptable: *See*—
Drainage receptacle. Protective receptacle.
Flexible pocket receptacle.
Receptacle for attachment plug caps. C. T. Von Hein. 2,030,079; Feb. 11.
Receptacle for motion picture films. J. T. Nist. 2,030,485; Feb. 11.
Receptacles, Apparatus for filling. L. B. Winter. 2,030,094; Feb. 11.
Record, Laminated. B. C. Bron. 2,030,563; Feb. 11.
Record perforating machine. J. T. Schaaf. 2,030,466; Feb. 11.
Recording mechanism. J. B. Strauss. 2,030,479; Feb. 11.
Rectifier and the like. E. F. Randall. 2,030,396; Feb. 11.
Refrigerating construction. F. H. Hibberd, G. E. Woodard, and J. Kirgan. 2,030,514; Feb. 11.
Refrigerating system. L. W. Atchison. 2,030,676; Feb. 11.
Refrigerating system, Solan operated. A. T. Brenner. 2,030,350; Feb. 11.
Refrigerator. J. A. Stone. 2,030,418; Feb. 11.
Refrigerator construction. W. C. Fuller. 2,030,291; Feb. 11.
Refuse catching and removing device for floors. I. T. Skiles. 2,030,077; Feb. 11.
Regulator: *See*—
Moving coin voltage regulator. Vapor regulator.
Wind screen.
Remote control for theater lights. R. D. Ross. 2,030,891; Feb. 11.
Resilient joint. J. W. Leighton. 2,030,730; Feb. 11.
Resorcinols, Alkyl. W. E. Austin. 2,030,423; Feb. 11.
Return bend for cracking stills. C. E. Ard. 2,030,409; Feb. 11.
Rivet. L. C. Huck. 2,030,169–70; Feb. 11.
Rivet. E. A. Miller. 2,030,167–8; Feb. 11.
Rivet and setting the same. L. C. Huck. 2,030,165–6; Feb. 11.
Rivets, Manufacturing. L. C. Huck. 2,030,171; Feb. 11.
Road surface mixer. T. E. Chamberlain. 2,030,883; Feb. 11.
Rodding and tamping machine for concrete. R. J. Noble. 2,030,315; Feb. 11.
Roller bearing bit. L. E. Garfield and F. L. Scott. 2,030,442; Feb. 11.
Roller coating machine. W. E. Shehan. 2,030,225; Feb. 11.
Rolling, Method and apparatus for. A. J. Haslett. 2,030,586; Feb. 11.
Rubber, Manufacture of. B. M. Unger. 2,030,191; Feb. 11.
Rustproofing composition and coating iron and steel. G. A. McDonald. 2,030,601; Feb. 11.
Saddle. J. W. Brandt. 2,030,800; Feb. 11.
Safety device for cranes and the like. A. F. Nash. 2,030,529; Feb. 11.
Safety device for manhole covers. C. E. Rego. 2,030,135; Feb. 11.
Safety jar holder. R. Cantini. 2,030,742; Feb. 11.
Safetypin. J. M. Abrams. 2,030,674; Feb. 11.
Salts, Avoiding setting phenomena in commercially prepared. J. Haas and G. Adolf. 2,030,583; Feb. 11.
Salts, Making ammonium. E. R. Cushing. 2,030,811; Feb. 11.
Salts of barium and strontium, Manufacturing soluble. R. N. Shreve, W. N. Pritchard, Jr., H. V. Farr, A. J. Still, and J. D. Crosby. 2,030,656; Feb. 11.
Sander, Track. W. H. White. 2,030,669; Feb. 11.

Saws, Cutting, setting and sharpening circular. E. Poeggel. 2,030,235; Feb. 11.
Scale. H. L. Walker. 2,030,666–7; Feb. 11.
Scale, Weighing and counting. W. N. Gilbert. 2,030,444; Feb. 11.
Scooter. E. P. Kassegviser. 2,030,796; Feb. 11.
Screen for use with lenticulated films, Multicolor. E. Gretener. 2,030,447; Feb. 11.
Screens, Making photographic stencil. E. B. Young. 2,030,731; Feb. 11.
Screw pump. J. L. Adams, Jr. 2,030,560; Feb. 11.
Seal for rotary engines. H. E. Kempton. 2,030,806; Feb. 11.
Seam and making same, Wire-cloth. N. W. Webb. 2,030,616; Feb. 11.
Seat for valves, Resilient. M. S. McKellar, E. P. Sherman, and H. W. Fletcher. 2,030,458; Feb. 11.
Seed from wheat, Separation of garlic and onion. B. Harts. 2,030,632; Feb. 11.
Seed mixer and agitator. A. Holmquist. 2,030,591; Feb. 11.
Separable fastener. G. G. Sahlin. 2,030,471; Feb. 11.
Separator: *See*—
Air separator.
Setting and indicating device for geared lathe headstocks. L. A. Carter. 2,030,097; Feb. 11.
Sewing machine, Blind stitch. J. Mann. 2,030,781; Feb. 11.
Shaker, Cocktail. S. Cominsky. 2,030,834; Feb. 11.
Shaping machine. F. G. Waller. 2,030,484; Feb. 11.
Sharpener for the blades of edged tools. P. von der Lippen. 2,030,161; Feb. 11.

Testing device for threaded articles. F. C. Nilson. 2,030,464; Feb. 11.
Testing machine. D. M. Warner. 2,030,418; Feb. 11.
Testing machine, Portable. A. B. Kinzel. 2,030,640; Feb. 11.
Testing machine, Universal. R. B. Lewis. 2,030,457; Feb. 11.
Textile operations. W. A. Dickie and A. H. Gentle. 2,030,102; Feb. 11.
Thread and reticulated sheets of rubber or similar material, Making elastic. M. M. Harrison. 2,030,208; Feb. 11.
Thrust bearing. J. Doisa. 2,030,813; Feb. 11.
Time-cycle controller. W. J. Kerr and R. C. Miller. 2,030,451; Feb. 11.
Timer for concrete mixers. R. C. Garber and H. R. McDermott. 2,030,747; Feb. 11.
Timing mechanism for glass feeders. O. M. Tucker and W. A. Reeves. 2,030,804; Feb. 11.
Tin from columbium alloys, Removing. E. F. Doom. 2,030,357; Feb. 11.
Tire building drum. A. L. Heston. 2,030,749; Feb. 11.

Tire inflater, Automatic. O. W. Hosking. 2,030,592–3; Feb. 11.
Tire, Vehicle wheel. F. K. Kreuta. 2,030,215; Feb. 11.
Tire, Wheel. G. F. A. Corts. 2,030,243; Feb. 11.
Tool for making snap fasteners for bag frames. E. W. Schantz. 2,030,400; Feb. 11.
Tool set and container therefor. W. F. Costello. 2,030,138; Feb. 11.
Top, Spinning. W. L. Jones. 2,030,302; Feb. 11.
Torque loading lash adjusting device for friction roller transmissions. W. D. Gove and J. Dolza. 2,030,208; Feb. 11.
Torque motor. E. S. Taylor. 2,030,277; Feb. 11.
Towel rack. A. J. Chmurski. 2,030,498; Feb. 11.
Towel vending machine. H. F. Mayfield. 2,030,525; Feb. 11.
Toy aeroplane. W. E. Back. 2,030,347; Feb. 11.
Toy locomotive. A. C. Gilbert. 2,030,201; Feb. 11.
Trap: *See*—
Rainwater trap.
Treating apparatus. O. Oppenlaender, R. J. Gollong, and R. H. Carter. 2,030,711; Feb. 11.
Trees of insects, Apparatus for ridding. E. Bernits, Sr. 2,030,052; Feb. 11.
Trench digger and back-filling machine. W. A. Billings. 2,030,045; Feb. 11.
Trimming machine. A. Eppler. 2,030,057; Feb. 11.
Truck. J. A. Lamont. 2,030,144; Feb. 11.
Truck or tractor with two rear axles. H. R. M. G. Smeets. 2,030,548; Feb. 11.
Truss or bridge. T. Maddock. 2,030,262; Feb. 11.
Tube: *See*—
Electric arc discharge tube.
Electric discharge tube.
Short wave tube.
Soot blowing tube.
X-ray tube.
Tube base. G. M. Rose, Jr. 2,030,184; Feb. 11.
Tubes, Manufacture of electric discharge. A. G. Pearce. 2,030,392; Feb. 11.
Tubes to power transmission lines, Device for applying luminescent. J.-B. J. M. Abadie. 2,030,491; Feb. 11.
Tuned vibrating system. T. Aamodt. 2,030,421; Feb. 11.
Tuning mechanism. A. G. Wheller. 2,030,129; Feb. 11.
Turpentine oils, Catalytic oxidation of. W. Schrauth. 2,030,802; Feb. 11.
Typewriting machine. W. A. Dobson. 2,030,056; Feb. 11.
Typewriting machine. J. A. B. Smith. 2,030,409–10; Feb. 11.
Typewriting marginator, Automatic. T. Pimental. 2,030,395; Feb. 11.
Undergarment. H. Schoebel. 2,030,826; Feb. 11.
Universal joint. R. B. Poole. 2,030,074; Feb. 11.
Universal joint, Resilient. H. D. Geyer. 2,030,788; Feb. 11.
Urea resin molding powders, Making. P. B. Watson. 2,030,102; Feb. 11.
Vacuum cleaner. B. A. Baxter. 2,030,133; Feb. 11.
Vacuum cleaner. T. E. D. Bilde. 2,030,565; Feb. 11.
Vacuum cleaner, Electric. O. Grave. 2,030,366–7; Feb. 11.
Vacuum discharge apparatus, Arrangement for supervising the vacuum, i. e. the gas or vapor pressure, in. W. Dallenbach. 2,030,781; Feb. 11.
Vacuum discharge apparatus, Grid-controlled electric. J. von Issendorff. 2,030,127; Feb. 11.
Vacuum tube periodic relay. G. E. Horton, Jr. 2,030,794; Feb. 11.
Valve: *See*—
Lubricated plug valve.
Optical valve.
Pressure relief valve.
Valve. E. Giger-Knüsli. 2,030,143; Feb. 11.
Valve. E. H. Mueller. 2,030,150; Feb. 11.
Valve. J. B. Spear. 2,030,332; Feb. 11.
Valve actuating mechanism. V. F. Zahodiakin. 2,030,345; Feb. 11.
Valve for controlling flow of milk and air in milking machines. C. H. Hapgood. 2,030,513; Feb. 11.
Valve operating mechanism. G. Cawley. 2,030,371; Feb. 11.
Valves, Making hollow head. A. T. Colwell. 2,030,500; Feb. 11.
Vapor phase oxidation. E. Riegler. 2,030,800; Feb. 11.
Vapor regulator. L. H. Gillick and E. A. Russell. 2,030,580; Feb. 11.
Vaporizer device. J. Robinson. 2,030,075; Feb. 11.
Vehicle, Combined road and rail. K. Y. Mesbit. 2,030,311; Feb. 11.
Vehicle end framing. W. H. Massey and M. P. Blomberg. 2,030,462; Feb. 11.
Vehicle for road building and repairing. J. Van Vorst and G. M. Baker. 2,030,555; Feb. 11.
Vehicle rocking machine. P. J. Kroll. 2,030,174; Feb. 11.
Vehicle suspension. M. Wagner. 2,030,557; Feb. 11.
Ventilator. F. A. Strawsine. 2,030,551; Feb. 11.
Vermiculites, Treating. W. B. Byers. 2,030,239; Feb. 11.
Vernier gauge. F. Csembe. 2,030,354; Feb. 11.
Vessel cover. H. L. Pollock. 2,030,266; Feb. 11.
Vessel, Forming a pressure. I. Harter. 2,030,318; Feb. 11.
Vitamin D and product thereof, Irradiation of. O. Lienert. 2,030,377; Feb. 11.
Vitamin preparations containing vitamin D, Water-miscible. C. W. Hooper. 2,030,792; Feb. 11.
Wagon. R. E. Choate and W. E. Rodler, 2,030,137; Feb. 11.
Wall construction. H. E. Marks. 2,030,217; Feb. 11.
Wall paper remover. E. A. Schaefer, Jr. 2,030,720; Feb. 11.
Wall structure, Plastic. E. T. Ferngren. 2,030,059; Feb. 11.
Walls, Insulating. F. Weyerhaeuser and J. S. Busch. 2,030,668; Feb. 11.
Washer: *See*—
Air washer.
Water closet. C. H. Ewermann. 2,030,559; Feb. 11.
Water tube boiler. J. O. Nyraard. 2,030,265; Feb. 11.
Watt hour meter, Detachable. W. C. Nein. 2,030,116; Feb. 11.
Wax, Nonslippery floor. T. G. Dixon. 2,030,055; Feb. 11.
Weed puller. E. L. Smith. 2,030,770; Feb. 11.
Weir, Milk bottle. J. S. Lundgren. 2,030,706; Feb. 11.
Welding apparatus. J. A. Derrat. 2,030,089; Feb. 11.
Well boring apparatus. A. Pranger and B. Boykin, Jr. 2,030,318; Feb. 11.
Wells, Drilling. H. L. Woods. 2,030,777; Feb. 11.
Wheel. C. Sauzedde. 2,030,076; Feb. 11.
Wheel and axle assembly, Antifriction. A. H. Oelkers. 2,030,151; Feb. 11.
Wind screen. A. Knecht. 2,030,258; Feb. 11.
Winding apparatus. H. Snyder. 2,030,660; Feb. 11.
Window for vehicles. E. F. Anderson. 2,030,089; Feb. 11.
Window sash holder. T. T. Roche. 2,030,209; Feb. 11.
Windshield heater. L. T. Page. 2,030,117; Feb. 11.
Wiper mechanism, Windshield. B. B. Evans. 2,030,296; Feb. 11.
Wire, Pile. O. J. Pickard and F. Pickard. 2,030,188; Feb. 11.
Wrench clip. J. H. Coyle. 2,030,148; Feb. 11.
Wrench clip. W. R. Moore. 2,030,147; Feb. 11.
Wringer, Clothes. G. Walen. 2,030,327; Feb. 11.
X-ray tube. V. J. Andrew. 2,030,561; Feb. 11.
Yarn and making same, Elastic. N. E. Randall. 2,030,610; Feb. 11.
Yarn controlling member. V. Lombardi. 2,030,261; Feb. 11.
Yarns or threads, Apparatus for manufacturing twisted artificial. A. W. Knight. 2,030,110; Feb. 11.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 11, 1936

Note.—First number—class, second number—subclass, third number—patent number

9— 30: 2,030,226
98: 2,030,431
116: 2,030,093
117: 2,030,551
200: 2,030,790
12: 2,030,783
14: 2,030,539
173: 2,030,357
200: 2,030,708
2: 2,030,369
2,030,394
19: 2,030,711
20: 2,030,469
22: 2,030,139
37: 2,030,171
2,030,200
1: 2,030,353
82: 2,030,057
130: 2,030,615
147: 2,030,139
16: 2,030,262
15— 227: 2,030,494
253: 2,030,266
16— 42: 2,030,649
2,030,699
72: 2,030,334
17— 7: 2,030,462
18— 8: 2,030,189
2,030,212
12: 2,030,211
34.1: 2,030,324
42: 2,030,122
50: 2,030,191
54: 2,030,208
55: 2,030,321
2,030,729
57: 2,030,668
19— 1: 2,030,293
20— 4: 2,030,668
6: 2,030,216
18: 2,030,547
22: 2,030,774

U. S. GOVERNMENT PRINTING OFFICE: 1966

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 463—No. 3 TUESDAY, FEBRUARY 18, 1936 Price—$16 per year

The OFFICIAL GAZETTE is issued under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $10.00 per annum, including annual index, $12.75; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Attorneys—Disbarment

(Order No. 3,332)

Acting under the provisions of section 487 of the Revised Statutes of the United States (U. S. C., title 35, sec. 11) C. W. Van Arsdalen of 822 Land Title Building, Philadelphia, Pa., whose registration is Number 7,107, is hereby disbarred from practice before the United States Patent Office.

CONWAY P. COE,
Commissioner.

Notice of Cancellation

U. S. PATENT OFFICE, Washington, *Jan. 30, 1936.*

Mexican American Habanero Corporation, its assignee or legal representatives take notice:

An application for cancellation having been filed in this Office by C. F. Hernandez, S. en C., de Chile 24 Cuahutemotzin, Mexico, D. F., to effect the cancellation of trade-mark registration of Mexican American Habanero Corporation, 25 East 40th Street, New York, N. Y., No. 310,856, dated December 4, 1934, and the notice of such proceeding sent by registered mail to the said Mexican American Habanero Corporation at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Mexican American Habanero Corporation, its assignee or legal representatives, shall enter an appearance herein within thirty days from the first publication of this notice the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

U. S. PATENT OFFICE, Washington, *Jan. 30, 1936.*

Robinhen Corporation, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted in this Office upon the application of Sears, Roebuck and Co., 925 South Homan Avenue, Chicago, Ill., to effect the cancellation of trade-mark registration No. 174,210, issued October 9, 1923, to Robinhen Corporation, 512 Fifth Avenue, New York, N. Y., and a notice of such proceeding sent by registered mail to said Robinhen Corporation at said address having been returned by the post office as undeliverable, notice is hereby given that unless said Robinhen Corporation, its assigns or legal representatives shall enter an appearance within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Disclaimers

T. M. 323,090.—Herbert W. Pittsburgh, New York, N. Y. TRADE-MARK "STYLNITREND" FOR MEN'S AND BOYS', WOMEN'S, MISSES', CHILDREN'S, AND INFANTS' HOSIERY, UNDERWEAR, SWEATERS, ETC. Registered June 4, 1935. Disclaimer filed December 11, 1935, by the registrant, Herbert W. Pittsburgh.

Hereby enters disclaimer to men's and boys' hosiery, sweaters, bathing suits; men's dress and negligee shirts, boys' shirts and blouses; women's, misses', children's, and infants' wash dresses, blouses, and aprons, * * *.

1,755,114.—Louis A. Hazeltine, Hoboken, N. J. UNIDIRECTIONAL SIGNALING SYSTEM. Patent dated April 15, 1930. Disclaimer filed January 18, 1936, by the patentee, the assignee, *Hazeltine Corporation*, assenting.

Hereby enters this disclaimer to claims 10, 12, 13, 14, 16, 17, 19, 21, 23, 24, and 29 of said patent.

Renewal of Forfeited Cases

A petition for the renewal of a forfeited application need not be signed by the inventor or assignee, but may be signed by the attorney.

A power of attorney in the original application authorizing an attorney to transact all business in the Patent Office in connection with the application construed to be of sufficient scope to include the signing of a petition for renewal and the subsequent prosecution of the application. (*Ex parte Apel*, 101 O. G., 1903.)

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE McCALLUM AND SCHRAUBSTADTER

No. 3,498. Decided December 5, 1935

PATENTABILITY—PROCESS OF TREATING PYRITES.

Claims for process of treating pyrites *held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. James A. Carr, Mr. Joseph J. Gravely, and *Mr. R. Peale Herrick* for McCallum and Schraubstadter.

Mr. R. F. Whitehead and *Mr. Howard E. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.:*

The appellants filed their application in the United States Patent Office for a patent upon an alleged new and useful improvement in a process for treating pyrites. In connection with this application, 29 claims were filed, numbered from 1 to 29, inclusive. All claims were rejected by the Examiner. On appeal, the Board of Appeals reversed the decision of the Examiner as to claims 20, 21, 22, 24, and 25, and affirmed the same as to the remaining claims. The appellants have appealed as to all claims rejected by said decision of affirmance.

Claims 2, 8, 13, 18, 20, and 29 are thought to be typical of all the rejected claims, and are as follows:

2. The process which comprises burning pulverized pyrites in suspension in an atmosphere laden with oxygen, separating out the greater portion of the solid matter, and passing the gaseous matter with the remaining solid matter suspended therein into a reducing atmosphere kept at a temperature above the point of condensation of sulphur vapor, again separating out the solid matter and cooling the gaseous matter below the temperature at which sulphur vapor condenses.

8. The process of producing flowers of sulphur from iron pyrites which consists in burning pulverized pyrites in a blast of air whose oxygen content is somewhat insufficient to oxidize all of such pyrites, subjecting the gaseous products of such burning with free sulphide suspended therein but without free oxygen to a temperature in excess of the point of condensation of sulphur vapor, and drawing off and cooling the gaseous products to a temperature below that at which sulphur vapor condenses.

13. The process which comprises burning pulverized pyrites in suspension in an atmosphere so adjusted as to temperature and oxygen as to promote the oxidation of the iron, and the reduction to elemental sulphur of the sulphur compounds, supplying steam or other form of water vapor to promote the more rapid oxidation of the iron and reduction of the sulphur compounds, settling or otherwise separating out the greater portion of the solid matter and conveying the sulphur vapors and gases into a condenser for the recovery of the elemental sulphur.

18. The process which comprises burning pulverized pyrites in suspension within a suitable reaction chamber and generating therein by oxidation of the pyrites particles a porous catalytic agent which is autogenetic coincident with the burning of the pyrites.

20. The process which comprises substantially autopyrogenetically treating pulverized sulphides in suspension in such a manner that the chemically basic constituents are convertible to and recoverable in an oxidized state, while the sulphur constituents are reducible to and recoverable in the form of elemental sulphur.

29. The process which comprises burning sulphides in suspension in a reaction zone and maintaining within such zone an equilibrium of oxidation and reduction whereby the reduction of the sulphur compounds to elemental sulphur is promoted.

Appellants' alleged invention consists of a process for treating pyrites, and for the recovery of its constituent elements, chiefly having reference to the recovery of sulphur. In the process, iron pyrites (FeS_2) is first "finely divided." This finely divided substance is blown into the upper portion of a combustion chamber, in suspension in a current of air, by means of a blower. When the process is initiated, a series of burner jets surrounding the inlet to the combustion chamber is lighted, the fuel supply being any suitable substance, such as gas, powdered coal or powdered coke. The burning jets are utilized in the process until reaction starts within the combustion chamber, after which the jets are closed, the reaction supplying enough heat to complete the process. The appellants recite in their specification: "The quantity of oxygen is controlled so as to be somewhat less than that required for complete oxidation of the pyrites."

As the air and pyrites enter the combustion chamber, decomposition is started. Some of the pyrites remains unchanged, some of it is changed to iron sulphide (FeS), a large portion is decomposed into other iron oxides, including ferrosoferric oxide (Fe_3O_4) and into sulphur dioxide (SO_2) and elemental sulphur (S).

From the combustion chamber, the current of gases and vapors enters a chamber called the reducing chamber, which is illustrated as a vertical chamber with funnel-shaped base and an endless belt arrangement passing the bottom orifice of the chamber to carry off such heavy oxides as are deposited out of the current.

It is claimed that the reaction in the combustion chamber is rapid and complete, and is catalytically accelerated by the ferrosoferric oxide produced in the operation. Some of this ferrosoferric oxide is carried over into the reducing chamber, and there continues its work as a catalyst. The temperature in this reducing chamber is kept above the point at which sulphur vapor condenses, that is, above 445 degrees centigrade. In this reducing chamber it is claimed that the remaining sulphur dioxide is deprived of its oxygen and that the elemental sulphur thereby produced, together with that previously produced in the combustion chamber, passes off in gaseous form into a suitable cooling and collecting chamber where it is cooled and collected as flowers of sulphur. The iron compounds in the reducing chamber, after deoxidation of the sulphur, are deposited at the bottom of said chamber in the form of oxides.

The specification then recites:

"The iron compounds deposited in the combustion chamber contain some sulphur; and to eliminate this sulphur, such iron compounds, which are mostly various oxides of iron, are treated in a sintering machine and then reduced, as by smelting in a blast furnace or in an electric furnace."

The sulphur which is obtained as a result of this sintering process is returned as a vapor from the sintering machine, and passes with the current of inflowing pyrites again into the combustion chamber.

In this process, it is stated by appellants in their specification that the process contemplates that the "draft will carry into the reducing chamber enough sulphides of iron to bring about reduction of the sulphur dioxide. This quantity may be controlled in the first instance by properly proportioning the quantity of pyrites

in the charging blast with relation to the volume of oxygen in such blast; and a proper control can be readily ascertained by taking samples of the product at different points along the draft."

The specification also recites:

"When using auxiliary fuel, such as oil, gas or powdered coke, a considerable quantity of water is produced by combustion. At other times it may be expedient to introduce water vapor either as steam or by other means."

The claims in issue here were rejected by both tribunals, on the following references: Benner et al., 1,751,066, March 18, 1930; Benner et al., 1,751,067, March 18, 1930.

Several features are urged by the appellants which, it is said, are novel and inventive in appellants' process and claims, and which it is claimed are not met by the Benner et al. references. To paraphrase these claims they are, substantially, as follows:

First. That the Benner references do not disclose the feature stated in most of appellants' claims, that appellants use, in carrying the material into their apparatus, less air than is necessary for complete combustion of the pyrites.

Second. That the references do not disclose that the material subjected to the process must be so fine that it will be carried through the process in the air stream.

Third. That the reference patents do not show the production of ferrosoferric oxide during the early part of the process, and its consequent use as a catalyst.

Fourth. That the references show the use of fuel, while a novel feature of appellants' process is the production of sufficient heat to carry on the process, as the result of the reactions in the process.

Fifth. That the references do not show the production of a catalyst of an extremely porous character during the process described therein.

All of these features are claimed by appellants to be new and inventive.

It is noted that the Board of Appeals is apparently of the opinion that the Benner patentee did not appreciate the function which the ferrosoferric oxide performed in the Benner process. However, it is said by the Board that the Benner patents show the production of (Fe_3O_4) during the process, and that whether its function was fully understood or not, it being concededly a catalyst and being shown to exist in the process, its effect would be the same whether understood or not. We agree with the Board of Appeals in its conclusion in this respect. That it was present in the Benner process is plainly shown by the specification in the reference patent, 1,751,066, wherein it is stated:

> The heat developed by the oxidation of the iron sulfide Fe_3O_4 serves to provide a large portion of the heat required to maintain the temperature of the reaction chamber, thereby reducing the use of the more expensive and less available coal and oil for heating purposes.

The reference patents to Benner were issued contemporaneously on applications filed as of the same date. The only apparent difference between the two patents is in some details of construction which appear to be somewhat immaterial, so far as the issues herein are concerned. The patents are concerned with the extraction of elemental sulphur from sulphide ores, particularly pyrites or pyrrhotite. In the patents, the sulphide ore is introduced into a reduction chamber through an opening in the top. The reduction chamber is a vertical chamber, much deeper than its width, having a funnel-shaped bottom which empties into a receptacle for the collection of solid matters. With the sulphide ore, which is "in the granular state either coarse or finely divided," carbonaceous fuel, equal to 10 per cent or more of the total charge, is dropped through the top opening or feeding device. The proportion of carbonaceous fuel may be varied according to the necessities. At the bottom of the reduction chamber is an inlet through which an oxidizing gas including a portion of free oxygen is admitted. In the process, where the charge is in a state of coarse division, the chamber is practically filled with the charge. However, where the charge is finely divided, suitable means are "provided for dispersing the same such as a rotating cone or a blast of a gaseous medium." It results that in such cases of fine division the falling material in the reduction chamber is met by the rising blast from the inlet pipe, and is thus dispersed and carried forward in the process. The reduction chamber is maintained at a high temperature of from 700 to 800 degrees centigrade, or above. This chamber consists of three portions, A, B, and C. In the top of the chamber, in zone A, according to the specification in Patent 1,751,066, a reducing atmosphere is maintained and a large part of the volatile matter in the fuel is driven off. The sulphide ore also decomposes, yielding free sulphur, (SO) and some iron oxides, such as (Fe_3O_4). In zone B, if coal is used as a fuel, coke is produced and is substantially utilized in the reduction of the sulphur dioxide and carbon dioxide ascending from the zone below. Gases containing sulphur dioxide may be also introduced into the reduction chamber at the bottom of zone B. In the bottom zone of the reduction chamber, the unoxidized iron sulphide descending from zone B is burned completely, yielding sulphur dioxide and iron oxide. Various other chemical reactions occur which are unnecessary here to further specify. The statement is made in the specification:

> The amount of air admitted through the inlet 3 is regulated so that only enough oxygen over that required to oxidize the FeS and carbon is provided.

The gaseous products of the reduction chamber are removed through the top thereof, through an outlet, while the ash and cinder content may be removed from the bottom of the chamber by suitable means. It is stated:

> By a proper regulation of the air, sulphur dioxide, coal and sulphide ore, admitted to the chamber, it is possible to provide for complete oxidation of the coal and ores, maintain the required temperature for the reduction, and reduce substantially all the sulphur dioxide gas to elemental sulphur.

The ash and cinder product may be discharged from the bottom of the chamber as a commingled product by any well-known means. The specification then discloses that the gas mixture from the reduction chamber is carried through a conduit to a catalyst chamber, where a suitable catalyst is provided to aid in the reduction of these gases in order to yield elemental sulphur. There is a device provided to remove such material as soot or other solid carbonaceous material before the gaseous mixture enters the catalyst chamber. The temperature of the catalyst chamber is maintained at about 350 degrees centigrade to prevent the condensation of the sulphur vapor and to provide for rapid interaction of the gases. The sulphur vapor and gases are then removed from the catalyst chamber, and the sulphur vapor is condensed by any suitable apparatus for heat interchanging.

It seems quite evident from our resumé of the Benner patents that the first suggestion of the appellants, namely, that the application here shows, for the first time, that less air is used than is necessary for complete combustion, was disclosed in the Benner patents. Repeatedly the inventor calls attention, if not in direct words, by implication, at least, to the fact that the amount of air to be admitted to the chamber is limited. Evidently the amount can be and is regulated from time to time, in order to expedite the process and to get the most satisfactory results. It will be noted that the appellants here do not specify any particular amount of air except that it must be less than the amount required for complete combustion. We think the patents referred to disclose sufficiently this feature.

Next it is contended that the appellants here have described a process where the pyrites is pulverized, and fine enough to be carried along in the air stream, and that this is not met by the references. Benner shows the use of material in a coarse state, or in a finely pulverized state; in other words, has disclosed the use of the material in all forms. It is quite obvious that if the material be in a finely pulverized state, the blast of oxidizing material from the base of the Benner reduction chamber will carry this finely divided matter along with the stream of oxidizing material. As a matter of fact, it is plain that such material must be carried from the reduction chamber to the catalyst chamber and, thence, out of the apparatus, because of the flow of such heated material from one chamber to the other. Thus we think it may be fairly said that the Benner device shows a "carrying along" of the material in the stream of gases during the process.

As to the use of the ferrosoferric oxide as a catalyst, it is plain that this material, being produced during the early stages of the Benner process, will act as a catalyst whether the patentee understood its exact function or not. Therefore, it was disclosed, and the appellants can claim no patentable feature in that respect. The mere discovery of the function of this catalyst does not connote patentability. *In re Fronting*, 22 C. C. P. A. (Patents) 1005, 76 F.(2d) 210, 469 O. G. 434.

It is also said that the Benner patents disclosed the use of fuel, while the appellants dispense with fuel, thus making a much more economical process. Appellants, however, do use fuel in one stage of their process, and do show, as we have heretofore quoted, that the use of fuel is possible, and recommended under some circumstances. In this respect, therefore, the appellants do not distinguish from the Benner process.

Contention is then made that the particular character of the process of the appellants produces a porous catalyst, which is much more satisfactory in its application than that of other catalysts. The porous nature of this catalyst is said to arise from the fact that in the early stages of appellants' process, the reduction of the sulphide ores is almost explosive in its character. No reason, however, has been shown in the record here, so fare as we have observed, why the Benner process will not operate in the same way and produce ferrosoferric oxide of the same porous character. The conditions being the same, it would seem to naturally result that such would be the case. Therefore, we are unable to see wherein the process of appellants is inventive over the reference patents, in this respect.

The claims are many, and differ somewhat in verbiage. However, the points which are here alluded to are the ones which it is said distinguish appellants' application from the reference patents. As we have found that in the respects complained of there seems to be nothing inventive over the references, a more particular discussion of these disallowed claims is thought to be unnecessary. Therefore, the decision of the Board of Appeals should be, and is, affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE MOSHER

No. 3,511. Decided November 25, 1935

1. APPEAL—AFFIDAVIT AS TO SIZE NOT CONSIDERED.

Where the proportions and size of an applicant's device and the comparative proportions of the device shown in the patent on which the claims are rejected are not of record in applicant's original specification, an affidavit respecting the relative size of such devices will not be considered on appeal.

2. CLAIMS OF A REFERENCE PATENT HELD PART OF THE DISCLOSURE THEREOF.

Claims of a reference patent *held* part of the disclosure thereof and to suggest such modification of the structure shown in the drawing thereof that one skilled in the art could, without the exercise of invention, produce the structure claimed by appellant.

3. PATENTABILITY—DOUGHNUT MACHINE.

Claims for a doughnut machine *held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Charles A. Morton for Mosher.

Mr. E. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

LENROOT, *J.*:

This appeal brings before us for review a decision of the Board of Appeals of the United States Patent Office, affirming that of the Examiner, rejecting all of the claims of appellant's application for lack of invention in view of the cited prior art. The claims here involved are Nos. 1 to 10, inclusive.

Claims 1 and 4 are illustrative and read as follows:

1. In a doughnut machine and in combination a cooking vat having a deep portion and a shallow portion, one

doughnut conveyor in each of said portions, turning mechanism between said conveyors, and means for actuating said turning mechanism to transfer doughnuts from said deep portion to said shallow portion and to simultaneously overturn said doughnuts.

4. A doughnut machine comprising a cooking vat having a deep portion and a shallow portion, a submerged conveyor in said deep portion, an elevated conveyor in said shallow portion, turning mechanism between said conveyors, means for actuating said turning mechanism to transfer doughnuts from said deep portion to said shallow portion and to simultaneously reverse said doughnuts, and means for actuating said conveyors and said turning mechanism in timed relation, said means comprising a reciprocable lever and connections between said lever and said conveyors and mechanism whereby movement of said rod in one direction moves said turning mechanism and movement in the opposite direction moves said conveyors.

The nature of the claimed invention is sufficiently recited in the claims above quoted.

Appellant claims that by his structure a large saving in cooking grease is made possible compared with the grease used in machines in the prior art, and he also claims that his invention avoids rancidity of the grease used in cooking doughnuts in a doughnut machine.

The references relied upon are: Roehl et al., 1,822,409, September 15, 1931. Roehl, 1,834,182, December 1, 1931.

The patent to Roehl et al., No. 1,822,409, relates to a doughnut machine. The specification and drawings disclose a tank with deep and shallow portions. In the deep portion there is shown a submerged conveyor, and in the shallow portion two conveyors, with a turn-over device between them. The patent states:

> Changes in the specific form of our invention, as herein disclosed, may be made within the scope of what is claimed without departing from the spirit of our invention. [Italics ours.]

While the drawings disclose three conveyors, as aforesaid, and the specification describes them with a turn-over device between the two conveyors in the shallow portion, claims 1 and 2 of the patent read as follows:

> 1. A doughnut machine comprising a tank, two conveyors for moving the doughnuts along said tank, a turn-over paddle disposed between said conveyors, said paddle including a shaft and a pair of oppositely directed paddle members secured to said shaft in offset relation to one another to form rests on opposite sides of said shaft.
>
> 2. A doughnut machine comprising a tank, two conveyors for moving the doughnuts along said tank, a turn-over paddle disposed between said conveyors said paddle including a shaft, a pair of paddle members secured to said shaft on opposite sides thereof for engaging the doughnuts, said shaft forming a rest for the edge of the doughnut for supporting the same during the over-turning thereof.

It will be noted that the above-quoted claims refer to only two conveyors in the tank with a turn-over device interposed between them. Claim 3 of said patent refers to a conveyor submerged in the tank and a second conveyor disposed without the tank. This claim does not contain the element of a turn-over device between the conveyors. Claim 4 of the patent refers to only one conveyor positioned above the tank.

The patent to Roehl, No. 1,834,182, relates to a device for turning over the doughnuts during the process of cooking in a doughnut machine.

Claims 4 and 5 of appellant's application detail turn-over mechanism similar to that shown in said last-named patent.

In appellant's application the dimensions of the tank and conveyors are not shown; furthermore, the references do not give the dimensions of the tanks and conveyors therein described.

During the progress of appellant's prosecution of his application before the Examiner, he filed an affidavit which, among other things, set out the dimensions of the tank of the doughnut machine marketed commercially, embodying the construction of the Roehl et al. patent, No. 1,822,409, and also set out the dimensions of the machine disclosed in his (appellant's) application, contending that his machine was 3 feet shorter than the Roehl et al. machine, had only 75% of the grease capacity of said machine, but that his machine had the same doughnut capacity as said Roehl et al. machine. Both the Examiner and the Board of Appeals declined to consider said facts contained in the affidavit as bearing upon the patentability of appellant's claims. Upon this point the Board in its decision stated:

> As to this affidavit the Examiner states that the proportion or size of applicant's device and the comparative proportions of Roehl's product were not of record in the original specification. In the original specification it was stated in substance that the principal advantage of applicant's arrangement lies in the fact that a large saving of cooking grease is made possible by virtue of the overhead conveyor device for substantially half the length of the doughnut machine, permitting the use of a shallower pan or vat than is required where both of the conveyors are submerged. It is further stated in the original specification that one of the conveyors formerly used at the receiving end of the machine is eliminated and only two conveyors in all are employed, one at the receiving end and the other at the delivery end.
>
> Any disclosure of particular size and proportions other than those set out in the original specification would constitute new matter if incorporated in the present disclosure and cannot be considered as a part thereof. * * *.

[1] We are in agreement with these views of the Board, and are of the opinion that we may not consider said affidavit respecting the relative size of the tanks disclosed by appellant and by the references.

It will be observed that claim 1 of appellant's application recites one doughnut conveyor in each of the deep and shallow portions of the tank. Most of the other claims recite "a submerged conveyor" and "an elevated conveyor." Claim 6 does not recite any conveyor at all, but does recite the position of the turn-over device between the deep and shallow portions of the tank. It was the view of the Examiner that, while claim 1 limited the device claimed to one conveyor only in the deep portion and one conveyor only in the shallow portion of the tank, the other claims were not so limited, and so included a structure having more than one conveyor in either or both of said tank portions.

As to claim 1 he held that it would not involve invention to eliminate one of the conveyors shown by Roehl et al., 1,822,409, in the shallow portion of the tank and place the turn-over device between the conveyor in the deep portion of the tank and the conveyor in the shallow portion thereof.

He rejected all of the claims as being unpatentable over Roehl et al., No. 1,822,409, in view of Roehl, No. 1,834,182. The Board in its decision, while affirming the rejection of all of the claims by the Examiner for the reasons stated by him, evidently was of the opinion that even claim 1 reads directly upon Roehl et al., No. 1, 822,409, except as to the location of the turn-over device. Referring to said last-named patent the Board stated:

> * * * Since this patent discloses two conveyors in the shallow portion of the cooking vat it obviously discloses one conveyor in the shallow portion of the vat.

The Board, however, further continued as follows:

> Aside from this observation that a claim of this type would be met specifically in the structure of the Roehl patent, it is our view that it would be obvious to modify the Roehl structure by omitting one of the conveyors, as the middle one for example, Fig. 2, and locating the turning machine at the point of junction between the deep and shallow portions of the vat. While such a modification would necessarily require some reorganization of the mechanism, it is our view that such change would be entirely within the skill of any mechanic experienced in this art and would not amount to a patentable change.

We are inclined to the view of appellant that those of his claims embracing more than one conveyor should be construed as relating to only one conveyor in the deep portion and only one conveyor in the shallow portion of the tank; but it is unnecessary for us so to decide because, even so construed, we do not think them patentable in view of the cited art.

[2] Appellant contends that it would not be obvious to one skilled in the art, from an examination of the specifications and drawings of the references, so to reconstruct the Roehl et al. machine as to produce a machine corresponding to appellant's claims; but the claims are a part of the references, and we think those hereinbefore quoted from Roehl et al., No. 1,822,409, suggest a modification of the structure shown in the drawings of that patent so that one skilled in the art could, without the exercise of invention, produce the structure claimed by appellant, especially in view of the fact that the patent recites that changes in the specific form of the invention disclosed, within the scope of what is claimed, may be made. Claim 1 of the patent recites "two conveyors for moving the doughnuts along said tank, a turn-over paddle disposed between said conveyors." Claim 2 contains the same element in the identical words above-quoted from claim 1. Claim 3 embraces "a submerged conveyor disposed within said tank * * *, a second conveyor disposed without said tank." While this claim does not embrace the turn-over device, claims 1 and 2 do embrace it and it clearly would be obvious that it would be desirable to place a turn-over device embraced in said claims between the first submerged conveyor and the elevated conveyor embraced in claim 3.

As hereinbefore noted, claim 6 does not recite any conveyors, but is directed to the positioning of the turn-over device between the deep and shallow portions of the tank. Claim 7 is likewise directed to the positioning of the turn-over means between the deep and shallow portions of the tank, but ascribes to said turn-over means the additional function of delivering partly cooked doughnuts to the elevated conveyor above the shallow portion of the tank. It is obvious, from what we have said with respect to those claims reciting more than one conveyor, that claims 6 and 7 also lack patentability in view of the cited references.

We are therefore of the opinion that the Board of Appeals was right in its conclusion that it would be obvious to one skilled in the art so to modify the structure shown in the specification and drawings of Roehl et al. to produce the structure claimed by appellant, without the exercise of invention. While it is true that neither the Examiner nor the Board of Appeals referred to the claims of the Roehl et al. patent, we think it is proper for us to do so in affirming the rejection of the claims here involved upon the reference Roehl et al., No. 1,822,409, in view of the reference Roehl, No. 1,834,182, and we are of the opinion that the rule announced by us in the case of *In re Tucker & Reeves*, 19 C. C. P. A. (Patents) 810, 54 F.(2d) 815, 416 O. G. 236, respecting reasons of appeal, has no application to the case at bar.

The reasons of appeal herein specifically claim that "The Board of Appeals erred in holding that the modification and reorganization of the mechanism of the Roehl patent, No. 1,822,409, necessary to reproduce the structures of Claims 1 to 10, and each of them, would be entirely within the skill of any mechanic experienced in this art."

[3] Inasmuch as we must find, for the reasons stated herein, that the Board of Appeals did not err in the holding complained of, the decision should be, and is, affirmed.

Affirmed.

Interference Notice

U. S. PATENT OFFICE, Washington, Jan. 24, 1936.

Bake-Rite Oven Manufacturing Company, its assigns or legal representatives, take notice:

An interference has been declared by this Office between the application of The Moore Corporation, 605 Berdan Street, Joliet, Ill., for registration of a trade-mark, and trade-marks Nos. 110,826 and 110,826, registered July 26, 1927, and No. 110,831, registered September 6, 1927, to Bake-Rite Oven Manufacturing Company, 609-611-613 Hearst Building, San Francisco, Calif., and Reno, Nev. A notice of such proceeding sent by registered mail to said Bake-Rite Oven Manufacturing Company at each of said addresses having been returned by the post office as undeliverable, notice is hereby given that unless said Bake-Rite Oven Manufacturing Company, its assigns or legal representatives shall enter an appearance within 20 days from the first publication of this order, the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 18, 1936

[Vol. 468. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

111,027. CIGARETTE-PAPER. Registered June 20, 1916. SOCIÉTÉ ANONIME D'EXPLOITATION DES PAPETERIES L. LACROIX FILS, Angoulême, France, a société anonyme of France. Renewed June 20, 1936.

111,030. SNAP-BUTTONS USED AS GARMENT-FASTENERS. Registered June 20, 1916. WALDES & CO., Prague-Wrschowitz, Austria-Hungary. Renewed June 20, 1936, to Waldes Koh-I-Noor, Inc., Long Island City, N. Y., a corporation of New York, assignee by mesne assignments.

111,092. COATS, VESTS, TROUSERS, OVERCOATS, AND RAIN-COATS. Registered June 27, 1916. HART, SCHAFFNER & MARX, Chicago, Ill., a corporation of New York. Renewed June 27, 1936.

111,094. COATS, VESTS, TROUSERS, OVERCOATS, AND RAIN-COATS. Registered June 27, 1916. HART, SCHAFFNER & MARX, Chicago, Ill., a corporation of New York. Renewed June 27, 1936.

LABELS

REGISTERED FEBRUARY 18, 1936

47,033.—*Title:* RED CROSS TOILET TISSUE. For Toilet Tissue. A. P. W. PAPER COMPANY, INC., Albany, N. Y. Published December 10, 1935.

47,034.—*Title:* MONTEREY PALM SPRINGS. For Furniture. BARKER BROS., INCORPORATED, doing business as Barker Bros., Los Angeles, Calif. Published October 21, 1935.

47,035.—*Title:* VANITY FAIR. For Furniture. BARKER BROS., INCORPORATED, doing business as Barker Bros., Los Angeles, Calif. Published October 1, 1935.

47,036.—*Title:* BAY POINT BRAND. For Oysters. BAY CANNING CO., Bay St. Louis, Miss. Published September 25, 1935.

47,037.—*Title:* GLAS GLOS. For a Preparation for Cleaning and Polishing Windows, Mirrors, Windshields, Etc. FANNIE BEEDLE, doing business as El-Deeb, Medina, Ohio. Published October 15, 1935.

47,038.—*Title:* BUTTER CARTON DESIGN NO. 821. For Butter. BLOOMER BROS. COMPANY, Newark, N. Y. Published December 31, 1934.

47,039.—*Title:* BUTTER CARTON DESIGN NO. 820. For Butter. BLOOMER BROS. COMPANY, Newark, N. Y. Published December 31, 1934.

47,040.—*Title:* BUTTER CARTON DESIGN NO. 833. For Butter. BLOOMER BROS. COMPANY, Newark, N. Y. Published December 31, 1934.

47,041.—*Title:* BUTTER CARTON DESIGN NO. 834. For Butter. BLOOMER BROS. COMPANY, Newark, N. Y. Published December 31, 1934.

47,042.—*Title:* NO. 2 PINT LINERLESS DESIGN NO. 537. For Ice Cream. BLOOMER BROS. COMPANY, Newark, N. Y. Published December 31, 1934.

47,043.—*Title:* BUTTER CARTON DESIGN NO. 837. For Butter. BLOOMER BROS. COMPANY, Newark, N. Y. Published September 15, 1935.

47,044.—*Title:* BUTTER CARTON DESIGN NO. 832. For Butter. BLOOMER BROS. COMPANY, Newark, N. Y. Published September 15, 1935.

47,045.—*Title:* BUTTER CARTON DESIGN NO. 836. For Butter. BLOOMER BROS. COMPANY, Newark, N. Y. Published September 15, 1935.

47,046.—*Title:* BUTTER CARTON DESIGN NO. 819. For Butter. BLOOMER BROS. COMPANY, Newark, N. Y. Published December 31, 1934.

47,047.—*Title:* AVALON. For Cigarettes. BROWN & WILLIAMSON TOBACCO CORPORATION, Louisville, Ky. Published December 23, 1935.

47,048.—*Title:* TERRITORIAL DESIGN NO. 229. For Butter. THE BUTLER PAPER PRODUCTS COMPANY, Toledo, Ohio. Published December 30, 1931.

47,049.—*Title:* CRYSTAL SOLITAIRE #37. For a Game. STRUBE A. DERWIK, Yonkers and New York, N. Y. Published August 8, 1935.

47,050.—*Title:* CRYSTAL SOLITAIRE, MIDGET. For A Game. STRUBE A. DERWIK, Yonkers and New York, N. Y. Published November 24, 1935.

47,051.—*Title:* CRYSTAL SOLITAIRE #37. For a Game. STRUBE A. DERWIK, Yonkers and New York, N. Y. Published August 8, 1935.

47,052.—*Title:* KINGKOOL. For Motor Oil. FIDELITY OIL COMPANY, INC., Spartanburg, S. C. Published December 26, 1935.

47,053.—*Title:* WALDORF ALE. For Ale. FOREST CITY BREWERY INC., Cleveland, Ohio. Published December 21, 1935.

47,054.—*Title:* FRITATOS. For Potato Chips. THE FRITO CO., Dallas, Tex. Published April 10, 1935.

47,055.—*Title:* FOR YOUR HEALTH'S SAKE—HEALTH WHEAT. For Breakfast Food. HEALTH WHEAT, INC., Cleveland, Ohio. Published November 4, 1935.

47,056.—*Title:* HI-HAT TIES. For Ties. KIENLY NECKWEAR COMPANY, Chicago, Ill. Published December 23, 1935.

47,057.—*Title:* COCO-WHEATS. For Cocoa Coated Cereal. LITTLE CROW MILLING COMPANY, INC., Warsaw, Ind. Published December 16, 1935.

47,058.—*Title:* LADY LUCK HAIR TONIC. For Hair Tonic. MASTER CHEMICAL COMPANY, Milwaukee, Wis. Published December 24, 1935.

47,059.—*Title:* GREEN BAND GENUINE KOPPERS SEABOARD COKE. For Coke. NEW YORK CHARCOAL CO., INC., Brooklyn, N. Y. Published December 26, 1935.

47,060.—*Title:* BLACK BAND CHARCOAL. For Charcoal. NEW YORK CHARCOAL CO., INC., Brooklyn, N. Y. Published December 26, 1935.

47,061.—*Title:* RED BAND KINDLING WOOD. For Kindling Wood. NEW YORK CHARCOAL CO., INC., Brooklyn, N. Y. Published December 26, 1935.

47,062.—*Title:* ORANGE BAND CHESTNUT COAL. For Chestnut Coal. NEW YORK CHARCOAL CO., INC., Brooklyn, N. Y. Published December 26, 1935.

47,063.—*Title:* PISTON RING SET. For Piston Ring Sets. THE PERFECT CIRCLE COMPANY, Hagerstown, Ind. Published December 9, 1935.

47,064.—*Title:* COMPRESSION RINGS. For Compression Rings for Pistons. THE PERFECT CIRCLE COMPANY, Hagerstown, Ind. Published December 9, 1935.

47,065.—*Title:* OIL RINGS. For Oil Rings for Pistons. THE PERFECT CIRCLE COMPANY, Hagerstown, Ind. Published December 9, 1935.

47,066.—*Title:* MYTEX WHITE SHOE POLISH. For White Shoe Polish. PRUDEN CHEMICAL COMPANY, Orlando, Fla. Published December 18, 1935.

47,067.—*Title:* DIXI-COLA. For a Beverage. JOE L. TRAVIS, doing business as Dixi Cola Company, Birmingham, Ala. Published November 19, 1935.

47,068.—*Title:* TRIPLE DRY LITHIATED. For a Beverage. JOE L. TRAVIS, doing business as Dixi Cola Company, Birmingham, Ala. Published November 19, 1935.

PRINTS

REGISTERED FEBRUARY 18, 1936

15,573.—*Title:* DR. EAST'S OINTMENT. For an Ointment. E. H. EAST, M. D., Portland, Oreg. Published November 26, 1935.

15,574.—*Title:* IT'S UNIQUE—BECAUSE IT'S DIFFERENT. For a Scalp Tonic. THE FERTILE COMPANY, Washington, Pa. Published October 24, 1935.

15,575.—*Title:* HERE'S HOW BREAD ENTERS THE SPIRIT OF MERRY-MAKING! For Bread. GENERAL MILLS, INC., Minneapolis, Minn. Published July 16, 1935.

15,576.—*Title:* TO A THOUGHTFUL WOMAN WHO WANTS A SLENDER SILHOUETTE. For Bread. GENERAL MILLS, INC., Minneapolis, Minn. Published July 12, 1935.

15,577.—*Title:* MADAM: COMPLETE SETS OF THIS EXQUISITE SILVERWARE—NOW GIVEN FREE. For Flour. GENERAL MILLS, INC., Minneapolis, Minn. Published November 22, 1935.

15,578.—*Title:* MISSING MOMENTS (FEATURING MISSING COOK). For Coffee. HILLS BROS., San Francisco, Calif. Published December 20, 1935.

15,579.—*Title:* MISSING MOMENTS (FEATURING MISSING MAGICIAN'S "PROPS"). For Coffee. HILLS BROS., San Francisco, Calif. Published November 14, 1935.

15,580.—*Title:* MISSING MOMENTS (FEATURING MISSING TRUMPS). For Coffee. HILLS BROS., San Francisco, Calif. Published October 10, 1935.

15,581.—*Title:* MISSING MOMENTS (FEATURING MISSING GASOLINE). For Coffee. HILLS BROS., San Francisco, Calif. Published November 17, 1935.

15,582.—*Title:* MISSING MOMENTS (FEATURING MISSING KEY). For Coffee. HILLS BROS., San Francisco, Calif. Published October 17, 1935.

15,583.—*Title:* MISSING MOMENTS (FEATURING MISSING BAKING POWDER). For Coffee. HILLS BROS., San Francisco, Calif. Published October 24, 1935.

15,584.—*Title:* MISSING MOMENTS (FEATURING MISSING THEATER TICKETS). For Coffee. HILLS BROS., San Francisco, Calif. Published November 21, 1935.

15,585.—*Title:* MISSING MOMENTS (FEATURING MISSING WALLET). For Coffee. HILLS BROS., San Francisco, Calif. Published December 6, 1935.

15,586.—*Title:* MISSING MOMENTS (FEATURING MISSING CARTRIDGES). For Coffee. HILLS BROS., San Francisco, Calif. Published October 31, 1935.

15,587.—*Title:* MISSING MOMENTS (FEATURING MISSING LIPSTICK). For Coffee. HILLS BROS., San Francisco, Calif. Published September 26, 1935.

15,588.—*Title:* MISSING MOMENTS (FEATURING MISSING SHIRT STUDS). For Coffee. HILLS BROS., San Francisco, Calif. Published October 3, 1935.

15,589.—*Title:* MISSING MOMENTS (FEATURING MISSING DRIVER'S LICENSE). For Coffee. HILLS BROS., San Francisco, Calif. Published December 13, 1935.

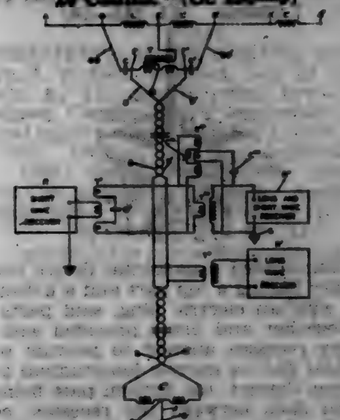
15,590.—*Title:* AT FIRST SNEEZE TAKE LANE'S COLD TABLETS. For Cold Tablets. KEMP AND LANE, INC., Le Roy, N. Y. Published October 16, 1935.

15,591.—*Title:* STOP THAT COUGH WITH KEMP'S BALSAM. For a Cough Balsam. KEMP AND LANE, INC., Le Roy, N. Y. Published October 16, 1935.

15,592.—*Title:* IT'S BREAD AT ITS BEST BECAUSE IT'S TESTED. For Bread. QUALITY BAKERS OF AMERICA, INC., New York, N. Y. Published June 18, 1935.

REISSUES

FEBRUARY 18, 1936



19,854

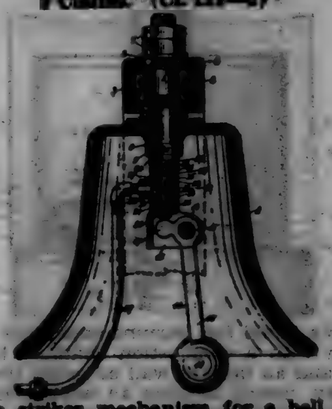
DUPLEX RADIO AERIAL SYSTEM

Ernest V. Amy and Julius G. Aceves, New York, N. Y., assignors to Amy, Aceves & King, Inc., New York, N. Y., a corporation of New York

Original No. 1,965,529, dated July 3, 1934, Serial No. 703,822, December 22, 1933. Application for reissue October 29, 1935, Serial No. 47,332

20 Claims. (Cl. 250—8)

12. A radio receiving system for short wave and long wave signals, comprising: an antenna, a pair of downlead conductors, means for causing a rise or fall in potential of said antenna with respect to ground due to long wave signals to impress a signaling voltage between said downlead conductors, and means for transferring to said downleads potential differences between electrically spaced points in said antenna due to short wave signals, whereby circulating long wave currents and circulating short wave currents are produced in said downleads.



19,855

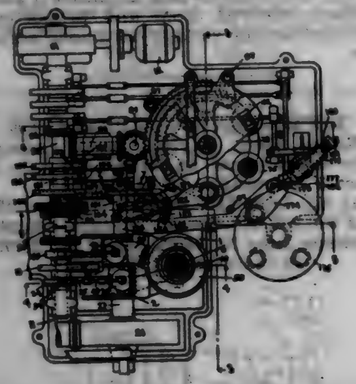
BELL RINGER

Arthur L. Bridgman, Boston, Mass.

Original No. 1,929,197, dated October 3, 1933, Serial No. 672,911, October 30, 1931. Application for reissue September 26, 1935, Serial No. 42,311

9 Claims. (Cl. 121—3)

1. In a striker mechanism for a bell having a striker movable into and out of engagement with the bell, the combination therewith of mechanism for moving the striker including a body providing a cylinder having an enlarged portion, said body having an inlet passage communicating with the cylinder for supplying fluid under pressure, a plunger having a body portion movable in said cylinder and an enlarged head movable in the enlarged portion of the cylinder, said plunger and cylinder having cooperating surfaces adapted to permit an increased inflow of fluid under pressure as said plunger rises above a predetermined position, said plunger and body having means adapted to cooperate when said plunger has moved to a predetermined position to exhaust fluid under pressure from said enlarged portion of the cylinder.

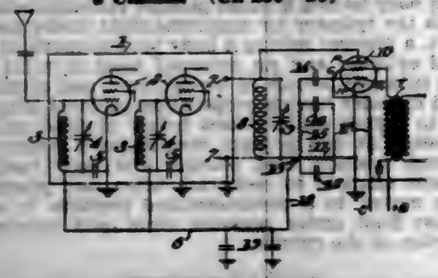


19,856

METHOD OF AND MACHINE FOR MAKING PULP ARTICLES

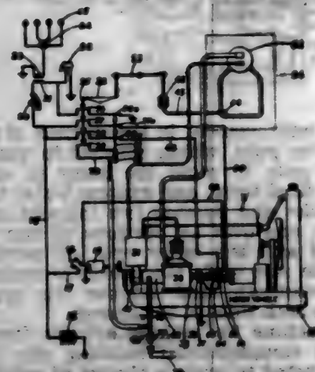
Ralph W. Chapman, Old Town, Maine, assignor, by mesne assignments, to The Old Town Company, a corporation of Maine

Original No. 1,778,994, dated October 21, 1930, Serial No. 149,627, November 26, 1926. Application for reissue October 15, 1932, Serial No. 637,995



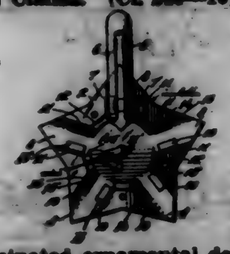
31 Claims. (Cl. 92—59)

1. That improvement in the method of making articles from pulp, which consists in pressing a charge of pulp to mold the same to approximately its final form, and express water from its opposite sides and passing two induced currents of free air, one over all portions of one side of the charge and the other over all portions of the opposite side while the charge is under pressure, to evaporate and remove the expressed water from both sides of the charge.



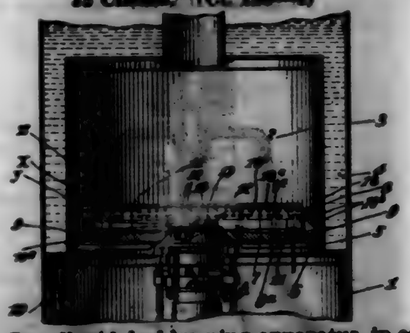
31. A machine for making articles from pulp comprising complemental molding dies formed and constructed to press a charge of pulp to approximately its final form and expel water therefrom, complemental forming dies, one of which is imperforate and the other is provided with outlet means for escape of liquid and vapor, formed to press the molded charge to its final form, means for causing the coaction of said dies, means for heating the imperforate forming die, and means for transferring the molded charge from the molding dies to the forming dies.

19,257
CARRIER WAVE RECEIVER
Paul O. Farnham, Boonton, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Original No. 1,910,899, dated May 23, 1933, Serial No. 582,497, December 21, 1931. Application for reissue July 17, 1934, Serial No. 735,715
6 Claims. (Cl. 250—20)



1. The combination with a carrier wave amplifier and a tube having cathode, control grid, screen grid and plate elements, of circuit connections for impressing between the cathode and plate elements the amplified carrier wave voltage developed by said amplifier, said circuit connections including a resistor across which rectified direct current and alternating current voltages are developed by the diode rectifier action of said cathode and plate elements, means for impressing the said alternating current voltage between the control grid and cathode elements, and means for returning to said amplifier a gain control voltage derived from and proportional to the rectified carrier voltage developed across said resistor.

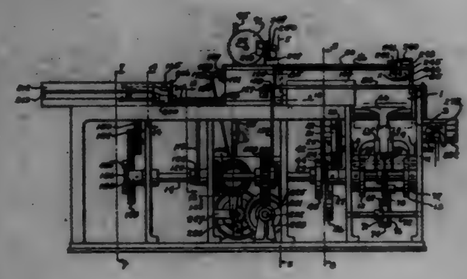
19,258
REFRIGERATING APPARATUS
John Ralph Fehr, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, a corporation of Delaware
Original No. 1,735,350, dated December 22, 1930, Serial No. 206,263, March 21, 1928. Application for reissue June 28, 1935, Serial No. 28,982
16 Claims. (Cl. 62—117)



9. Refrigerating apparatus comprising in combination, a motor vehicle, a refrigerating system including a compressor adapted to be driven by the vehicle motor, a battery, an electrical connection between said battery and motor, means operated automatically in response to refrigerating demand for starting the vehicle motor by controlling said electrical connection, means for actuating the compressor from an independent source of energy, and means responsive to the supply of energy from an independent source for preventing operation of the starting means by modifying said electrical connection.

19,259
ILLUMINATED ORNAMENTAL DEVICE
Elmer J. Graf, Roselle Park, N. J., assignor to G. R. G. Corporation, Newark, N. J., a corporation of New Jersey
Original No. 1,977,134, dated October 16, 1934, Serial No. 613,697, June 2, 1932. Application for reissue March 16, 1935, Serial No. 11,507
7 Claims. (Cl. 240—10)

1. An illuminated ornamental device comprising a holder having a top part and a bottom part provided with an electric plug, said parts being secured together and being provided with complementary recesses aligned to provide sockets, said recesses having narrow longitudinal grooves at the edges thereof, the bottom part being provided with slots between the recesses, contact members fixed in said slots, the ends of the contact members being curved and positioned in the recesses of the bottom part and extending upward into the aligned recesses of the top part, said ends of the contact members having depressed portions resting in the grooves in the recesses, and exhausted envelopes removably held between the contact member ends, the envelopes being provided with lead-in wires received by and making electrical contact with the depressed portions of the contact member ends, and means to electrically connect the contact members with the plug.



19,260
OIL BURNING FURNACE
Forrest A. Heath, Upper Montclair, N. J.
Original No. 1,888,875, dated November 8, 1932, Serial No. 253,371, February 10, 1928. Renewed March 12, 1930. Application for reissue October 25, 1934, Serial No. 750,024
35 Claims. (Cl. 158—4)

35. In a liquid fuel burning apparatus, in combination with a combustion chamber having a hearth and an upright wall adjacent the hearth periphery, means forming an impingement surface designed to reach high temperature in operation, said means being spaced horizontally from said upright wall to form therewith a chamber, means for discharging liquid fuel substantially horizontally toward said impingement surface to homogenize and gasify the fuel, means for sweeping air for combustion toward said surface at high velocity to thoroughly carburet the homogenized fuel, means for igniting the combined fuel and air, and baffling means disposed above said impingement surface and projecting into the upper part of the last-mentioned chamber, said baffling means constructed to direct part of the ignited mixture downwardly into said last-mentioned chamber.

19,261
STEREOTYPE PLATEMAKING MACHINE
Joseph J. Walser, deceased, late of Ann Arbor, Mich., by The Goss Printing Press Company, assignee, Chicago, Ill., a corporation of Illinois
Original application September 2, 1920, Serial No. 407,984. Divided and this application March 15, 1922, Serial No. 543,959. Original No. 1,592,110, dated July 20, 1926. Application for reissue July 6, 1935, Serial No. 30,140
28 Claims. (Cl. 29—21)

1. A machine for operating on stereotype printing plates including in combination means for holding a curved stereotype plate stationary and

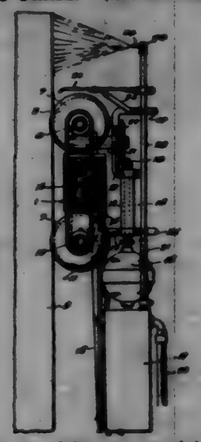
means traveling within the concave part of the plate to trim a straight edge thereof.

PLANT PATENTS

GRANTED FEBRUARY 18, 1936

185
REGAL LILY
Chester N. Moore, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 16, 1934, Serial No. 748,534
1 Claim. (Cl. 47—60)

The variety of regal lily herein shown and described characterized by the fact that its anthers are non-dehiscent, turning from an original orange tint to a reddish-brown color and shrinking in size throughout the blooming period of the flower, and by the fact that the throat of the flower is very lightly tinted with yellow the petals otherwise being substantially white.



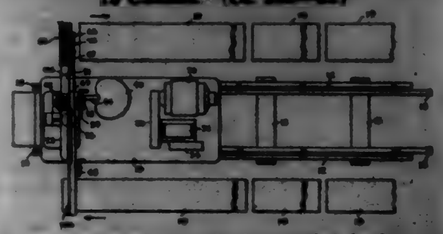
186
PEACH
William C. Elliott, Modesto, Calif.
No Drawing. Application September 22, 1934, Serial No. 745,176
1 Claim. (Cl. 47—62)

The peach tree variety herein described, characterized by freestone fruit having texture similar to clingstone Paloro and the quality of keeping approximately fifteen days without refrigeration after being picked ripe.

PATENTS

GRANTED FEBRUARY 18, 1936

2,030,840
SMOKESTACK PAINTER
John Walter Allen, Greenwood, Miss., assignor of forty-nine per cent to W. M. Blain, Greenwood, Miss.
Application August 1, 1934, Serial No. 737,994
1 Claim. (Cl. 91—18)

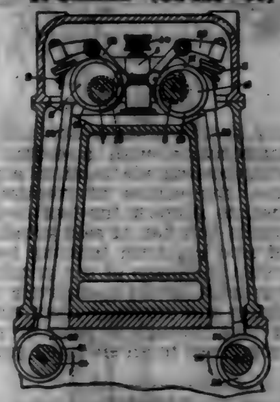


A climbing machine comprising an electro-magnet including a core, yokes on the ends of said core, tubular spindles projecting laterally from the yokes, magnetic wheels journaled on said tubular spindles and magnetically connected with the magnet, shafts journaled in the tubular spindles, traction wheels fixed on the shafts, an electric motor supported on the electro-magnet, and means operatively connecting the traction wheels to said electric motor, said means including a bracket mounted on the electro-magnet, a bearing mounted in said bracket, a shaft journaled in said bearing and operatively connected to the electric motor for actuation thereby, an angular bracket mounted on said bearing, a bearing mounted on the second-named bracket at right angles to the first-named bearing, a shaft journaled in the second-named bearing, gears operatively connecting the second and third-named shafts, a gear fixed on one of the first-named shafts in one of said yokes, and a gear fixed on the third-named shaft and operatively engaged with the third-named gear.

2,030,841
BOTTLE CLOSURE
Cliserio Anaya, Mexico, D. F., Mexico
Application October 2, 1933, Serial No. 691,875
In Mexico October 3, 1932
1 Claim. (Cl. 215—51)

A neck for a container comprising a tubular portion, a seat formed in said portion and having arcuately curved walls merging into each other to form an annular groove, a closure to engage the seat and including a hollow dome-shaped portion and an upwardly and outwardly extending annular flange, said dome portion adapted to flex under pressure and bear against one of said walls with the flange bearing against the other wall and extending into the groove, and a gasket secured to the inner face of the closure and adapted to conform to the contour thereof and to engage one of the curved walls and extend into the groove by the influence of said closure being applied to the seat, said flange having relatively spaced slots to provide partially disconnected portions to the flange.

2,030,842
APPARATUS FOR REMOVING METAL
James L. Anderson, Chester, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application April 13, 1933, Serial No. 17,079
15 Claims. (Cl. 90—22)



1. Apparatus for surfacing metal bodies comprising a base, means for supporting a row of bodies to be surfaced, means for causing relative movement of the base and said bodies in the direction that the row of bodies extends, an arm carried by the base, and means on the arm for supporting a plurality of torches in position to surface the bodies successively during said relative movement.

2,030,843
PROCESS AND APPARATUS FOR TREATING SAUSAGE CASINGS
Ralph L. Atkinson, Dorchester, Mass., assignor to Arthur D. Little, Incorporated, Cambridge, Mass., a corporation of Massachusetts
Application June 14, 1932, Serial No. 616,744
7 Claims. (Cl. 24—84)

1. The process of drying moist tubular casings made of regenerated cellulose hydrate upon an expansible mandrel, said casings being in the form of collapsed tubing, predeterminate in length, comprising the steps of opening one end of the casing, slipping said opened end over one end of the mandrel in the contracted condition, drawing the casing smoothly over the mandrel to the other end thereof, expanding said mandrel to a definite extent, permitting the portion of the casing surrounding the mandrel to dry thereon in close contact therewith, contracting the mandrel, and drawing the dried portion of the casing off the mandrel.

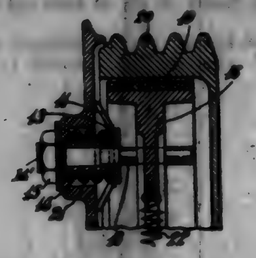
2,030,844
VALVE OPERATING MECHANISM FOR INTERNAL COMBUSTION ENGINES
Stanley Herbert Attwood, Walsenhampton, England, assignor to Stuart Motor Units Limited, London, England
Application January 13, 1933, Serial No. 651,612
In Great Britain January 18, 1932
17 Claims. (Cl. 123—90)

1. In a valve actuating mechanism, a pair of oscillatory cams, a follower for each of said cams, a valve actuating member operable to be effectively actuated by said cams and followers only when both said followers are actuated together by said cams, a driving element adapted to be continuously rotated, and a pair of mechanisms each adapted to convert rotary motion into reciprocatory motion and connected on the one hand in driven relationship to said driving element with a phase displacement with respect to one another and on the other hand to one of said cams to oscillate the same through predetermined phase displaced angles determined by the phase displacement of said mechanisms, said followers being so positioned in the paths of oscillatory movement of the respective cams that the periods of actuation of the followers by the cams overlap during movement of the cams in one direction of their respective oscillations and follow in succession without overlap during movement of the cams in the other respective directions due to the phase displacement between the cams.

2,030,845
INDICATOR FOR GAME APPARATUS
George D. Barck, Columbus, Ohio
Application March 8, 1935, Serial No. 9,615
5 Claims. (Cl. 116—134)

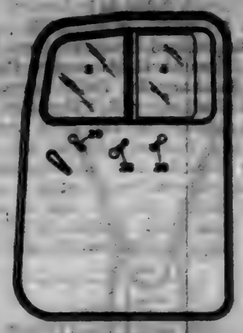
1. In game apparatus, a frame, a spring-pressed plunger carried by said frame, a rotatable indicator carried by said frame, and motion transmitting means between said plunger and indicator for causing the latter to rotate in unison with the sliding movement of said plunger.

2,030,846
ADJUSTABLE BURNISHING REAMER
Robert R. Blakton, Herkimer, N. Y.
Application April 30, 1934, Serial No. 723,269
1 Claim. (Cl. 77—76)



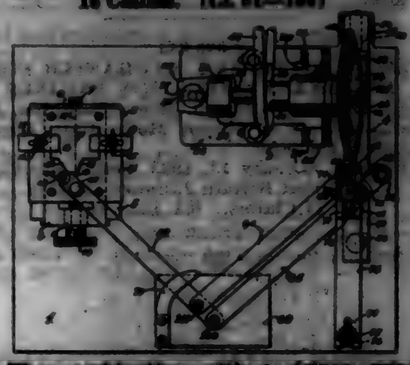
In a tool of the character described a longitudinal slotted reamer body and a cutting blade adjustably fitting the slot in said body and provided with spaced longitudinal sides and an outer face curved upon a radius slightly smaller than that of an opening to be reamed, a portion of the blade at its front end and leading side being removed to present a longitudinal edge midway between the sides of the blade and a transverse notch cut through the outer face of said portion providing a cutting edge and clearance therefor, the rear end portion of the blade constituting a burnishing surface for the reamed bore.

2,030,847
MIXING MACHINE
William C. Blackmond, Ranger, Tex., assignor of one-half to Joseph H. Reynolds, Cisco, Tex.
Application January 14, 1935, Serial No. 1,456
6 Claims. (Cl. 259—33)



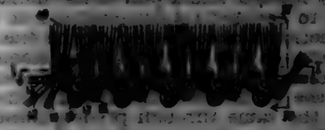
1. A mixer comprising, a hopper, a screw conveyor at the bottom of the hopper, false sides in the hopper extending along each side of said conveyor, a longitudinal shaft mounted behind each swinging side, cams secured on each shaft and arranged to engage the rear sides of the false sides to swing the same over said conveyor, and means for revolving said shafts.

1,930,248
BRAKE
Edward Bishop Boughton, London, and Geoffrey Van Vestrant, Leamington Spa, England, assignors to Automotive Products Company Limited, London, England
Application April 5, 1933, Serial No. 664,828
In Great Britain April 25, 1932
8 Claims. (Cl. 188—78.5)



1. A brake of the internal expanding type, wherein the brake shoe is automatically operable to a position of non-braking cooperation with the drum, including a locating member formed with a slot, a pin having a diameter less than the width of the slot carried by the brake shoe and extending into said slot, said locating member being in the form of a disk frictionally held against external manual adjustment in one direction, with such frictional holding of the disk yielding to external manual adjustment in the opposite direction, and means for manually adjusting the locating member in the permissible direction.

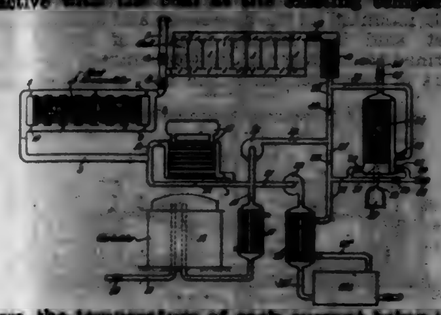
1,930,249
WINDOW CONTROL DEVICE FOR AUTOMOBILES AND OTHER TRAVELING VEHICLES
Leonard D. Boyer, Maplewood, Mo.
Application February 5, 1934, Serial No. 709,179
1 Claim. (Cl. 296—44)



In a device of the class described, a pair of separated panels forming a door panel and a window frame therein, a pane of glass slidable between said panels and in said window frames, a supporting frame for the lower side of said pane of glass, said supporting frame having a pivot mounting therein upon which said pane of glass may be pivoted, another pivot mounted at the upper edge of said window frame and in axial alignment with said first named pivot, means carried by said upper pivot for engaging and supporting the upper edge of said pane of glass, said means comprising an inverted channel of sufficient width to freely receive the upper edge of the glass.

1,930,250
GRINDING MACHINE
Raphael Attl, Union City, N. J.
Application July 1, 1931, Serial No. 548,896
Renewed June 30, 1933
16 Claims. (Cl. 51—104)

1. The combination with a driven grinding wheel, of a supporting platform in a plane extending below the center of rotation of said grinding wheel to support the tool in a line below the center of rotation of said grinding wheel, the plane of said platform forming less than a right angle with the plane of the grinding wheel, and a pantographic device operatively connected to said platform and pivotally mounted to guide said cutting tool through a path of movement reduced as compared to an enlarged guiding pattern.



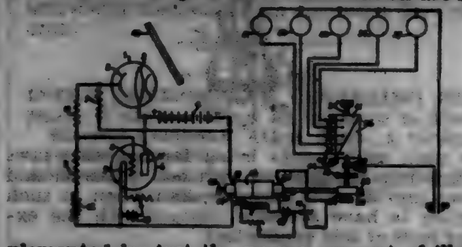
1,930,251
PILE FABRIC
Charles Edward Barrett, Yonkers, N. Y., assignor to Alexander Smith & Sons Carpet Company, Yonkers, N. Y., a corporation of New York
Application February 14, 1931, Serial No. 515,448
3 Claims. (Cl. 139—402)

1. A pile fabric comprising rows of looped tuft yarns, and a backing with a warp of stuffer threads between the rows of tuft yarns, a first shot of weft threads above the stuffer threads about which tufts are looped, a second shot of weft threads below the stuffer threads and under the looped tufts, a third shot of weft threads below the stuffer threads about which tufts are also looped, a fourth shot of weft threads below the stuffer threads and under the looped tufts, a first binder thread between each row of looped tufts which overlies the first shot of weft threads and underlies the third and fourth shots of weft threads, and a second binder thread between the rows of looped tufts which overlies the first shot of weft threads and underlies the second and third shots of weft threads.

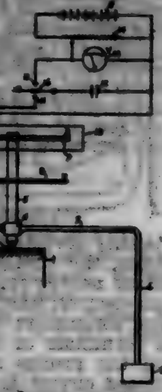
1,930,252
PROCESS OF DISTILLING COAL
George A. Berry, Round Brook, and Allen J. Beardsley, Plainfield, N. J., assignors to National Fuels Corporation, New York, N. Y., a corporation of New Jersey
Application November 16, 1926, Serial No. 148,[illegible]
Renewed May 14, 1930
16 Claims. (Cl. 202—16)

1. The process of distilling coal by the successive passage of a plurality of currents of heated gas at different temperatures that is substantially non-reactive with the coal at the existing tempera-

tures, the temperature of each current being independently controlled.



1,930,253
LIQUID SPRAY APPARATUS
Gilbert G. Budwig, Saratoga, Calif., assignor to Insect-O Products Company, Burbank, Calif., a corporation of California
Application January 24, 1931, Serial No. 510,511
9 Claims. (Cl. 299—64)



1. In combination, a device for mixing and distributing liquids comprising a mixing head having a distributing surface thereon, said head being provided with a conduit having one end terminating in an aperture in said surface, the other end being adapted to be inserted in a body of liquid, means for angularly directing a stream of liquid at a relatively high velocity onto said distributing surface to cause a flat sheet of said latter liquid to pass over a sufficient portion of said surface and said aperture to seal said aperture from the atmosphere, and means associated with the edges of said aperture to create a reduced pressure in said conduit due to the passage of said latter liquid over said aperture.

1,930,254
CONSTANT INTENSITY ILLUMINATION SYSTEM
George W. Calver, United States Navy
Application March 20, 1933, Serial No. 661,671
3 Claims. (Cl. 240—6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A system for maintaining the intensity of illumination substantially constant over a predetermined area notwithstanding wide variations in the uncontrolled components of the illumination, comprising, a plurality of lamps, a source of power for energizing said lamps, a multi-position switch for connecting all or a part of said lamps in circuit with said source of power, means for urging said multi-position switch toward the position in which all of said lamps are connected in circuit with said source of power, a light sensitive device, means controlled by said light sensitive device for urging said multi-position switch toward the position in which none of said lamps are connected in circuit by a force proportional to the illumination on said device, whereby the forces tending to urge said multi-position switch in opposite directions are balanced at the position of the multi-position switch in which the uncontrolled components of illumination are supplemented by just the proper amount of illumination from said lamps to provide a predetermined desired intensity of illumination over said area, and an adjustable light filter over said light sensitive device whereby said system may be adjusted to maintain any predetermined intensity of illumination.

1,930,255
MEANS FOR TESTING MATERIALS
Robert H. Canfield, Washington, D. C.
Application March 8, 1924, Serial No. 714,654
8 Claims. (Cl. 265—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination, a frame, a stem connected thereto, a plurality of bar magnets carried by said stem to form an astatic system, a point mounted on one end of said stem, said point being in the form of a 3-sided pyramid wherein the apex angle of each face is a right angle, means carried by said frame to act thereon to hold said frame and said stem in stable equilibrium when the assembly consisting of the foregoing elements is supported solely on said point, an electrical circuit having a portion disposed to act on said magnet system to apply a couple to rotate said stem when current flows through said portion, a condenser, means to charge said condenser with a uniform pre-determined charge and means to discharge said condenser through said portion.

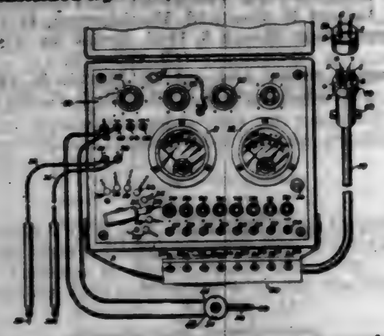
1,930,256
PLUG CONNECTER
Henry P. Dilg, Pittsburgh, Pa.
Application March 1, 1932, Serial No. 596,899
3 Claims. (Cl. 173—361)

1. A plug connecter comprising a body of insulating material having a spacer and backing

member on the opposite sides of which are ridges and over which, exposed ends of wires may be placed, and a closure member having connecter prongs embodied therewith so as to form a mov-

able unit, said prongs being formed with jaws having snap engagement with said ridges on said spacer and backing member, and when in such position to have pressure contact with the exposed ends of said conductors.

2,030,857



ELECTRICAL CIRCUIT ANALYZER

Edward N. Dingley, Jr., Washington, D. C.

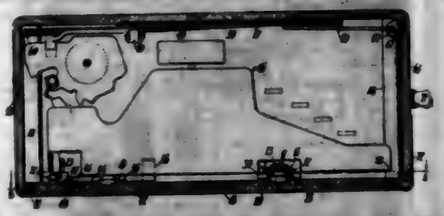
Application March 20, 1934, Serial No. 716,511

4 Claims. (Cl. 250—20)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a testing device for apparatus employing electron tubes, the combination of a test plug having contact prongs corresponding to the terminals of an electron tube, a plurality of electron tube sockets, conductors extending between corresponding terminals of said plurality of tube sockets and the prongs of said test plug, and normally closed circuit jacks included in circuit between said contact prongs and said corresponding socket terminals whereby a current indicating instrument may be connected in circuit between any one of said prongs and the corresponding socket terminal by inserting a double contact plug connected to said current indicating instrument into an appropriate one of said jacks or a voltage indicating instrument may be connected between any two of said jacks by a pair of single contact plugs connected to said instrument.

2,030,858



TYPEWRITING MACHINE

William A. Dobson, Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware

Application May 27, 1933, Serial No. 673,968

11 Claims. (Cl. 45—68.2)

1. The combination of clamping means for securing a typewriter to a baseboard, said typewriter having a rear device detachably interlocking with a co-operating device on said baseboard, and also having a pair of shouldered front feet resting on said baseboard, said clamping means including an elongate clamping bolt slidably mounted on the baseboard and spanning said feet, said bolt having a pair of spaced jaws formed to overtop and half encompass the shoulders of said feet when the bolt is shifted home

in a longitudinal direction and to be free of said feet when the bolt is shifted in the opposite direction, said baseboard having means for locating said feet thereon preparatory to shifting the clamping bolt home, and a cover securable upon said baseboard, said bolt being locked in home position by said cover.

2,030,859

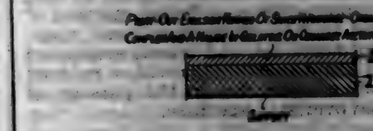
TEXTILE ASSISTANTS

Othmar Drapal, Cologne-Mulheim, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application August 31, 1934, Serial No. 742,349. In Germany September 12, 1933

6 Claims. (Cl. 252—1)

1. The composition of matter comprising Turkey red oil, spent sulphite liquor, an alkali metal phosphate, an alkali metal salt of an alkylated naphthalene sulphonic acid, and a dissolving medium.



2,030,860

PRINT-OUT EMULSION

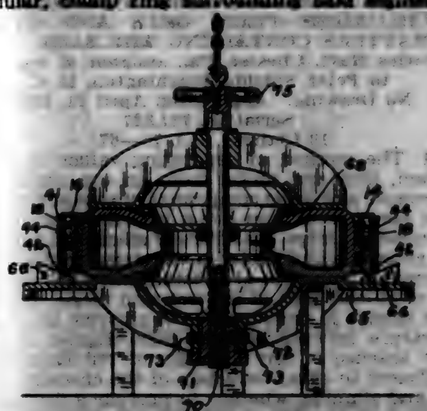
George Earle Fallesen and Cyril J. Staud, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York

Application March 2, 1935, Serial No. 9,613

15 Claims. (Cl. 95—7)

1. A process of producing a light-sensitive emulsion which comprises precipitating silver hydroxide in an aqueous solution, dissolving the precipitate in an organic alkali, mixing the solution with an inert carrier therefor, and adding an alkali metal halide to the mixture.

2,030,861



TIRE RETREADING MOLD

Martin M. Fisher, Seattle, Wash.

Application June 16, 1934, Serial No. 730,543

5 Claims. (Cl. 18—18)

1. In a tire retreader the combination with a tire support and an annular clamp ring adapted to engage the upper wall of said tire, and means for compressing said ring, of a plurality of arcuate segments having steam heating passageways therethrough, horizontal tubes through said segments, and a series of spaced, exterior rings thereon, co-acting means on adjoining ends of said segments making air tight connections between said steam passageways, and an exterior, annular, clamp ring surrounding said segments

and co-acting with said spaced rings for outlet of excess air, and clamping means therefor.

2,030,862

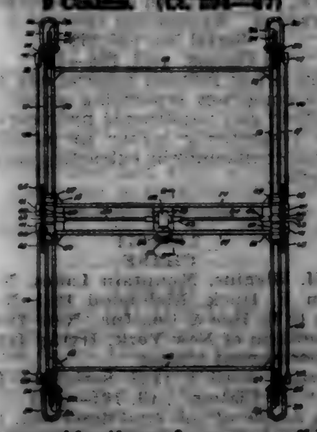
MEANS FOR POSITIONING FREIGHT ON VEHICLES

Benjamin F. Fitch, Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y., a corporation of Delaware

Application January 28, 1932, Serial No. 589,392

19 Claims. (Cl. 105—396)

1. The combination of a vehicle, a container, and a set of removable brackets, the brackets and vehicle being formed with interlocking projections and recesses whereby the bracket may be held in various positions, the bracket having a surface on which the container may stand and having means preventing the shifting of the container with reference to the bracket.



2,030,863

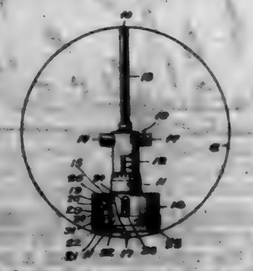
LOAD LIFTING CRADLE

Benjamin F. Fitch, Greenwich, Conn., assignor to Motor Terminals Company, New York, N. Y., a corporation of Delaware

Application September 23, 1934, Serial No. 745,027

9 Claims. (Cl. 294—67)

1. The combination of a suspendible frame, four shackles pivotally carried thereby in positions corresponding to the four corners of a quadrilateral, four cranks carried by the frame, two on each side, four links connecting the respective cranks with the corresponding shackles, a gear associated with each crank, a pair of driving pinions each standing between and meshing with the two gears on that side of the frame, and motor mechanism for operating the two pinions.



2,030,864

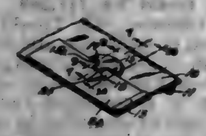
INSIDE MICROMETER CENTERING DEVICE

Harry C. Gielow, Elgin, Ill., assignor to The L. S. Starrett Company, Athol, Mass., a corporation of Massachusetts

Application October 26, 1934, Serial No. 750,126

7 Claims. (Cl. 33—178)

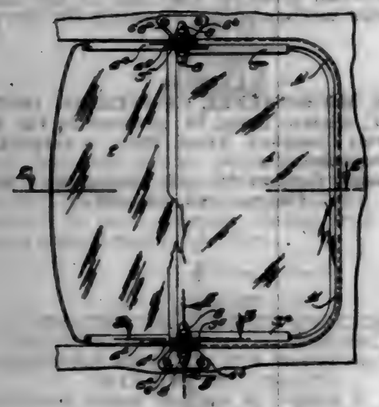
1. The combination with an inside micrometer, of a sleeve disposed in co-axial alignment with and clamped upon the barrel of the micrometer, and a collar disposed in co-axial alignment with the micrometer and sleeve and mounted thereon for movement in an axial direction, said collar having a circular end face disposed at right angles to the axis of the micrometer for the purpose set forth.



2,030,865

ADDRESS PLATE

Walter T. Gellwitzer, Cleveland, Ohio, assignor to Addressograph Company, Wilmington, Del., a corporation of Delaware



Application May 23, 1932, Serial No. 612,955

14 Claims. (Cl. 101—369)

10. A frame having a longitudinal guideway defined by upwardly projecting portions of the frame which have their edges projecting toward each other to provide a shallow channel into which a printing plate may be slid, spring abutments carried by the frame and positioned to engage the opposite ends of such printing plate, each abutment being formed on the end of a tongue cut out of the frame and having its body normally lying in the plane of the frame and adapted to be beneath the printing plate, the abutment being pressed up from the plane of the tongue and having an abrupt shoulder adapted to engage the end of the printing plate, there being also a portion gradually connecting the abutment with the tongue and adapted to occupy a notch in the plate.

2,030,866
CLOSED CAR WIND DEFLECTOR
Elmer M. Harris, San Diego, Calif.
Application March 6, 1933, Serial No. 659,653
8 Claims. (Cl. 296—84)

1. The combination with a vehicle window wherein the window glass is set inwardly from the side of the vehicle body, of a pair of transparent deflector members adapted to fit within said window between the plane of the vehicle body and the window glass, said deflectors disposed one forwardly and outwardly of the other, hinge means for pivotally supporting said deflectors at their adjacent margins, whereby said deflector members may be shifted outwardly beyond the plane of said vehicle body said deflectors being entirely exposed at their overlapping portions to provide uninterrupted vision from one remote margin to the other.

2,030,867
ART OF REMOVING METALS AS VOLATILE CHLORIDES FROM ORES AND OTHER MATTERS CONTAINING THE SAME
Charles Hart, Chester, Pa., assignor of one-half to Peter Shields, Washington, D. C.
No Drawing. Application February 14, 1934, Serial No. 711,240
7 Claims. (Cl. 75—17)

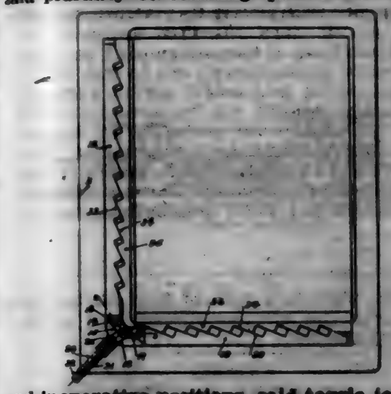
1. The method of removing and separating iron and nickel from oxide ores containing the same in the presence of gangue, which comprises subjecting the ore to a sponging reduction in the presence of a limited quantity of carbon and at a temperature not substantially exceeding 1000 degrees C., treating the sponged ore with chlorine at a temperature between 200 and 500 degrees C. for effecting a chlorination of elemental iron and nickel and for a time sufficient for the selective elimination of elemental iron as ferric chloride, thereafter heating the sponged ore in the presence of chlorine to a temperature between 700 and 900 degrees C. for completing the chlorination of elemental iron and nickel and for a time sufficient to eliminate the same as mixed ferric and nickel chloride vapors, the quantity of carbon during sponging being so restricted that no substantial amount of carbon is present during the chlorination of the sponged ore removing the mixed chloride vapors and cooling the same to a temperature between 420 and 780 degrees C. for effecting the deposition of nickel chloride therefrom.

2,030,868
ART OF REMOVING METALS AS VOLATILE CHLORIDES FROM ORES AND OTHER MATTERS CONTAINING THE SAME
Charles Hart, Chester, Pa., assignor of one-half to Peter Shields, Washington, D. C.
No Drawing. Application April 11, 1934, Serial No. 721,227
19 Claims. (Cl. 75—67)

1. The method of separating values of chromium, iron and nickel from an ore containing chromite and oxide compounds of iron and nickel, the quantity of iron being predominant, in the presence of large quantities of silica and alumina as gangue, which includes the steps of effecting a sponging reduction at substantially 1000 degrees C. of at least part of the iron and nickel, heating the sponge in the presence of chlorine at a temperature between 500 and 1000 degrees and in the absence of any quantity of reducing agent sufficient to effect reduction of the chromite, silica and alumina, whereby to provoke a driving off of iron and nickel as chlorides, fractionally condensing the vapors to separate the iron and nickel as chlorides, and again heating the residue in the presence of chlorine and a reducing agent to drive off the chromium as chromium chloride.

2,030,869
MULTI-PLY GLASS SHEET GLAZING UNIT
Charles D. Haven, Milwaukee, Wis., assignor to The Thermopane Company, Toledo, Ohio, a corporation of Ohio
Application October 13, 1934, Serial No. 748,189
10 Claims. (Cl. 20—56.5)

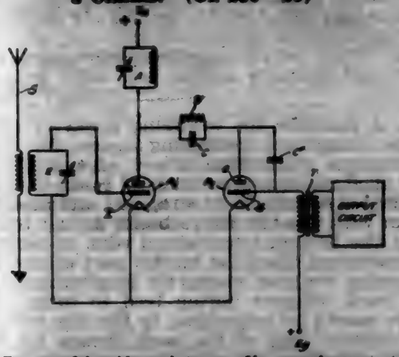
1. A multi-ply glass sheet glazing unit of the character described comprising a plurality of glass sheets, yieldable separator strips bonded between the glass sheets at spaced points entirely around their perimeters forming a hermetically sealed space therebetween, and a weatherproof protective seal arranged exteriorly of the separator strips.



2,030,870
HYDROCARBON OIL TREATMENT
Lawrence M. Henderson, Narberth, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application October 5, 1932, Serial No. 636,582
18 Claims. (Cl. 196—13)

1. In the art of refining mineral oils, the process which comprises separating an oil containing paraffinic and naphthenic hydrocarbons into fractions respectively richer in paraffinic and naphthenic compounds by extracting said oil with a furoic ester.

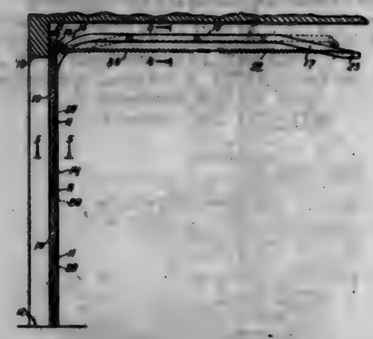
2,030,871
CHAIR
Gilbert H. Higgins, Mountain Lakes, N. J., and William F. Huck, Richmond Hill, N. Y., assignors to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York; Irving Trust Company, permanent trustee
Application April 1, 1932, Serial No. 602,632
22 Claims. (Cl. 141—296)



1. In a device of the kind described, the combination of a frame, a plurality of coacting quoins arranged on adjacent sides of said frame and a

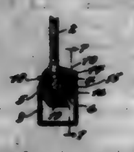
single manually operable toggle joint for moving said plurality of coacting quoins into operative

and inoperative positions, said toggle joint being resiliently biased.



2,030,872
ULTRA-SHORT WAVE RECEIVER
Hans Erich Hollmann, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application July 11, 1934, Serial No. 734,685
In Germany July 19, 1933
3 Claims. (Cl. 250—20)

1. In combination, in a radio receiver, a radio frequency stage comprising an electron discharge device having anode, grid and cathode electrodes, an input circuit connected between said control electrode and said cathode for impressing radio frequency energy thereon, another electron discharge device comprising a grid, cathode and anode, means for supplying a high positive potential to said last grid relative to its associated cathode and anode for obtaining a pendulum motion of the electrons emanating from said last cathode about said last grid, a connection including a condenser in parallel with a resistance between the anodes of both said devices, and an output circuit coupled to the grid of said last device.

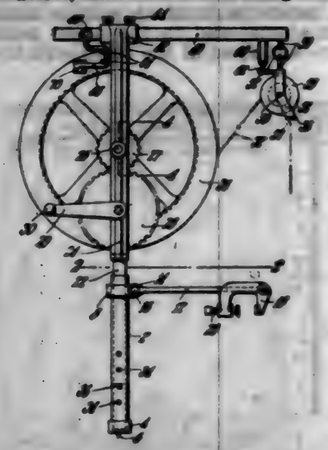


2,030,873
SPRING BALANCED DOOR
Daniel C. Hungerford, Corning, N. Y., assignor to J. Edward Ogden Company, East Orange, N. J., a corporation of New Jersey
Application November 5, 1931, Serial No. 573,094
24 Claims. (Cl. 20—30)

18. A counterbalancing system for door closures, comprising a closure, tracks for said closure having horizontal portions, vertical portions, and intermediate portions connecting said vertical and horizontal portions, springs operatively connected at one end to the upper portion of the closure and fixed at the other end, the force

of said springs being operative against said intermediate, connecting, track portions, whereby the spring tension exerts a horizontal component of force on the connecting track portions in varying relation as the closure traverses the said connecting portions of said tracks.

2,030,874
MOUNTING FOR PANELS
Lytle Gale Hunter, Flushing, N. Y.
Application March 12, 1934, Serial No. 715,277
12 Claims. (Cl. 20—56.4)



1. In combination, a frame having an opening closed by a panel, said frame adjacent the edge of the panel comprising two walls, one disposed forwardly and the other rearwardly of the panel and the rear wall overlapping the panel, a backing strip of resilient compressible material disposed between said panel and said rear wall, interlocking elements on said strip and rear wall securing the strip to the wall by the resilience of the material of the strip, a facing strip of resilient compressible material engaging the front face of the panel opposite the backing strip, and means holding said facing strip in place on the frame.

2,030,875
FISHING APPARATUS
Arthur Johnson, Springfield, Mass.
Application August 26, 1935, Serial No. 37,706
7 Claims. (Cl. 242—84.1)

5. A fishing apparatus of the class described comprising in combination, an upright support member having means associated therewith for attaching to the side of a boat, a spindle rotatable in said support and having a bracket on its upper end, a pulley wheel rotatable relative to said bracket, an arm extending forwardly of said bracket having a frame member flexibly mounted on its forward end, a guide pulley ro-

tatable in said frame, means for rotating said pulley wheel, means for locking said wheel

against rotation, and a fishing line extending from said pulley wheel to said guide pulley.

2,030,876

COMPOUNDS OF THE N-DIHYDRO-1,2,2',1'-ANTHRAQUINONE AZINE SERIES AND PROCESS FOR THE PRODUCTION THEREOF

Frank Willard Johnson, Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application July 27, 1932, Serial No. 625,212
13 Claims. (Cl. 260—31)

1. In a process of preparing condensation products of the anthraquinone series, the step which comprises condensing a 2-amino-1-chloro-anthraquinone in the presence of cuprous iodide.

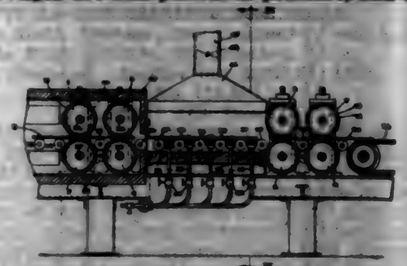
2,030,877

PRODUCTION OF DERIVATIVES OF N-DIHYDRO-1,2,2',1'-ANTHRAQUINONE AZINE

Frank Willard Johnson, Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 20, 1932, Serial No. 629,751
13 Claims. (Cl. 260—31)

1. In a process of producing condensation products of the anthraquinone series, the step which comprises condensing a 2-amino-1-chloro-anthraquinone having the 3-position blocked with an inert substituent group in the presence of a copper bromide.



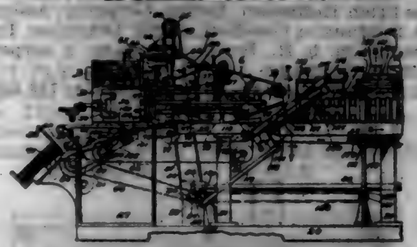
2,030,878

SAFETY GLASS

James W. Kamerer, New Kensington, and Le Roy B. Whitmire, Natrona Heights, Pa., assignors to Duplate Corporation, a corporation of Delaware

Application October 21, 1933, Serial No. 694,580
3 Claims. (Cl. 49—81)

1. A process of making safety glass which consists in adhering two sheets of glass to the opposite sides of a sheet of reinforcing material which is combustible, which softens on the application of heat, and which projects out past the edges of the glass sheets, exposing the edges of the plate thus formed to a flame which burns off the projecting portions of the reinforcing sheet and softens the edges of each sheet lying inward of the burned portions, subjecting the plate while said edges are still plastic to pressure, and then



placing the plate in a bath of fluid having direct contact with the surfaces thereof and applying pressure to the bath.

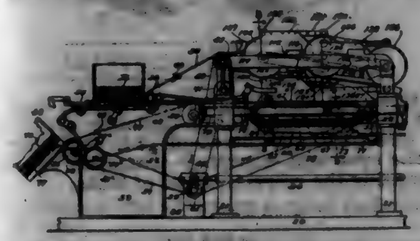
2,030,879

WRAPPING MACHINE

Paul E. Kleinberg, Easton, Pa., assignor to T. W. & C. B. Sheridan Company, New York, N. Y., a corporation of New York

Application June 12, 1934, Serial No. 730,376
18 Claims. (Cl. 93—3)

1. A machine for wrapping books or like articles comprising conveying means for causing continuous straightline travel edgewise through the machine of a procession of books, means for feeding a procession of wrappers and assembling them with the successive books during travel so that the bottom longitudinal edge of each book is positioned upon the middle part of the corresponding wrapper, means for longitudinally scoring each wrapper during feed to form parallel score marks corresponding to the side corners of the bottom edge of the book, means for thereafter unfolding the side flaps of each wrapper during travel and causing the same to lie flatly against the side faces of the book with the top edges of the flaps above the top edge of the book, means for thereafter during travel scoring each wrapper flap along longitudinal lines corresponding to the later folding thereof, means for thereafter during travel folding over one wrapper flap and tucking it down between the components of the book, means for thereafter during travel applying adhesive to one wrapper flap along a longitudinal sealing line, means for thereafter during travel folding over and down the second wrapper flap and applying it to the first flap for sealing by such adhesive, and means for applying during travel sealing pressure upon the second wrapper flap at the sealing line.



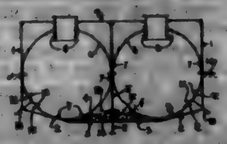
2,030,880

WRAPPING MACHINE

Paul E. Kleinberg, Easton, Pa., assignor to T. W. & C. B. Sheridan Company, New York, N. Y., a corporation of New York

Application June 12, 1934, Serial No. 730,377
14 Claims. (Cl. 93—6)

1. A machine for folding and wrapping books or like articles comprising conveying means for causing continuous travel through the machine of a procession of books, means for feeding a procession of wrappers and assembling them flatwise with the successive books during advancing travel so that each book is positioned upon the middle part of the corresponding wrapper, means operating during travel and advancing with the book and wrapper for folding each book and wrapper by thrusting the middle thereof downward, and traveling abutment means advancing with the book and wrapper and between which the book is so thrust down, causing the sides of the book and wrapper to fold upwardly into edge-



wise position, with the side flaps of each wrapper standing flatly against the side faces of the folded book and with the top edges of the flaps above the top edge of the book, means for thereafter during travel folding over one wrapper flap and tucking it down between the two parts of the book, means for thereafter during travel applying adhesive to one wrapper flap along a longitudinal sealing line, means for thereafter during travel folding over and down the second wrapper flap and applying it to the first flap for sealing by such adhesive, and means for applying during travel sealing pressure upon the second wrapper flap at the sealing line.

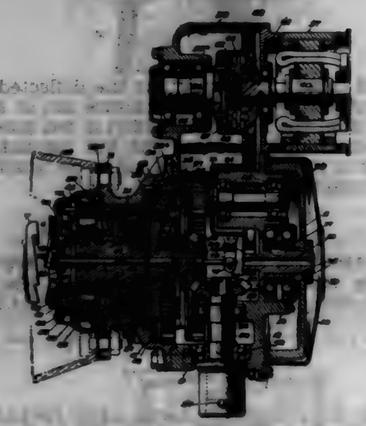
2,030,881

VESSEL

Herbert M. Knight, Montclair, N. J.

Application August 28, 1933, Serial No. 687,289
8 Claims. (Cl. 114—79)

1. In a vessel, the combination of an interior longitudinal, vertical bulkhead, exterior substantially vertical upper strakes, lower strakes obliquely disposed with reference to said upper strakes, said upper and said lower strakes having lines of contact, means rigidly connecting said strakes at said lines, inner bottom plates obliquely disposed with reference to said bulkhead and to said lower strakes, said plates having lines of contact with said bulkhead above the bottom of the vessel and also with said lower strakes, means rigidly connecting said inner plates and said bulkhead at said contact lines, other means rigidly connecting said inner plates and said lower strakes at their said contact lines, a plurality of inner shells, each said shell being curvilinear in a plane normal to the longitudinal axis of said vessel and in tangential contact with the bulkhead at one side and with an upper strake at its other side and resting upon and in tangential contact at its bottom with the one lower strake and with one of said inner plates, and means connecting said bulkhead strakes and plates with the said inner shell at the several said tangential points of contact therewith, said shells function-



ing as continuous frames and cooperating with the bulkhead strakes and plates to obtain a reenforced girder-like unitary structure.

2,030,882

ENGINE STARTING APPARATUS

Raymond P. Lansing, Montclair, N. J., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a corporation of New York

Application January 8, 1929, Serial No. 331,093
Renewed May 28, 1935
3 Claims. (Cl. 122—179)

1. In an engine starter, an engine engaging driving member adapted for longitudinal and rotary movement, a flywheel disposed substantially coaxially with respect to said engine engaging member, means including a bell shaped gear for drivably connecting the flywheel and member, power means for rotating the flywheel, said power means having the longitudinal axis thereof laterally spaced from and substantially parallel to the axis of rotation of the flywheel, means including a second bell shaped gear meshing with said first named gear, for drivably connecting said power means and flywheel, and manually operable means for rotating the flywheel and adapted for independent or conjoint action of said power means.

2,030,883

PRECIPITATION OF MIXED ESTERS OF CELLULOSE

Carl J. Malm, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York

No Drawing. Application July 28, 1931, Serial No. 553,647
5 Claims. (Cl. 260—183)

1. In the process of recovering a mixed organic ester of cellulose from a solution thereof in a lower fatty acid containing liquid the step which comprises precipitating the ester in an aqueous precipitation bath containing 50–60% by weight of mixed lower fatty acids.

2,030,884

BOTTLE CAP AND PROCESS OF MAKING SAME

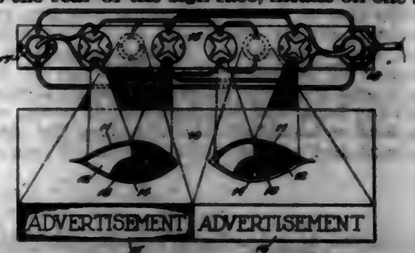
William T. Mason and Henry J. Coleman, La Salle, Ill.; said Coleman assignor to said Mason

Application June 7, 1934, Serial No. 729,352
9 Claims. (Cl. 113—40)

6. The process of forming a bottle cap consisting of bending and crimping the margin of a

metal disc and inwardly deflecting and expanding a portion of the disc, then before using the cap cutting through the major portion of the edge of the deflected portion leaving a hinge portion to connect the deflected portion with the

cap, and finally flattening out the deflected and expanded portion to form a closure tab of a size greater than the hole from which it was punched to prevent blowing out of the tab through the hole due to pressure within a bottle on which the cap is engaged.



2,039,835
APPARATUS FOR BURNING SULPHUR
Myles Standish Maxim, Somerville, Mass.
Application June 15, 1931, Serial No. 544,440
7 Claims. (Cl. 23—278)

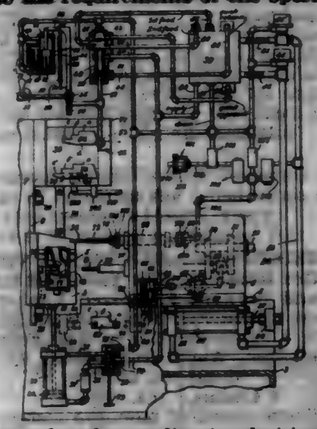
7. An apparatus for burning sulphur comprising an elongated chamber having a pair of spaced partitions transversely disposed therein dividing the chamber into a sulphur burning compartment and a combustion compartment, the two compartments being interconnected by openings through the partitions, an inlet for primary air to the sulphur burning compartment, the latter compartment also being provided with a refractory checkerwork disposed to provide a foraminous barrier between the inlet for primary air and the openings through the partitions and through which the primary air must pass to reach said openings, a feeding device disposed above the checkerwork to supply sulphur thereto, and an inlet for secondary air disposed to discharge a current of air into the space between the two partitions.

2,039,886
ELECTRICAL ADVERTISING SIGN
Frank H. McDonald, Pittsburgh, Pa.
Application October 2, 1934, Serial No. 746,583
4 Claims. (Cl. 40—130)

1. An advertising sign comprising a sign face of opaque material having openings therein shaped to correspond to the human eye, translucent material covering said openings and having thereon the representation of the iris and pupil of the eye, two sets of electric light bulbs mounted at the rear of the sign face, means on one set

of bulbs for directing light therefrom onto one side of said eyes, means on the other set of bulbs for directing light therefrom onto the other side of the eyes, and separately controlled means for energizing the respective sets of bulbs.

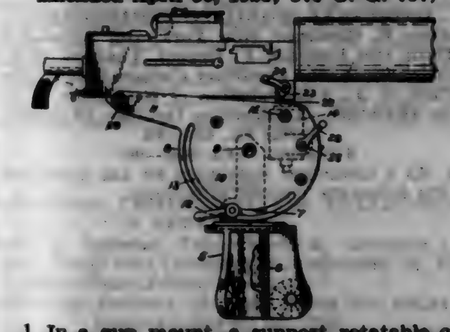
2,039,887
METHOD OF MAKING SODIUM AND ZINC SULPHIDES
Thomas A. Mitchell, Inglewood, and Royal L. Sessions, Los Angeles, Calif., assignors, by mesne assignments, to Hughes-Mitchell Processes, Incorporated, Denver, Colo., a corporation of Wyoming
No Drawing. Application June 11, 1931, Serial No. 543,714. Renewed April 19, 1933
6 Claims. (Cl. 23—135)



1. The method of making sodium sulphide comprising the steps of purifying crude sodium sulphate in an alkaline aqueous solution to oxidise, precipitate and remove iron and manganese therefrom, removing the excess of hydroxyl ion by means of hydrochloric acid and treating the resultant solution with iron-free barium sulphide to form sodium sulphide.

2. The method of making zinc sulphide pigment comprising the steps of oxidising, precipitating and removing the iron and manganese from crude sodium sulphate in an alkaline aqueous solution, removing the excess of hydroxyl ion from the solution by means of hydrochloric acid, producing sodium sulphide by reaction of iron-free barium sulphide on said purified solution and treating a zinc chloride solution with the sodium sulphide to precipitate zinc sulphide which is substantially free from oxygen and iron compounds.

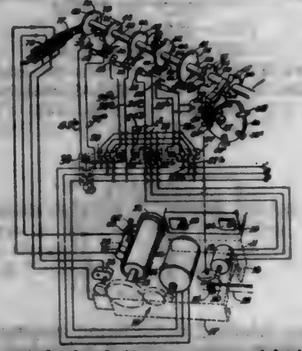
2,039,888
MACHINE TOOL
Everette K. Morgan, Rockford, Ill., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a corporation of Illinois
Application December 2, 1927, Serial No. 237,521
45 Claims. (Cl. 29—51)



1. In a machine comprising a tool support and a work support, one of said supports being movable relative to the other support for the performance of an operation on the work, the tool support having different tools for performing more than one operation on the work, a single variable delivery pump, a single control valve for controlling the pump's delivery, means operative under fluid pressure for communicating movement to the movable support, said control valve controlling communication between the pump and the last mentioned means to determine the speed and direction of movement of the support according to the position of said valve, and plural

means for controlling the control valve, each according to the requirements of the operation be-

ing performed and according to what tool or tools are in use.



2,039,889
MOUNT FOR MACHINE GUNS
Sidney H. Negrotie, United States Army, Fort Benning, Ga.
Application April 1, 1933, Serial No. 663,049
3 Claims. (Cl. 89—40)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a gun mount, a support rotatable on a vertical pivot, a cradle trunnioned on the support and including spaced plates having arcuate slots, a clamping bolt passing through the slots and the support, an elevating mechanism housing positioned between the cradle plates forwardly of the support and secured to the cradle plates, a sleeve within the housing, a gun attaching member threadedly engaged with the interior of the sleeve, a worm wheel fixed to the sleeve, a shaft mounted in the housing and extending through one of the cradle plates, a worm on said shaft meshing with the worm wheel and a gun attaching member at the rear of the cradle.

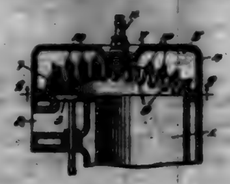
2,039,890
CONTROL MECHANISM FOR MACHINE TOOLS AND THE LIKE
Alexander Oberhoffken, Rockford, Ill., assignor to Ingersoll Milling Machine Company, Rockford, Ill., a corporation of Illinois
Application April 1, 1933, Serial No. 663,893
14 Claims. (Cl. 173—339)

2. In combination with relatively movable supports and electric motor driving means for effecting relative movements between said supports in different directions and at different speeds, a control mechanism comprising an element movable step-by-step through a plurality of rest positions, switching means governing the starting, stopping and speed of operation of said driving means and variably controlling said driving means to produce relative movements of different character in each of said positions to determine the direc-

tion and speed of relative movement between said supports, and means actuated according to the extent of relative movements between said supports and operating to advance said element through a plurality of rest positions during relative movement in one direction between said supports.

2,039,891
ROLLING MILL ROLL, METHOD OF MAKING SAME, AND PRODUCT OF SUCH ROLL
William H. Payne, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a corporation of Ohio
Application November 5, 1931, Serial No. 573,307
3 Claims. (Cl. 80—58)

2. A roll for rolling sheet metal to be used as enameling stock, the entire working surface of said roll which is used in the rolling operation being a roughened surface of a pattern characteristic of the dendritic structure of that intermediate zone in a chilled casting which lies between the chilled outer layer and the gray iron inner body of the casting, the harder portions of the surface in said dendritic zone standing in relief above the softer portions thereof.



3. A sheet of ferrous metal particularly adapted for use as enameling stock, said sheet having a surface which, irrespective of its metallurgical structure, is characterized by deep, sharp edged pits which are a counterpart of a relief pattern of the dendritic structure of that intermediate zone in a chilled casting which lies between the chilled outer layer and the gray iron inner body of the casting.

2,039,892
MATCH MANUFACTURING
Michail G. Pelipets, New York, N. Y., assignor of one-half to Peter L. Doudzhenko, New York, N. Y.
No Drawing. Refiled for abandoned application Serial No. 585,242, January 7, 1932. This application February 8, 1935, Serial No. 5,617
2 Claims. (Cl. 52—25)

1. A striking composition for match boxes, consisting of from 85% to 95% of rosin by weight,

from 1% to 3% of shellac, from 1% to 2% of paraffin and wax, and from 3% to 10% of resinous material taken from a group consisting of turpentine, pitch, and gutta percha, said ingredients forming a binder, and a ground abrasive material imbedded in said binder.

2,030,033
CYLINDER HEAD
Robert H. Pennebaker, New Orleans, La.
Application January 13, 1933, Serial No. 586,410
9 Claims. (Cl. 123—173)

9. In an internal combustion engine, a cylinder, a cylinder head defining a cooling jacket, a plurality of cylindrically shaped hollow heat extractors carried by one wall of said cylinder head and extending downwardly from said head toward said cylinder, said heat extractors being closed at their lower limits, and heat distributing members connected with the said wall of said cylinder head and projecting upwardly therefrom into the cooling jacket, cooling fluid being circulated in said cooling jacket and said hollow heat extractors.

2,030,034
CYLINDER HEAD
Robert H. Pennebaker, New Orleans, La.
Application August 4, 1933, Serial No. 683,667
9 Claims. (Cl. 123—173)

1. In an internal combustion engine, a cylinder, a head for said cylinder defining a cooling jacket, a plurality of hollow parallel extending fins projecting downwardly from said head toward the interior of said cylinder, said hollow fins being closed at their lower extremities and having their upper ends opening into the cooling jacket for providing a path for the circulation of cooling medium for effecting the extraction of heat from said cylinder, and means projecting upwardly into said cooling jacket intermediate said hollow fins for dissipating heat extracted by said hollow fins from said cylinder.

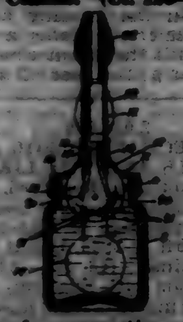
2,030,035
METHOD OF MAKING SLIDE FASTENERS
Sverre Quisling, Madison, Wis., assignor to Hookless Fastener Company, Meadville, Pa., a corporation of Pennsylvania
Application November 21, 1933, Serial No. 699,612
5 Claims. (Cl. 153—1)

1. The method of making slide fasteners of the class described which comprises forming support holding means along the two side edges of a flat strip of rigid material, attaching a flexible support to the support holding means on each side of the strip, and forming from said strip two

separate series of upward apart fastener members, one series being left attached to each strip.

2,030,036
MEDICINAL AZO COMPOUNDS
Rasmer Raz Renshaw, New York, and Edmund Y. Thea and Bernard F. Dressel, Yonkers, N. Y., assignors to The Pyridium Corporation, Nepera Park, N. Y., a corporation of New York
No Drawing. Application March 23, 1932, Serial No. 601,713
4 Claims. (Cl. 260—97)

1. As a new chemical monazo compound useful for medicinal purposes, a di-amino-phenyl-azo-phenyl compound, the amino groups of the first phenyl group being unsubstituted and the second phenyl group being provided with two substituents, at least one of which is in ortho-position to the azo linkage, and at least one of which consists of a methyl group and the other of which is selected from the group consisting of methoxy and hydroxy.

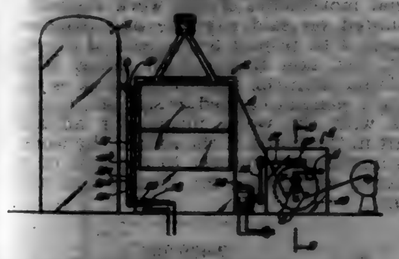


2,030,037
MEDICINAL MONOAZO COMPOUNDS
Rasmer R. Renshaw, New York, and Edmund Y. Thea and Bernard F. Dressel, Yonkers, N. Y., assignors to The Pyridium Corporation, Nepera Park, N. Y., a corporation of New York
No Drawing. Application October 15, 1932, Serial No. 638,340
8 Claims. (Cl. 260—96)

1. As a medicinal substance an azo compound of the following structural formula:

in which a hydrogen atom more adjacent to the azo group than the para position is replaced by R which represents a halogen atom or a lower alkyl group.

2,030,038
VAPORIZER
Joseph Robinson, New York, N. Y.
Application March 14, 1932, Serial No. 598,963
7 Claims. (Cl. 128—192)

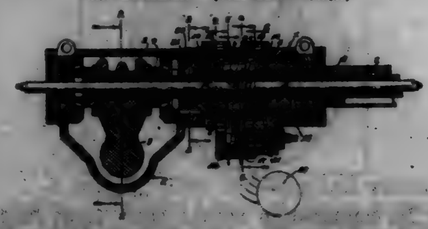


1. A device for generating vapors for inhalation, comprising in combination, a receptacle for a medicament, a heat absorbing member for receiving heat externally applied thereto and thus stored therein disposed on the receptacle and dependingly projecting into the medicament to cause vaporization thereof, means for adjusting the elevation of the heat absorbing member relative to the medicament level, and an applicator for conveying the medicament vaporized by said heat storage member to an affected part.

2,030,039
FOOD CONTAINER UNIT
Lewis H. Sewitsch, Chicago, Ill.
Application July 23, 1935, Serial No. 32,317
11 Claims. (Cl. 211—77)

1. In a rotary container group, a flat rotary sheet metal support for a group of containers, a base upon which said support is pivoted to rotate about a central vertical axis, said sheet metal support having radial beads on the upper side thereof, defining the divisions between the containers, said beads being adapted for engaging the bottom side edges of the containers, and said support having peripheral upstanding container engaging means co-operating with said beads to removably maintain the containers in position.

2,030,040
QUOTATION PROJECTING OR ANALOGOUS APPARATUS
James A. Spencer, Teaneck, N. J., assignor to News Projection Corporation, New York, N. Y., a corporation of New York
Application January 15, 1930, Serial No. 420,847
Renewed August 24, 1934
13 Claims. (Cl. 271—2.1)



1. In a stock quotation projection machine, the combination with a tape puller, of a motor, friction driving means between the motor and the puller, a clutch member on a driven element of the puller, a movable stopping clutch member, an electro-magnet arranged to operate the movable clutch member into stop clutching engagement with said driven clutch member, a magnet circuit including a contact, an element running on a tape loop, and a connection from said element to the contact to close the magnet circuit with a deflection in the tape by said element, said connection including lost motion means.

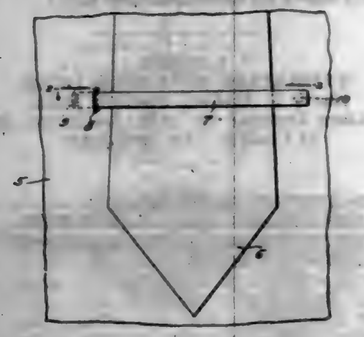
2,030,041
PROCESS FOR DEPOLYMERIZING ALPHA SUBSTITUTED ACRYLIC ACID ESTERS
Daniel E. Strain, Wilmington, Del., assignor to Du Pont Viscoloid Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 16, 1935, Serial No. 1,153
13 Claims. (Cl. 260—166)

1. Method of producing a monomeric ester of an acrylic acid substituted in the alpha position by a hydrocarbon radical which comprises heating the corresponding polymeric ester at a temperature above its decomposition point.

2,030,042
HYDRAULIC STEERING GEAR
Harry F. Vickers, Detroit, Mich.
Application October 30, 1930, Serial No. 489,812
22 Claims. (Cl. 180—79.2)

1. In a steering gear, the combination of a housing containing a wheel shaft a manually operated driving member and a follow up type control valve in axial alignment with said wheel shaft, a cover for said housing containing a driven operating member cooperating with said driving member and fluid operated means connected to said driven member, fluid supply means connected to said steering gear housing, and conduits for conducting the fluid through the control valve to the fluid operated means.

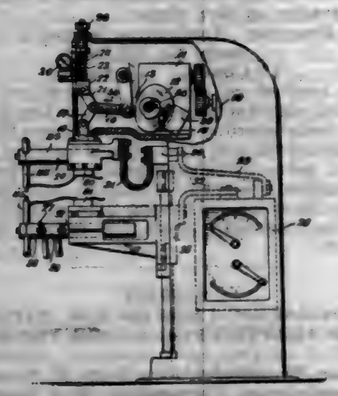
2,030,903
PHOTOGRAPHIC FILM OF THE MONOPACK TYPE ADAPTED FOR COLOR PHOTOGRAPHY
Hans von Fraunhofer, New York, N. Y., assignor to Omnichrome Corporation, New York, N. Y., a corporation of New York
No Drawing. Application August 2, 1934, Serial No. 738,296
13 Claims. (Cl. 95—3)



1. A method of forming a sensitised monopack film comprising uniformly coating a carrier with a homogeneous solution incorporating color sensitising dyes and filter dyes of varying particle size and rate of diffusion and superimposing on such coating a layer of emulsion, and thus permitting the color sensitising dyes and filter dyes to diffuse upwardly from the carrier into the emulsion.

2,030,904
PHOTOGRAPHIC FILM OF THE MONOPACK TYPE ADAPTED FOR COLOR PHOTOGRAPHY
Hans von Fraunhofer, New York, N. Y., assignor to Omnichrome Corporation, New York, N. Y., a corporation of New York
No Drawing. Application August 2, 1934, Serial No. 738,299
11 Claims. (Cl. 95—3)

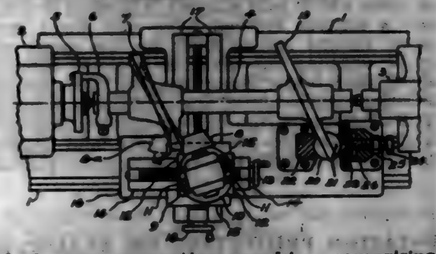
1. A method of treating a mono-pack film, comprising diffusing into the emulsion of the



film a reagent incorporating sensitizing dyes and filter dyes of such particle size and rate of diffusion for such time as to produce in the emulsion a plurality of strata predominantly sensitized respectively to record different color aspects.

2,030,905
TIE HOLDER
Raymond M. Wolfe, Louisville, Ky.
Application August 13, 1934, Serial No. 739,651
Renewed January 8, 1936
2 Claims. (Cl. 2—115)

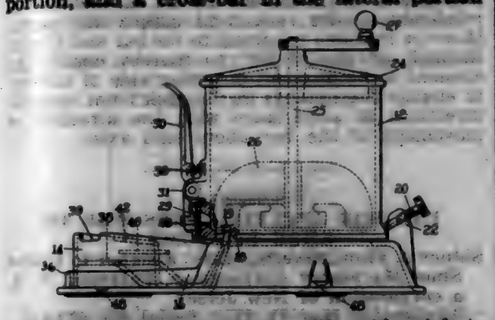
1. In combination with a shirt front having an opening therein, a tie retaining strip having an end extending through said opening to the inner side of the shirt and secured to the shirt at said inner side, said strip adapted to be disposed across the shirt front for retaining a tie scarf end between the strip and the shirt front, and inter-engaging means on the shirt front and on the free end of the strip for releasably retaining the strip in tie retaining position.



2,030,906
METHOD AND MEANS FOR SPOT-WELDING ALUMINUM AND ALUMINUM ALLOYS
Nelson F. Malley, Brooklyn, N. Y., assignor to Aluminum Alloys Welding Corporation, a corporation of New York
Application September 16, 1935, Serial No. 39,878
8 Claims. (Cl. 219—4)

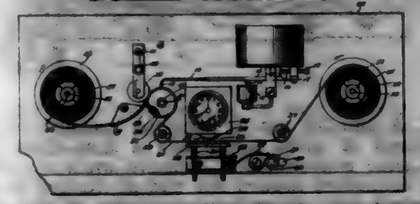
1. The spot-welding process, which comprises placing at least two partly overlapping aluminum containing plates between two electrodes, causing said electrodes to press with a constant pressure against said plates, causing an electrical current to flow through said electrodes and the underlying portions of said plates, while said constant pressure is being maintained, interrupting the flow of the electrical current, diminishing said constant pressure until a predetermined lower pressure is attained, and then increasing said lower pressure while the material is still hot.

6. In a machine for spot-welding aluminum and aluminum alloys, a pair of electrodes situated substantially opposite each other, a cam having operative surfaces, means connected with one of said electrodes and in contact with said cam surfaces to cause said electrode to exert a pressure upon plates inserted between said electrodes, a source of electrical energy, the first-mentioned electrode comprising a rod and a block carrying said rod; the second-mentioned electrode comprising a rod, a block carrying said rod, another block having a greater resistance than the second-mentioned block and connected in series with the second-mentioned block, and a further block connected in series with the third-mentioned block; means connecting the last-mentioned block with said source of electrical energy, and means connecting the first-mentioned block with said source of electrical energy.



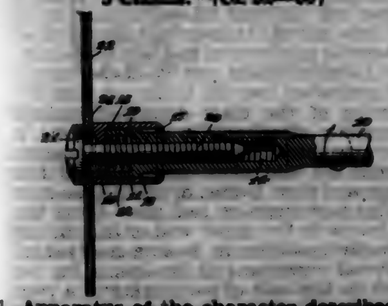
2,030,907
CAM GENERATING MACHINE
Heraclio Alfaro, Boston, Mass.
Application August 4, 1934, Serial No. 738,503
17 Claims. (Cl. 51—101)

1. A cam generating machine comprising a work support mounted for rotation about a fixed axis, a carriage mounted for linear movement longitudinally of the axis of the work support, means for reciprocating the carriage during each revolution of the work support and for relating the linear movements of the carriage to the rotational movements of the work support, a shaft mounted on said carriage and disposed transversely with respect to the axis of the work support, the axis of the shaft being substantially coplanar with the axis of the work, a generating cutting element carried by said shaft and engageable with the work, means for adjusting said shaft in the plane of the axis of the work to various angles with respect to the axis of the work support, and means for driving said cutting element.



2,030,908
DISPENSING APPARATUS
Walter Barnett and Alfred Richard O'Key, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application July 7, 1934, Serial No. 734,150
In Great Britain August 17, 1933
8 Claims. (Cl. 91—66)

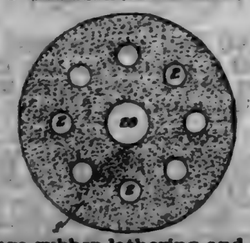
1. In a dispensing apparatus, a tray to receive small quantities of material dispensed from a container, said tray having a portion forming a sump and a lateral portion provided with a rim which is notched, and with a brush-receiving shelf at a level higher than the bottom of the sump portion, and a cross-bar in the lateral portion



above its shelf to cooperate with said notch to support a brush.

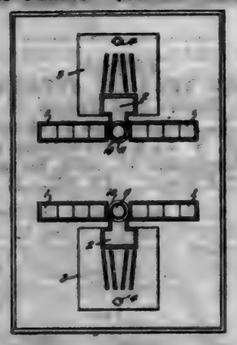
2,030,909
RECORDING DEVICE
Albert E. Berden, Yellow Springs, Ohio, assignor to Antioch Industrial Research Institute, Inc., Yellow Springs, Ohio, a corporation of Ohio
Application December 12, 1931, Serial No. 580,654
9 Claims. (Cl. 178—91)

1. A system for recording signals superimposed on alternating carrier current which comprises a receiving circuit having a vacuum tube output including distorting network, electromagnetic recorder directly connected to the said vacuum tube output, the recorder having a magnetic field continuously magnetized during operating and an armature cooperating with the magnetic field and the recorder having electrical constants approximately matching the impedance of the vacuum tube output circuit at the signal note frequency.



2,030,910
GRINDING WHEEL MANDREL
James H. Blair, Staten Island, N. Y., assignor to Chayes Dental Instrument Corporation, New York, N. Y., a corporation of New York
Application March 21, 1933, Serial No. 661,286
5 Claims. (Cl. 33—59)

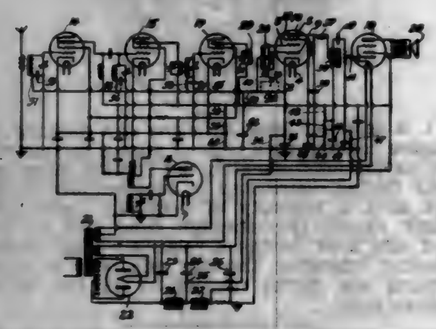
1. Apparatus of the character described, comprising a rotatable rod-like member having a threaded opening in one end thereof, a cup-shaped sleeve slidably secured to the same end



of said member with the inturned bottom of the sleeve covering the end of the member, said bottom having an opening therein substantially coaxial with said threaded opening, resilient means forcing said sleeve outwardly, and a bolt passing through said sleeve into threaded engagement with said opening to hold a disk between the end of said sleeve and the head of said bolt, said sleeve being movable to contact the inturned bottom thereof directly with the end of the rod-like member.

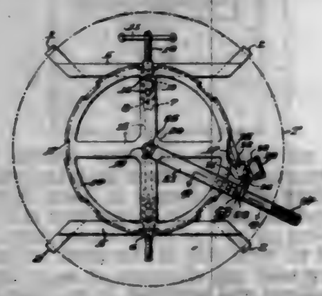
2,030,911
WASHING AND LATHERING SPONGE DEVICE
Charles R. C. Berden, Brookline, Mass.
Application December 9, 1933, Serial No. 701,653
3 Claims. (Cl. 15—244)

1. A sponge rubber lathering and washing appliance comprising a body of porous sponge rubber having approximately flat contact faces, said body having distributed in substantially its entire area a plurality of normally open ducts which extend therethrough from face to face, and said body having a relatively large central opening extending through said body in radial venting and drying relation to the rest of the sponge body.



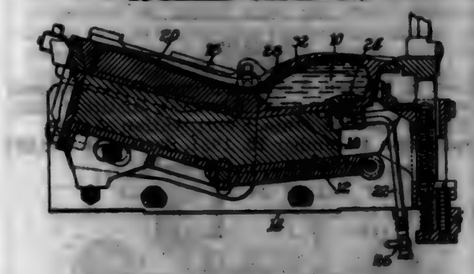
2,030,912
SIGNALS AND CONTROLS FOR PASSENGER AND FREIGHT ELEVATORS AND FOR OTHER PURPOSES
William Noble Dickinson, Rockville Centre, N. Y.
Application June 20, 1931, Serial No. 545,759
25 Claims. (Cl. 177—336)

1. In an elevator signaling system including in combination, centralized push buttons and car designating signal means at each intermediate floor landing, said car designating signal means comprising an up and down signal lamp, windows situated at each side of the push buttons corresponding with the elevators at each side of said push buttons and adapted to be illuminated by said signal lamp, a light baffle normally maintained in a position to block out light from said windows, an electro-magnetically operated pawl and ratchet mechanism to shift said baffle a cer-



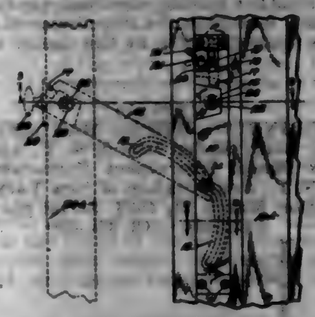
tain distance to illuminate all of the windows from the push button out to and including the particular window which designates the door to be served by an approaching elevator, and a controller to control the electrical impulses transmitted to said electro-magnet, said controller comprising a traveling solenoid having a movement corresponding to the movement of an elevator, an electrical connection between said solenoid and the push button, a mechanism co-operating with the plunger in said solenoid to actuate a contact-wiping member and contacts corresponding in number to an approaching car, over which said wiping member passes to complete an electrical circuit with the said electromagnet and thereby send the required number of electrical impulses through same.

2,030,913
DETECTING AND AMPLIFYING SYSTEM
Harold F. Elliott, Palo Alto, Calif.
Application April 27, 1932, Serial No. 607,355
16 Claims. (Cl. 250—20)



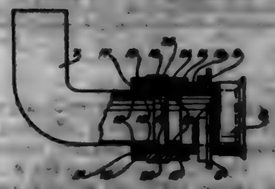
1. In a self-governing amplifier for alternating current potentials, means for amplifying the potentials, means comprising a single space discharge device with a single cathode and a single source of energy for rectifying the amplified potentials, re-amplifying the rectified potentials, and governing the amplifier directly by the rectified and re-amplified potentials combined serially.

2,030,914
BRAKE TESTING APPARATUS
Merlin Hugh Evans and James H. Woodhouse, Elmira, N. Y., assignors to Evanwood Corporation, Elmira, N. Y., a corporation of New York
Application December 11, 1934, Serial No. 756,933
7 Claims. (Cl. 265—1)



5. In brake testing apparatus of the class described, a circular notched rack, means for removably securing the rack to a wheel tire, a bar pivoted at the axis of the rack, a handle operatively fixed with respect to the bar, a notch engaging element movable with the bar and handle relatively to the rack, and supporting means therefor movable relatively to the bar and handle through an arc of 180° to thereby enable the element to be disposed on either side of the bar to engage the notches in the rack from opposite directions in accordance with the direction of movement of the bar about said axis.

2,030,915
PAD FOR APPLYING PRESSURE TO SHOE BOTTOMS
Sidney J. Flinn, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application May 11, 1933, Serial No. 672,651
In Great Britain October 18, 1932
14 Claims. (Cl. 12—32)



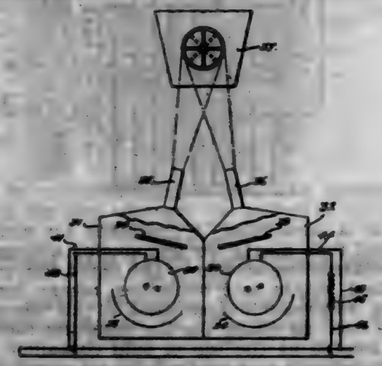
7. A pad for use in applying pressure to the bottoms of shoes comprising a fluid-filled bag the shoe engaging and opposite walls of which are connected toward one end of the pad by an internal wall extending lengthwise of the pad.

2,030,916
DOOR FASTENER
James C. Gard, Bloomington, Ill.
Application April 13, 1934, Serial No. 720,235
1 Claim. (Cl. 292—269)

A device of the class described including a plate member attachable to a door frame, a link member mounted for pivotal and longitudinal movement on said plate and disposed between the plate and door frame, a locking bar mounted for sliding movement on said plate above the said link, a recess in the upper end of the link adapted to receive said bar in locking relation to prevent pivotal movement of the link, a lug portion disposed on the side of said link and a recess in said plate adapted to receive said lug portion in a manner to hold said link against longitudinal movement, and mechanism secured in the door movable to engage or disengage said link.

2,030,917
MULTIPLE JOINT EXTENSION UNION
Joseph B. Guilliford, Regina, Saskatchewan, Canada.
Application November 19, 1934, Serial No. 753,722
In Canada April 6, 1934
7 Claims. (Cl. 285—123)

1. A multiple joint extension union, for connecting tubing with an existing exteriorly threaded fitting, comprising in combination an elongated slidable nut, smoothly bored, having on one end an inverted flange, the inner edge of the flange to slidably fit the tubing to be connected, and threaded interiorly in the remaining end to fit the said existing exteriorly threaded fitting, an extension sleeve, having one end slidable exteriorly over said tubing, and the opposite end of said sleeve slidable interiorly of the said existing fitting, annular means arranged for gaskets, and means provided on the slidable nut for tightening said gaskets.



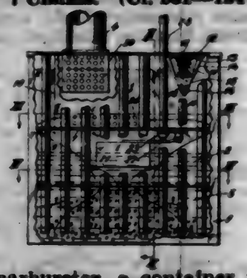
2,030,918
METHOD OF MAKING A PEN POINT
Harry J. Hahnn, Camden, and Lloyd S. Henwood, Merchantville, N. J., assignors to C. Howard Hunt Pen Company, Camden, N. J., a corporation of New Jersey
Application June 15, 1932, Serial No. 619,248
2 Claims. (Cl. 113—32)

1. The method of manufacturing pen points of the type having a tip bent to increase the thickness thereof; which method includes treating a chromium-nickel alloy steel to make the metal hard and springy; forming a flat pen point blank from the metal; after treatment in the manner referred to, and without intervening process steps appreciably affecting the characteristics of the alloy, bringing portions of the metal at the tip of the pen into planes substantially parallel to each other by bending the metal, to provide increased thickness at the tip; and thereafter, and without other intervening process steps appreciably affecting the characteristics of the alloy, slitting the nib of the pen including its tip.

2,030,919
DEVICE FOR CREATING AN ILLUSION
Robert Harding, Jr., Elmsford, N. Y., assignor to Sirian Lamp Company, Newark, N. J., a corporation of Delaware
Application December 4, 1931, Serial No. 578,978
Renewed July 9, 1935
3 Claims. (Cl. 88—24)

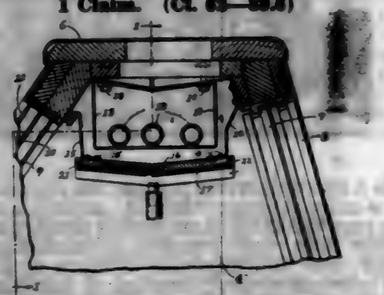
1. In a device of the class described a pair of electric lamps each comprising an envelope, a filamentary resistance wire within said envelope, electron emitting material in contact with said wire, and an inert gas having a pressure in the neighborhood of 200 mm. of mercury surrounding said wire, means to minimize the ionization of the gas around said filament when the current flows in one direction through the lamp, means to connect said lamps reversely to said circuit so that when the current flows in one direction the ionization of gas in one lamp is minimized while when the current flows in the other direction the ionization of gas in the other lamp is minimized, a pair of objects one adapted to receive the light from each of said lamps, a screen, and means to project said objects in superimposed position upon said screen.

2,030,920
COLOR ENGRAVING PROCESS
William M. Hensel, Chicago, Ill.
Application February 2, 1934, Serial No. 709,623
1 Claim. (Cl. 95—5.3)



In a photoengraving process, the steps of making a color selection negative; making a correction negative of the same subject through a dense orange filter, over-exposing to photograph the yellow, reds and magentas as much as possible, and over-developing; making a half-tone dot printing plate from the color selection negative and etching; resensitizing said printing plate with a composition capable of being insolubilized by the action of light; exposing said resensitized printing plate to light through said color correction negative; washing out the soluble portions of the resensitizing composition; and re-etching the plate.

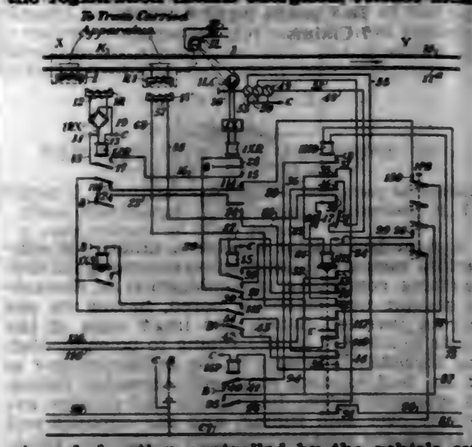
2,030,921
COPPER-BERYLLIUM ALLOYS
Werner Bonsebrack, Hanau-on-the-Main, Germany, assignor to Heraeus-Vacuumschmelze, A. G., Hanau-on-the-Main, Germany
No Drawing. Application June 15, 1934, Serial No. 730,727. In Germany June 17, 1933
2 Claims. (Cl. 75—1)



1. An alloy consisting of beryllium in quantities in excess of a trace up to about 3%, titanium from about .5% to about 3%, and the balance copper.

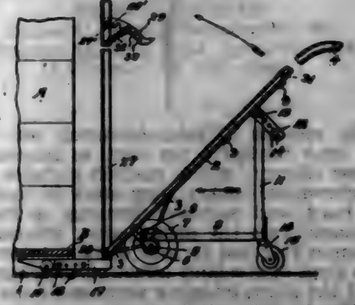
2,030,923
CARBURETOR
Richard R. Hirth, Milwaukee, Wis.
Application January 23, 1935, Serial No. 3,769
7 Claims. (Cl. 261—124)

1. In a carburetor, a container for confining a liquid fuel, means for introducing atmospheric air adjacent the bottom of the liquid fuel column confined within said container, means for supplying controllable quantities of air above the liquid fuel, an outlet for the resulting fuel mixture located at the top of said container, baffle means between said controllable air supply means and said outlet, baffle means in the body of liquid fuel, baffle means above the level of the liquid fuel, said latter two baffle means respectively constructed to provide paths of flow toward and away from the vertical center-line of the container, and further baffle means between the outlet and each of said former baffle means.



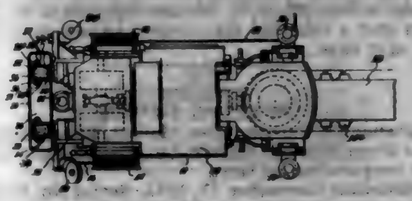
2,030,923
DISPLAY REFRIGERATOR ACCESSORY
George J. Hopkins, Kendallville, Ind., assignor to McCray Refrigerator Company, Kendallville, Ind., a corporation of Indiana
Application January 29, 1934, Serial No. 708,816
1 Claim. (Cl. 62—89.6)

A drip pan adapted for disposition below a refrigerating coil having an under roughened surface of a material with a heat conductivity flow of less than two B. t. u.'s per square foot per degree per hour per inch of thickness.



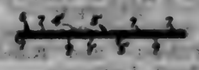
2,030,924
SIGNALING SYSTEM
Ralph R. Kemmerer, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application April 5, 1935, Serial No. 14,865
20 Claims. (Cl. 246—77)

2. A signaling system comprising in combination with a trackway and a vehicle adapted to travel on the trackway, a plurality of electro-responsive registration means one at each of a plurality of spaced locations along the trackway, an intermittent control means at each location for energizing the registration means and including a vehicle controlled actuator operative to render such control means effective when and only when a vehicle is passing the location, storage means at each location effective to retain the registration means energized, release means



at each location controlled by the vehicle controlled actuator at a location in advance and operative to deenergize the associated registration means in response to the vehicle passing such location in advance, and vehicle signaling means controlled by the registration means.

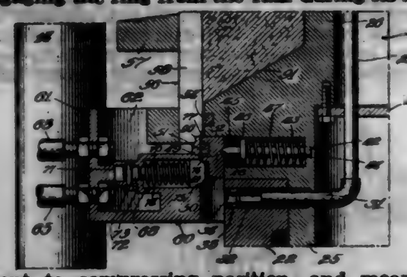
2,030,925
PORTABLE TRUCK
Dudley L. Lea, Findlay, Ohio, assignor to Self Lifting Piano Truck Company, Findlay, Ohio, a corporation
Application January 2, 1935, Serial No. 127
7 Claims. (Cl. 280—49)



1. In a hand truck of the class described, in combination, a main frame comprising upwardly and rearwardly inclined side bars, wheel carrying arms projecting downwardly from the side bars near their lower ends, wheels supported on said arms, an adjustable wheel frame pivotally connected at its front portion to said arms adjacent to the said wheels and adjustably connected at its upper portion to the upper portion of said side bars, caster wheels carried by the lower portion of said wheel frame, said wheel frame comprising horizontal members which afford the pivotal connection thereof with the arms carrying the first mentioned wheels, and said wheel frame also including vertical parts rigidly fixed to said horizontal members and which are adjustably connected with the side bars of the main frame to afford connection between the wheel frame and said side bars, attaching means for the caster wheels located at the juncture of said horizontal members, a load supporting rack pivotally mounted on the main frame adjacent the lower end of the latter and including a toe extending at an angle therefrom at the lower end, and adjustable connecting means intermediate the main frame and rack adjacent to the upper ends thereof for adjusting the angular position of the latter with respect to the former.

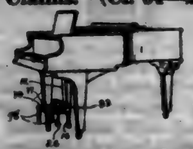
2,030,926
KERF-CUTTING MACHINE
Frank A. Lindgren, Western Springs, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application August 16, 1934, Serial No. 740,108
3 Claims. (Cl. 262—36)

1. In combination with a kerf-cutting machine slidable on its own bottom on the mine floor, a shoe adapted to engage the mine floor, means for detachably connecting said shoe to said machine comprising means interchangeably connectible to said machine adjacent opposite sides of the latter, hinge means disposed between said shoe and one of said connecting means, and vertical adjusting means disposed between said shoe and the other of said connecting means.



2,030,927
PISTON PACKING RING
Charles A. Marien, St. Louis, Mo., assignor to Ramsey Accessories Manufacturing Corporation, St. Louis, Mo., a corporation of Missouri
Application December 29, 1931, Serial No. 589,834
1 Claim. (Cl. 309—39)

1. A laminated piston ring for engines comprising a plurality of similar metallic flat split superposed ring sections arranged with the gaps of adjacent sections in close proximity, said sections being connected at one point in the circumference of the ring, and adjacent sections having plane surfaces spaced around their peripheral faces, the plane surfaces of one section being staggered with respect to those of the next adjacent section.



2,030,928
HYDRAULIC PRESS
John B. Middaugh, Chicago, Ill., assignor, by mesne assignments, to Oppenheimer Casing Co., Chicago, Ill., a corporation of Illinois
Application March 25, 1932, Serial No. 602,737
7 Claims. (Cl. 100—44)

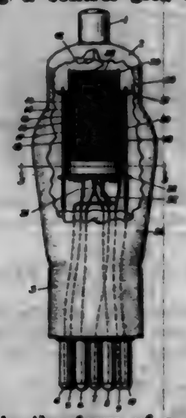
1. An hydraulic press of the vertical type comprising in combination, a curb, a ram movable into the curb to compress the charge therein, a detachable sealing ring mechanically connected to and movable with the ram for closing the bottom of the curb, means for automatically disengaging the ring from the ram during its move-

ment to compressing position, and means for holding the ring adjacent the bottom of the curb.

2,030,929
STOOL AND AUXILIARY PEDAL FOR PIANOS
Yoshiro Miyashita, Seattle, Wash.
Application August 24, 1935, Serial No. 37,694
3 Claims. (Cl. 84—232)

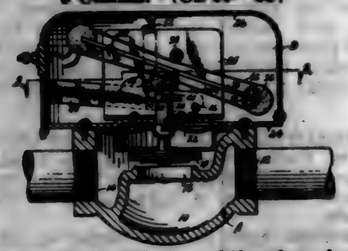
1. In combination, a piano foot stool with auxiliary pedals for children, comprising a stool adjustably connected adjacent the regular pedals of a piano, a horizontal pivot shaft supported by and above the rear side of said stool, auxiliary pedals rotatably mounted on said shaft, cylindrical blocks slidably mounted on said shaft, said blocks provided with slots in one side thereof for the entry of rear ends said pedals therein and for limiting the downward movement of said pedals, with means for binding said blocks in desired positions on said shaft, when said auxiliary pedals have been suitably positioned over said regular pedals, to be operated thereby.

2,030,930
ELECTRON DISCHARGE DEVICE
Henry W. Parker, Toronto, Ontario, Canada, assignor to Rogers Radio Tubes, Limited, Toronto, Ontario, Canada, a corporation of Ontario, Canada
Application April 4, 1934, Serial No. 718,963
5 Claims. (Cl. 250—27.5)



1. An electron discharge device comprising, a substantially evacuated envelope containing a cathode, an anode, said anode being in the form of a plurality of rods electrically interconnected, and a control grid externally disposed with relation to both said cathode and said anode, and formed with re-entrant portions located between said cathode and anode.

2,030,931
ELECTRON COUPLED THERMIONIC OSCILLATOR
Henry W. Parker, Toronto, Ontario, Canada, assignor to Rogers Radio Tubes, Ltd., Toronto, Ontario, Canada, a corporation of Ontario, Canada
Application April 26, 1934, Serial No. 722,451
8 Claims. (Cl. 250—27.5)



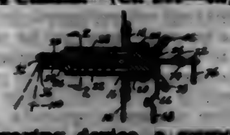
1. An electron coupled thermionic oscillator comprising, a substantially evacuated envelope

containing a cathode, a plurality of electrodes cooperating with said cathode and constituting a detector-amplifier section, and a plurality of electrodes cooperating with said cathode and constituting an oscillator section, said oscillator section including a control grid and anode, said

anode being in the form of a plurality of rods electrically interconnected and said control grid being externally disposed with relation to both said cathode and said anode and formed with reentrant portions located between said cathode and anode.

2,030,932
CONTROL DEVICE
Lawrence M. Persons, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a corporation of Iowa
Application October 17, 1932, Serial No. 638,114
3 Claims. (Cl. 60—23)

1. In an actuating device of the class described, a support, a control member movable relative thereto, means constraining said control member toward movement in one direction, a supporting bar pivoted to said support and having ends of insulating material, an electric resistance wire coiled around said ends and spanning the distance therebetween on each side of said supporting bar, said control member engaging the stretches of said wire on one side of said supporting bar and being retained in engagement therewith by said means constraining it toward movement in a direction toward the supporting bar and a stationary abutment engaging the outside of the stretches of said wire on the other side of said supporting bar.

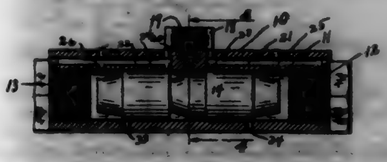


2,030,933
MAGNET SWITCH
Lawrence M. Persons, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a corporation of Iowa
Application October 16, 1933, Serial No. 693,813
10 Claims. (Cl. 200—122)

1. In a switch for controlling an electric circuit, a base, a horseshoe magnet mounted thereon, an operating arm movably mounted on said base, a pair of magnetic armatures supported thereby, one on either side of the poles of said

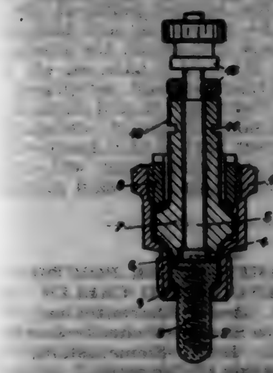
magnet whereby magnetic lines of force pass through each of said armatures from one of said poles to the other, a contact supported by said arm and a cooeting stationary contact supported on said base.

2,030,934
SPRAYING DEVICE
Lawrence M. Persons, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a corporation of Iowa
Application November 17, 1932, Serial No. 643,473
4 Claims. (Cl. 299—62)



1. In a spraying device, a supporting post, a spray nozzle, means for mounting said spray nozzle so that its discharge end extends laterally from the upper end of said post, said mounting means including a pair of pivots within said post and at right angles to each other and means for oscillating said spray nozzle about each pivot to thereby cause a spray from said spray nozzle to traverse a path which is zigzag in one direction and back and forth at right angles to said direction during the operation of the spraying device.

2,030,935
ELECTRIC POWER TRANSMISSION SYSTEM
Georg Pfaff, Breslau, Germany, assignor to Vereinigte Zünder- und Kabelwerke A.-G. Meissen/Sachsen, Germany
Application July 29, 1935, Serial No. 33,190
In Germany November 9, 1932
6 Claims. (Cl. 171—97)



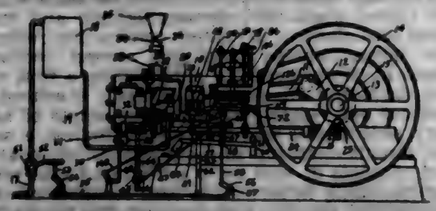
6. A polyphase high voltage power transmission system comprising separate single-core insulated lead covered cables for each phase, said cables having in intimate contact with the lead sheath supplementary conductors of high conductivity, and a plurality of cross-connecting conductors interconnecting said supplementary conductors at intervals which progressively diminish from the median point of the cable-run towards the ends thereof, the interval between any except the middle cross-connection and the cross-connection immediately following in the direction of the nearest end of the line being one half that between the former cross-connection and the cross-connection immediately preceding it in the direction of the middle of the transmission line.

2,030,936
VIBRATOR
George B. Pickup, New Haven, Conn.
Application January 29, 1935, Serial No. 3,991
11 Claims. (Cl. 121—17)

1. A vibratory engine or tool comprising a body provided with a cylinder and a piston mounted to reciprocate in the cylinder, said body being provided with an inlet opening adjacent its central portion leading into the cylinder and also being provided with passages each communicating with the cylinder adjacent an intermediate portion thereof and adjacent one end thereof, the piston being provided with a recess adjacent its central portion adapted to effect communication between said inlet port and one or the other of said passages, and said recess having an inclined bottom surface terminating in an abrupt shoulder.

2,030,937
INCANDESCENT IGNITER
Reinhold Reichmann, Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany
Application August 6, 1935, Serial No. 35,606
In Germany January 5, 1933
10 Claims. (Cl. 123—145)

1. An igniter of the class described comprising, a self-supporting ceramic body forming an incandescent member for direct operation within the cylinder of an internal combustion engine, and a filament disposed gas-tight within said body for incandescing said body.

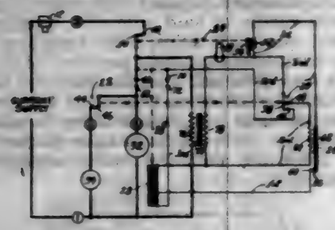


2,030,938
MINE CAR
Donald U. Rich, Teaneck, N. J., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application November 16, 1934, Serial No. 753,249
29 Claims. (Cl. 105—253)

1. The combination with a car body, of a plurality of horizontal transversely extending hinge rods carried by the body, a plurality of doors, a plurality of means attached to the doors and hinging the doors on the rods, a plurality of hook shaped members secured to the free edge of at least one door, the means hinging at least one of the doors on its rod being provided with a portion situated substantially on the opposite side of the hinge axis from the door and adapted to be engaged by the hook member of the adjacent door when the doors are in closed position.

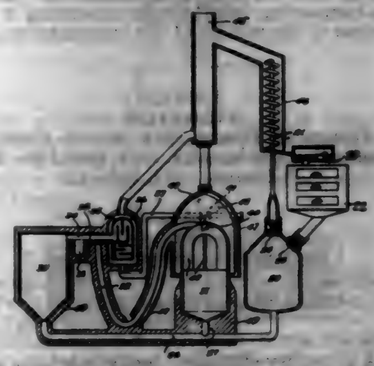
28. In a mine car, side and end sills forming a frame, wheel carrying axles connected with the side sills, a lading supporting bottom, side and end walls attached to said sills, wheel housings spaced outwardly of said side sills, axle housings positioned over said axles, filler members having portions complemental with portions of the wheel housings and attached thereto, inclined deflector walls positioned between the wheel housings and the axle housings and terminating substantially flush with the latter, and flanges projecting inwardly from the deflector walls engaging said axle housings.

2,030,939
INTERNAL COMBUSTION ENGINE AND AUTOMATIC CONTROL THEREFOR
William A. Robinson, Oakland City, Ind., assignor of fifty-one per cent to Lewis C. Nicholson and John O. Rosebaum, both of Indianapolis, and William W. Rogers and Byron C. Van Hook, both of Princeton, and William H. Baugh, Terre Haute, Ind.
Application July 28, 1932, Serial No. 625,338
1 Claim. (Cl. 123—198)



In combination with an engine having a shaft operable thereby, a fuel intake, a valve therefor, a speed control operable by said shaft, and an ignition system operable by said shaft, of a control mechanism operable by said shaft, means connecting said mechanism to the speed control, ignition system and valve, and means released by said mechanism after predetermined amount of prime mover operation to cut off the fuel supply and the ignition supply to the engine upon the elapse of a predetermined period following initiation of the mechanism for automatic control of the engine.

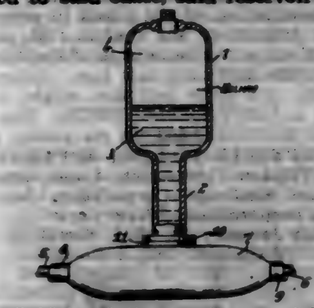
2,030,940
MOTOR FUEL PRODUCTS
Thomas H. Rogers and Vanderveer Voorhees, Hammond, Ind., assignors, by mesne assignments, to Gasoline Antioxidant Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 25, 1934, Serial No. 732,388
8 Claims. (Cl. 44—9)



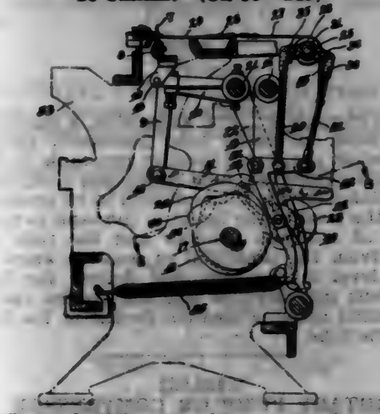
1. A motor fuel comprising unsaturated hydrocarbons which normally tend to deteriorate upon storage by gum formation, and stabilized against such gum formation by having incorporated therein a small amount of a gum inhibitor selected from the group consisting of an aromatic amino azo compound and an aromatic hydroxy azo compound, said amount being sufficient substantially to retard such deterioration.

2,030,941
ELECTRIC CONTROL APPARATUS FOR FUEL BURNERS
Abraham L. Rabel, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a corporation of Iowa
Original application August 15, 1932, Serial No. 628,383. Divided and this application December 31, 1934, Serial No. 759,964
2 Claims. (Cl. 158—28)

1. In combination with an electrically operated fuel burner, a control system comprising a relay having an actuating winding, a holding winding and holding contacts operable when the actuating winding is energized to close the burner circuit to initiate operation, a room thermostat controlling energization of said relay, a thermal time limit cut out switch controlling said system and including a resistance heater, a warp switch having a warp element, a heater and contacts which are closed when said element is cold and open when said element is heated, combustion responsive means having first and second contacts closed in the presence of combustion, a first circuit including in series said room thermostat, said cut out switch heater, said contacts of said warp switch and said actuating winding, a second circuit shunting said cut out switch heater, said contacts of said warp switch and said relay and including in series the first contacts of said combustion switching means and the heater for said warp element and a third circuit in parallel with the heater for said warp element and including in series said second contacts of the combustion responsive switching means, said holding contacts and said holding winding, said warp element moving slowly when cooling due to de-energization of its heater caused by combustion failure opening said first set of contacts of said combustion switching means whereby a purging period is provided between the de-energization of said relay caused by combustion failure opening said second contacts of said combustion switch to stop operation of said burner and re-engagement of the contacts of said warp switch to re-initiate operation of the burner by re-establishing said first circuit.



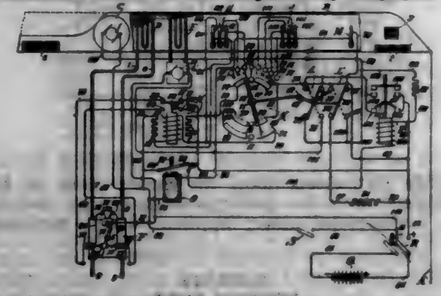
2,030,942
REFRIGERATION APPARATUS
Truman S. Safford, Harrison, N. Y.
Application May 20, 1932, Serial No. 612,468
18 Claims. (Cl. 62—115)



1. A refrigerator comprising a compressor which includes a U-shaped housing forming a compression chamber, an expansion chamber, a measuring chamber, a vaporizer, and superheater, a vaporizable liquid piston, a syphon adapted to feed liquid from the measuring chamber to the vaporizer, a surface combustion heater for said vaporizer and superheater, a condenser at a level not lower than the expansion chamber connected to a part of said housing which is normally below the liquid level therein, a U-tube connecting the top of the expansion chamber to the top of the condenser with the bottom of the U at a level approximately that of the liquid therein at the end of the compression stroke, a vent from the top of the condenser to the compression chamber, a thermostat near the top of the condenser for controlling the supply of fuel to said heater, and a sealing liquid separating the vaporizable liquid from the refrigerant in the compression chamber; a refrigerant compressor and an evaporator designed and related so as to provide a continuously descending path for liquid from the highest point of the condenser through the evaporator and back to the compressor; a stack into which the products of combustion from the heater pass, an air jacket around the condenser of said compressor and opening into the lower part of said stack, and an air jacket around said refrigerant condenser and opening into a lower part of said stack whereby waste heat from said compressor will create a draft to draw cooling air over said refrigerant condenser.

2,030,943
PRESSURE COMPENSATOR FOR OIL- OR COMPOUND-FILLED CABLES
Franz Schrettke, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany, a corporation of Germany
Application October 29, 1931, Serial No. 571,943
In Germany November 1, 1930
2 Claims. (Cl. 173—264)

1. In combination with a cable containing a fluid insulating medium which tends to absorb gases but in which helium is relatively insoluble, a pressure compensator comprising a reservoir connected to said cable, said reservoir containing said fluid insulating medium and helium in direct contact therewith.



2,030,944
FABRIC TAKE-OFF MECHANISM FOR KNITTING MACHINES
Paul Schmidt, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application September 7, 1932, Serial No. 631,976
16 Claims. (Cl. 66—149)

1. In a knitting machine, a reciprocatively operated set of needles for producing a knitted fabric, tension take-off means for the fabric, and means for controlling the movement of said take-off means to compensate for the reciprocating movement of the needles, comprising overrunning clutch structure actuated in accordance with movement of the needles, said structure acting as a clutch on said take-off means to relieve tension on the fabric in one direction of movement of the take-off means and exerting a braking action on the take-off means in the opposite direction of movement thereof.

2,030,945
CONTROL SWITCH MECHANISM
William M. Smith, Chicago, Paul B. Parks, Oak Park, and Edward A. Russell, Chicago, Ill., assignors to Vapor Car Heating Company, Inc., Chicago, Ill., a corporation of New York
Application February 26, 1934, Serial No. 713,902
9 Claims. (Cl. 236—1)

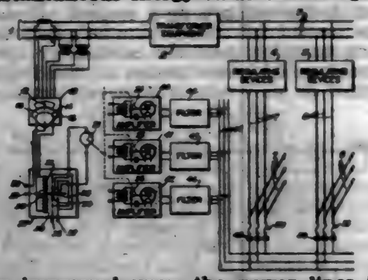
2. Means for regulating the temperature within an enclosure comprising in combination with a heating means, a cooling means, and electrically operated mechanism for controlling the heating or cooling means to automatically maintain any one of a plurality of predetermined temperatures within the enclosure, a manually operable selector device comprising a control member rotatable in either direction from a central neutral position, bridging contacts carried by the control member, and two groups of fixed contacts positioned so as to be respectively engaged by

the bridging contacts as the control member is swung to one side or the other of its neutral position, the bridging of selected contacts in one group serving to energize and control the heating means, and the bridging of selected contacts in the other group serving to energize and control the cooling means.

2,030,946
MANUFACTURE OF FIBER PRODUCTS
Daniel Manson Sutherland, Jr., Morrisville, Pa.
No Drawing. Application October 31, 1930, Serial No. 492,622. Renewed August 11, 1934
2 Claims. (Cl. 92—29)

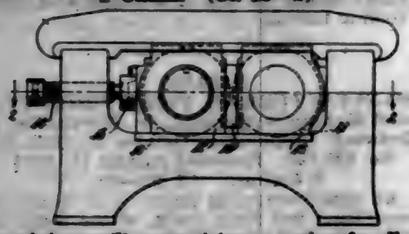
1. An improvement in the reuse of white water in processing wet fiber stock, whose water content exceeds that of the formed fiber product, in a closed system or cycle; which improvement comprises reducing the water content of the wet stock entering the closed system to equal that of the formed fiber product leaving said closed system, and adding the white water to this stock to prepare the same for use in the forming machine of the system.

2,030,947
BRAID
William S. Titcomb, Andover, Mass., assignor to Shoe Lace Company, Boston, Mass., a corporation of Maine
Application December 1, 1933, Serial No. 700,408
4 Claims. (Cl. 36—25)



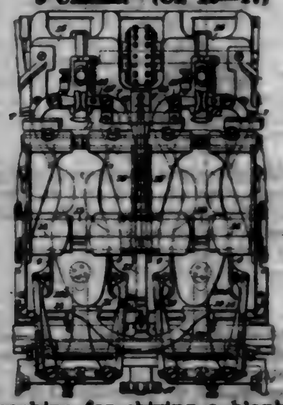
1. A braided shoe lace composed of two sets of fibrous threads, one of said sets of threads including dull, rough threads and the other set including smooth, lustrous threads.

2,030,948
CONTROL CIRCUIT
John L. Wesley, East Orange, N. J., assignor to Wired Radio, Inc., New York, N. Y., a corporation of Delaware
Application March 8, 1934, Serial No. 714,839
7 Claims. (Cl. 179—3.5)



3. The method of transmitting signalling electrical energy over a commercial electrical power

distribution network which comprises adjusting the instantaneous energy value of the signalling

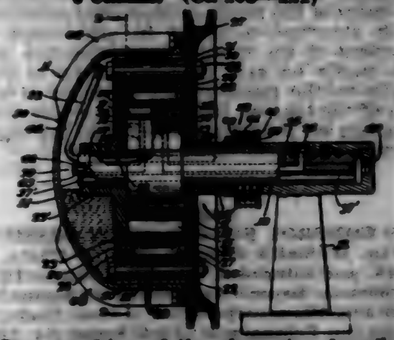


energy impressed upon the power lines in accordance with the instantaneous energy level of the commercial power applied to said network.

2,030,949
MIXING MILL
Douglas L. White, Watertown, Mass., assignor to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application December 19, 1934, Serial No. 758,321
1 Claim. (Cl. 18—3)

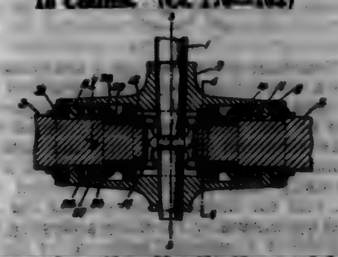
A mixing mill comprising a pair of rolls, an adjusting screw therefor, a shear member between the adjusting screw and the trunnion of the adjacent roll, and a resilient member of rubber composition mounted under compression operatively between the trunnions of the rolls.

2,030,950
SKIVING MACHINE
Ernest Albert Williams, Cincinnati, and Adolph Ferdinand Berger, Columbus, Ohio, assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application June 30, 1934, Serial No. 731,500
9 Claims. (Cl. 12—17)



1. A machine for skiving a blank having, in combination, a pair of rolls one of which is a matrix roll, a knife located behind the bite of the rolls considered in the direction in which the rolls feed the blank, and an end gage for facilitating presentation of the blank in proper position with respect to the matrix roll, said gage being located on the same side of the bite of the rolls as is the knife.

2,030,951
RECEPTACLE FILLING APPARATUS
Lewis B. Winton, Greenwich, Conn., assignor to American Sealcone Corporation, New York, N. Y., a corporation of New York
Application January 19, 1934, Serial No. 707,276
16 Claims. (Cl. 226—102)

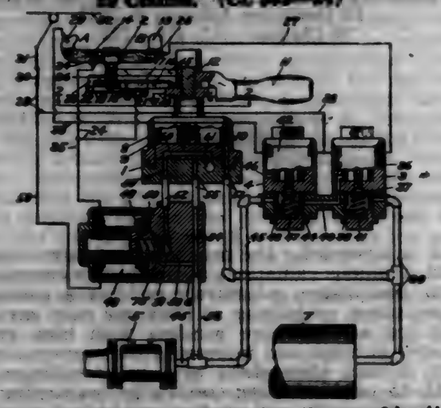


1. In receptacle filling apparatus, a liquid carrying tank, an outlet tube positioned with its inlet below the liquid level in the tank, a valve normally closing the tube outlet, and a cup member slidable on the tube adapted to be positioned below the level of the liquid in the tank to permit filling of said cup member and the tube with liquid from the tank and to position above the liquid level in the tank and deliver the liquid therefrom into the tube and actuate the valve to tube outlet opening position to deliver the liquid from the tube.

2,030,953
ROTARY PUMP OR COMPRESSOR
William W. Wishart, Chicago, Ill., assignor of one-half to Automotive Maintenance Machinery Co., Chicago, Ill., a corporation of Illinois
Application February 14, 1934, Serial No. 711,006
6 Claims. (Cl. 103—121)

1. In a machine of the character described, a shaft support, a stator assembly and a roter assembly, one of said assemblies comprising a shaft having one end mounted in said support and its other end unsupported, a cylindrical piston member carried by said shaft, a surrounding annular cylinder member arranged for line contact with said piston member to leave a working space therebetween, and a partition constantly connecting said members and permitting oscillation of said cylinder member with respect to said piston member; and the other assembly comprising side plates coacting with the ends of the piston and cylinder members and a peripheral portion having an internal camming surface for progressively oscillating said cylinder member during relative rotation of the two assemblies, an external portion of such assembly overlying the unsupported end of said shaft being removable and containing a chamber in which a portion of said shaft is exposed; said shaft having an inlet passage and an outlet passage therein, each extending to and accessible at the supported end-portion of the shaft, said inlet passage opening at its other end to the working space near one side of the partition, and said outlet passage comprising two portions, one of which opens from the working space near the other side of said partition through the chamber-exposed portion of said shaft and the other of which extends from said chamber to the supported end-portion of said shaft; and a check valve mounted on said shaft in position to be exposed for service access upon removal of said removable portion of the aforesaid other assembly, said valve controlling the first mentioned portion of said outlet passage.

2,030,961
AUTOMATIC VARIABLE PITCH PROPELLER
Blaine B. Gemeny, Washington, D. C., assignor of one-third to Earle D. Crammond, Washington, D. C.
Application February 14, 1934, Serial No. 711,345
18 Claims. (Cl. 170—163)

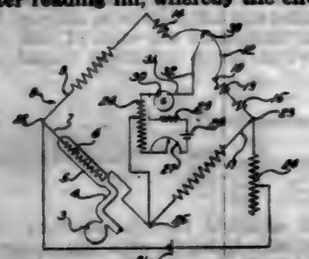


1. In an automatic self-adjusting variable pitch propeller having a hub portion, and a plurality of blades having shanks mounted for turning movement in the hub for variation of the pitch of the propeller, weight lever means connecting relatively opposite sides of different blades for balancing out centrifugal forces tending to turn the blades in the hub when the propeller is operated, and means cooperating with the blades controlling the pitch of the propeller in relation to the air forces acting thereon when the propeller is operated.

2,030,964
BROOM AND METHOD OF MAKING SAME
Walter H. Zachry, Atlanta, Ga.
Original application July 14, 1933, Serial No. 681,122. Divided and this application August 20, 1934, Serial No. 740,456
11 Claims. (Cl. 300—21)

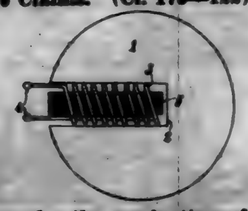
1. In a separable head and handle structure for brooms, mops and the like, a lineally split socket of soft flexible metal and tapering to reduced diameter at one end, a length of wire having a portion helically wound about said socket to provide and maintain threads in said socket, work-engaging material disposed about said socket and aforementioned wire portion and secured thereto by windings of the remainder of said wire whereby to provide a head about said socket, a handle having a threaded end adapted to be screwed into said socket, the threads at the ends of said threaded handle portion being relatively raised as compared with adjacent threads whereby to assure of an especially tight fit with the interengaging socket threads so as to firmly connect the handle and socket, said socket thread-providing and head-forming portions of said wire cooperating with one another in tending to maintain said split socket from spreading from internal pressure of the handle.

2,030,965
BRAKE SYSTEM
Burton S. Aikman, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application July 20, 1934, Serial No. 735,189
19 Claims. (Cl. 303—24)



1. In a fluid pressure brake, the combination with a brake cylinder, of means operative electrically for supplying fluid under pressure to the brake cylinder, manually operable means controlling a communication through which fluid under pressure is supplied to the brake cylinder and for effecting the operation of said electrically controlled means, and means effective upon energization of said electrically controlled means to cut off the flow of fluid under pressure through said communication.

2,030,966
MEASURING APPARATUS
Virgil B. Barker, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 23, 1929, Serial No. 395,053
11 Claims. (Cl. 73—31)



7. Apparatus of the kind described, comprising a Wheatstone bridge, one arm thereof having a different temperature coefficient of resistance from the other arms, the resistances of the arms of the bridge being selected to effect a normal proportional unbalance relative to the thermal characteristics of the first named arm, said first named arm being adapted to be subjected to a fluid to be measured, a potentiometer in circuit

with the bridge galvanometer for varying and equalizing the normal potential difference between each side of the bridge to render the galvanometer reading nil, whereby the effect of any

variation in the impressed bridge voltage is neutralized and changes in the resistance of the first arm due to variation in the fluid measured may be directly read on the galvanometer.

2,036,957
ELECTROMAGNETIC APPARATUS
Joseph Bethenod, Paris, and André Claude, Nanterre, France, assignors to Société Anonyme pour les Applications de l'Electricité & des Gaz Rares Etablissements Claude-Paz & Silva, a corporation of France
Application December 29, 1933, Serial No. 704,558
In Germany January 9, 1933
10 Claims. (Cl. 176—122)

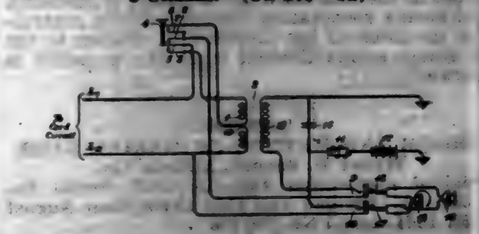
1. A process for the production of ultra-violet and luminous radiations of adjustable composition, comprising inductively exciting a gaseous atmosphere containing at least one rare gas by exciting an inductive winding with high frequency current, and increasing the current density in said atmosphere to a value sufficiently high to produce spark spectra by positioning a magnetic core in said winding and in said atmosphere.

2,036,958
PROCESS FOR PREPARING CALCIUM SALTS OF SUBSTITUTED QUINOLINE CARBOXYLIC ACIDS
Philip J. Breivogel, Glen Ridge, N. J.
No Drawing. Application May 17, 1932, Serial No. 611,937
12 Claims. (Cl. 260—33)

1. The process for preparing the calcium salt of a 2-phenyl quinoline 4-carboxylic acid which comprises dissolving a 2-phenyl quinoline 4-carboxylic acid in an aqueous alkaline solution containing an excess of alkali, neutralizing the excess alkali, and adding a soluble calcium salt.

2,036,959
KNITTED MITTEN AND METHOD OF MAKING THE SAME
William C. Buckholz, Ballston Spa, N. Y., assignor to Ackuhand Knitting Co., Inc., Ballston Spa, N. Y.
Application September 3, 1935, Serial No. 39,935
3 Claims. (Cl. 66—174)

2. A seamless tubular knit mitten having a hand portion and a tip portion both of plain stitch knitting, the tip portion having substantially half as many wales or longitudinal rows



of stitches as the hand portion and there being the same number of wales or longitudinal rows of stitches at all parts of said tip portion.

2,036,960
SELF-LOCKING BRACKET
Fred J. Burns, Saginaw, Mich., assignor to The Columbia Mills, Inc., Saginaw, Mich., a corporation of New York
Application July 22, 1935, Serial No. 32,487
5 Claims. (Cl. 156—17)

1. A Venetian blind having a stationary head rail and a pair of spaced apart brackets secured thereto and adapted to revolubly support a tilt rail, one of said brackets being formed with an angularly disposed slotted opening adapted to accommodate the pintle of the tilt rail, a locking dog pivotally and pendently mounted on said bracket, and an inwardly extending leg on said dog, said leg normally forming a closure for said slot to prevent accidental removal of the pintle.

2,036,961
OPERATOR'S TELEPHONE CIRCUIT
Herman T. Carter, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application April 11, 1934, Serial No. 721,510
4 Claims. (Cl. 179—81)

1. In an operator's telephone circuit arranged to prevent the picking up of room noise during the time when an operator is merely listening upon a telephone connection, the combination with a transmitter of a receiver, an induction coil having a primary winding and a secondary winding, a source of potential connected to said transmitter and primary winding forming a transmitter circuit, conductors leading to an external circuit and a key-switch to effectively disconnect the secondary winding of said coil from said conductors thereby disconnecting the transmitter circuit from said conductors and connecting said receiver across said conductors.

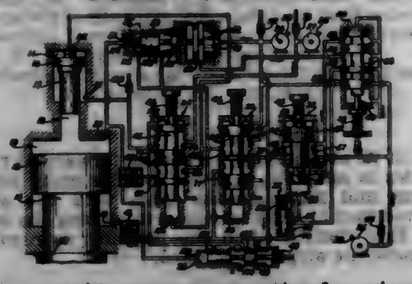
2,036,962
MOISTUREPROOF MATERIAL AND METHOD OF MAKING SAME
William Hale Church, Buffalo, and William L. Hyden and John C. Siemann, Kenmore, N. Y., assignors to Du Pont Cellophane Company, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application August 5, 1932, Serial No. 627,499
42 Claims. (Cl. 91—68)

1. In a method of moistureproofing, the steps which comprise coating sheets or films formed of a cellulosic substance having a smooth, dense and non-porous surface with a composition consisting essentially of a drying oil, drying said coating, and applying a moistureproofing composition directly on the first coating.

2,036,963
DISCHARGE TUBE
André Claude, Nanterre, France, assignor to Société Anonyme pour les Applications de l'Electricité et des Gaz Rares Etablissements Claude-Paz & Silva, Paris, France, a corporation of France
No Drawing. Application April 3, 1934, Serial No. 718,935. In France April 8, 1933
8 Claims. (Cl. 176—122)

1. The method of manufacturing gas filled electric luminous discharge tubes and the like having their inner surface provided, by the intermediary of a volatilizable cementing agent, with a layer of luminescent or phosphorescent substance, comprising applying the cementing agent in an extremely thin and uniform layer on said surface by wiping with a plug of elastic absorbent material impregnated with the cementing agent, depositing the luminescent or phosphorescent substance in a thin film on the wiped surface, and eliminating the cementing agent.

2,036,964
EGG PRODUCT AND EMULSIFIER THEREFOR
Forest H. Clickner, Chicago, Ill., assignor to Kraft-Phenix Cheese Corporation, Chicago, Ill., a corporation of Delaware
No Drawing. Application April 16, 1934, Serial No. 720,589
5 Claims. (Cl. 99—11)



1. A new composition of matter, comprising whole egg material to which has been added whey powder substantially free of lipoid.

3. A method comprising adding to whole egg material sufficient whey powder substantially free of lipoid to render the white portion of said egg material substantially equivalent in emulsifying power to the yolk portion thereof.

2,036,965
EMULSIFIER
Forest H. Clickner, Chicago, Ill., assignor to Kraft-Phenix Cheese Corporation, Chicago, Ill., a corporation of Delaware
No Drawing. Application May 13, 1935, Serial No. 21,192
6 Claims. (Cl. 167—81)

1. An emulsifier for oil-water systems, comprising whey powder substantially free of lipoid.

2,036,966
VARIABLE PRESSURE APPARATUS
Edward J. Crane, Oak Park, Ill., and Daniel V. Waters, Cranford, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 29, 1933, Serial No. 649,354
5 Claims. (Cl. 60—52)

1. A variable pressure apparatus for actuating a pressure element comprising a pair of cylinders of different diameters having a passage interconnecting the same, pistons reciprocable in the cylinders, the piston of largest diameter carrying a pressure element, the piston of smallest diameter carrying a plunger reciprocable in the interconnecting passage, a liquid pressure transmission system connected to both ends of each of the cylinders and the interconnecting passage for introducing liquid pressure thereinto to actuate and return each of the pistons comprising a manually operable valve for controlling the system, and a system of liquid pressure controlled valves operated sequentially in response to an actuation of the manually operable valve to direct the pressure to actuate the pressure element piston, build up a predetermined pressure behind the element, actuating the plunger piston to further increase the pressure behind the element, and then directing the pressure liquid for returning the pistons to their starting positions, said pressure system comprising a large capacity pump and a small capacity pump, said pressure controlled valves being normally in position to direct liquid from said small capacity pump for holding said plunger piston in retracted position, said pressure piston being held in retracted position by a minimum pressure valve and during the operating stroke liquid from the large capacity pump being directed first to the operating face of the pressure piston and subsequently solely to the plunger piston.

5. In a fluid pressure apparatus, a work cylinder and piston, a source of fluid pressure, a valve normally spring held to direct fluid from said source to one side of said piston to operate the piston to its non-working position, means to move said valve to direct fluid to the other side of said piston comprising a manual valve operable to direct fluid pressure to move said first valve against said spring, and an auxiliary source of fluid pressure effective to maintain said first valve in operated position after said manual valve is returned to normal.

2,036,967
AIRCRAFT
James Heron Cressman, 3d, Haverford, Pa., assignor to The Air Drill Corporation, Philadelphia, Pa., a corporation of Delaware
Application February 28, 1935, Serial No. 8,748
3 Claims. (Cl. 170—159)

1. The combination of a propeller for airplanes, a vertical section of a hollow cone having its base

secured to the front face of the hub of said propeller with one of its section lines extending forward at right angle to said face, a second similar vertical section of a hollow cone also having its base secured to the front face of the propeller hub with

one of its section lines extending forward at right angles to said face, said two sections being joined along said right angular lines with the outer curved face of each section constituting the leading face thereof when the propeller is revolved to move the airplane forward.

2,030,965

EYEGLASS LENS

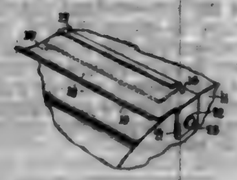
Edward Culver and Alfred Henry Emerson, London, England, assignors to United Kingdom Optical Company, Limited, London, England

Application October 9, 1934, Serial No. 747,576

In Great Britain June 27, 1934

9 Claims. (Cl. 88—54)

1. A lenticular ophthalmic lens comprising a body portion having a non-visual border portion, and a plurality of visual portions of substantially the same focal power, said visual portions comprising a central field and lateral fields abutting said central field on the opposite sides thereof.



2,030,969

SCRAPER BLADE

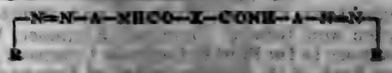
John K. Cushman, York, Pa., assignor to York Ice Machinery Corporation, York, Pa., a corporation of Delaware

Application June 17, 1933, Serial No. 677,097

14 Claims. (Cl. 259—129)

1. The combination of, a carrier element; a scraper blade comprising a flat portion and a leading portion angularly disposed to the flat portion, said flat portion being bent at each end to form ears on the blade; a channel-shaped member on the carrier and cooperating with the rear edge of said flat portion throughout the length thereof to sustain the blade; and means for releasably securing said ears to said carrier.

2,030,970



AZO DYES AND METHODS FOR THEIR PRODUCTION

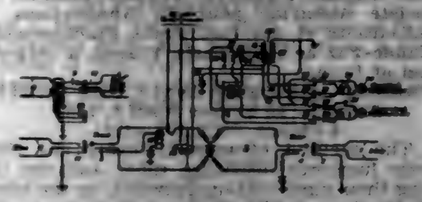
Miles Augustinus Dahlen, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington Del., a corporation of Delaware

No Drawing. Application January 8, 1933, Serial No. 650,506

14 Claims. (Cl. 260—77)

8. Water-insoluble azo dyes having the following general formula:

wherein R represents the radical of an ice color coupling component, A represents a para-arylene nucleus free from water-solubilizing groups, and X represents an arylene nucleus free from water-solubilizing groups.



2,030,971

OPERATOR'S TELEPHONE CIRCUIT

Eginhard Dietze, Westfield, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York

Application April 21, 1934, Serial No. 721,889

5 Claims. (Cl. 179—51)

1. An operator's telephone circuit adapted to have connected thereto an operator's telephone set and a supervisor's telephone set, both sets being substantially identical in their electrical characteristics, the said telephone circuit including means for connecting said sets to said circuit, the circuit being so arranged that the connection thereto of one of said telephone sets will introduce substantially no receiving loss in the other telephone set connected to the said circuit.

2,030,972

APPARATUS FOR THE PRODUCTION OF ARTIFICIAL FILAMENTS AND LIKE MATERIALS

Henry Dreyfus, London, England

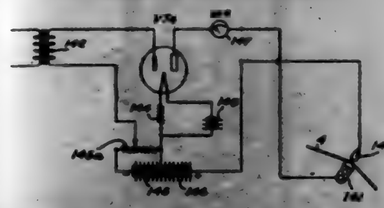
Application May 3, 1933, Serial No. 668,826

In Great Britain May 13, 1932

4 Claims. (Cl. 18—8)

1. A spinning jet for the production of artificial filaments, yarns, threads or the like, said jet having a face of thin metal provided on the inside of said face and integral therewith, over areas not occupied by spinning orifices with lines of increased thickness adapted to reinforce said face, the outer face of said jet being left smooth to facilitate jet wiping.

2,030,973



METHOD OF AND APPARATUS FOR ELECTRICALLY RECORDING AND REPRODUCING SOUND OR OTHER VIBRATIONS

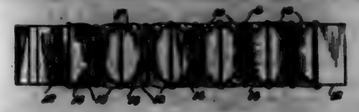
Merle Dunton, Detroit, Mich.

Application August 18, 1931, Serial No. 556,743

Renewed August 2, 1934

21 Claims. (Cl. 179—100.1)

1. Apparatus for recording electrical impulses, which comprises, in combination, a movable tape carrying a substance adapted to react to the passage of an electric current therethrough, a thermionic valve or valves, means for applying varying voltages to the thermionic valve or valves, means coacting with the movable tape for impressing the resultant varying electrical output of the thermionic valve or valves thereon, said means comprising electrodes, one of which is a thin blade disposed transversely of the tape, and means for moving said tape, whereby successive lines are produced on the tape transversely thereof, each line being produced by a single electrical pulsation.



2,030,974

BRACELET, OR THE LIKE, STRUCTURES

Raymond Everitt, Toronto, Ontario, Canada

Application December 8, 1934, Serial No. 756,694

6 Claims. (Cl. 63—8)

1. The combination in an article of the class described, of a frame composed of co-extensive zig-zag wires placed together to compose a succession of diamond shaped spaces, and discs bent to fit in adjacent diamond spaces thereof and having their bent portions overlying the wire frame.

2,030,975

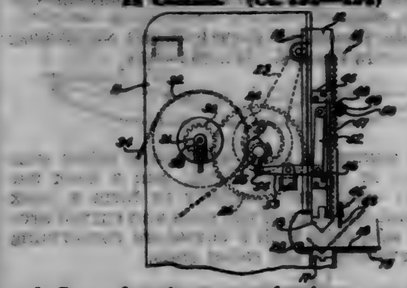
MIXTURE MEASURER

Edwin Bradley Fairchild, New York, N. Y.

Application June 10, 1933, Serial No. 675,224

2 Claims. (Cl. 73—63)

1. In a device of the kind described, a main open topped container, a secondary container having an open top and fixed to the main container at substantially right angles thereto and with its open end projecting over the edge of the main container, and a handle on the main container beneath the auxiliary container and having a flat back bar constituting a support to hold said containers with the auxiliary container substantially vertical.



2,030,976

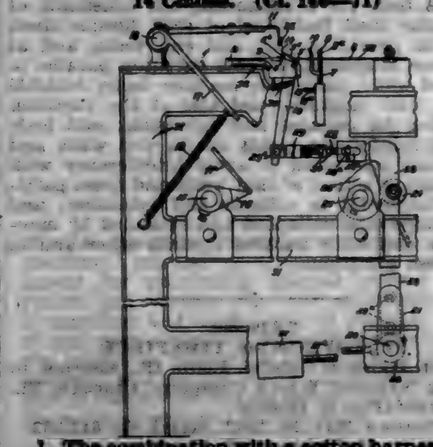
SAFETY GUARD AND CONTROL SYSTEM

Walter B. Fairfield, La Grange, and Ralph Jungclyk, Hinsdale, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application March 18, 1932, Serial No. 599,044

14 Claims. (Cl. 192—134)

1. In a forming press having a reciprocable forming member and operating means therefor, a movable guard, and means for moving the guard in timed relation with the movement of said forming member for covering the danger zone of the press during a movement of the forming member in one direction, said means operating to effect a return movement of the guard during a predetermined final portion of said movement of the forming member.

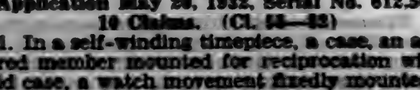


2,030,977

MAIL EYE CLINCHING DEVICE AND METHOD OF FORMING COTTON HARNESS HAVING METAL EYES

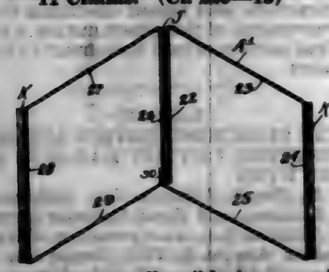
Samuel B. Floyd, Atlanta, Ga., assignor to Atlanta Harness and Reed Manufacturing Company, Atlanta, Ga., a corporation of Georgia

Application August 9, 1932, Serial No. 628,107



14 Claims. (Cl. 140—71)

1. The combination with a cotton harness making machine, of a mail eye clinching device including a slotted needle on which the eyes are adapted to be stacked, an anvil, a clinching lever adapted to co-operate with the anvil for clinching the eyes, a holder alined with the needle adapted to guide the eyes over the clinching lever and support them in clinching position, a clamping wedge adapted to co-operate with the holder

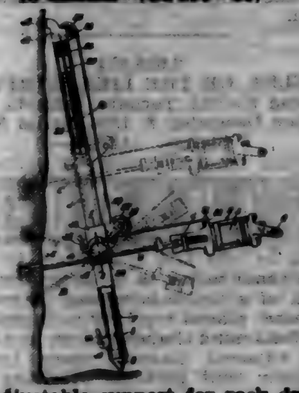


in locking the eyes in clinching position, a fork actuated from the machine adapted to operate through the slot in the needle for feeding the eyes over the holder to clinching position and for removing the clinched eyes from clinching position, and means operated from the machine for actuating the clinching lever.

2,030,978
BUMPER
Byron F. Fortier and Fredrick A. Miller, Springfield, Ohio, assignors to Louis R. Hildreth, Columbus, Ohio
Application December 4, 1931, Serial No. 579,082
16 Claims. (Cl. 293—55)

1. In a bumper, a front bar having rolled ends and a slot in each rolled end, and a back bar having its ends bent reversely to form a hook bent around one edge of the slots and curved arcuately at said ends with a curvature conforming to the curvature of the rolled ends.

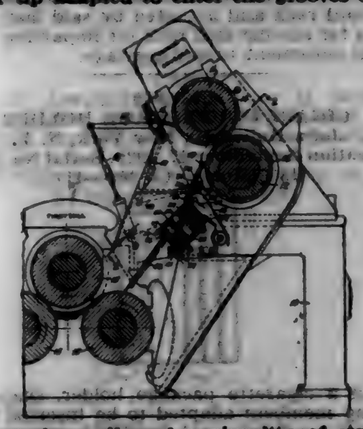
2,030,979
EGG BOX
Collins F. Fuller, Chicago, Ill.
Application July 11, 1935, Serial No. 30,514
11 Claims. (Cl. 229—15)



10. A body for a collapsible box consisting of a tubular shell fashioned of stiff, fibrous sheet material providing side and end walls, and at least one intermediate cross partition parallel to the end walls; said body member being foldable at the wall junctures and also at the partition junctures for collapse and extension; said body having reinforcing cleats on its end walls and partitions positioned to avoid interference with the hinging action of said walls and cross partitions incidental to collapse and extension; and said body being collapsed and extended by moving the end walls parallel to each other and to the cross partitions.

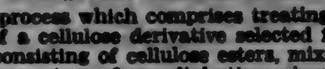
2,030,980
SELF-WINDING TIMEPIECE
William Atkinson Gabriel, Elgin, Ill., assignor to Elgin National Watch Company, Chicago, Ill., a corporation of Illinois
Application May 20, 1932, Serial No. 612,565
10 Claims. (Cl. 58—32)

1. In a self-winding timepiece, a case, an apertured member mounted for reciprocation within said case, a watch movement fixedly mounted on the case and disposed within the aperture in said member, the dimensions of said watch movement being less than the dimensions of the aperture in said member, a cut-out portion in the side of said member, a manual winding stem extending through said cut-out portion whereby to permit the reciprocation of said member, and means operated upon the reciprocation of said member for automatically winding the watch.



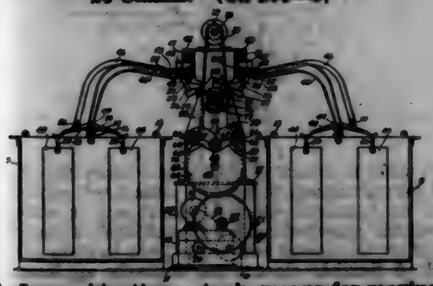
2,030,981
ROCK DRILL
Elmer G. Gartin, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application May 20, 1933, Serial No. 671,496
13 Claims. (Cl. 255—63)

2. An adjustable support for rock drills comprising an upstanding column having abutment engaging supports at its opposite ends, a drill guide mounted on said column for adjustment longitudinally therealong and on which a rock drill is adapted to be guided for bodily movement relative to the guide, and drill counterbalancing means associated with said column and drill guide and connected to the rock drill for counterbalancing the weight of the rock drill irrespective of its bodily guided position with respect to said guide and column, said counterbalancing means including a counterbalancing weight guided by said column longitudinally of the latter and connections between said weight and the rock drill.



2,030,982
TRAMP IRON COLLECTOR
Ernest Grossenbacher, Fajardo, Puerto Rico
Application August 15, 1934, Serial No. 740,035
9 Claims. (Cl. 209—215)

1. In combination with a cane crushing apparatus having a pair of rolls provided with peripheral grooves and a mill, a tramp iron collector comprising an electromagnetic device positioned at a point between the crusher rolls and the mill, a non-magnetic cover plate for said device having a plurality of recesses, inserts of a magnetic material positioned within said recesses in said cover plate, a scraper plate having a scraper tip adapted to enter the grooves of the

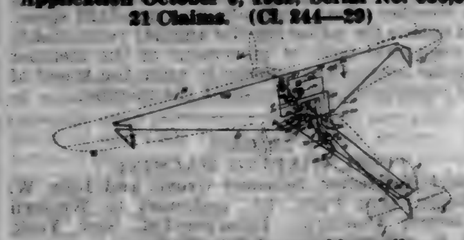


lower crusher roll, and a plurality of strips of magnetic material upon said scraper plate forming extensions of the inserts of magnetic material over the non-magnetic cover plate of the electromagnetic device.

2,030,983
TREATMENT OF FILMS AND FOILS OF ORGANIC CELLULOSE ESTERS
Max Hagedorn, Dessau in Anhalt, and Paul Müller, Dessau-Ziebigk, Germany, assignors to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application October 3, 1932, Serial No. 636,974
In Germany October 5, 1931
14 Claims. (Cl. 18—57)

1. A process which comprises treating a sheet made of a cellulose derivative selected from the group consisting of cellulose esters, mixed esters and ether-esters of an aliphatic carboxylic acid having up to 5 carbon atoms and containing a softening agent with a solution of a hydroxide selected from the group consisting of alkali metal hydroxides and ammonium hydroxide in a liquid which has a swelling action on the film forming colloid, and removing from the sheet the treating liquid by means of liquid which has no solvent action on the softening agent.

2,030,984
AUTOMATIC ELECTROPLATING MACHINE
Albert H. Hannon, Springfield, Ohio
Application March 7, 1933, Serial No. 659,933
26 Claims. (Cl. 204—5)



1. In combination, a tank, means for moving a plurality of suspended articles to and from the tank, means for quickly lowering and raising said articles with respect to said tank, and means acting on the lowering and raising means for intermittently moving said articles vertically while in the tank.

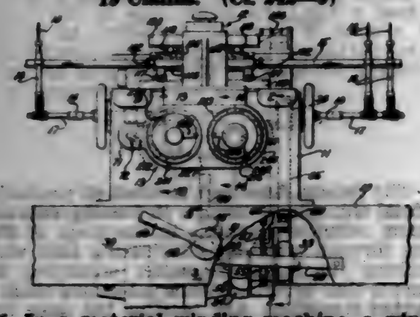
2,030,985
METHOD FOR PRODUCING ARTIFICIAL SILK
August Hartmann and Gotthard Bauriedel, Barmen, Germany, assignors to American Bemberg Corporation, New York, N. Y.
Original application October 30, 1926, Serial No. 145,150. Divided and this application August 5, 1931, Serial No. 555,396. In Germany November 2, 1925
2 Claims. (Cl. 18—54)

1. The herein described method of producing artificial silk, which consists in passing cuprammonium cellulose solutions in the form of filaments through a flowing coagulating bath while stretching the same, thereafter acidifying the filaments thus produced while subjecting them to a further stretching, and twisting the same into a spinning centrifuge.

2,030,986
AUTOMATIC AIRPLANE PILOT
Clinton H. Havill, South Orange, N. J., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application October 6, 1932, Serial No. 636,695
21 Claims. (Cl. 244—79)

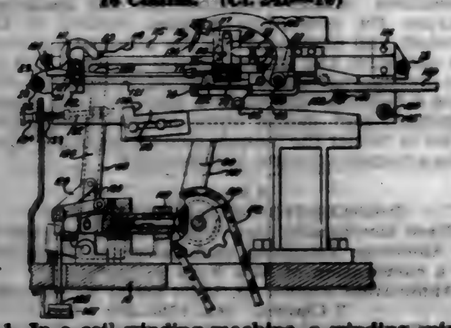
4. In an airplane having rudder, aileron and elevator members, automatic controls for the members, manual controls for the members, means for preventing manual control of the rudder and elevator when the automatic control is operative and in the neutral position, and all of said manual controls being interconnected with the automatic controls in a manner to be moved thereby, said means being automatically operable to render the manual control operative when the automatic control is inoperative.

2,030,987
OSCILLATION CONTROL DEVICE
Alfred Herskmann, New York, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application August 29, 1933, Serial No. 687,261
7 Claims. (Cl. 179—81)



1. In an amplifying circuit, the combination with an amplifier having input and output cir-

cuits effectively coupled so that oscillations will be set up whenever the loss through the feedback path is less than the gain of the amplifier and a non-linear variable impedance device connected



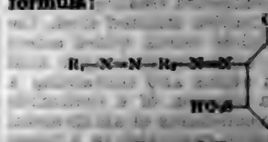
across the output of the feedback path to effectively increase the loss through said path whenever the voltage increases across the said device thereby preventing the continuance of said oscillations.

2,030,263
COIL WINDING MACHINE
Robert Hefstetter, Downers Grove, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 16, 1931, Serial No. 580,183
19 Claims. (Cl. 242—9)

1. In a material winding machine, a winding spindle, means for rotating said spindle to wind material thereon, means for distributing the material upon said spindle, said last mentioned means comprising a movable member constrained to travel along a path which is so related to the axis of the spindle that a component movement of the member is in a direction longitudinally of said spindle and means for moving the member along said path at a constant speed, and means for adjusting the angular relationship between said path of movement of the member and the axis of the spindle to alter the speed of said component movement of the member.

2,030,269
COIL WINDING MACHINE
Robert Hafstetter, Downers Grove, and John W. Sager, Oak Park, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application December 16, 1931, Serial No. 580,184
16 Claims. (Cl. 242—10)

1. In a coil winding machine, a winding spindle, feeding rolls for feeding material to said winding spindle, reciprocating members for feeding material to said feeding rolls, a carriage for supporting said reciprocating members, a rack fixed to said carriage, means for actuating said reciprocating members, and means associated with said rack and actuated by said last named means for moving said rack for imparting a horizontal movement to said carriage.

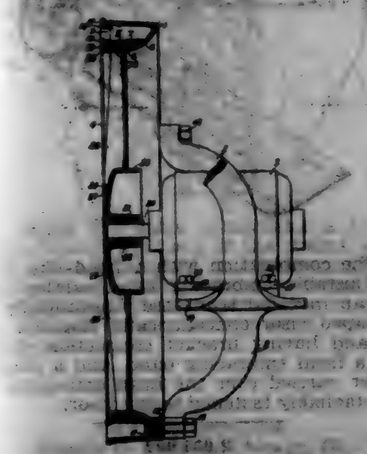


2,030,290
CIGARETTE PACKAGE HOLDER
John Heitzman, New York, N. Y.
Application September 27, 1929, Serial No. 395,546
13 Claims. (Cl. 206—41)

1. In a cigarette package holder, spaced depending members adapted to be inserted into a cigarette package, said holder being provided with an opening at the upper end thereof, movable spring-pressed means for normally closing said opening, and a collapsible spring member on and integral at one end with said holder for exerting pressure on the cigarettes in said package to urge the cigarettes towards said opening.

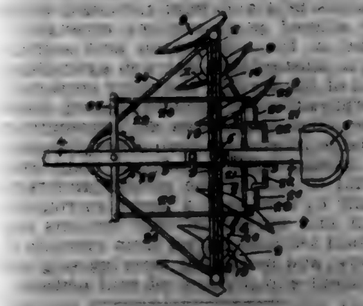
2,030,291
AZO DYES AND METHODS FOR THEIR PREPARATION
Henry Jordan, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 25, 1932, Serial No. 619,719
6 Claims. (Cl. 260—94)

4. Difficultly soluble azo dyes having, when in the form of their free acid, the following general formula:



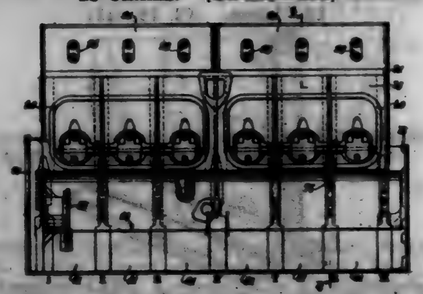
wherein R_1, R_2 and R_3 represent residues of the benzene series which are free from solubilizing groups.

2,030,292
FLEXIBLE CLOSURE FOR CONTAINERS AND THE LIKE
Joseph F. Keller, New York, N. Y.
Application February 20, 1925, Serial No. 9,296
7 Claims. (Cl. 206—57)



1. A flexible closure particularly applicable to relatively small containers such as cigarette cases and the like, comprising a plurality of trough-like units having unitary lips, the lips of one unit being bent over to engage an adjacent trough wall of a second unit whereby the units are interconnected for simultaneous movement and relative flexing.

2,030,293
FAN
Albert G. Langenkamp and Roy H. McElroy, Dayton, Ohio, assignors to International Engineering, Inc., Dayton, Ohio, a corporation of Ohio
Application August 27, 1934, Serial No. 741,552
8 Claims. (Cl. 170—163)

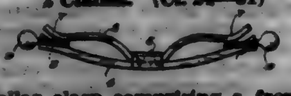


1. A fan unit comprising a multi-blade fan having an annular rim, and a supporting frame having an annular offset portion adapted to receive said rim, said offset portion having a reversely-directed groove, the inner surface of said supporting frame being substantially flush with the inner surface of said rim, said offset portion being adapted to reduce the backward flow of air around the tips of said blades.

2,030,294
CULTIVATOR
Henry Lisius, Havelock, N. Dak.
Application January 8, 1935, Serial No. 880
4 Claims. (Cl. 97—54)

1. A cultivator comprising a frame, a draw bar pivoted to the frame, cultivator gangs carried by the ends of the frame, a gear mounted on the draw bar, a flexible connection between the gear and the ends of the frame, and means for rocking the gear to advance one gang relative to the other gang.

2,030,295
WELDED STEEL ENGINE
Bruno Loeffler, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a corporation of Delaware
Application November 27, 1934, Serial No. 754,942
12 Claims. (Cl. 123—195)



1. An internal combustion engine formed of a plurality of parts welded together including a cylinder block section and a crank case section, the cylinder block section having side and end walls, cylinders, a cylinder top plate having cylinder apertures therein, downwardly extending bosses on the top plate around the apertures, and bosses on the top plate at the sides thereof, said cylinders being welded to the first bosses and the side and end walls being welded to the last named bosses.

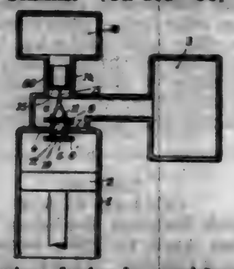
2,030,296
DISPLAY APPARATUS
Ruben B. Lustig, Kansas City, Mo.
Application November 16, 1933, Serial No. 698,230
2 Claims. (Cl. 206—78)

1. A bag display apparatus comprising a sheet of relatively stiff bendable material having a slit opposite edge portions of which are serrated, the teeth of one edge being interposed between the teeth of the other edge, and a bag having its open end portion inserted through said slit, the teeth of opposite edges of said slit being substantially alined with each other and holding said open end portion crinkled and tightly compressed.

2,030,297
COLLAR CLASP
Louis Madison, Brooklyn, N. Y.
Application April 16, 1935, Serial No. 16,667
2 Claims. (Cl. 24—81)

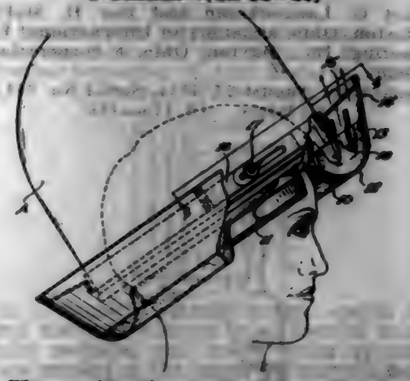
1. A collar clasp comprising a front member, clamps back of the front member adjacent the ends thereof and spaced therefrom to receive the front marginal portions of a collar, and screws threadedly engaging the end portions of said front member and positioned approximately lengthwise of the latter and adapted to press the front marginal portions of a collar against said clamps.

2,030,998
BUILDING CONSTRUCTION
William D. Mann, Highland Park, Ill.
Original application February 14, 1930, Serial No. 428,284. Divided and this application April 24, 1931, Serial No. 532,457. Renewed November 23, 1934
13 Claims. (Cl. 72—45)



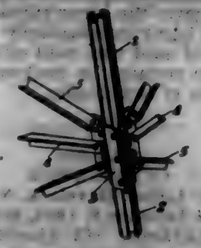
1. As an article of manufacture a composite preformed wall-block unit having a core, veneer finishing faces applied on the sides of said core, the said core having notches across its edges and holes through the body thereof, for permitting said veneer faces to be bonded together.

2,030,999
INK
Lawrence McLaughlin, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application October 10, 1929, Serial No. 398,731
1 Claim. (Cl. 134—68)



An ink adapted for use on vitreous surfaces, consisting of approximately three parts of finely divided cobalt oxide, one part of borax, and sufficient boiled linseed oil to form a suspension of the cobalt oxide and borax in the boiled linseed oil vehicle.

2,031,000
DAMPING DEVICE
Jean Mercier, Neuilly-sur-Seine, France
Application January 23, 1935, Serial No. 3,034
In Germany January 28, 1934
7 Claims. (Cl. 188—88)



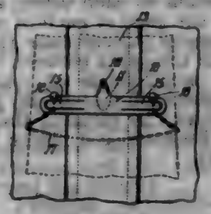
1. In a damping device in combination a container, fluid compressing means having two opposite walls adapted to be brought towards and away from each other, one of said walls separating said fluid compressing means from said container, a sliding member adapted to slide in said separating wall, a chamber containing a fluid at a constant pressure, a movable control member subject on one side to the pressure of said chamber and on the other side to the pressure of said container and connected on said other side with said sliding member, communicating means between said container and said fluid compressing means through said separating wall, and valve means operatively connected with said sliding member and adapted to open and to close said communicating means.

2,031,001
HAIR DRYING DEVICE
Anna Mont Moore, Lancaster, S. C.
Application May 13, 1935, Serial No. 21,641
5 Claims. (Cl. 34—96)

1. The combination with a hood-like drier of an adjustable embracing band carried by the drier, an inverted truncated substantially conical shaped visor concentrically disposed to the drier and having bracket connection with the band, a head embracing band, and a channeled member carried over the head embracing band and detachably fastened to the visor.

2,031,002
OIL FIELD DERRICK POST
Lee C. Moore, Tulsa, Okla.
Application February 2, 1934, Serial No. 711,272
1 Claim. (Cl. 189—19)

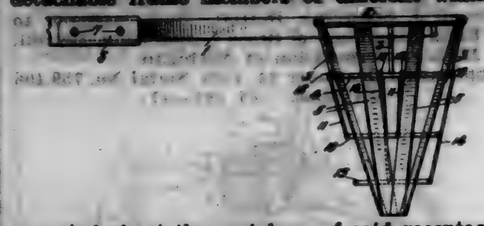
A derrick post and joint structure, comprising axially aligned posts sections arranged end to end, one on the other, each post section comprising a substantially flat web extending across the axis of the section, the outer portions of said web terminating in arcuate-shaped flanges on opposite sides of the web and circumferentially arranged in relation to each other, thereby forming a substantially cylindrical body extending from end to end of the section and reinforced internally by said web, a sleeve surrounding the adjacent end portion of said sections and into which said sections extend from opposite ends of the sleeve, and means for securing said sleeve to the adjacent end portions of said sections.



2,031,003
WIRE LINE DRILLING CLAMP
John E. Neptune, Rich Hill, Mo.
Application January 7, 1935, Serial No. 621
7 Claims. (Cl. 255—13)

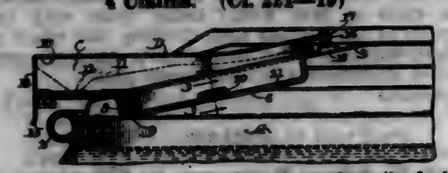
1. A cable clamp of the character described comprising a pair of hingedly interconnected jaws; an endless chain carried by each jaw respectively in opposed relation to each other and adapted to grip the cable therebetween; means to releasably hold the chains against the said cable; and means for simultaneously driving the chains to feed the cable through the clamp as the chains

are gripping the cable comprising a train of gears associated with one of the chains, a shaft supporting each gear of the train respectively journalled in one of the jaws, a worm pinion mounted on one of said shafts, a worm gear in mesh with said pinion, and means to rotate the said worm gear.



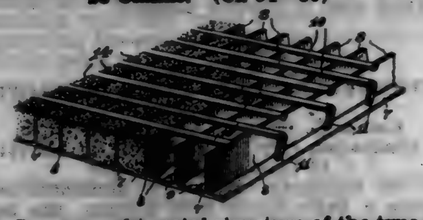
2,031,004
CRAVAT HOLDER
Joseph O. Pollack, Chicago, Ill.
Application July 11, 1935, Serial No. 30,844
4 Claims. (Cl. 24—69)

1. A cravat holder comprising an elongated supporting member, means for securing said member to a shirt front underneath a cravat, a resilient member mounted on and yieldable relative to said elongated member, a flexible member adapted to extend across the front of the cravat and form a loop with one end portion fastened to said elongated member and the other end portion fastened between and normally held against movement relative to said resilient and elongated members, said resilient member yieldable to permit adjustment of the size of the loop to cravats of different widths.



2,031,005
MACHINE FOR INSERTING BOTTLES, ETC., INTO TIGHT FITTING RACKS
Daniel J. Rondeau, Thomasville, Ga.
Application December 23, 1934, Serial No. 758,762
11 Claims. (Cl. 226—13)

1. A bagging machine comprising a funnel-like receptacle adapted to receive the article to be bagged and having spring tensioned side portions adapted to spread apart under the pressure of said article to discharge same into a bag at the small end of the funnel, and a plurality of detachable frame members of different widths

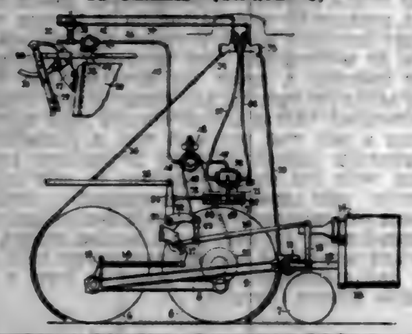


mounted about the periphery of said receptacle to limit the spread of said side portions.

2,031,006
POUR PAIL
Charles H. Rollason, Los Angeles, Calif., assignor to Beyis Manufacturing Company, Inc., Los Angeles, Calif., a corporation of California
Application September 26, 1934, Serial No. 745,495
4 Claims. (Cl. 221—19)

1. In a structure of the class described, the combination of a container having a cover of sheet metal, a dish-shaped depression in the sheet metal of said cover having a side wall provided with a plurality of peripherally spaced outward projections and having in its bottom wall a score line upon which the sheet metal is adapted to be severed and bent inwardly to define a pour opening, a spout for directing the fluid from said pour opening and comprising a trough-like member having a dish-shaped body portion having a side wall provided with a plurality of peripherally spaced outward projections registering with the said projections in said cover, whereby said spout is permanently secured against rotary movement in said depression, and a hinged cover for said spout having means for effecting a resilient spring engagement with the side and end edges of the spout to form a releasable closure therefor.

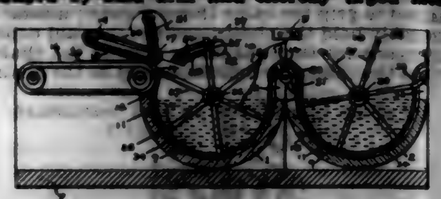
2,031,007
GRID OR GRATING
Walter F. Schaus, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a corporation of Michigan
Application May 26, 1932, Serial No. 613,753
22 Claims. (Cl. 94—20)



1. In a wrought metal structure of the type described, a set of flanged bars with the flange of one bar substantially abutting the flange of the adjacent bar, and means uniting the said abutting flanges of the bars to adjacent flanges to provide in the flange portions of the bars required tensional resistance in angular directions.

2,031,008
APPARATUS FOR EXTRUDING METAL
Joseph J. Schworak, Detroit, Mich., assignor to Behr Aluminum & Brass Corporation, Detroit, Mich., a corporation of Michigan
Application December 24, 1934, Serial No. 759,106
4 Claims. (Cl. 207—17)

1. In an apparatus for extruding unpierced metal billets to form tubing, a die member having a tapering recess terminating in a cylindrical portion of smaller diameter, a cylindrical mandrel of still smaller diameter within the cylindrical portion of said recess and a plurality of supporting and centering wings for said mandrel extending from the mouth of said recess and removably seated upon the tapering wall thereof, the ends of said wings being flush with the mouth of said recess and dividing the space in the entering portion thereof into separate segments terminating in a common plane.

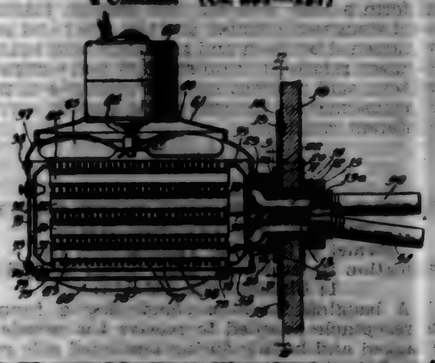


2,031,009
SANDER
Lewis K. Silcox, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application February 26, 1934, Serial No. 712,824
13 Claims. (Cl. 291—5)

1. The combination of a motor vehicle; a sander therefor; a motive energy controller for the vehicle; a starting gear for the vehicle having a starting position; and sander actuating means controlled conjointly by said energy controller and said starting gear, and active to actuate said sander when motive energy is supplied with the starting gear in starting position.

2,031,010
AUTOMATIC POSITIVE PAPER DEVELOPING APPARATUS
Luther G. Simjian, New Haven, Conn.
Application July 5, 1932, Serial No. 620,784
13 Claims. (Cl. 95—94)

1. An automatic developing apparatus comprising a basin for a fluid content, the basin having sides in parallel planes, curved companion grooves in said sides, the grooves having open ends adjacent opposite top portions of the basin, and an arm pivotally mounted upon said sides and adapted to extend below said grooves within said basin, whereby photographic prints, by their marginal portions may be inserted within one set of said open ends, an edge of each print engaged by said arm and thereby urged along



said grooves through said content and delivered at the opposite set of open ends of said grooves.

2,031,011
PACKAGE OF MATCHES
Edwin M. Sohn, Chicago, Ill.
Application January 20, 1932, Serial No. 654,307
3 Claims. (Cl. 44—43)

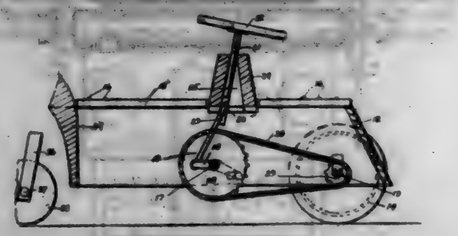
1. A package of matches adapted to diminish in size as the matches are used comprising, in combination, a plurality of matches each comprising a rigid strip of burnable material, igniting material affixed on one side face of each strip adjacent one end leaving the opposed side face bare, striking material affixed on said bare face adjacent the other end of each strip, said matches being arranged in face-to-face relation with the igniting and striking materials holding said strips in spaced relation to each other, and a binding strip glued to the edge of each of said strips and extending laterally intermediate the ends thereof and bridging the space between the strips, said binding strip being made of readily severable material whereby each match may be disconnected from the others by severing the binding strip at the space between said match and the next adjacent match.

2,031,012
HEAT EXCHANGE APPARATUS
Philmore F. Sperry, Chicago, Ill., assignor to Excel Auto Radiator Company, a corporation of Delaware
Application June 19, 1933, Serial No. 676,046
6 Claims. (Cl. 257—127)

2. The combination with a heat exchange device comprising a housing, a radiator core disposed within said housing, and means for advancing air through said housing and said radiator core, of adjustable means for supporting said core and said housing, said supporting means comprising a pipe fitting having a plurality of passages therethrough communicating with said core and with a supply of fluid, said pipe fitting being adapted to project through a supporting wall, a plate abutting against one side of said wall and provided with a plurality of apertures equidistantly spaced from each other and from the longitudinal axis of the pipe fitting, means screw-threaded on said pipe fitting and abutting against the other side of said wall, a bracket fixed to said housing, and means secured to said bracket and provided with projections engageable with said apertures.

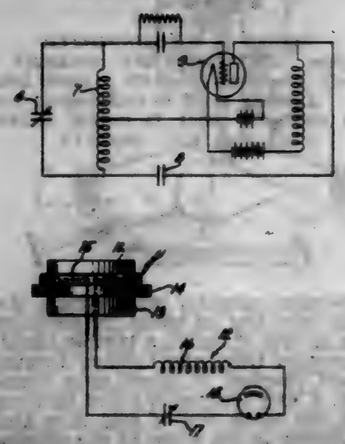
2,031,013
BLANKET
John C. Standish, Rensselaer, N. Y.
Application June 8, 1934, Serial No. 729,781
3 Claims. (Cl. 139—420)

1. A printing blanket for use in the textile printing art comprising a fulled and felted woven fabric having a splice in the warp thereof to form an endless belt; the warp of said fabric containing vegetable fiber, whereby to provide the necessary tensile strength, and also wool, whereby to effect a felting of the warp at the splice and to prevent relative slippage of the spliced warps; and the filling of said fabric being composed of composite yarns formed of wool and vegetable fiber carded and spun together in which the wool content is at least sufficient to provide a substantial fulling and felting of the fabric.



2,031,014
MACHINE FOR MAKING ELECTRICAL CABLES
Horace A. Staples, Plainfield, N. J., assignor to Habirshaw Cable and Wire Corporation, New York, N. Y., a corporation of New York
Original application April 23, 1932, Serial No. 607,063. Divided and this application October 6, 1932, Serial No. 636,494
3 Claims. (Cl. 207—9)

1. A machine for making a metal sheathed cable and comprising in combination, a chamber for receiving heated metal and from which the sheath is adapted to be extruded, a ram cooperable with said chamber for exerting pressure on metal therein, the said ram having an interior passage, a source of gas, and means for conducting a special gas atmosphere from said source and through said passage into said chamber during the withdrawal of said ram whereby air is excluded from said chamber during extruding operations.

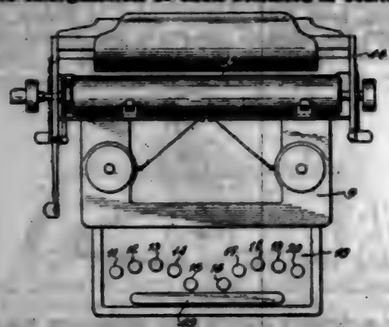


2,031,015
CHILD'S WHEELED VEHICLE
James H. Stevenson, Los Angeles, Calif.
Application September 19, 1934, Serial No. 744,659
6 Claims. (Cl. 280—32)

1. A vehicle consisting of a main box frame, a rear axle shaft a pair of traction wheels on the rear axle shaft, steering mechanism connected to the front of the box frame including a steering post with handle bars, a crank shaft between the ends of the main box frame, crank pedals for operating the crank shaft, to turn the

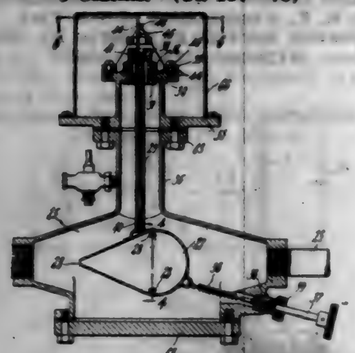
latter, a driver's seat, a post supporting the seat, means for guiding the movement of the post, and means actuated by the crank shaft for moving the post up and down to successively raise and lower the seat.

2,031,016
METHOD OF AND APPARATUS FOR TESTING ELECTRICAL DEVICES
Frank G. Tabersky, Bellwood, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 13, 1932, Serial No. 604,213
8 Claims. (Cl. 175—183)



1. An apparatus for testing electrical devices, comprising an oscillator tuned to substantially the frequency of the device being tested, a wave responsive device coupled to said oscillator and tuned to a harmonic frequency, and means associated with said wave responsive device for indicating the presence of a closed circuit in the device being tested.

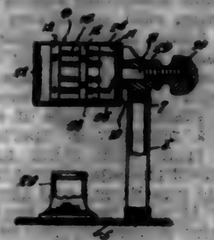
2,031,017
KEYBOARD
Robert Tevis, New York, N. Y.
Application December 12, 1931, Serial No. 581,830
Renewed May 12, 1935
7 Claims. (Cl. 197—11)



5. In a mechanism of the character described a plurality of solenoids, an energizing circuit for each solenoid, two and only two switches in each circuit, said switches being normally open, and a plurality of keys each operable to close a group of the switches, the two switches of each circuit

being respectively in different key groups whereby the energization of each solenoid is controlled

individually and selectively by a predetermined combination of two of said keys.



2,031,618
VISCOSITY REGULATOR
William Thomas, Bogota, N. J., assignor to Pneumercator Company, New York, N. Y., a corporation of Maine
Application May 15, 1933, Serial No. 671,103
9 Claims. (Cl. 137—78)

1. A viscosity regulator comprising a chamber having an inlet and an outlet for conduction of a flowing stream of liquid, a flexible liquid tight hose suspended from and opening through the top of said chamber in liquid tight connection therewith, a body secured in liquid tight connection with the lower end of said hose and suspended thereby in the midst of the chamber for frictional contact with the flowing liquid, a rod passing through the flexible hose into rigid connection with the friction body at the lower end of the hose and having a fulcrum bearing at one side of the upper end of the hose, and protruding therefrom to provide an external lever arm adapted to transmit motion for useful purposes.

2,031,619
TEST TUBE HEATER
Harry A. Walker, Somerville, and Harold P. Strand, Malden, Mass.
Application March 7, 1935, Serial No. 9,838
2 Claims. (Cl. 219—19)

2. A test tube heater comprising a base, an upright, a heating unit having an opening therein through which a test tube can be inserted, a shank on the unit for general disposition through the upper portion of the upright and being provided with threads, a hand knob, said hand knob being provided with a threaded socket for receiving the said threaded portion of the shank and adapted to be tightened against the upper por-

tion of the upright to fix the unit in any angularly adjusted position.

2,031,620
SURGICAL ENDOSCOPIC INSTRUMENT
Frederick Charles Wappler, New York, N. Y.
Application December 18, 1931, Serial No. 581,947
15 Claims. (Cl. 174—89)

1. In an instrument of the character described, a laterally fenestrated endoscopic tube insertable into a body cavity, means for varying the size of said fenestra so that it may be made sufficiently small to prevent the exposed cavity wall portion from protruding into said tube, and means wholly within the confines of said tube for electrically cooking said cavity wall portion.

2,031,621
HARVESTER THRESHER CANVAS
George Gedisp Weber and James Merryweather, Greencastle, Ind.
Application September 22, 1934, Serial No. 745,151
1 Claim. (Cl. 198—199)

A conveyor belt comprising a body, slats on the body; and fasteners each comprising a shank passing through the body and through a slat, the shank having a head cooperating with the body, the shank having a longitudinal slit terminating within the slat and leaving a portion of the shank solid within the slat, the slit defining bendable prongs, the shank having inclined surfaces defining a point at the end of the shank and enabling the prongs to pierce the body, the prongs being extended laterally in opposite directions, and being extended along the sides of the slats, toward the body, the ends of the prongs terminating on the sides of the slats, near to the body but spaced therefrom, the said inclined surfaces then slanting toward the slat.

2,031,622
COMBINATION GARMENT
Hildegard Wippermann, Chicago, Ill., assignor to The H. W. Gossard Company, Chicago, Ill., a corporation of Delaware
Application March 30, 1934, Serial No. 718,146
1 Claim. (Cl. 2—39)

A combination garment comprising a corset and a brassière adapted to encircle the body, having an opening at one side extending from top to bottom and fastening means for securing adjacent edges of said opening together, said corset having a stiffened continuous inelastic front portion adapted to sover the diaphragm and abdomen to a point adjacent the bustline and longitudinal side elastic sections for molding the hips and tensioning said front portion across the diaphragm and abdomen, and said brassière having an upper front portion of soft inelastic material constituting individual bust pockets shaped to mold and elevate the busts and a lower front band of stiffer inelastic material secured thereto and extending crosswise and telescoping the front of said corset, said brassière being secured to the side edges of said corset and detached from the front portion thereof permitting the lower front portion of said brassière to move up and down with respect to said corset front without straining or distorting the busts in accordance with bending movements of the body, said longitudinal side elastic sections extending upwardly past the lower overlapping front portion of the brassière and being tapered at their upper ends so as to produce less stretch at the brassière section than at the lower corset section.

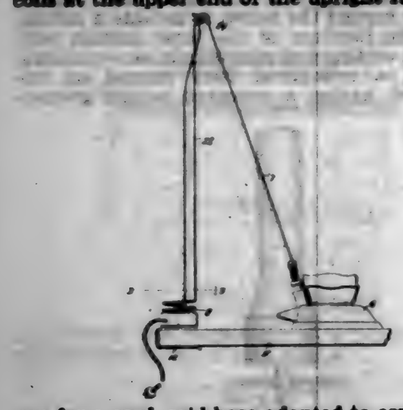
2,031,623
RHODAMINE COLORING MATTERS AND PROCESS FOR PREPARING THE SAME
Max Wyler, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application June 28, 1934, Serial No. 732,923. In Great Britain June 30, 1933
9 Claims. (Cl. 260—62)

2. A dyestuff for wool comprising the sulfonic acid of a rhodamine compound obtainable by subjecting naphthalene-2,3-dicarboxylic acid or its anhydride and a meta-alkylamino-phenol to rhodamine synthesis.

2,031,624
PUNCH
Gustaf R. Ahlquist, Great Falls, Mont.
Application January 14, 1935, Serial No. 1,783
1 Claim. (Cl. 164—124)

A punching and cutting device comprising an anvil block having a bore centrally arranged therethrough and a recess in its upper end, said recess being shaped to provide an annular groove with a convexed portion extending inwardly therefrom to the bore, and surrounding the latter, said block having its upper end beveled outwardly beyond the recess to provide a cutting edge at the juncture of the bevel portion with the recess, cutting and punching means including a handle, a cylindrical body formed on the handle and having a concaved bottom cooperating with the convexed portion and providing an annular cutting edge cooperating with the cutting edge first mentioned and the groove respectively, and a stud extending centrally from the concaved bottom to be received in the bore and being provided with a beveled free end forming a penetrating point.

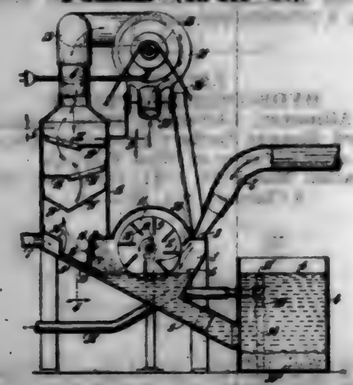
2,031,625
HYDROMETER SYRINGE
Frank Altmayer, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Application March 27, 1931, Serial No. 525,744
5 Claims. (Cl. 265—45)



1. In a hydrometer, a liquid receiving barrel, a bulb and a discharge tube associated with said barrel, said tube having a passage therethrough, and restrainer means including a rubber disc positioned in the discharge passage and normally closing the same, said rubber disc being adapted to flex under pressure and afford a passage for liquid when flexed in either direction and prevent the flow of liquid when the pressure is removed.

4. In a syringe provided with a liquid receiving chamber and an aperture communicating with said chamber, the combination of means for increasing and decreasing the air pressure within said chamber, and flexible means for closing said aperture located adjacent the outer extremity of the same, said last mentioned means being responsive to changes of air pressure within said chamber for opening said aperture either for filling or emptying said chamber.

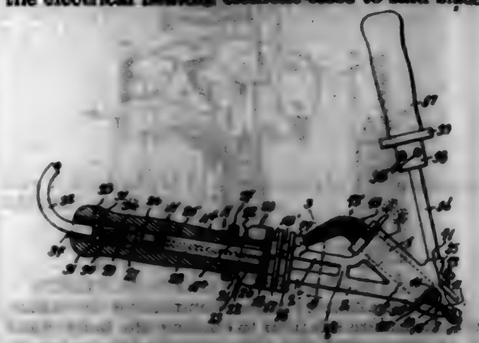
2,031,626
IRON ATTACHMENT
Charles Burton Barker, Aurora, Ill.
Application April 5, 1934, Serial No. 719,225
1 Claim. (Cl. 248—51)



A cord holder of the class described, comprising a hollow base, a board engaging clamp carried thereby, a flexible upright having horizontal coils at its lower end, the lower convolution of which

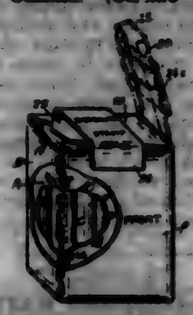
is fastened to the top of the base and horizontal coils at the upper end of the upright forming an

eye for a cord, said base adapted to contain electrical connections for the cord.



2,031,027
AIR WASHING DEVICE
David A. Barnie, Springfield, Mass.
Application May 15, 1935, Serial No. 21,632
8 Claims. (Cl. 183—27)

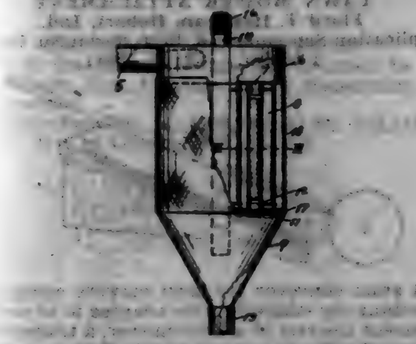
1. A dust washing machine comprising, in combination; a dust-collecting chamber having an inlet opening, a sediment tank having communication with the said chamber, the chamber and tank having water therein, a water-agitating member in the said chamber having lateral passages through the same, an exhaust member having a communication passage with the said collecting chamber, the water agitating member operating to project a curtain of water across the said passage, means for drawing the dust-laden air through the collecting chamber and for simultaneously operating the water-agitating member, the exhaust member having deflecting plates therein for causing the currents of air to travel in a circuitous path, and said plates serving to render the air passing through the exhaust chamber in a dry condition.



2,031,028
TIRE GROOVER
Clifford F. Beyer and George W. Fenke, St. Louis, Mo., assignors to Kwick-Kut Manufacturing Co., Inc., St. Louis, Mo., a corporation of Missouri
Application March 12, 1934, Serial No. 715,138
13 Claims. (Cl. 26—30.3)

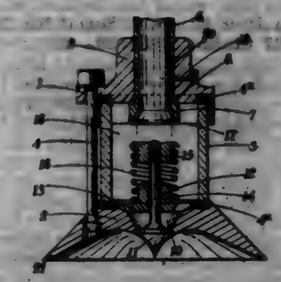
1. A tire-grooving device comprising a head having a cavity formed therein, an electrical heating element supported within said cavity, a blade carried by said head, said cavity being extended throughout substantially the entire head, that is, from one end of the head to a point adjacent to the other end of the head which is in close proximity to said blade, so as to position the electrical heating element close to said blade,

and a handle for controlling movement of the device, the major axis of said handle and said head being disposed at an acute angle relative to each other so that an end of the head is out of alignment with the handle, whereby the electrical heating element may be introduced into or removed from the cavity without removing the handle.



2,031,029
CONTAINER
Hugh Herbert Brenneman, Glen Mills, Pa.
Application October 25, 1932, Serial No. 639,672
7 Claims. (Cl. 229—51)

1. As an article of manufacture a packet consisting of a container having therein articles taxed by the use of a revenue stamp affixed thereto and which must be broken when the container is opened, the said container consisting of at least two telescoped container members, a closing flap formed on each of the said container members with the flap of the outer container overlying the flap of the inner container and pivoted for movement about one of its shorter edges, and a revenue stamp positioned upon the said outer container flap and the said outer container for sealing the said outer container, the said revenue stamp being positioned intermediate the said pivoted and free ends of the said outer container flap.



2,031,030
METALLIC COATING RECOVERING DEVICE
Maxime J. Brimard, San Francisco, Calif.
Application April 22, 1935, Serial No. 17,507
2 Claims. (Cl. 183—70)

1. In a device of the character described, a drum adapted to receive dust laden air, pipes extending downwardly from said drum, a funnel-shaped container positioned beneath said drum and spaced therefrom, the upper surface of said funnel-shaped member being closed and having pipes extending therefrom and communicating with the interior of said funnel, fabric sleeves

extending between the pipes of said drum and funnel, a blanket supported on the closed end of said funnel, said blanket having an upstanding pile, and a breather pipe extending into said funnel and extending to a point above the top of said drum.

2,031,031
DEVICE FOR DELIVERING MEASURED QUANTITIES OF LIQUIDS
Harry Budd, Old Charlton, London, England
Application February 21, 1934, Serial No. 712,383
In Great Britain February 27, 1933
3 Claims. (Cl. 221—116)

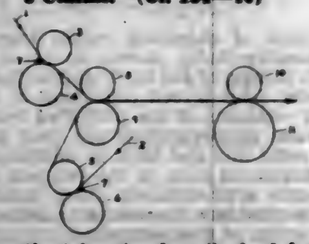
1. A device for delivering measured quantities of liquids comprising in combination a delivery tube adapted to be fitted to the outlet of a closed liquid container, a measuring vessel having a limited vertical movement on said tube, said measuring vessel comprising two horizontally disposed end plates, a vertically disposed cylindrical member arranged between said end plates, means for forming an airtight joint between said delivery tube and measuring vessel, means for maintaining a liquid-tight joint between said cylindrical member and end plates, means for securing the parts in assembled relationship, a spring controlled valve located within said measuring vessel, a valve seating provided on the lowermost plate with which said valve coacts and a stop-member mounted on said valve adapted to coact with and close the inner end of the delivery tube when said measuring vessel is forced upwardly on said delivery tube for the purpose of removing the valve from its seat to discharge the contents of said vessel.

2,031,032
MEANS FOR MIXING THE COLOR ELEMENT IMAGES IN MULTI-COLOR SCREEN PHOTOGRAPHIC PRINTING AND PROJECTION
Walter Chapman, Palmers Green, London, England, assignor to Dufaycolor Limited, London, England
Application March 18, 1933, Serial No. 661,076
In Great Britain July 7, 1932
2 Claims. (Cl. 88—16.4)

1. Method of obtaining copies from a three color Lumiere-Dufay screen so as to obtain a thorough mixing of the light transmitted through the master color screen consisting in displacing the color elements of the projected beam by optical means approximately one unit parallel to a given color line and then by additional optical means displacing each of the two sets or designs of elements approximately three quarters of a unit in a direction transverse relatively to the first direction of displacement.

2,031,033
DISPENSING CARTON
Morton Wise Denoboim, St. Louis, Mo., assignor to Waxide Paper Company, Kansas City, Mo., a corporation of Missouri
Application November 5, 1934, Serial No. 751,584
3 Claims. (Cl. 206—58)

1. A dispensing carton for a roll of sheet paper including a tubular body housing the roll of paper and having a slot to pass the paper, inserts in the ends of the tubular body having trunnion means for rotatably supporting the roll of paper, caps on the ends of the tubular body to retain the inserts, and a knife mounted on the caps for severing the paper.

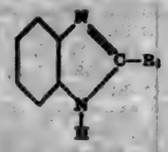


2,031,034
FIDELITY CONTROL CIRCUITS
George Victor Dowding, London, England, assignor to Radio Corporation of America, a corporation of Delaware
Application November 16, 1933, Serial No. 698,311
In Great Britain November 16, 1932
7 Claims. (Cl. 250—20)

1. In a radio receiver, an electron discharge tube provided with a tunable signal input circuit, an output circuit connected to the output electrodes of said tube, a network following said tube adapted to amplify the modulation frequencies of received signals, said network having a rising frequency-amplification characteristic, means operatively associated with said tube for regulating the selectivity characteristic of said signal input circuit, and additional means, operative upon adjustment of said first means to impart minimum selectivity to said tuned input

circuit when a strong signal is received, for diverting from the input to said network currents of the higher modulation frequencies.

2,031,035
METHOD OF MAKING MOISTUREPROOF PAPERBOARD AND THE LIKE
Carl G. Dreymann, Pittsburgh, Pa., assignor to Grant Paper Box Company, a corporation of Pennsylvania
Application October 11, 1933, Serial No. 693,110
3 Claims. (Cl. 154—40)



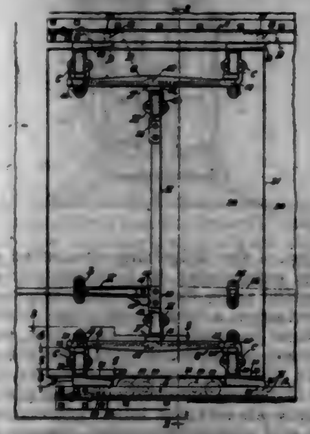
2. The method herein described of forming a multiple-ply sheet of moisture-repellant cardboard, paper-board, and the like, which consists in spreading superficially upon a ply of paper an uninterrupted film of a thermoplastic, moisture-proof adhesive, in heated and fluid condition, bringing such filmed ply, while the film superficially continues in fluid condition, together with a second ply, into a roll-pass of a width equal to the combined thickness of such components, whereby union is effected without compression, allowing the united article to cool to the point of stiffening of the film material, and, finally, at such temperature, subjecting the article to consolidating pressure.

2,031,036
COMPOSITION OF MATTER AND METHOD OF ITS PRODUCTION
Carl G. Dreymann, Pittsburgh, Pa., assignor to Grant Paper Box Company, a corporation of Pennsylvania
No Drawing. Application May 17, 1934, Serial No. 726,110
5 Claims. (Cl. 154—43)

1. A container wall for the packaging of material including a sheet or film composed substantially of amorphous petroleum wax of an apparent melting-point of 120°–170° F., carrying a suspended colloid.

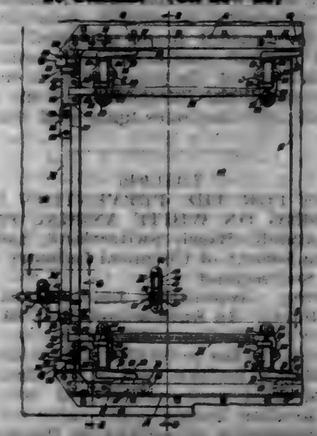
2,031,037
PROCESS FOR THE MANUFACTURE OF BENZIMIDAZOLES HAVING HIGHER ALKYL-GROUPS AT THE β-CARBON ATOM
Charles Graenacher, Basel, and Franz Ackermann, Binningen, near Basel, Switzerland, assignors to the firm of Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application May 14, 1934, Serial No. 725,654. In Switzerland May 18, 1933
5 Claims. (Cl. 260—44)

1. A process for the manufacture of benzimidazoles of the general formula



wherein R_1 stands for a higher alkyl radical containing at least 9 carbon atoms, consisting in condensing ortho-phenylenediamine with a glyceride of such a higher fatty acid which contains at least 10 carbon atoms, the condensation being carried out in the presence of a reducing agent.

2,031,038
LAWN MOWER ATTACHMENT
Floyd T. Harrigan, Hobart, Ind.
Application September 18, 1934, Serial No. 744,681
1 Claim. (Cl. 56—291)

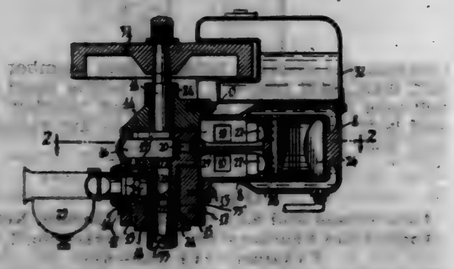


A grass conveyor for lawn mowers comprising a rectangular-shaped frame adapted to be secured adjacent the reel of a lawn mower, a transversely mounted roller in one end of said frame, a second roller, an endless apron trained around said rollers, the sides of said frame having a plurality of spaced oppositely disposed angularly arranged slots therein, said second roller being adapted to be arranged in pairs of said slots for controlling the slack in said apron, a driving connection between the lawn mower and the first named roller, and a receptacle detachably suspended from the frame for receiving the grass from the elevator.

2,031,039
REFRIGERATOR CAR DOOR
Stacy B. Hasseltine, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application June 22, 1934, Serial No. 732,015
27 Claims. (Cl. 20—23)

1. In a door construction for refrigerator cars having a wall member provided with a door opening, the combination with a door adapted to close said opening; of guide tracks on said wall member above and below said door opening; a carrier slidably guided on each track; top and bottom crank members mounted on the door for rotation about vertically aligned axes; a crank arm on each crank member having a crank pin at the outer end journaled in the corresponding carrier; an operating shaft on said door rotatable about a vertical axis fixed with respect to the aligned axes of rotation of said crank members; and power multiplying motion reducing connections between said rotary operating shaft and said crank members for rotating said crank members through an angle which is less than the angular rotation of said operating shaft.

2,031,040
REFRIGERATOR CAR DOOR
Stacy B. Hasseltine, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application July 14, 1934, Serial No. 735,210
20 Claims. (Cl. 20—23)



1. In a door construction for refrigerator cars having a wall member provided with a door opening, the combination with a single door adapted to close said opening; of guide tracks on said wall member above and below said door opening; carriers slidably guided on said tracks; top and bottom swinging supporting arms, each arm being journaled at one end on the door and at the other end on one of said carriers; bars connected to said arms for swinging the same to close or open said door; an operating member connected to the bars; keeper means on the car adjacent to said door opening; and means fixed on said operating member having camming engagement with the keeper means for moving said bars to swing said arms to force the door into the door opening when said actuating member is operated in one direction and pry said door open when the actuating member is operated in a reverse direction.

2,031,041
MOTOR VEHICLE AIR CONDITIONER
Harry W. Hedberg, Fresno, Calif.
Application August 13, 1935, Serial No. 36,015
6 Claims. (Cl. 257—7)

1. A motor vehicle air conditioning structure, comprising a receptacle having spaced inner and outer walls, insulation material between said walls, said receptacle having an open top, a frame secured over and about the edges of said walls at said open top facilitating the suspension of the receptacle in a floor opening, a grating supported upon the frame and closing the top of the receptacle, a second inner receptacle having a wall of foraminous material attached to said frame and suspended in the first receptacle in spaced relation with the inner wall of the same, a bottom for said second receptacle for the support therein of a refrigerant material, an air collecting unit, and an air conducting pipe leading from said unit through the wall of the first receptacle and discharging thereinto beneath the bottom of the second receptacle.

2,031,042
INTERNAL COMBUSTION ENGINE
Ralph J. Herrington, Minneapolis, Minn.
Application October 1, 1934, Serial No. 746,336
1 Claim. (Cl. 123—73)

In a two-cycle internal combustion engine, a crank case having a closure removably secured in the lower end thereof, a vertical crank shaft journaled in a bearing in said closure, the lower section of said crank shaft being formed with an axial tubular bore which communicates at its upper end with the lower central portion of said crank case and at its lower end with a radial port in said shaft which has sealing engagement with the surrounding surface of said journal bearing, and a fuel and lubricant mixture admission port extending [illegible] through said closure and journal bearing below said crank case and adapted to communicate with said radial port in said tubular shaft upon rotation thereof, whereby mixture drawn upwardly through said shaft into said crank case during operation will drain into the bore of said [illegible]ft adjacent its surrounding bearing surface when the engine is idle, prolonging the life of said bearing and improving the starting and slow speed operation of said motor.

2,031,043
ELEVATOR SAFETY DEVICE
Frederick Hymans, Larchmont, N. Y., assignor to Otis Elevator Company, New York, N. Y., a corporation of New Jersey
Application June 15, 1935, Serial No. 26,729
20 Claims. (Cl. 187—91)

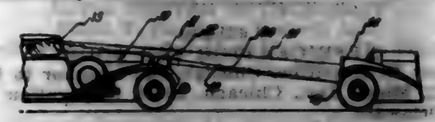
1. In an elevator system having a body movable in the elevator hatchway, a rail extending longitudinally of the hatchway and a safety device for said movable body, said safety device comprising; a member suspended beneath said body adapted to move upwardly with respect thereto; means carried by said member for engaging said rail; operating means for said rail engaging means carried by said member; resilient means interposed between said operating means and said body; and means operable during down-

ward movement of said body for operating said operating means to effect the engagement of said rail engaging means with said rail to retard said member in its downward movement, decreasing the distance between said member and said body, said resilient means acting upon said decrease in distance between said member and said body to transmit force due to the weight of said body to said operating means.

2,031,044
SAFETY PIKE

Lars Jensen and Ray Sherman, Lincoln, Nebr.

Application February 19, 1935, Serial No. 7,161
2 Claims. (Cl. 294—61)



1. A pike including a hollow cylinder and a socket member and a septum therebetween, said cylinder and socket and septum being of integral construction, a prod having a base portion and a point portion, said prod being insertable in said cylinder in either of two positions with either the point portion or the base portion projecting therefrom, said septum being provided with a central aperture for receiving the point of said prod, and a releasable latch for holding said prod in either of its two positions.

2,031,045
MEANS FOR AVOIDING GLARE FROM AUTOMOBILE HEADLIGHTS

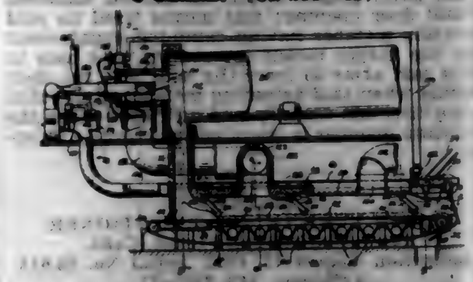
Edwin H. Land, Wellesley Farms, Mass., assignor to Sheet Polarizer Company, Inc., Union City, N. J., a corporation of New Jersey

Application January 16, 1933, Serial No. 651,952
In Canada December 6, 1932
10 Claims. (Cl. 88—1)

1. In a device for avoiding glare from automobile headlights and the like, the combination comprising an enclosed light source, a lens for transmitting light, a polarizing body associated with said light source and positioned to polarize the beam emanating therefrom, said polarizing body comprising a set suspending medium having a mass of polarizing particles dispersed and immovably embedded therein with their polarizing axes oriented to substantial parallelism, and a visor through which said light is adapted to be viewed comprising a similar polarizing body adapted to transmit plane polarized light substantially without scattering and positioned to substantially cut off the polarized light emanating from said headlight irrespective of the angle at which said light impinges upon said visor.

2,031,046
PROCESS FOR THE PREVENTION OF THE BLEEDING ON WHITE ANIMAL FIBERS

Albert Landolt, Basel, Switzerland, assignor to the firm Society of Chemical Industry in Basle, Basel, Switzerland



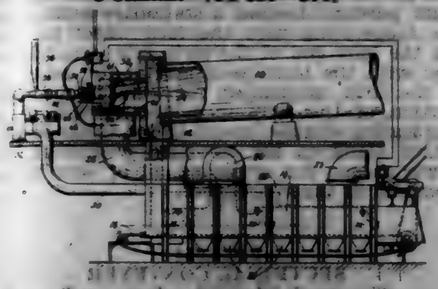
No Drawing. Application June 17, 1931, Serial No. 545,145. In Switzerland June 20, 1930
7 Claims. (Cl. 8—13)

1. Process for the prevention of the bleeding of dyed wool onto undyed wool in the simultaneous milling of dyed wool and undyed wool in an aqueous solution having a pH-value not greater than 7, consisting in adding to the solution a textile auxiliary obtained by causing a compound selected from a group of products consisting of alcohols and aldehydes to react with a naphthalene sulfonic acid.

2,031,047
APPARATUS FOR MANUFACTURING, TREATING, AND COOLING CEMENT CLINKERS

Harry S. Lea, Detroit, Mich.

Application February 13, 1932, Serial No. 592,774
3 Claims. (Cl. 263—32)

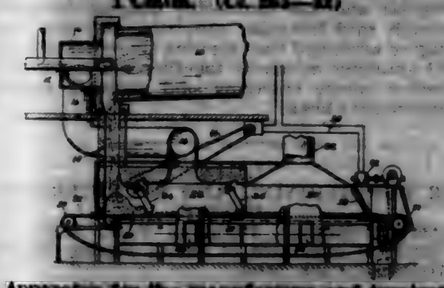


1. In apparatus for the manufacture and treatment of cement clinker, a kiln having an outlet for the discharge of clinker, a fuel feed for the kiln, a stationary closed chamber to receive the clinker discharged from the kiln, clinker moving means arranged within said chamber to advance the clinker in a moving bed through the chamber, means for causing an air stream to pass through the chamber and through the moving clinker, means for delivering a portion of said air from said chamber into the kiln, control mechanism responsive to the temperature of the air delivered from said chamber to the kiln coupled with the clinker moving mechanism to regulate the same as a function of said temperature.

2,031,048
FUEL FEED BURNER

Harry S. Lea, Detroit, Mich.

Application June 22, 1932, Serial No. 618,834
8 Claims. (Cl. 110—104)

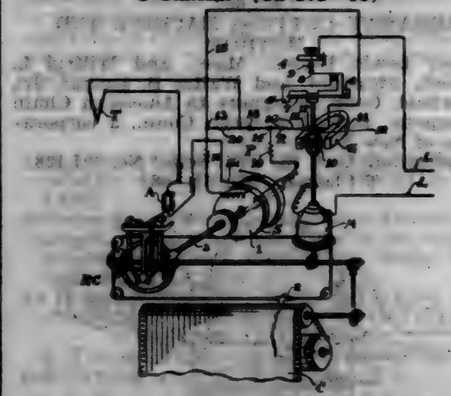


1. Fuel feed mechanism for a cement kiln comprising, in combination with a kiln, a fuel feed pipe arranged to direct a stream of powdered fuel into the kiln, a source of heated air, an enclosure surrounding the discharge end of said fuel feed pipe forming a chamber thereabout communicating with the source of heated air to receive air therefrom to pass through said chamber over the discharge end of the fuel feed pipe into the kiln, an air pipe extending through the wall of the enclosure telescopically surrounding the fuel feed pipe but spaced therefrom forming an air passageway therearound, and means supporting said pipes operable to adjust the angular position thereof as a unit within the enclosure.

2,031,049
APPARATUS FOR MANUFACTURING AND TREATING CEMENT CLINKERS

Harry S. Lea, Detroit, Mich.

Application September 12, 1933, Serial No. 689,295
1 Claim. (Cl. 263—32)

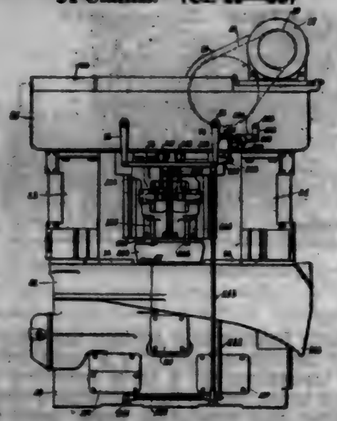


Apparatus for the manufacture and treatment of cement clinkers comprising a primary combustion chamber wherein cement clinker is formed, a clinker treatment chamber into which the primary combustion chamber discharges highly heated cement clinkers, means for advancing said cement clinkers in a continuous stream through said treatment chamber, means for directing an air draft through said advancing stream of cement clinkers within the treatment chamber, means for taking air heated by being passed through the forward end of the clinker treatment chamber and delivering the same to the primary combustion chamber, valve means engaging the moving stream of clinkers preventing an uncontrolled quantity of air from passing into the primary combustion chamber from the clinker treatment chamber, and mechanism responsive to the rise and fall of said valve means in response to the increase and decrease in thickness of the stream of clinkers travelling thereunder operable to vary the rate of travel of the clinker advancing means.

2,031,050
MEASURING SYSTEM

Morris E. Leeds, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a corporation of Pennsylvania

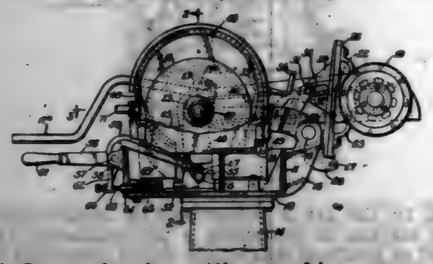
Application December 3, 1932, Serial No. 645,333
8 Claims. (Cl. 171—95)



5. In the art of potentiometric measurement, the method of producing a potentiometric current of constant magnitude which comprises deriving a direct current voltage from a commercial source of current, maintaining the magnitude of said voltage substantially constant notwithstanding substantial variation in voltage of said commercial source and variations in magnitude of the condition under measurement, producing by said derived voltage flow of current through a path including in series a measuring circuit of substantially constant resistance and resistance whose magnitude is substantially constant and high relative to any change in the resistance of said path due to change of temperature or other condition of operation.

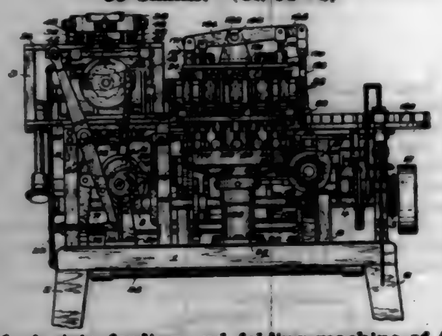
2,031,051
AUTOMATIC CHUCKING MACHINE

Arthur J. Lewis, Stratford, Conn., assignor to The Baird Machine Company, Bridgeport, Conn., a corporation of Connecticut



Application January 26, 1933, Serial No. 653,041
34 Claims. (Cl. 29—38)

1. In a machine of the class described, the combination of a support, a plurality of rotatable work holders on the support, means for opening the work holders but normally disconnected therefrom, means for rotating the work holders but



normally disconnected therefrom and an element common to both of said means and having direct connections therewith, said element being movable to actuate said means toward the work holders.

2,031,852
ABRASIVE CUTTING MACHINE AND METHOD
Dartrey Lewis, Boston, Mass., and Wilfrid L. Walsh, Stratford, and Walter B. Lashar, Jr., Fairfield, Conn., assignors to American Chain Company, Inc., Bridgeport, Conn., a corporation of New York
Application April 18, 1934, Serial No. 721,128
9 Claims. (Cl. 51—98)

1. In an abrasive cutting machine, means for clamping the material to be cut, a thin abrasive wheel, a frame on which the said wheel is rotatably mounted, the said frame being pivotally mounted to permit it to tilt and to move the wheel bodily in its plane of rotation, and a member provided with an arcual conduit for liquid mounted in the plane of rotation of the wheel and approximately concentric therewith, said conduit being provided with a narrow slot through which the edge of the wheel may, when tilted, extend into the conduit and rotate therein, said conduit being symmetrical with respect to the plane of travel of the wheel therein.

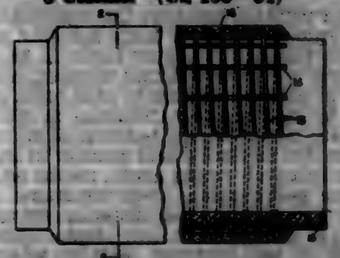
2,031,853
APPARATUS FOR FORMING, FOLDING, AND BANDING PAPER STRIPS
Alvin A. Maasial, Wheeling, W. Va.
Application September 17, 1934, Serial No. 744,211
26 Claims. (Cl. 93—1)

1. A strip feeding and folding machine of the character described, including a table having an opening therethrough, a strip receiving hopper above said table, means for removing a strip from said hopper and depositing same upon the table, means for advancing a strip along said table and into position over said opening, a reciprocating die above said table aligned with the opening and adapted for movement therethrough, a feed wheel beneath said opening adapted to cooperate with said die member to form said strip into substantially U-shape with one free end shorter than the other, means supported by the table beneath the latter for folding the short end of the strip into parallel relation with the bight portion of same, a stationary guide member cooperating with the feed wheel for folding the long end of the strip into parallel relation with the bight portion and the other end of the strip, mechanism for securing the folded portion of the strip in folded position, a reciprocating channel member for advancing the folded blank to the securing mechanism, and power means for actuating all of said moving elements in timed sequence.

2,031,854
SECTIONAL CONVEYER
Timothy F. McCarthy, Indiana, Pa.
Application May 6, 1935, Serial No. 20,819
6 Claims. (Cl. 198—204)

1. In a conveyer, a plurality of aligned troughs, and means to connect said troughs together comprising a pair of abutting members extending laterally from adjacent troughs, said members being provided with aligned apertures and the aperture in one of said members being of an irregular contour, a connecting bolt adapted to register with said apertures, said connecting bolt having a head conforming to the contour of said irregular aperture and being adapted to extend through said irregular aperture, and said head being so arranged that turning thereof will clamp said abutting members together against a compression spring engaging said abutting member opposite said head.

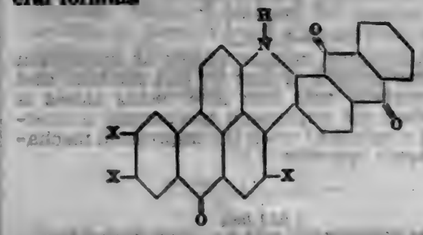
2,031,855
AIR CONDITIONING AND REFRIGERATING DEVICE
Robert McKinney, Highland Park, Mich., assignor of one-third to Lucius Hadlow Grimes, Highland Park, Mich.
Application October 30, 1933, Serial No. 695,899
4 Claims. (Cl. 261—107)



1. In an air conditioning device, a casing provided with a water reservoir, an electric motor mounted within the casing and provided with a shaft, a series of fans on the shaft, the casing having a pair of inlet openings, a curtain between each air inlet opening and the fans, the curtain being formed of absorbent porous material having a layer of wire mesh on each side thereof, a pair of belts driven by the electric motor, each belt extending into the water reservoir and each belt being provided with lugs for throwing water over the curtains during rotation of the belt.

2,031,856
TUBING CATCHER
William H. McKissick, Tulsa, Okla.
Application April 16, 1934, Serial No. 720,834
3 Claims. (Cl. 166—219)

1. A tubing catcher including a tubular body member, a set of slips carried on the body member to engage a casing in which the tubing catcher is inserted and having depending foot portions, a collar slidable on the body member and having flange portions engaging the foot portions of the slips, lock springs having offset ends fulcrumed in the collar and having casing gripping portions, a spring coiled about the body member, a weight member loading the spring and having a wedge portion engaging the lock springs to effect movement of the lock springs into gripping engagement with the casing upon movement of said weight member in response to inertia and the action of the coiled spring upon dropping movement of the body member whereby the slips are supported from the casing, stop means on the body member engaging one end of the spring and having an annular flange to protect the weight from accidental movement, and wedge means on the body member for driving the slips into gripping engagement with the casing.



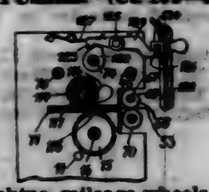
2,031,857
COMPOSITE PIPE AND LIKE STRUCTURE
Robert W. Mitchell, Westmount, Quebec, Canada
Application December 24, 1934, Serial No. 759,125
5 Claims. (Cl. 138—84)

1. A composite pipe or the like comprising a preformed inner portion, longitudinal reinforcing bars outside of and in contact with the outer surface of said inner portion, circumferential reinforcement comprising a continuous member encircling said preformed portion and disposed in tension outside of and in contact with said longitudinal reinforcing but out of contact with said preformed portion, and a cementitious covering for all said reinforcing extending between the circumferential reinforcing and the outer surface of said preformed inner portion and thereby held against displacement.

2,031,858
VAT-DYESTUFFS OF THE ANTHRAQUINONE SERIES AND PROCESS OF MAKING THE SAME
Wilhelm Moser, Riehen, and Walter Fierozd, Binningen, Switzerland, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application March 13, 1935, Serial No. 10,915. In Switzerland March 17, 1934
4 Claims. (Cl. 260—36)

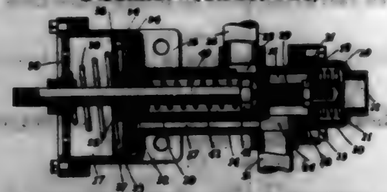
2. The anthraquinone derivatives of the general formula

in which one X stands for a methyl group and the other two X's stand for hydrogen atoms, which products are dark olive powders, dissolving in sulfuric acid at first to a brown solution which then gradually changes to olive-green, and forming reddish-blue vats from which vegetable fibers are dyed fast green-olive to brown-olive tints.



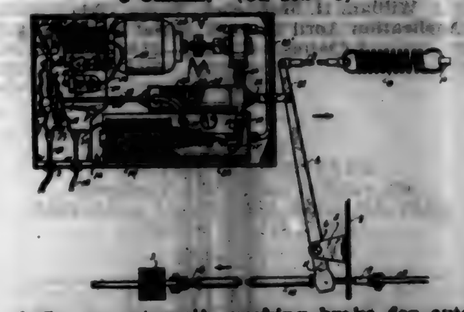
2,031,859
TRANSMISSION MECHANISM
Matteo Natella, Salerno, Italy
Application April 7, 1933, Serial No. 664,945
In Italy May 12, 1933
7 Claims. (Cl. 74—337)

1. In a transmission mechanism, the combination of a driving shaft; a driven shaft; a spindle carried by said driving shaft and disposed crosswise thereof; a plurality of segmental beveled gears mounted side by side on said spindle so as to swing around the axis of said driving shaft; a plurality of telescopically associated hollow drums that are concentrically disposed with relation to the axis of said driving shaft and each of which is made at one end with a bevel gear co-operatively disposed with respect to one of said segmental beveled gears and made at its opposite end with



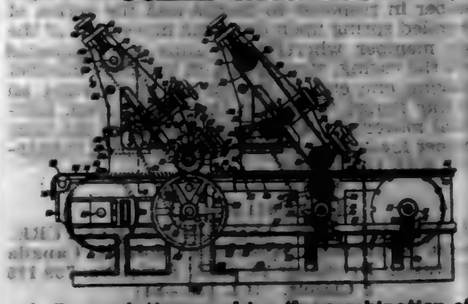
a spur gear, the spur gears of the several drums being of different diameters; a plurality of spur gears fixed in position upon said driven shaft each of which is continuously in mesh with the spur gear of one of said drums, and automatic means for operating said spindle so as to selectively control the engagement of said segmental beveled gears individually with the beveled gears of said drums according to variations in the load imposed upon said mechanism by said driven shaft.

2,031,660
PRINTING ODOMETER
John F. Ohmer, Dayton, Ohio, assignor, by mesne assignments, to Central United National Bank, Cleveland, Ohio, as trustee
Application October 2, 1932, Serial No. 635,976
11 Claims. (Cl. 101—93)



1. In a machine, mileage wheels, an impression mechanism therefor, a door for said machine, and means whereby said door after being closed is locked when the impression mechanism is operated and is unlocked when the impression mechanism is again operated.

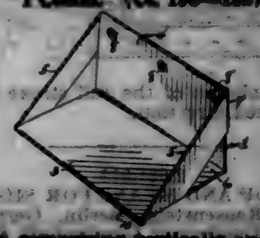
2,031,661
FLUID CONTROL VALVE FOR VACUUM BRAKE SYSTEMS
Max Paul and Walter Orr, Stockton, Calif., assignors of one-third to Prentice M. Miles, Stockton, Calif.
Application April 20, 1934, Serial No. 721,193
8 Claims. (Cl. 303—54)



1. A valve unit for a vacuum braking system comprising a valve chamber, open at one end to atmosphere, a hollow piston valve slidable in the chamber, an outwardly opening air valve to close the open end of the chamber, said chamber having longitudinally spaced ports near the open end of the chamber, the port nearest the said end being adapted for connection to a brake pipe and the other being adapted for connection to a source of negative pressure, the piston valve normally closing the last named port but the other port being always open, and said valve also then holding the air valve open, a foot actuated rod slidably projecting into the piston valve from its end opposite the ports, a compressible spring between the piston valve and rod acting to cause said valve to yieldably move with the rod when the latter is pulled away from the ported end of the chamber whereby the valve will be moved to open the second named port and allow the air valve to close, and means within the valve unit actuated upon the establishment of communication between the ports to cause the piston to be retracted sufficiently without movement of the foot actuated rod to close said second named port but insufficiently to engage and open the air valve.

2,031,662
AUTOMATIC PARKING BRAKE
Charles G. Peabody and Richard W. Roberts, Portland, Oreg.
Application April 15, 1935, Serial No. 16,295
6 Claims. (Cl. 192—8)

1. In an automatic parking brake for automotive vehicles, the combination including a master brake lever connected to the braking system of the vehicle and having release and applied positions, means constantly urging the lever to applied position, hydraulic means for moving the lever to release position, means in the ignition circuit of the vehicle operating when such circuit is open to release the hydraulic means so that the urging means move the lever to applied position, and magnetic means in the ignition circuit operable when the circuit is closed to cause the hydraulic means to move the lever to release position.



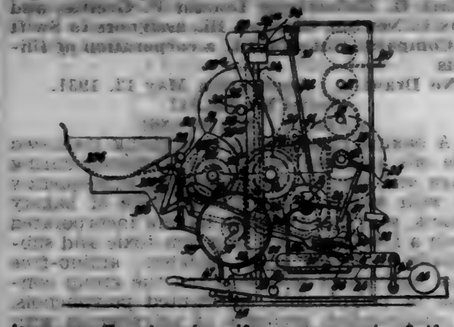
2,031,663
CONTINUOUS MACHINE FOR PRINTING FLOOR AND WALL COVERINGS
Thomas Pauli, Raritan, N. J.
Application October 17, 1932, Serial No. 638,048
3 Claims. (Cl. 101—181)

1. In a printing machine the combination of a frame, endless conveyer belts movably mounted upon the frame for moving goods to be printed, an endless one piece printing member, rollers arranged in parallel relation to each other and embraced by said member, bearings in which said rollers are mounted, said bearings arranged upon the frame for mounting said member in an oblique position relatively to the goods, means adjustably mounting said bearings upon the frame, and arranged for varying the distance between the rollers, a guide upon the frame positioned obliquely to the conveyor belts in which guide the bearings in which one of the rollers is mounted are movably in a line at right angles to the length

of said member and arranged for varying the position of the last mentioned roller relatively to the goods, a supporting roller upon the frame and arranged for supporting the goods adjacent to said member, an ink receptacle mounted upon the frame, an ink roller positioned to receive ink from said receptacle and arranged for applying ink to said member, a roller located within said member and arranged for pressing said member against the ink roller, bearings in which the last mentioned roller is mounted, and means adjustably mounting said last mentioned bearings upon the frame.

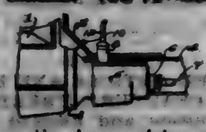
2,031,664
ELEVATOR BUCKET
Leonard C. Penting and Arthur G. Kilwer, Abilene, Kans.
Application April 3, 1934, Serial No. 718,641
1 Claim. (Cl. 198—152)

A bucket comprising vertically and horizontally arranged and integrally connected walls, side members integral with the horizontal wall and bent to engage one face of the vertical wall, said side members spaced from the horizontal and vertical walls where said walls join each other to form openings, a flange formed on the vertical wall and overlying the ends of the side members, said vertical wall, the flange and the ends of the side members having aligned openings to receive fasteners for securing the vertical wall to a conveyor belt and simultaneously securing the ends of the side members to the vertical wall, said horizontal wall having its free edge rolled to form a beading.



2,031,665
ANTENNA
Klaas Posthumus and Balthasar van der Pol, Eindhoven, Netherlands, assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Original application September 18, 1929, Serial No. 393,794. Divided and this application September 21, 1932, Serial No. 634,313. In the Netherlands September 18, 1929
5 Claims. (Cl. 250—11)

1. A directive antenna system comprising a two wire transmission line, the wires of said line being parallel to each other and separated a distance equal to an odd multiple of half the length of the communication wave, parallel radiators transverse of said wires extending between said wires and connected thereto, said radiators being located substantially one wave length apart whereby cophasal energization is effected therein.



2,031,666
AUTOMATIC LAP DOFFER
Thomas S. Ramsdell, Great Barrington, Mass.
Application April 7, 1933, Serial No. 665,813
21 Claims. (Cl. 19—162)

4. A picker calender or the like, comprising feed rolls, a lap roll for receiving the lap which passes through said feed rolls, means for rotating said rolls, and means for severing the lap by

temporarily stopping the movement of the lap through adjacent rolls.

2,031,667
AUTOMATIC TRANSMISSION
Carl F. Rouse, Grosse Pointe, and Axe E. Kilpela, Detroit, Mich., assignors, by mesne assignments, to Borg-Warner Corporation, a corporation of Illinois
Application August 2, 1933, Serial No. 682,449
11 Claims. (Cl. 74—336.5)

1. An automatic transmission comprising a driving shaft, a driven shaft, change speed gearing adapted to interconnect said shafts in a plurality of different driving ratios, jaw clutch mechanism having pitched axial teeth surfaces operable only whenever approximate synchronization between the rotative speed of said teeth occurs for connecting said change speed gearing to said driven shaft in a plurality of different ratios, means operable responsive to a predetermined speed of rotation of the driven shaft for actuating said clutch mechanism to effect an automatic change in the driving ratio between said shafts, manually operable means for actuating said clutch mechanism to effect selective changes in the driving ratio between said shafts, and a lost motion connection between said manually operable means and said other means.

2,031,668
REFRIGERATOR DOOR
Clifford A. Rehling, St. Paul, Minn., assignor to Seeger Refrigerator Company, St. Paul, Minn., a corporation of Minnesota
Application November 11, 1933, Serial No. 697,931
9 Claims. (Cl. 20—35)

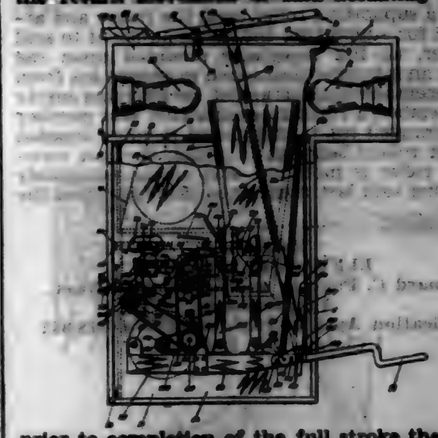
7. A door including an insulating frame, an outer metal sheathing for said door, hook-like spring means on one side of said frame adapted to resiliently engage one side of said sheathing, and means for holding the other side of said frame in tight engagement with the other side of said sheathing.

2,631,069
STABILIZATION OF OILS AND FATS
William D. Richardson, Donald P. Grettie, and Roy C. Newton, Chicago, Ill., assignors to Swift & Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application May 12, 1931, Serial No. 536,942
6 Claims. (Cl. 99—96)

1. A baking composition comprising stabilized edible oils and fats which are stabilized during storage and distribution and when subsequently used with water in the manufacture of bakery products, said oils and fats having incorporated therein a fraction of 1% of a non-toxic and substantially odorless and tasteless amino-free phenol derivatives selected from the group consisting of polyphenols, substituted polyphenols, and condensation products of polyphenols with ketones or aldehydes, said polyphenol derivative being soluble in the oil or fat, but having such insolubility in hot water and stability at high temperatures that it will remain in the oil or fat when used with water in the manufacture of bakery products, and stabilizes the same during such use and in the resulting bakery product.

6. Food products in which, or in the manufacture of which, water is used, said products containing therein oils or fats stabilized by the presence therein of a small amount of a condensation product of pyrogallol and acetone.

2,631,070
METAL COATED ARTICLE AND PROCESS OF MANUFACTURE THEREOF
Robert R. Robinson and Edward L. Rick, Los Angeles, Calif.; said Rick assignor to William D. Howse, Los Angeles, Calif.
Application May 17, 1932, Serial No. 671,516
25 Claims. (Cl. 41—26)



1. A sign including a cellulose body and metallic indicia adhering to a surface thereof primarily through the intimacy of the contact therewith.

4. The process of coating a cellulose body with metal which includes removing a portion of the volatizable matter from the surface of said body and subsequently directing molten metal particles thereagainst at high velocity.

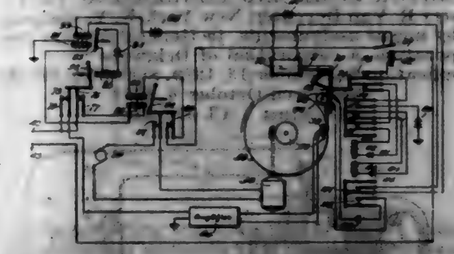
2,631,071
PHOTOGRAPHIC COPYING APPARATUS
Bruno C. Rochri, Binghamton, N. Y., assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York
Application January 13, 1932, Serial No. 651,459
Renewed July 17, 1935
6 Claims. (Cl. 88—24)

1. A photographic copying apparatus comprising a casing, a copy holder thereon having a pivoted platen, illuminating means therefor, film holding means in said casing, a shutter in the exposure path between said copy holder and said film, a single actuating means movable through a predetermined path, means actuated by the movement of said last named means in one direction for successively operating said platen, illuminating means and shutter, and means preventing the return movement of said actuating means

prior to completion of the full stroke thereof in the first named direction.

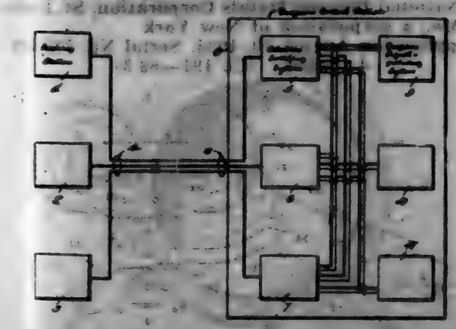
2,631,072
METHOD OF AND MEANS FOR SIGNALING
Hans Otto Roosenstein, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application May 5, 1933, Serial No. 669,431
In Germany May 18, 1931
12 Claims. (Cl. 250—5)

1. The method of reducing fading effect on the transmission of modulatory electrical energy which includes the step of, modulating said waves to a depth which varies exponentially as the amplitude of the modulating potential varies.



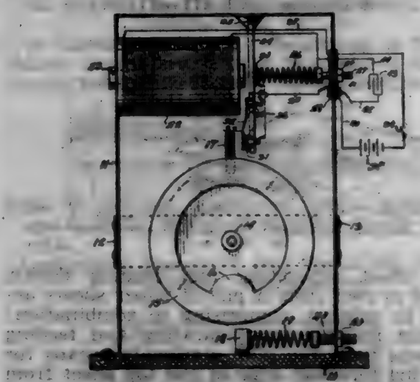
2,631,073
DIRECTION FINDER COMPENSATOR FOR DIRECT READING OF TRUE BEARINGS
Hans Schaefan, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application March 28, 1932, Serial No. 601,571
In Germany April 14, 1931
5 Claims. (Cl. 250—11)

1. A direction finder mechanical compensator for the direct reading of the true bearings comprising a scale, an indicator pivotally located at the center of said scale for reading the bearing of said scale, a replaceable cam having a periphery for providing the corrections necessary to secure direct readings of the true bearing



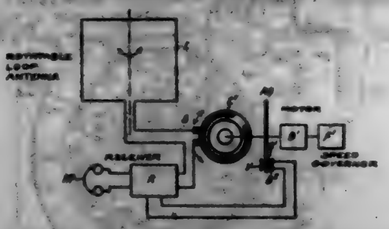
a parallelogram drive having arms, one of said arms joined to said indicator, a roller pivotally located at an extended portion of one of said arms, said roller adapted to revolve on the periphery of said cam, the relationship between the virtual displacement angle of the cam and the parallelogram drive, and the corresponding displacement angle of the indicator upon the scale having a greater angular ratio than 1 to 1.

2,631,074
AUTOMATIC PROGRAM SYSTEM
Gordon Brown Schaibell, Newark, N. J.
Application March 12, 1931, Serial No. 522,691
19 Claims. (Cl. 179—100.4)



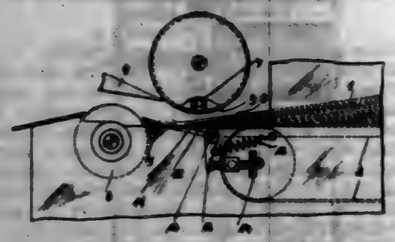
1. In a program system, a phonograph record having a program recorded thereon, an electrical pickup device for engaging with said record, a translating device, means for establishing an electrical circuit between said pickup device and said translating device, means controlled by the movement of said pickup device on said record for electrically disconnecting said translating device from said pickup device at a predetermined time, and means controlled by the movement of said pickup device on said record for moving said pickup device from a point on said record corresponding to the end of said program to a point on said record corresponding to the beginning of said program.

2,631,075
SELECTIVE PROGRAM SYSTEM
Gordon Brown Schaibell, New York, N. Y.
Application March 12, 1931, Serial No. 522,690
Renewed June 7, 1932
43 Claims. (Cl. 179—3)



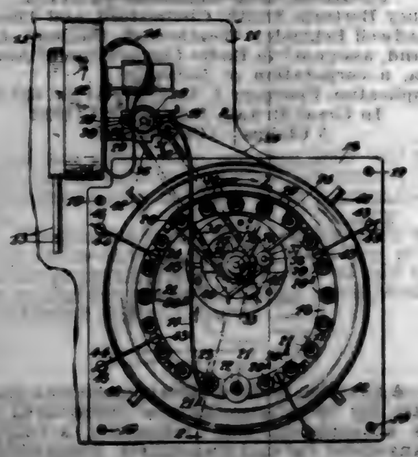
1. A selective program system comprising means adapted to produce program signals and including a program record, a plurality of program receiving stations, and switching means adapted to selectively distribute said program signals to said receiving stations, said switching means being controlled in accordance with predetermined movement of said program record.

2,631,076
ELECTRIC OSCILLATOR
Owen M. Shattuck and Mari E. Fulk, Phila, Ohio; said Shattuck assignor to said Fulk
Application June 12, 1934, Serial No. 730,365
4 Claims. (Cl. 172—126)



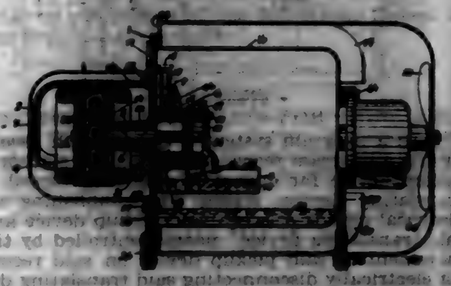
1. A device of the character described, including a wheel having a lug thereon, a spring disposed in the path of movement of the lug and struck by said lug after a predetermined movement of the wheel, the spring, when the inertia of the wheel has been overcome, acting to reverse the movement of the wheel, an electro-magnet, and means actuated by the magnet and engaged by said lug after a predetermined reverse movement of the wheel affecting energization of the electro-magnet and the movement of said means against the lug to reversely impel the wheel.

2,631,077
WIRELESS DIRECTION FINDING, BEARING FINDING, AND SIMILAR SYSTEM
Sidney Bertram Smith, Chelmsford, and Thomas Lydwell Eckersley, Weatheroak, Danbury, England, assignors to Radio Corporation of America, a corporation of Delaware
Application February 3, 1933, Serial No. 655,020
In Great Britain February 25, 1932
5 Claims. (Cl. 250—11)



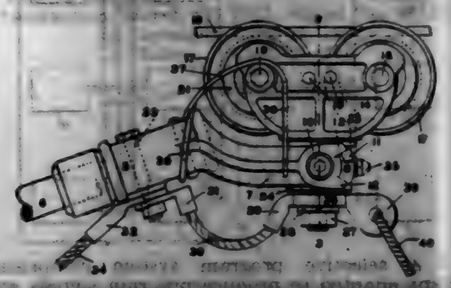
1. A direction finder system comprising a transmitter for the transmission of interrupted signals, an aerial for said transmitter, a coupling arrangement for said transmitter, comprising an interrupting device driven at a substantially constant pre-determined speed and a rotatable loop aerial coupled to a receiver having associated therewith an interrupting device comprising a rotatable disk to interrupt the signals from said transmitter and being driven at substantially the same speed as said transmitter, said interrupting device having means provided by said rotatable disk to differentiate between a desired signal from said transmitter and a subsequent repetition, the said desired signal being used for determining the point of origin of said signal.

2,031,078
SHEET SEPARATING AND FEEDING DEVICE
Georg Spicer, Leipzig, Germany
Application August 24, 1934, Serial No. 741,364
In Germany August 28, 1933
6 Claims. (Cl. 271—37)



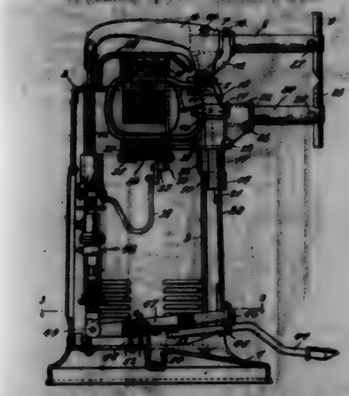
1. A sheet separating and feeding device, adapted to feed from a pile of paper sheets arranged in echelon, comprising in combination: a suction member for separating and feeding the sheets from the pile; stationary means for lifting the foremost edge of the top sheet from the edge of the second sheet to form a gap between the top sheet and the rest of the pile; means for adjusting said stationary lifting means; and an air blast member for blowing air into the gap; said stationary lifting means operating independently of the pile feed.

2,031,079
DEVICE FOR THE REWINDING OF PHOTOGRAPHIC FILMS
Hector J. Streyckmans, New York, N. Y., assignor, by mesne assignments, to Artexsotion Pictures, Inc. of New York, New York, N. Y., a corporation of New York
Application March 8, 1933, Serial No. 650,796
10 Claims. (Cl. 88—18.7)



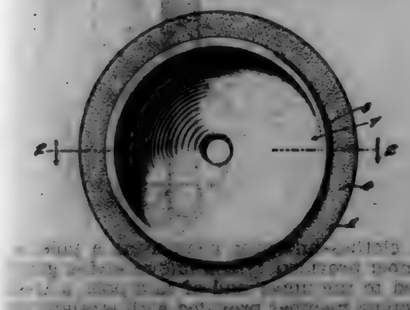
2. In a device for rewinding continuous motion picture film upon the top of the periphery of a substantially annular coiled roll thereof from the inside of which such film is returned to the projector head in an automatic projecting machine, in combination, an annular stationary reel for the coiled film comprising a circular series of idler rollers, an endless friction drive belt for revolving the coiled film on the reel passing over a chosen arcuate number of said idler rollers at the top of the circular series thereof in frictional driving engagement with the inner face of the innermost coil of said film and passing around the terminal rollers in said upper arcuate number thereof to the inside of said reel, and a driving pulley for said belt around which it passes within said reel, one of said idler rollers in the bottom portion of said circular series thereof being an outwardly flaring cone-shaped roller so as thereby effectively to serve as a film-delivering roller around which the innermost coil of said film passes inwardly and upwardly at the outside of said coiled roll thereof in the upwardly returning movement of this portion of said continuous film to said projector head.

2,031,666
MOTOR PUMP AND CONDENSING UNIT
Harry R. Van Deventer, New York, N. Y., assignor, by mesne assignments, to General Motors Corporation, a corporation of Delaware
Application September 12, 1932, Serial No. 632,381
Renewed October 6, 1933
11 Claims. (Cl. 62—115)



1. In a motor-pump unit, the combination of a motor and pump, a common support therefor comprising a plate, said plate having apertures in communication with the intake to and exhaust from said pump, a casing forming with said support a gas-tight chamber, means within said chamber for retaining a body of lubricant, means for supplying said lubricant to the motor and pump, and means in said chamber for retaining a body of liquid separate from said lubricant;

2,031,671
ELECTRIC CURRENT COLLECTOR
Albert Vigna, Webster Groves, Mo., assignor to National Bearing Metals Corporation, St. Louis, Mo., a corporation of New York
Application August 10, 1934, Serial No. 739,157
4 Claims. (Cl. 191—61.3)

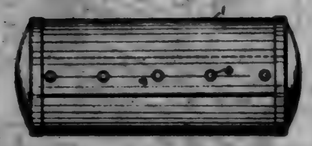


1. In a device of the class described, the combination with a truck, of collector wheels mounted thereon, a vertical pivot pin carrying said truck, a pivot block in which said pivot pin is mounted, and a trolley harp provided with transverse engaging said pivot block.

2,031,672
WELDING MACHINE
Edmund J. von Henke, Chicago, Ill., assignor to American Electric Fusion Corporation, Chicago, Ill., a corporation of Illinois
Application February 5, 1934, Serial No. 709,879
6 Claims. (Cl. 219—4)

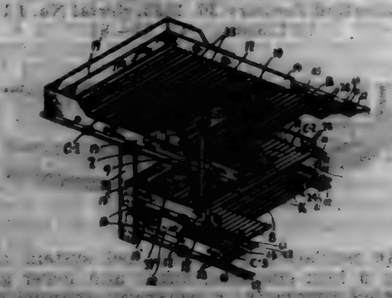
1. In a welding machine, a base having a support extending upwardly therefrom, a horizontally extending pin mounted on said support, two members both pivotally mounted on said pin, one extending upwardly and the other downwardly therefrom and one resting against said support to prevent rotation on the pivot in one direction, horns mounted in said members, and electrodes mounted in said horns and facing towards each other whereby upon pivotal movement of said members with respect to each other said electrodes may be brought into close proximity to weld work therebetween, and means for supplying electric current to said electrodes.

2,031,962
GUIDE OR SUPPORT FOR MOLTEN GLASS
Charles A. Weller, Bloomfield, N. J., assignor, by direct and mesne assignments, of one-half to Baker & Company, Inc., Newark, N. J., a corporation of New Jersey, and one-half to Westinghouse Electric and Manufacturing Company, a corporation of Pennsylvania
Application January 21, 1933, Serial No. 652,816
4 Claims. (Cl. 49—55)



1. In the manufacture and handling of glass, a metallic part required to be in direct contactual relation with molten glass in such a state that the glass is capable of flowing and wetting metal, said part formed of an alloy of platinum and rhodium, wherein platinum constitutes the major portion.

2,031,964
BLASTING ASSEMBLY
Vernon Harcourt Williams, Ardrossan, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application October 3, 1933, Serial No. 692,672. In Great Britain October 5, 1932
1 Claim. (Cl. 102—5)

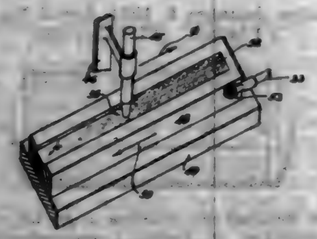


A blasting assembly, comprising a blasting charge loaded into a bore hole, and a tamping charge consisting of solid carbon dioxide.

2,031,965
METHOD OF FORMING METAL CONTAINERS
John F. Werder, Lakewood, Ohio, assignor of one-half to Edmund Rogers, South Euclid, Ohio
Application January 9, 1931, Serial No. 507,711
3 Claims. (Cl. 113—120)

2. The method of making a metal container body consisting in forming corresponding unbroken embossed projections and apertures respectively in the two end portions of a strip of metal of proper length for the body to be formed, closing the strip so as to form an overlapping joint with the projections engaging in the apertures, clamping the joint along the two sides of the registering projections and apertures so as to hold the overlapping portions in effective engagement to the extreme edges thereof and leaving access to the projections and apertures, and applying solder to the joint through the apertures while in such clamped condition.

2,031,966
ROASTING APPARATUS
Maurice D. Woodruff, William H. Mechlin, and Jonathan Markley, Springfield, Ohio, assignors to The Bauer Brothers Company, Springfield, Ohio, a corporation of Ohio
Application December 21, 1933, Serial No. 703,436
1 Claim. (Cl. 34—35)

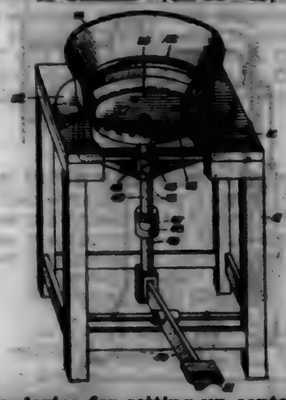


In an apparatus of the character described, a conveyor for material consisting of a frame and a bottom member of sheet metal formed separately from the frame, said frame having longitudinally extending grooveways, and projections on said bottom loosely extending into said grooveways to support said bottom from said frame and to permit expansion and contraction of said bottom relatively to said frame.

2,031,667
REFRIGERANT MIXTURE
Glenn F. Zellhoefer, Bloomington, Ill.
No Drawing. Application March 20, 1933, Serial No. 661,789
1 Claim. (Cl. 252—5)

A refrigerant mixture for the absorption type of refrigeration apparatus consisting of normally liquid dichlor benzol as a solvent, and methyl chloride as a refrigerant.

2,031,668
METHOD AND APPARATUS FOR FUSING METALS
John A. Zublin, Bel Air, Calif.
Application August 6, 1934, Serial No. 735,684
5 Claims. (Cl. 75—22.5)



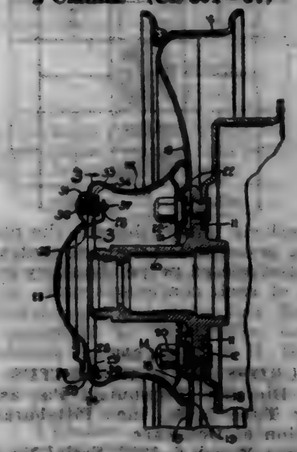
1. The process of forming a substantially homogeneous solid body of constituents slightly soluble in each other and present in amounts greatly in excess of their mutual solubility, that includes forming an intimate and uniform mixture of the constituents, placing the mixture in a cool mould, progressively moving over and through the mixture an electric arc which rapidly melts entirely that small portion of the mixture surrounding the arc, but without materially heating the mould, and immediately chilling this small molten portion in the cool mould as soon as the arc moves on, thus solidifying this small molten portion with all of its constituents in substantially the same uniform distribution as in the initial mixture.

2,031,669
OSCILLATION-TYPE LOCK
James L. Adams, Jr., Youngstown, Ohio
Application January 30, 1935, Serial No. 4,112
13 Claims. (Cl. 61—8)

2. An oscillation type canal lock system, comprising a lock chamber, upper and lower gates connected therewith, a waterway channel connecting with the outer side of the upper gate, a Venturi bell connected by its large end into the bottom portion of the said lock chamber, a fluid control valve connected to the small end of the said Venturi bell, and a long fluid inertia tube having a free outer end and connected by its inner end to the said valve, the said outer end rising to a height comparable with that of the said waterway channel.

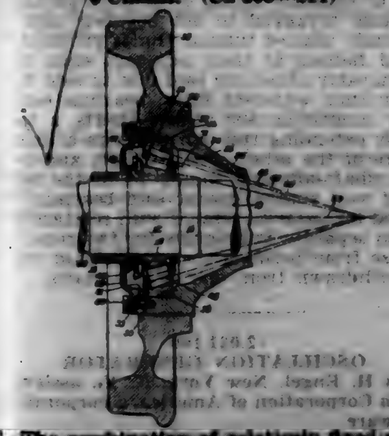
2,031,680
MEANS FOR SETTING-UP COLLAPSIBLE CONTAINERS
Earl W. Barnard, Morris, Ill., assignor to Morris Paper Mills, Morris, Ill., a corporation of Illinois
Application July 17, 1933, Serial No. 680,741
19 Claims. (Cl. 93—55)

1. In a device for setting up containers of the type having a body portion with tongues on the lower edge thereof adapted to interlock with a bottom member having complementary interlocking elements, means for rotating the tongues along the lower edge of said body member into inwardly turned position, means for supporting a bottom member having complementary interlocking elements, and means for producing relative motion between said body portion and bottom member, whereby to interlock said tongues and said bottom member.



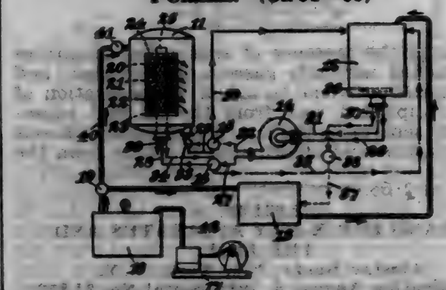
2,031,681
CLOTHESLINE PROP
Nanstad Berg, Cleveland Heights, Ohio, assignor of one-half to Joseph H. Bruce, Shaker Heights, Ohio
Application November 8, 1932, Serial No. 637,121
1 Claim. (Cl. 248—353)

A clothes-line prop comprising a pole, a head member provided with a line receiving groove secured to the upper end of said pole, a U-shaped clamping member provided with straight parallel sides conforming closely to the shape of the pole movably secured thereto with the closed end thereof adjacent said head member and the free ends extending longitudinally of said pole, a laterally offset portion on said U-shaped clamping member overlying said groove for engagement with a line positioned therein, said head member



being provided with apertures for the reception of the straight parallel sides of said U-shaped clamping member, and a lever pivotally connected to said pole and to the free ends of said U-shaped clamping member for operating the same.

2,031,682
HUB CAP AND COVER
Russell S. Begg, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 19, 1929, Serial No. 333,727
5 Claims. (Cl. 301—37)



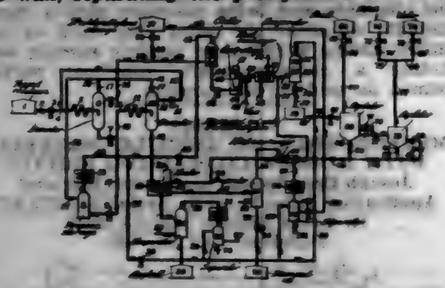
1. A hub cover concealing the attaching means for bolted-on wheels comprising a substantially cylindrical barrel member encircling said attaching means and having its rear edge reversely curved and seated against the wheel body, and attaching means adapted in securing the barrel member to be placed under tension and adapted to hold said rear edge of the cover against the wheel body under such tension.

2,031,683
WHEEL AND AXLE ASSEMBLY
Frederic H. Bender and Fred E. Bachman, Chicago, Ill., assignors to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application April 3, 1931, Serial No. 528,549
6 Claims. (Cl. 308—214)

1. The combination of relatively fixed and rotatable members, anti-friction bearings therebetween, said bearings including inner and outer race rings, frusto-conical rollers disposed between said race rings sloping outwardly of said assembly and away from said inner race ring, the large ends of said rollers disposed outwardly, a cage spacing said rollers and urged to rotary movement by said outer race ring, the inner race ring having a convexed bearing surface, the outer race ring having a bearing surface of straight line elements and being provided with a thrust shoulder adjacent the outer end, each of said rollers having a spherical bearing surface contacting a complementary spherical surface formed on said thrust shoulder.

2,031,694
IMPREGNATION OF TEXTILE MATERIALS WITH RUBBER-CONTAINING LIQUIDS
Joseph Brandwood, Southport, England
Application June 14, 1933, Serial No. 675,833
In Great Britain July 13, 1932
4 Claims. (Cl. 91—68)

1. A process for the impregnation of prepared textile yarns with a rubber-containing liquid which comprises winding the yarns in coil form with an open wind on a foraminous support, continously circulating the rubber-containing liquid through the wound packet at a pressure above atmospheric, draining the liquid out of contact with the coiled yarns, and removing excess of liquid from the yarns by passing a compressed gas at a pressure above atmospheric between the wound coils.



2,031,695
PROCESS FOR SEPARATING WAX FROM OIL
Ulric B. Bray, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application May 17, 1932, Serial No. 611,923
8 Claims. (Cl. 196—19)

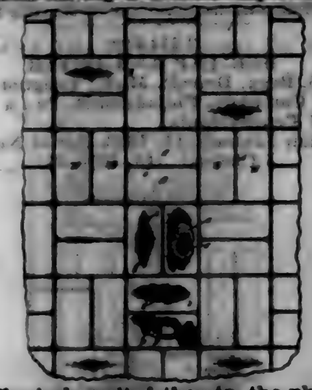
4. A process for the separating of wax from oil containing wax which does not contain sufficient asphaltic material to promote crystallization of the wax, which comprises mixing said oil with asphalt, commingling said oil and asphalt with liquid propane to dissolve the oil and wax and precipitate the asphalt, chilling the propane solution of oil and wax in the presence of the insoluble asphalt to precipitate wax, removing the asphalt and wax from the oil and propane and removing the propane from the substantially wax free oil.

2,031,696
PROCESS FOR PRODUCING LUBRICATING OIL
Ulric B. Bray, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Original application October 8, 1928, Serial No. 490,724. Divided and this application October 14, 1933, Serial No. 693,644
5 Claims. (Cl. 196—19)

1. A process for separating wax from oil con-

taining the same which comprises commingling said oil with a liquefied normally gaseous hydrocarbon and a chlorinated ethylene selected from the class consisting of dichlorethylene and trichlorethylene, chilling the mixture to precipitate the wax, separating the precipitated wax from

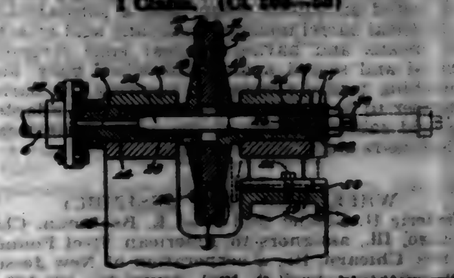
the oil in the presence of substantial quantities of liquefied normally gaseous hydrocarbon and chlorinated ethylene to aid in the separation of the precipitated wax from the oil and subsequently separating the liquefied normally gaseous hydrocarbon and chlorinated ethylene from the oil.



2,031,097
STAND FOR X-RAY APPARATUS AND THE LIKE
Gustav Bucky, New York, N. Y.
Application August 6, 1935, Serial No. 34,873
5 Claims. (Cl. 248—123)

1. A movable stand for X-ray apparatus and the like comprising a head rotatable about a vertical axis and being provided with a hole passing through the head in vertical direction, a holding member supported by said head and adapted to be swung about a horizontal axis, an elongated member carried by said holding member and adapted to be longitudinally moved in relation to said holding member, whereby said elongated member may be inclined in relation to the vertical axis as desired and may be passed at least partly through the hole of said head when in vertical position, and means for holding said elongated member in an adjusted position.

2,031,098
DEVICE FOR PROTECTING CONCRETE
Sam F. Carf, St. Louis, and Ervin W. Carf, Clayton, Mo.
Application December 11, 1933, Serial No. 701,712
1 Claim. (Cl. 154—46)

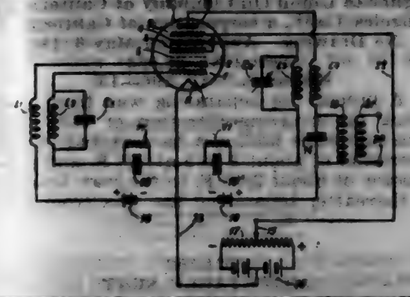


A blanket to be used in covering and curing newly laid concrete, made of a plurality of united

substantially square units of discarded fabric bags, each unit composed of two approximately equal rectangular portions joined centrally by a seam and having a flexible impervious ma-

terial adhesively united thereto, the plurality of units being so connected that the central seam of each unit is disposed perpendicularly to the central seam of each contiguous unit.

2,031,099
CROSS-ROLL APPARATUS
August P. Diescher, Pittsburgh, Pa., assignor to Diescher Tube Mills, Inc., Pittsburgh, Pa., a corporation of Delaware
Application March 6, 1933, Serial No. 659,773
1 Claim. (Cl. 266—58)

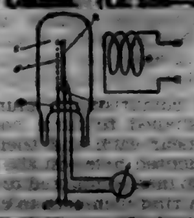


In a cross-rolling mill, the combination with a pair of helically acting cross-rolls, an annular guide disc arranged to act between said rolls, two axially aligned tubular shafts provided with opposed flanges at their adjacent ends, means for removably attaching said disc to said flanges between their adjacent faces, bearings each rotatably supporting one of said shafts, a rod removably extending through the bore of one into the bore of the other of said shafts and having a close shaft-aligning sliding fit in the bore of each of said shafts, one of said bearings being mounted for axial movement with relation to the other to separate said shafts for the removal of said disc from between them after said rod has been withdrawn from one of the shafts.

2,031,100
OSCILLATION GENERATOR
Francis H. Engel, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application September 10, 1934, Serial No. 743,291
7 Claims. (Cl. 250—36)

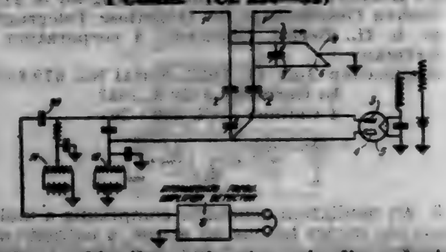
1. A vacuum tube having an inner oscillator section and an outer section, means for causing said two oscillator sections to generate currents

of different frequencies, and an output circuit traversed by currents of the beat frequency and means including an electrode in said tube be-



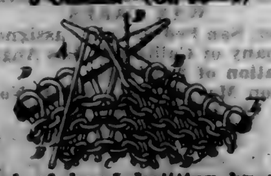
tween said sections for controlling the amplitude of the beat frequency oscillations generated without change of frequency thereof.

2,031,101
ARRANGEMENT ADAPTED TO GENERATE ULTRA SHORT ELECTROMAGNETIC WAVES
Eduard Fetterowsky and Heinz Lax, Berlin, Germany, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application July 1, 1933, Serial No. 678,570
In Germany July 13, 1932
7 Claims. (Cl. 250—36)



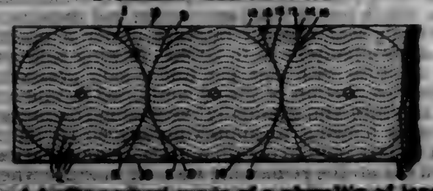
1. An ultra short wave circuit comprising an electron discharge device having anode, cathode and control electrodes, a source of potential in circuit with said cathode and control electrode for applying to said control electrode a high positive potential with respect to cathode, and means excluding the use of a separate source of anode potential for causing said anode to be at a negative potential with respect to said cathode, said last means comprising an effective resistance connected between said anode and cathode which is arranged to be traversed by the current in said anode circuit.

2,031,102
PHOTOELECTRIC TUBE
Heinrich Geffcken and Hans Richter, Leipzig, Germany, assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application July 25, 1931, Serial No. 551,216
In Germany July 31, 1930
17 Claims. (Cl. 250—27.5)



1. The method of manufacturing light responsive electrodes for photoelectric tubes which comprises coating a conductor in said tube with a salt of a heavy metal, producing a glow discharge in an atmosphere of attenuated oxygen within said tube thereby converting the said salt into an oxide, admitting cesium into said tube, and applying heat to coat the cesium on the oxide.

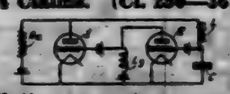
2,031,103
ULTRA SHORT WAVE RECEIVER
Ralph W. George, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 11, 1933, Serial No. 651,097
1 Claim. (Cl. 250—33)



The combination with a two wire line adapted to carry currents of a predetermined frequency, of individual linear conductors having effective electrical lengths approximately equal to a quarter wave length of said currents extending from each of said wires to ground, and a tunable condenser connected across said conductors, the inductance of said conductors and the capacity of said condenser forming a parallel resonant circuit tuned to said predetermined frequency.

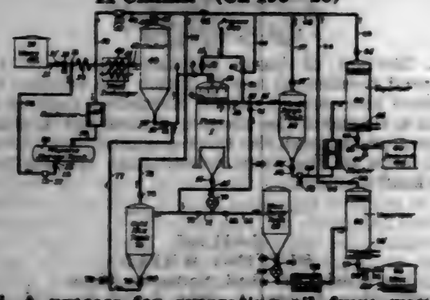
2,031,104
METHOD OF HAND KNITTING
Nan Gilpin, Riverside, Ill.
Application June 11, 1934, Serial No. 729,995
5 Claims. (Cl. 66—1)

1. Method of hand knitting by use of two pointed needles on one of which the stitches are formed successively which comprises causing an elastic thread to be passed, during the knitting operation, through the inter-engaged stitch forming loops of the yarn constituting the body of the knitted fabric.



2,031,105
BUFFING WHEEL
Elisha W. Hall, Scituate, Mass.
Application August 3, 1934, Serial No. 738,175
3 Claims. (Cl. 51—276)

1. A buffing wheel made of a plurality of layers of fabric secured together by rows of stitching which extend entirely across the annular face of

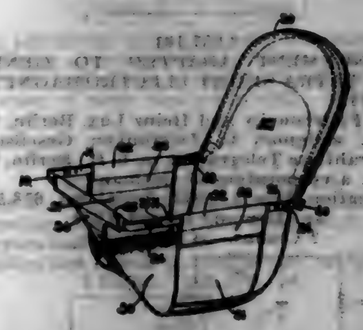


the wheel in lines which are equidistant apart throughout their length and which curve adjacent the periphery of the wheel in such manner as to form angles with tangents at the points of intersection with said periphery which are respectively greater and less than a right angle, the lines of stitching thereby causing the wheel to act hard when rotated in one direction and relatively soft when rotated in the other direction.

2,031,106
PRODUCTION OF OSCILLATIONS
Kurt Heegner, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application July 11, 1933, Serial No. 679,855
In Germany July 8, 1932
4 Claims. (Cl. 250—36)

3. An oscillation generator comprising a multi-electrode device having an anode, a cathode and a control electrode, a series tuned circuit tuned to a desired frequency of operation directly connected between said anode and cathode, said series tuned circuit including a coil, a resistance whose value is substantially equal to the resistance of said coil at the tuned frequency connected effectively in shunt to said series tuned circuit, an inductance connected between said control electrode and cathode, and means including an electron discharge device for coupling said inductance to said series tuned circuit, said last device having electrodes directly connected both to said inductance and to said tuned circuit.

2,031,107
PROCESS FOR SEPARATING OIL FROM WAX CAKES
Basil Hopper, San Pedro, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application May 23, 1934, Serial No. 727,841
11 Claims. (Cl. 196—20)

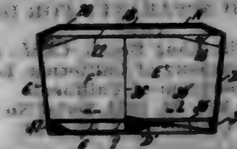


4. A process for separating oil from wax-oil mixtures which comprises passing a condensable gas which gas in the liquid state will dissolve oil, through said wax-oil mixture under a pressure of approximately 10 to 20 lbs., flowing said wax-oil mixture with said gas under said pressure to remove a portion of the oil contained in said wax-oil mixture and gradually increasing the pressure of said blowing to approximately 50 to 100 lbs. per square inch to obtain a partial condensation of said gas on the remaining wax-oil mixture whereby said wax-oil mixture is simultaneously blown and partially washed to separate further quantities of oil from said wax-oil mixture.

2,031,108
PROCESS FOR REMOVING WAX FROM OIL
Basil Hopper, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
No Drawing. Application May 6, 1935, Serial No. 20,853
6 Claims. (Cl. 196—19)

5. A process for separating wax from a wax-bearing oil involving filtration or cold settling which comprises adding a hard asphalt having a penetration of about 3 to 5 at 77° F. and a melting point of about 200° F. to the wax-bearing oil and thereafter separating the wax from the oil.

2,031,109
ADJUSTABLE SEAT
Jacob Kersten, Kalamazoo, Mich.
Application June 25, 1934, Serial No. 732,196
6 Claims. (Cl. 155—17)



3. In combination, a seat frame, a back frame pivoted at one end thereof, a flexible seat portion, a flexible back portion attached between the seat portion and the back frame, sides attached to the seat portion at their bottom edges and fastened to the seat frame at their top edges, a strip fastened to the seat portion and adjustable means between the strip and the seat frame whereby the seat portion may be controlled, said movement of the back frame relatively to the seat frame also causing positioning of part of the seat portion.

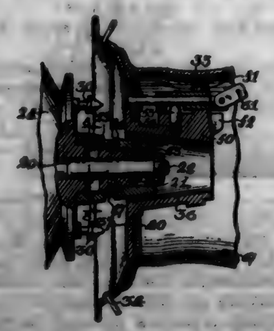
2,031,110
MULTIPLE RING BRACELET
Clifford G. King, Barrington, R. I.
Application March 6, 1935, Serial No. 10,785
10 Claims. (Cl. 63—3)

1. A bracelet, comprising a plurality of split ring members shaped to form cooperating attaching means near each end thereof and having diamond indented holes on the outer surface thereof and clasp means adapted to extend transversely over said ring members to cooperate with said cooperating attaching means to hold said ring members in side by side relationship and against rotative movement thereon.

2,031,111
CARTON AND BLANK FOR FORMING THE SAME
Henry Kendall, New York, N. Y., assignor to Southern Kraft Corporation, New York, N. Y., a corporation of Delaware
Application July 24, 1933, Serial No. 681,870
5 Claims. (Cl. 229—16)

1. A container formed from a continuous sheet of material having a cover panel provided with a central portion adapted to be raised above the outer edges of the cover panel, insert flaps carried by two opposite side panels and separated from the two other opposite side panels by convergent slots, said insert flaps being provided at the outer ends of said slots with divergent walls so designed as to bring the outer edge of the insert panel carried by one side panel in abutting relation to the outer edge of an insert panel carried by the opposite side panel whereby to form a container of fixed cubical contents, and a bottom carried by one of said panels.

2,031,112
POWER TUBE
Wilhelm Eberhard Köhle, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application March 4, 1931, Serial No. 520,061
In Germany March 7, 1930
1 Claim. (Cl. 250—27.5)



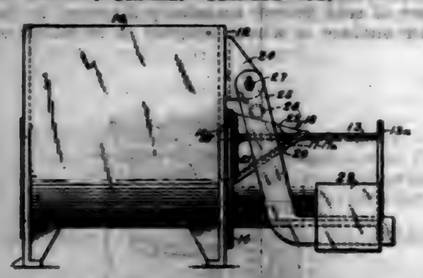
An electron discharge power tube having electrodes, at least one of said electrodes having hollow double iron walls, and a liquid cooling means within said hollow walls having a coating of tin to protect the iron walls from the formation of incrustations where said hollow walls are in contact with the cooling liquid.

2,031,113
ALLOYS
Robert H. Leach, Fairfield, Conn., assignor to Handy & Harman, New York, N. Y., a corporation of New York
No Drawing. Application April 17, 1934, Serial No. 720,949. Renewed July 9, 1935
5 Claims. (Cl. 75—1)

1. An alloy which consists of silver in an amount ranging from about 90% to about 99.5%, beryllium ranging from about 0.1% to about 1.75%, and the remainder copper.

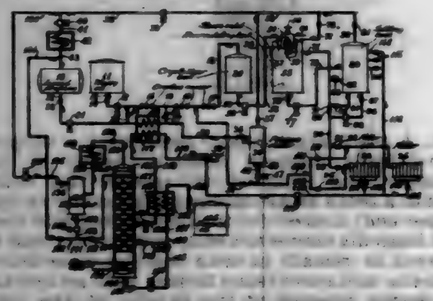
2,031,114
DEMOUNTABLE WHEEL
Louis Lebel, Sherbrooke, Quebec, Canada, assignor to Joseph J. Rosenthal, New York, N. Y.
Application January 4, 1934, Serial No. 705,225
4 Claims. (Cl. 301—9)

4. In combination with a vehicle axle, demountable wheel fastening mechanism comprising a hub adapted to be secured on the vehicle axle, a sleeve threaded over said hub and adjustable axially thereon, a radial flange associated with the hub, a plurality of studs projecting from said flange, said studs each having a circumferential groove cut therein with a face of said groove angularly disposed to form a cam surface, a wheel adapted to be fitted over



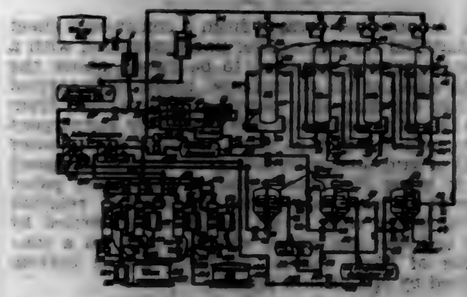
said sleeve and having a socket member formed to engage said sleeve, means on the wheel adapted to engage the studs projecting through apertures of the wheel socket member, said means embodying cam faces cooperating with that of the studs, and means on the axle for locking the sleeve thereon so as to permit accurate positioning of the socket member with respect to the cam faces of the studs.

2,031,115
SANITARY TOOTHBRUSH HOLDER
Charles V. Lindbloom and Lily W. Lindbloom, Cranford, N. J.
Application October 12, 1934, Serial No. 748,064
4 Claims. (Cl. 206—15.1)



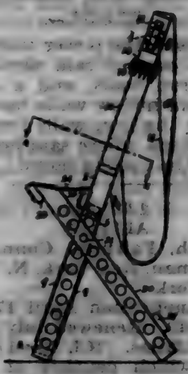
1. A tooth brush holder comprising a support; a vertically disposed housing carried by said support and adapted to receive the bristle end of a tooth brush, said housing having an open upper end; a cover for the open end of said housing hingedly connected with said support and arranged to remain in open position when moved thereto, said cover being formed with an aperture to permit passage of the handle of the tooth brush; means actuated by the weight of said brush when inserted into said housing to close said cover with the handle of the brush projecting through said aperture, the bristle portion of said brush being adapted to engage the underside of said cover and to tip it to open position by the removal of the brush from said holder.

2,031,116
SAFETY OUTLET CLOSURE FOR CONVEYERS
Willard B. McBurney, Atlanta, Ga.
Application December 24, 1934, Serial No. 759,036
7 Claims. (Cl. 198—64)



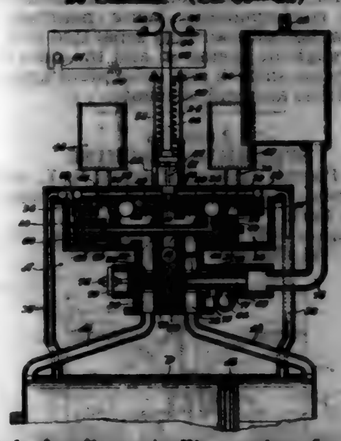
1. In a force-feeding conveyer for conveying coal or other material which may have hard or tough impediments therein, the combination of a hopper having an upright wall provided with an outlet-opening, a hollow conduit having an open end united with said wall and in open communication with said outlet-opening, said conduit having an upper weighted section which is normally displaceable and normally covers an eliminating opening and is provided with a pusher-element that normally extends into said outlet-opening of said wall, said displaceable upper section and the sub-jacent part of the conduit having normally unfastened adjoining edges that are inclined upward and away from the hopper in proper relation to permit the displaceable upper weighted section to slide forward and upward on said sub-jacent part, and a force-feeder extending from said hopper substantially to said conduit and being movable near to said pusher element; whereby, when an impediment is forced by said force-feeder against said pusher-element, the latter causes displacement of said upper section against resistance of its weight and thereby opens said eliminating opening.

2,031,117
PROCESS FOR DEWAXING OIL
David R. Merrill, Long Beach, and Philip Subkow, Los Angeles, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application October 24, 1931, Serial No. 639,340
11 Claims. (Cl. 196—18)



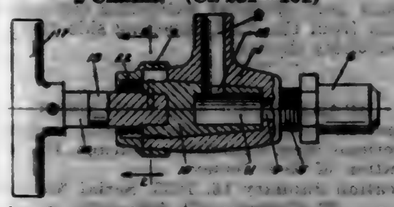
5. A method of chilling a wax-containing oil which comprises mixing said oil with a liquefied normally gaseous hydrocarbon, flowing said mixture from the initial mixing zone to a final zone of chilling, maintaining said mixture in a confined stream and without removal of vapor from said stream during said flow, and introducing chilled liquefied normally gaseous hydrocarbon diluent into said flowing stream between the initial mixing zone and the final zone of chilling, said introduction of chilled diluent being in an amount regulated to avoid shock chilling the wax.

2,031,118
PROCESS AND APPARATUS FOR DEWAXING OILS
David R. Merrill, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application May 22, 1934, Serial No. 726,963
15 Claims. (Cl. 62—176)



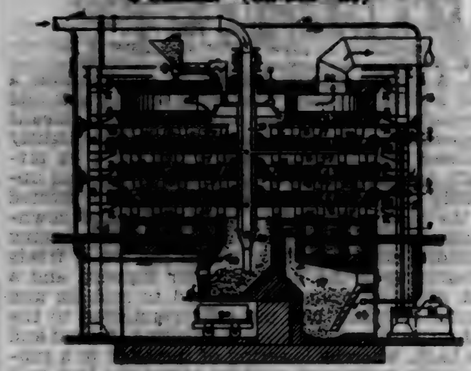
9. A process for chilling liquids which comprises mixing the liquid to be chilled with a volatile liquid refrigerant under superatmospheric pressure, commingling said mixture with a sufficient quantity of previously chilled liquid to reduce the temperature of the mixture to be chilled to substantially that of the previously chilled liquid and removing vaporized liquid refrigerant from the combined mixtures.

2,031,119
COMBINATION STOOL AND CARRIER
Robert E. Moreland, Galveston, Tex.
Application December 18, 1933, Serial No. 702,533
4 Claims. (Cl. 150—1.5)



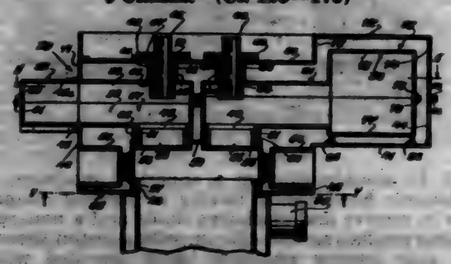
1. A carrier for golf equipment comprising a single pair of substantially rigid side members spaced apart, cross members securing the side members in spaced relation and forming an approximately rectangular frame, said cross members being shaped and arranged to support golf clubs in approximate alignment with the side members, legs pivoted to the side members, a flexible seat forming a support and secured to said side members and to said legs, said clubs and cross members being arranged to form a back rest.

2,031,120
STOKER CONTROLLING DEVICE
Harold S. Morton, St. Paul, Minn., assignor to The Stott Stoker Company, St. Paul, Minn., a corporation of Delaware
Application February 15, 1932, Serial No. 593,913
20 Claims. (Cl. 60—52)



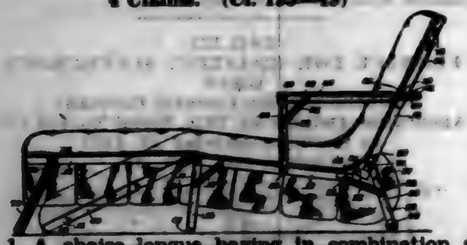
1. A hydraulic controlling system for a piston including, a cylinder in which said piston reciprocates, a supply tank for operating fluid, valve means immersed in said tank, a pump for forcing liquid from said tank to said valve under pressure, a fluid passage from said valve to said cylinder, means for regulating said valve to cause a flow of fluid through said valve from said tank through said conduit to said cylinder to reciprocate the same back and forth, and means inoperable under normal pressures in said valve for automatically relieving the abnormal pressure built up by the stopping of said piston by an obstruction.

2,031,121
VALVE STRUCTURE
Erwin H. Mueller, Detroit, Mich.
Application May 12, 1934, Serial No. 725,216
2 Claims. (Cl. 251—161)



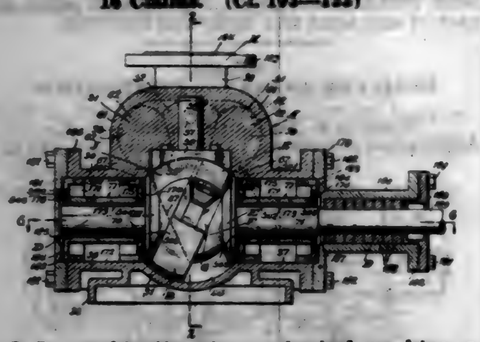
1. A valve member of unit construction for use with a hollow valve body having a tapered valve seat therein comprising, a tapered valve plug formed to fit into the tapered seat of the valve body and adapted to be turned relative to the seat to open and close the valve, the larger end of the plug having a recess therein disposed substantially on the turning axis of the plug, the walls of said recess having internal serrations thereon extending in an axial direction, a stem of bar stock having one end arranged to receive an operating handle and being of smaller cross dimension than the plug, the opposite end having serrations thereon extending in an axial direction, the serrated end of the stem being slightly oversize relative to the recess in the plug, and said serrated end of the stem being fitted into the recess with a driving fit, said serrations interfitting to lock the stem and plug together against relative rotation, and means for tying the plug and stem together against axial separation whereby the plug and stem are permanently assembled as a unitary structure, said unitary structure of plug and stem capable of being assembled in and disassembled from operating relation with the valve body.

2,031,122
FURNACE FOR ROASTING SULPHUROUS ORES
Wilhelm Mueller, Gleiwitz, Germany
Application October 12, 1933, Serial No. 693,433
In Germany October 18, 1932
5 Claims. (Cl. 263—34)



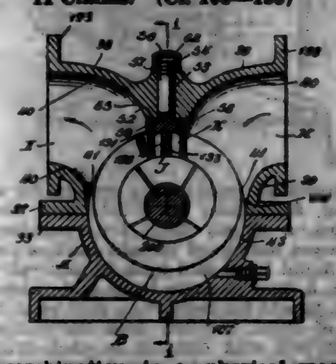
1. A roasting furnace for roasting sulphurous ores, zinc blende, pyrites or for calcining any ores, comprising in combination a plurality of superposed roasting hearths formed by hearth plates alternately stationary and rotary and each having a plurality of radial grooves in their under side, rabble arms one removably inserted in each of said grooves from the outer side of the furnace and extending the whole length of said grooves, and a plurality of downwardly projecting rabble teeth exchangeably fixed at a distance apart on each of said arms and removable therewith.

2,031,123
HEAD FOR INTERNAL COMBUSTION ENGINES
Maurice E. Mutchler, Buffalo, N. Y.
Application November 1, 1932, Serial No. 640,614
9 Claims. (Cl. 123—173)



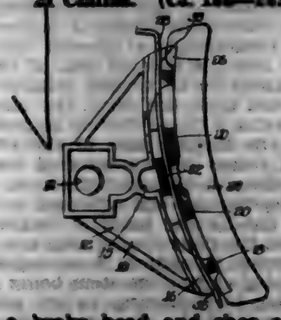
1. A head for an internal combustion engine including a housing which consists of preformed sheet metal sections, the companion edges of said sections being spaced throughout a portion of their extent to provide an opening, a sheet metal intake manifold and a sheet metal exhaust manifold, one of said manifolds being arranged in said opening and being partially enclosed by said sections, said housing and manifolds co-operating to provide a chamber through which a cooling medium may be circulated and being permanently secured together in a composite unit.

2,031,124
CHAISE LONGUE
Hugo Ferien, Chicago, and Charles F. Pearce, Jr., Glencoe, Ill., assignors to Burton-Dixie Corporation, Chicago, Ill., a corporation of Delaware
Application May 15, 1933, Serial No. 671,642
4 Claims. (Cl. 155—49)



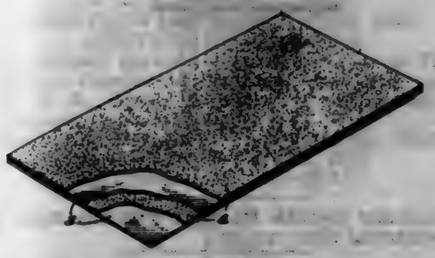
1. A chaise longue having in combination a seat, a back pivotally connected to said seat and normally inclined upwardly therefrom, means supporting said seat normally in position slightly inclined from the horizontal, including a leg pivotally connected to the back rearwardly and upwardly of the point at which the back is pivoted to the seat and inclined rearwardly and downwardly therefrom, the lower end of said leg being provided with means by which the leg is freely movable upon the floor or other support, and a link pivotally joined at one end to said leg and having its other end pivotally connected to the seat forwardly of the pivot connecting the seat and the back, whereby lowering of the back to a substantially horizontal position raises the seat to a substantially horizontal position.

2,031,125
SPHERICAL MACHINE
Frank A. Peschl, Jackson Heights, N. Y., assignor to Ereopha, Inc., New York, N. Y., a corporation of New York
Application February 6, 1934, Serial No. 709,934
16 Claims. (Cl. 103—123)



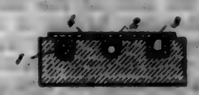
3. In combination, in a spherical machine, a relatively fixed casing having an interior chamber to receive and discharge fluids and a non-rotating oscillating disc-like impelling piston therein, said interior chamber being provided with rotating side walls and wth a peripheral wall and said piston being positioned obliquely within said chamber, said side walls being provided with extended surfaces conforming to substantial areas on the sides of the piston and said peripheral walls being provided with elongated gore-like port openings, said conformations being formed by positioning the oscillating impeller so obliquely within said interior that the portions of said impeller which converge towards said side walls will extend below the converging surface of said side walls, said side walls being bevelled off at diametrically opposite places to receive the converging sides of said impeller, and said ports extending substantially around the major portion of the spherical periphery of said interior and converging to substantially pointed apices substantially diametrically opposite their entrance to said interior, the adjuxtapositioned surfaces causing said conformations being maintained in parallelism but substantially separated from each other throughout operation and the sides of said impeller being smooth and continuous and devoid of projections and embossments.

2,031,126
SPHERICAL MACHINE
Frank A. Peschl, Jackson Heights, N. Y., assignor to Ereopha, Inc., New York, N. Y., a corporation of New York
Application July 17, 1934, Serial No. 735,553
11 Claims. (Cl. 103—123)



3. In combination, in a spherical machine, a casing having an interior chamber to receive and discharge fluids and an oscillating disc-like impelling piston therein, said interior chamber being provided with side walls and with a peripheral wall and said piston being positioned obliquely within said chamber, said side walls being provided with extended surfaces conforming to substantial areas on the sides of the piston and said peripheral wall being provided with extended port openings, and said impeller being provided with auxiliary port openings extending through said impeller from the fluid impelling side thereof to the periphery thereof.

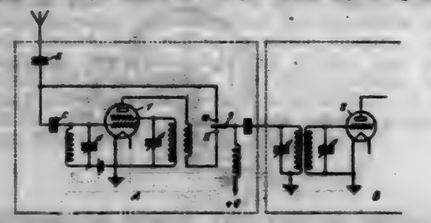
2,031,127
BRAKE HEAD ARRANGEMENT
Armand H. Peycke, Kenilworth, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application January 16, 1933, Serial No. 651,882
21 Claims. (Cl. 188—243)



1. In a brake head and shoe assembly, the combination of a brake head having toe lugs adjacent the ends thereof, a brake shoe carried by said head and having a center lug, and a resilient key engaging the toe and center lugs only of said brake head and shoe and flexed therebetween for securing said shoe to said head.

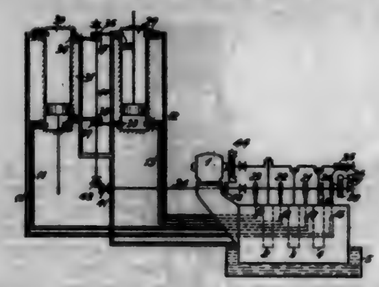
2,031,128
ELECTROLYTIC CONDENSER AND METHOD OF MAKING THE SAME
Arnold Haines, Brooklyn, N. Y.
Application July 19, 1933, Serial No. 681,086
12 Claims. (Cl. 175—315)

1. An electrolytic condenser composed of a plurality of electrodes, at least one of which is film-forming, said electrodes being separated by finely divided non-conducting crystals affixed to one of the electrodes.



2,031,129
METHOD OF MAKING SHAPED BODIES OF NONPLASTIC METALLIC OXIDES
Reinhold Reichsmann, Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany
Application January 6, 1932, Serial No. 650,462
In Germany November 19, 1932
10 Claims. (Cl. 25—156)

1. The method of producing shaped bodies of non-plastic metallic oxides which consists in reducing a metallic oxide to a granular state, thinly coating the oxide granules with a foreign binding agent by rolling the oxide and the binding agent in the presence of pressure, extruding the resulting plastic mixture to form said bodies, drying said bodies and sintering said bodies at a temperature above 1600° C.

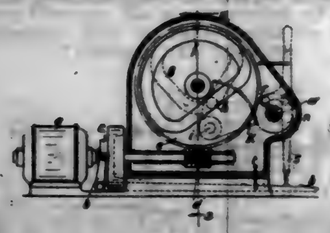


2,031,130
SHORT WAVE-LONG WAVE RECEIVER
Johannes Rohnfeld, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application February 17, 1933, Serial No. 657,157
In Germany May 28, 1932
3 Claims. (Cl. 250—20)

1. In combination with a radio receiver having a resonant input circuit adapted to be tuned to a desired radio frequency of the broadcast band and a signal collector, a short wave adapter unit comprising a tube having a resonant circuit connected between its cathode and a grid electrode, the resonant circuit being tunable over a desired short wave range, means coupling the signal collector to said resonant circuit, a second resonant circuit connected between the cathode and a grid electrode of said tube, a source of direct current potential for the output electrode of said adapter tube, means for regeneratively coupling

the output electrode to the said second resonant circuit, and means connected to said source and receiver input circuit, arranged for selective connection to said adapter tube output electrode or said signal collector.

2,031,131
DRIVING DEVICE FOR A MACHINE FOR CASTING STEREOTYPE PLATES
Karl Schäflein, Bern, Switzerland
Application June 13, 1932, Serial No. 616,907
6 Claims. (Cl. 22—2)



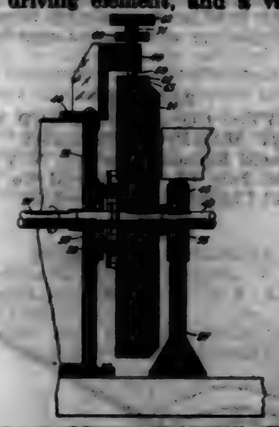
6. In a machine for casting stereotype plates and the like, having a melting pot, a mold adapted to be moved into and out of cooperative relation with said pot and a valve in said pot for controlling the flow of metal into said mold, a driving mechanism including fluid pressure means whereby said mold and said valve are actuated, timing means associated with said fluid pressure means for controlling the supply of fluid pressure thereto for the purpose of operating said mold and valve in timed relationship, a pressure fluid container, a pump, suction valves for controlling the supply of pressure fluid from said container, and means associated with said timing means for maintaining said suction valves open during the cooling period of a cast plate, to thereby render said pump inoperative.

2,031,132
MACHINE FOR CASTING STEREOTYPE PLATES AND THE LIKE
Karl Schäflein, Bern, Switzerland
Application September 21, 1933, Serial No. 690,414
In Germany November 11, 1932
1 Claim. (Cl. 22—2)

In a machine for casting stereotype plates or the like, having a mold and actuating means therefor, a metal supply valve and actuating means therefor, the combination of a drive for said mold and valve, comprising power means, a worm driven by said power means, a clutch intermitted between said power means and said worm, a worm wheel meshing with said worm, a

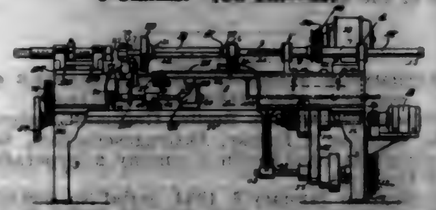
cam surface provided on each side of said worm wheel, gear means mounted within the periphery and on each side of said worm wheel and cooperat-

ing with said cam surfaces, and gears meshing with said gear means and arranged to transmit motion of the latter to said operating means for the purpose of actuating said mold and valve.



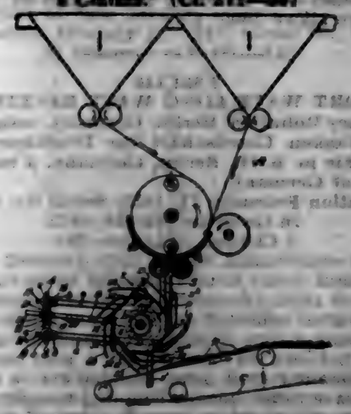
2,031,133
ELECTRIC HAND TOOL
Robert Schümann, Düsseldorf, Germany
Application January 24, 1933, Serial No. 653,308
In Germany January 25, 1932
3 Claims. (Cl. 144—32)

1. An electric hand tool for tightening and loosening screws, comprising in combination a driving spindle, a stationary clutch half on said spindle, a movable clutch half surrounding said stationary clutch half and axially shiftable relative to said stationary half, a tool carrying sleeve on the lower end of said movable clutch half, said movable clutch half adapted to bear against said stationary clutch half to transmit the movement of said driving spindle to said tool carrying sleeve when the tool is pressed against the workpiece, and an adjustable stop in the path of movement of said movable clutch half adapted to limit the displacement of said movable clutch half and determine the intensity of contact between said two clutch halves.



2,031,134
FACSIMILE SYSTEM
Henry Shore, Elizabeth, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 25, 1933, Serial No. 654,086
3 Claims. (Cl. 178—69.5)

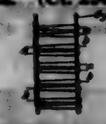
1. In combination, a driving element, a driven element and a mechanical filter system connecting the driving and driven elements, said filter system comprising a flywheel rigidly connected with the driven element and resiliently connected with the driving element, and a variable me-



chanically operable means to critically damp the mechanical filter system.

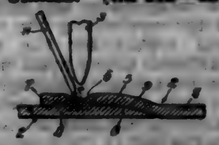
2,031,135
LATHE
Charles W. Smith, Grand Rapids, Mich.
Application February 26, 1934, Serial No. 712,543
6 Claims. (Cl. 142—42)

1. In a lathe: a tail stock; a member mounted in the stock for freely rotative movement with the work about the axis of the lathe's turning operation, said member having a circular bore therethrough coaxial with said axis receiving and holding the work therein against transaxial movement but permitting the free axial feeding movement of the work through the bore.



2,031,136
CONTROLLING DELIVERY FAN
Frank Sewick, Chicago, Ill., assignor to The Chicago Daily News, Inc., Chicago, Ill., a corporation of Illinois
Application April 14, 1934, Serial No. 720,554
8 Claims. (Cl. 271—80)

1. In a delivery fan structure, a fan body, arms

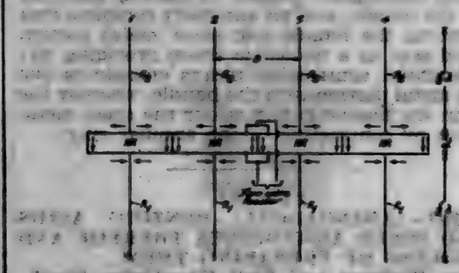


mounted on the body and spaced apart circumferentially thereof, gripping fingers pivoted on the body on axes parallel to the axis of the body for movement into and out of operative relation to the respective arms, and cam means mounted on the body for moving the fingers into and out of operative relation to the respective arms in the rotation of the body relative to the cam means, said cam means and said body being connected for relative rotation.

2,031,137
ELECTRON DISCHARGE TUBE AND CIRCUIT ARRANGEMENT
Karl Steimel, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application January 8, 1934, Serial No. 705,674
In Germany January 9, 1933
3 Claims. (Cl. 250—27.5)

1. An electron discharge tube comprising a cathode, cylindrical control grid, screen grid and anode electrodes concentrically arranged about the cathode in the order named, and an elliptically-shaped auxiliary electrode interposed in the space between the screen grid and the anode.

2,031,138
METHOD OF WELDING
Edward Hall Taylor, Oak Park, Ill.
Application March 17, 1934, Serial No. 716,057
6 Claims. (Cl. 113—35)



6. The method of producing tubing from metal strip by welding, which comprises providing the metal strip with a thinned area extending lengthwise of the strip and disposed inward from one edge thereof, said area being materially thinner than the adjacent unthinned portion of the strip, winding said strip spirally into tubular form with the forward thinned portion of each convolution overlying the rearward portion of the next preceding convolution and forming therewith a lap joint, and welding the overlap of the joint to the underlap along said thinned area of the overlap with the line of welding spaced inward of the overlap away from the leading edge of the latter.

2,031,139
CONTROLLING APPARATUS FOR AUTOMOBILE ENGINES
Matthew Ury, Bronx, N. Y.
Application December 15, 1933, Serial No. 702,525
5 Claims. (Cl. 161—1)

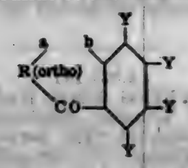
1. The combination with a motor vehicle having an ignition circuit, of a device for interrupting the ignition circuit comprising a clock mechanism, a switch in said circuit controlled by said mechanism after a predetermined time of operation of said mechanism, a lever biased under spring pressure in a direction for actuating said clock mechanism, and a movable element controlled by the operator of the vehicle and connected with said lever for counteracting said spring pressure during normal operation of the vehicle and for releasing said spring pressure when the vehicle is not in operation.

2,031,140
WIRELESS AERIAL FOR USE ON SHORT WAVES
Norman Wells, Sheen, London, and Ernest Green, Chelmsford, England, assignors to Radio Corporation of America, a corporation of Delaware
Application April 4, 1933, Serial No. 664,374
In Great Britain April 13, 1932
10 Claims. (Cl. 250—33)

1. A short wave aerial system comprising two approximately half wave length linear radiating elements extending on the same straight line and separated by a phasing unit, the latter consisting of a substantially non-radiating full wave length wire bent back upon itself to constitute a substantially rectangular wire frame having opposite ends symmetrically connected to said radiating elements.

2,031,141
FASTENING TOOL HANDLE
Daniel W. Winzeler, Montpelier, Ohio
Application June 14, 1934, Serial No. 730,641
1 Claim. (Cl. 306—29)

A sheet metal ferrule of symmetrical outside and inside contour throughout, said ferrule comprising a tapered, annularly complete, tubular section; axially spaced therefrom an additional exteriorly and interiorly annularly-continuous, complete cylindrical section; and approximately parallel independent laterally spaced tongues integral with and connecting said sections providing openings between the sections, said openings being parallel and spaced by the tongues.



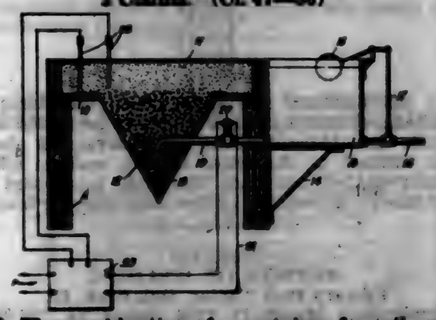
2,031,142
FASTENING FOR THE HANDLES OF TOOLS
Daniel W. Wimmler, Montpelier, Ohio
Application June 14, 1934, Serial No. 730,642
1 Claim. (Cl. 306—29)

A handle for a tool, a sheet metal circumferentially incomplete portion in seating assembly with the handle, and an annularly complete ring embracing the handle and sheet metal portion at said seat as a telescopic sleeve providing circumferential contracting means embedding the sheet metal portion with the handle, whereby the seat in the handle is formed for the sheet metal portion by contracting of the annular ring.

2,031,143
ORTHO - (AMINOAROYL) - BENZOIC ACIDS AND INNER ANHYDRIDES THEREOF AND PROCESS OF PREPARING THEM
Arthur Wolfram and Emil Hasselkerfer, Frankfort-on-the-Main-Hoechst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application January 30, 1929, Serial No. 336,324. In Germany February 7, 1928
12 Claims. (Cl. 260—64)

9. The compounds of the following formula:

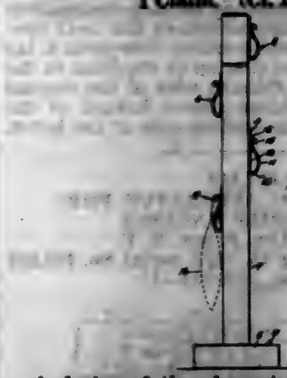
wherein R stands for a radical of the benzene series, Y for hydrogen or a substituent of the group consisting of halogen and alkyl, and wherein *a* represents the carboxylic acid group and *b* represents the amino group, or *a* and *b* jointly stand for the group —CO—NH—.



2,031,144
NONFLAMMABLE CLEANING SOLVENT
Merrill A. Youtz, Hammond, Ind., assignor to Standard Oil Company (Indiana), Chicago, Ill., a corporation of Indiana
No Drawing. Application July 14, 1930, Serial No. 467,997
1 Claim. (Cl. 87—5)

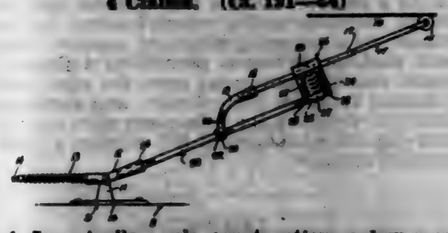
A dry cleaning solvent comprising a mixture of petroleum naphtha having a boiling range of about 160–220° F. with carbon tetrachloride in proportions of about 35 to 40 parts by volume of petroleum naphtha to about 65 to 60 parts by volume of carbon tetrachloride whereby the dry cleaning fluid is substantially non-flammable, its vapors are substantially non-flammable, and it leaves a substantially non-flammable residue upon evaporation.

2,031,145
NONFLAMMABLE CLEANING SOLVENT
Merrill A. Youtz, Green Bay, Wis., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Original application July 14, 1930, Serial No. 467,997. Divided and this application June 12, 1935, Serial No. 26,237
2 Claims. (Cl. 87—5)



1. A dry cleaning solvent comprising a mixture of petroleum naphtha having a boiling range of about 290–325° F. with acetylene tetrachloride, the amount of acetylene tetrachloride being sufficient to yield a substantially non-flammable mixture and a substantially non-flammable residue upon evaporation.

2,031,146
AUTOMATIC WATERING DEVICE
Theodore Dodge, River Falls, Wis.
Application August 16, 1935, Serial No. 36,583
3 Claims. (Cl. 47—38)



3. The combination of a container for soil, supply means for moistening soil within the container, means for controlling the supply means, electric control means for the second-named means and rendered active upon moistening the soil within the container, a storage tank for the supply means, and a substance within the container for setting up capillary attraction of moisture therein to the soil.

2,031,147
BAG RACK
Charles Elmer Doolin, San Antonio, Tex.
Application July 27, 1934, Serial No. 737,254
1 Claim. (Cl. 24—259)

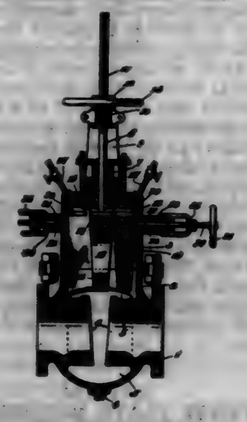
A device of the character described, said device comprising a flat strip constituting a base, said strip being bent arcuately upwardly and inwardly and then arcuately downwardly on itself defining an arcuate-shaped clip including a pair of legs, the legs of said clip adjacent said base being brought close together and said legs adjacent the bight portion of said clip being relatively widely separated and merging into the respective ends of said bight portion, said bight portion being semi-circularly curved, the leg adjacent said base being outwardly bowed, the leg remote from said base being outwardly bowed, said legs being sufficiently bowed to cause a portion of said bight portion of said clip adjacent the base to normally engage said part of the base.

2,031,148
TROLLEY
Henry Durst, Denver, Colo.
Application February 12, 1935, Serial No. 6,231
4 Claims. (Cl. 191—64)

1. In a trolley pole construction, a lower section, an upper section provided with a pulley, a fork pivotally attached to the intermediate portion of the lower section, said upper section being detachably joined to said fork to provide a pivotal connection between the two sections the lower section having a paddle-like support on its free end, a U-shaped jointing member carried by the lower section, said upper section passing therethrough, and a spring pressed follower cooperable with the upper section and disposed in the U-shaped member to resiliently maintain the sections in operative positions.

2,031,149
EDGE RUNNER-LIKE MIXING AND KNEADING MACHINE
Ludwig Eirich and Joseph Eirich, Hardheim, Baden, Germany
Application September 21, 1931, Serial No. 564,268
In Germany September 27, 1930
12 Claims. (Cl. 83—45)

1. In a mixing and kneading machine, in combination, a rotary grinding plate provided with an exchangeable perforated member in the center thereof, a plurality of rotating mixing and grinding tools eccentrically mounted with relation to the axis of said grinding plate and positioned to cooperate therewith, scraping means positioned beneath said perforated member for scraping said member, and means for adjusting the distance between the mixing and grinding tools and the grinding plate.



2,031,150
SKI EDGE PROTECTOR
Emil Marius Erikson, Remerud, near Oslo, Norway
Application December 28, 1934, Serial No. 759,259
In Norway December 21, 1933
4 Claims. (Cl. 280—154)

1. Ski edge protector comprising a number of relatively short links secured longitudinally of one another to the side of the ski and provided with contacting ends so that the links may pivot

a limited distance relative to each other in a plane perpendicular to the running surface of the ski.

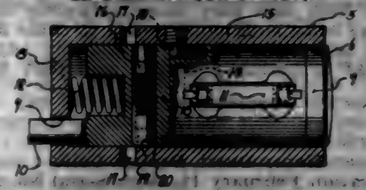
2,031,151
VALVE
Adam J. Eulberg, Sunburst, Mont.
Application March 15, 1935, Serial No. 11,340
5 Claims. (Cl. 251—51)

1. A valve mechanism comprising a valve casing having internal opposed surfaces constituting a valve seat, a bonnet on the upper side of the valve casing open to the valve seat, a valve body, means within the bonnet for suspending the valve body in a raised position out of engagement with the seat, a valve stem mounted through the upper end of the bonnet and having its lower end adapted to be detachably engaged with the valve body, said stem being shiftable longitudinally to raise the valve body from the seat in the valve casing or lower the valve body onto the seat, and means to shift the valve body between the suspending means and inner end of the stem when the valve is in a raised position.

2,031,152
MANUFACTURE OF ALLOYS OF IRON, CHROMIUM, NICKEL, AND COPPER
Alexander L. Feild, Baltimore, Md., assignor, by mesne assignments, to Rustless Iron and Steel Corporation of America, Baltimore, Md., a corporation of Delaware
No Drawing. Application August 10, 1932, Serial No. 628,185
13 Claims. (Cl. 75—45)

1. The process of making low-carbon iron-chromium-nickel alloys, which comprises charging a furnace with low-carbon steel scrap, high-carbon ferrochromium and "Monel" oxide, and heating the charge to a temperature sufficient to fuse the scrap and form a supernatant layer of molten slag and to cause a reduction of nickel and copper from their oxides to the metallic state accompanied by the oxidation of the carbon in the bath, thereafter adding to the slag a silicon reducing agent and lime to reduce chromium together with residual nickel and chromium from their oxides in the slag.

2,031,152
COVER FOR KEGS, BARRELS, OR LIKE CONTAINERS
Robert G. Fenenden, Townsend, Mass.
Application April 23, 1935, Serial No. 17,774
1 Claim. (Cl. 217—76)

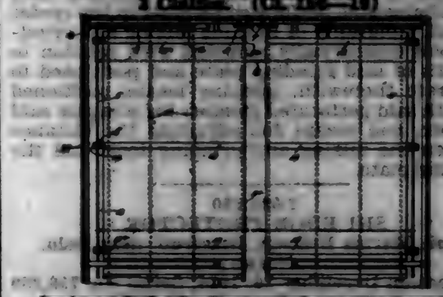


A keg or the like formed of wooden staves having a flat, open, seating shoulder around the inner periphery of the container near the end thereof and presenting above said shoulder an enlarged open mouth of greater diameter than the shoulder with its inner walls substantially parallel to the outer walls of the staves, a cover having a flat peripheral bottom edge and inwardly and upwardly tapered side walls and of a diameter such that it may be readily entered into the open mouth of the container to be loosely seated on said seating shoulder, and a compressing band having also inwardly and upwardly tapering side walls adapted to encircle the end of said container and when forced downwardly thereover to force inwardly the inner walls of the staves first against the flat bottom edge of the cover to lock the latter to its seat the said flat bottom edge being so related to the seating shoulder as to serve as a fulcrum about which subsequent movement of the staves takes place.

2,031,154
LICENSE PLATE HOLDER FOR AUTOMOBILES
Fred Fuchs, St. Paul, Minn.
Application July 23, 1934, Serial No. 736,572
4 Claims. (Cl. 177—329)

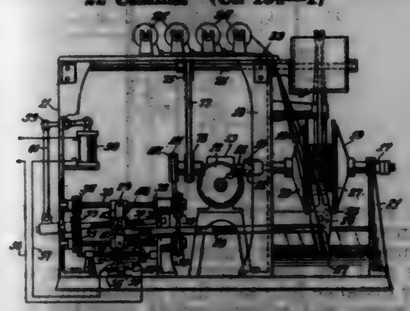
1. A license plate holder and illuminating device comprising a housing in upright plane, said housing comprising in part a lid removably securable to the main housing part to form therewith an elongated weather tight chamber, a large window in the lower part of said lid and a smaller window thereabove, electric light means inwardly of said smaller window, a clear glass in said lower window and a suitably colored lens in the upper window, a main deflector member comprising a transverse partition within the housing and arched at the smaller window thence extending horizontally toward both ends of the chamber and over the main window, to reflect light downwardly in the chamber, license plate holding means within the housing for removably but rigidly retaining a license plate in inclined plane inwardly of the main window with the upper edge of said license plate against the wall of the housing opposite the larger window, and a pair of side light deflector members of triangular form each with its wider end uppermost and tapered downwardly, and means for retaining said side deflectors in selective horizontally spaced positions to deflect light from their inner faces upon the face of the license plate exposed in the main window.

2,031,155
LOCK
John W. Fitz Gerald, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware
Application June 7, 1933, Serial No. 25,443
12 Claims. (Cl. 70—45)



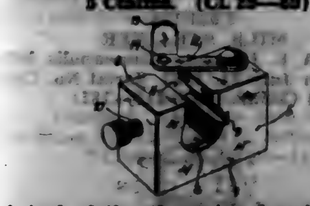
1. In a lock, a casing, a lock cylinder mounted therein, yieldable spring means holding the lock cylinder in a normal position of endwise movement, said spring means permitting a degree of inward endwise movement upon the application of inward force on the cylinder, and means for positively rendering the lock inoperative upon inward endwise movement of the cylinder a predetermined distance.

2,031,156
HONING TOOL
Frank L. Gillett, Los Angeles, and John S. Morgan, Jr., Inglewood, Calif., assignors, by mesne assignments, to The National Superior Company, Toledo, Ohio, a corporation of Delaware
Application May 22, 1933, Serial No. 672,286
17 Claims. (Cl. 51—104.4)



1. A device of the character described comprising in combination, a body having longitudinally extending abrasive elements, means in operative relation with and adapted to expand said abrasive elements, rotatable means having positive operating contact with the first mentioned means for actuating said first mentioned means, axially adjustable means mounted colinearly with the longitudinal axis of the device and co-operating with said rotatable means to form a stop to adjustably limit the maximum diameter to which said abrasive elements can expand.

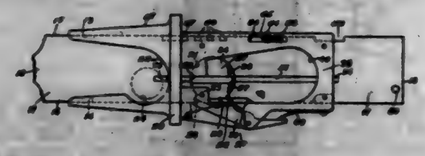
2,031,157
SHADE FOR GREENHOUSES
Lucian E. Gilson, Marshfield, Wis.
Application March 6, 1935, Serial No. 9,185
3 Claims. (Cl. 156—16)



1. A roof shade for greenhouses comprising a rotatably mounted shaft, a plurality of shade sections windable on said shaft, a second shaft rotatably mounted laterally of and in a lower plane than the first shaft, sheaves on the second shaft, flexible elements windable on said sheaves, each shade section having secured to one face thereof laterally spaced strips, and resilient means connecting said flexible elements with the shade sections in line with said strips, and means for rotating said shafts to wind and unwind said shade sections.

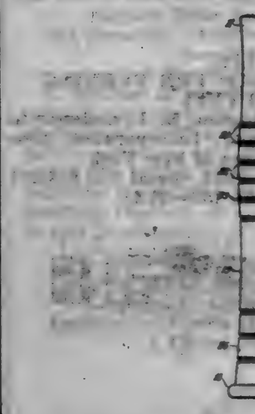
2,031,158
MACHINE FOR MAKING GRINDING WHEELS
Julian G. Goodhue, Evanston, Ill., assignor to Security Grinding Wheel Co., Chicago, Ill., a trust estate, as trustee
Application December 31, 1931, Serial No. 584,151
22 Claims. (Cl. 154—1)

1. In a machine of the kind described, the combination of a shaft and means for rotating said shaft, elements between which a cord is adapted to be wound by said shaft, means for feeding material between said elements, and means for applying pressure to said cord and material, said last mentioned means including means for applying a prescribed pressure for each winding and maintaining said means in said last mentioned condition.



2,031,159
ASSEMBLY TOOL FOR LOCK CYLINDERS
Raymond W. Griffith, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware
Application April 8, 1935, Serial No. 15,581
5 Claims. (Cl. 29—89)

1. A tool of the character described comprising a block having a bore adapted to receive a lock cylinder and having a slot opening into the bore from one face of the block, means for holding a cylinder inserted into the bore in a position with its tumblers accessible through said open slot, and means carried by the block and movable to a position disposed over the open slot to hold the tumblers of the cylinder in place.



2,031,160
SLUG-REJECTING COIN SLIDE
Louis M. Hall, Fort Thomas, Ky., assignor to The Monarch Tool & Manufacturing Company, Cincinnati, Ohio, a corporation of Ohio
Application February 3, 1934, Serial No. 709,621
2 Claims. (Cl. 194—100)

1. In a device of the class described, the combination of a guide plate providing a slide guide, a coin slide receivable in said guide for sliding advancement and retraction longitudinally, said slide having one longitudinal side edge cut away to provide an open-sided coin receiving aperture through which a part of the periphery of a coin or soft slug resting in said aperture is exposed in the plane of the slide, means operating upon advancement of the slide to indent a soft slug and arrest the advancing movement of the slide, a narrow off-center depending strip on the slide the major axis of which strip passes approximately through a diameter of the coin receiving aperture, a relatively wide cooperative

groove in the guide plate for reception of said off-center depending strip, and a horse-shoe magnet supported over the coin slide with its poles disposed in off-center relationship relative to the coin slide so that the poles will overlie the off-center coin receiving aperture when the slide is advanced, whereby the location of the magnet, the guide plate channel, and the slug indenting and slide arresting means, may remain in the aforesaid cooperative positions and still perform their respective functions although the open-sided coin receiving aperture be enlarged or reduced in diameter for reception of coins of different denominations.

2,031,161
HANDGRIP MEMBER
Otto W. Hamel, Chicago, Ill.
Application April 29, 1935, Serial No. 18,792
2 Claims. (Cl. 273—72)

1. A base-ball bat having a handle part and a batting part of circular cross-section, the handle part being of increasing taper toward its termination from a point spaced inwardly thereof, and having a bulbous portion between said point and said batting part, said bulbous portion gradually tapering decreasingly toward both the handle termination and the batting portion over a longitudinal extent substantially sufficient to accommodate two hands of a player, and a series of longitudinally spaced-apart concentric annular grooves on the said bulbous portion.

2,031,161
ICE CREAM SERVICE CONTAINER
Cecil E. Hoover, Scandinavia, Wis.
Application August 31, 1932, Serial No. 631,531
3 Claims. (Cl. 211—133)

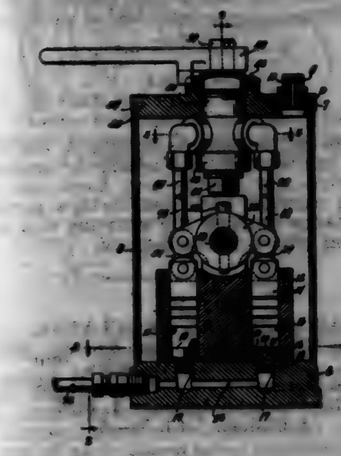
1. A container comprising a vertical cylinder with an apertured upright wall and having its bottom closed and its upper end open, and said upright cylinder wall also having an opening in one side thereof extending from its bottom to an intermediate point in its height and spaced from its upper end, whereby the cylinder from said point to its upper end is closed at its side, a shelf supported in the cylinder at the upper end of the opening in the side of the cylinder and constituting a bottom for the upper portion of the cylinder, and other shelves spaced apart and supported in the cylinder opposite the opening in the side wall of the cylinder whereby articles may be placed on and removed from the latter shelves through the opening in the side wall of the cylinder.

2,031,163
METHOD AND TORCH FOR BURNING LIQUID FUEL
Howard G. Hughey, Irvington, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application January 21, 1933, Serial No. 654,371
12 Claims. (Cl. 158—27.4)

8. An oxygen-liquid-fuel torch having two connections to receive oxygen and liquid fuel, respectively, means for dividing the oxygen stream first into two parts, one of which furnishes oxygen to a metal oxidising jet, a primary atomising mixer receiving liquid fuel from the liquid fuel connection, a secondary mixer receiving a mixture of oxygen and atomised liquid from the primary mixer, and means for dividing again the other branch of the main oxygen stream and supplying one portion to the primary mixer and another portion to the secondary mixer.

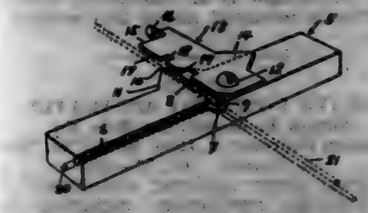
2,031,164
AIR PURIFYING DEVICE
Carl W. Johnson, Minneapolis, Minn., assignor to Heywood Paper Box & Manufacturing Company, Minneapolis, Minn., a corporation of Minnesota
Application March 16, 1935, Serial No. 11,481
1 Claim. (Cl. 183—15)

In an air purifying device, an open topped chamber, a closure cap closing the top of said chamber, a second chamber formed integrally with said cap and depending therefrom a moderate distance into said first mentioned chamber, the upper wall of said second chamber and the central portion of said cap being common, the lower wall of said second chamber having restricted ports therein, said cap being provided with an air outlet communicating with the upper portion of said second chamber, said second chamber being at least partially filled with pieces of odor-absorbing material, said first chamber being adapted for filling thereof with an air washing liquid up to a level somewhat below the bottom of said second chamber, an air inlet in said cap, an air containing element disposed below the surface of liquid placed in said lower portion and being provided with restricted ports, and a conduit supported by said cap and connecting said air inlet to said air containing element.



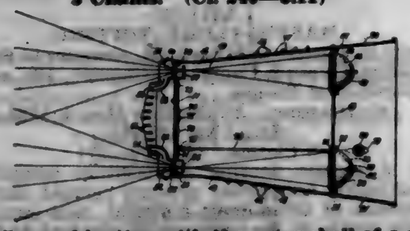
2,031,165
MILK STRAINER
Clarence A. E. Johnson, Minneapolis, Minn.
Application July 21, 1934, Serial No. 736,496
4 Claims. (Cl. 210—181)

2. In a device of the class described, a pair of axially spaced concavo-convex plates the concave



sides of which are in opposing relation, said plates having wide rim portions that are parallel and rest directly, the one upon the other, at least one of the opposing faces of said rim portions being roughened to afford a strainer surface.

2,031,166
HYDRAULIC APPARATUS
Joseph H. Kerber, Milwaukee, Wis., assignor to Hi-Way Service Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application July 22, 1933, Serial No. 681,571
2 Claims. (Cl. 103—2)

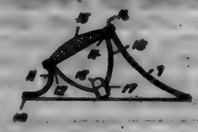


1. In an hydraulic apparatus, the combination of a base, a pump cylinder mounted on said base, a plunger working in said cylinder, a head member, a control valve operatively connected to said pump cylinder and mounted on said head member and controlling the discharge from said pump, a casing member having a fluid tight connection with said base and head member and forming therewith an enclosing casing for said pump cylinder, plunger and valve, and means for actuating said plunger including a shaft extending through a wall of said casing member.

2,031,167
WIRE SPLICER
Landis E. Kressman, Belo, Oreg.
Application March 15, 1933, Serial No. 660,918
7 Claims. (Cl. 140—118)

1. A wire splicer comprising a block having in one side a pair of straight wire end receiving grooves located in approximately the same plane and intersecting approximately at right angles, and a relatively thin closure plate mounted on the block and swingable transversely on said side of the block for positioning over the grooves for holding the wire ends in the grooves.

2,031,168
ILLUMINATING APPARATUS
George Kuhn, Takoma Park, Md., assignor to Butler-Kuhn Corporation, Washington, D. C., a corporation of Delaware
Application January 10, 1931, Serial No. 507,919
5 Claims. (Cl. 240—8.11)



1. In combination with the outer shell of a motor vehicle having a forward substantially upright wall portion, said wall portion having therein a light emitting opening, a projector having a horizontal axis and mounted within said shell in rearwardly spaced relation to said opening to project a beam of light in a forward direction, the bottom of said opening being substantially at the level of the bottom of said beam, the height of said opening being not less than half the depth of said beam at the projector, the width of said opening being considerably less than the width of said beam at the projector and than the height of said opening, said projector producing a beam the rays of which are converged laterally and crossed at a locus lying in a vertical plane passing through the optical axis of the projector and in the vicinity of said opening, said rays forming a pattern at the light opening substantially conforming to the size and shape of the latter, and means positioned between said projector and said opening and movable into the beam to modify the character thereof.

2,031,169
METHOD FOR REMOVING STAINS FROM TEETH
Gilbert Dillie Laymon, Miami, Fla.
No Drawing. Application October 15, 1934, Serial No. 748,427
2 Claims. (Cl. 167—83)

1. Method of removing stains from teeth comprising impregnating the mucin film to a depth at least as great as the objective stain with an iodine solution, and treating the thus impregnated film with a solution of sodium thiosulphate whereby the kinetic as well as the chemical decoloring reaction of the substances is produced in situ in all regions of the objective stain.

2,031,170
VEHICLE INDICATING LAMP
James C. Lester, Pulaski, Tenn.
Application March 23, 1935, Serial No. 11,511
1 Claim. (Cl. 240—7.1)

A device of the class described comprising a lamp casing circular in cross section and having an opening at its upper end portion, the side portion of said casing flaring outwardly and downwardly and one side being shorter than the other side presenting the open top portion at an angle with respect to the vertical axis of the casing, an inwardly extending flange on the inner side of said casing spaced from the edge of the opening,

a reflector in said casing disposed on said flange, the lower portion of said reflector lying in substantially the same plane as the bottom of said casing, a bulb in said reflector, a lens disposed within said opening, and a rim for securing said lens therein.

1,931,171

MASTIC FLOOR TOPPING

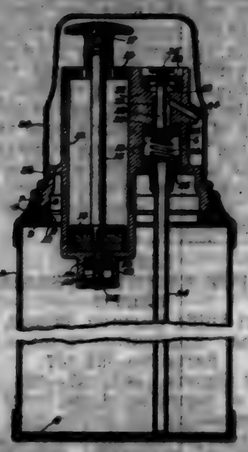
Harry K. Linnell, Oak Park, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois

No Drawing. Application May 5, 1932, Serial No. 609,591

5 Claims. (Cl. 106—37)

1. A mastic flooring composition comprising dead-burnt anhydrous gypsum cement and an emulsion of bituminous material, said emulsion being stable in the presence of divalent and trivalent cations; and in which composition the ratio of the said cement to the bituminous material lies within the range of 7:1 and 2.25:1.

1,931,172



BEVERAGE DISPENSING BOTTLE

George J. Maloney, Long Beach, Calif.

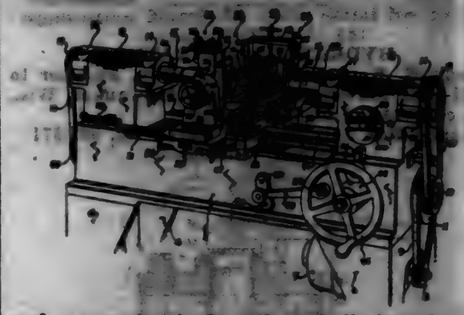
Application October 28, 1931, Serial No. 571,538

Renewed September 24, 1934

7 Claims. (Cl. 221—77)

1. A beverage dispensing bottle comprising, in combination, a tubular container having an enlarged opening at its upper end, a stopper for said opening defining a cylinder with its axis extending parallel to but offset laterally from the axis of said container, a pump for placing the content of said container under pressure including a vertically reciprocable piston in said cylinder, a discharge passageway communicating with the lower portion of said container and extending through said stopper on the side thereof opposite said pump cylinder, and valve mechanism within the confines of said stopper operable from a point exteriorly of the bottle independently of said piston and controlling the opening and closing of said passageway.

1,931,173



BORING MACHINE

Ray A. Miller, Fort Washington, Wis., assignor to Simplicity Manufacturing Company, Fort Washington, Wis., a corporation of Wisconsin

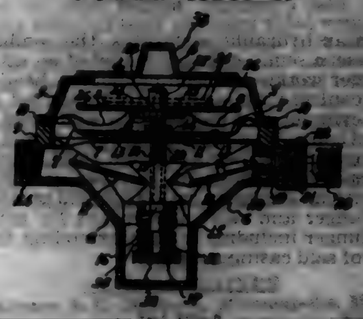
Application April 29, 1934, Serial No. 722,152

24 Claims. (Cl. 29—96)

1. A machine for boring the bearings of connecting rods and cutting oil grooves therein comprising, a boring spindle, a work supporting carriage movable in a direction parallel to the axis of the boring spindle to carry a connecting rod mounted thereon to and from operative relationship with respect to the spindle, a boring tool on the spindle to bore the bearing of the connecting

rod, a grooving tool on the spindle to cut an oil groove in the bearing, and means to simultaneously revolve the spindle and move the work supporting carriage back and forth a predetermined distance to cause the grooving tool to cut an elliptical groove in the bearing.

2,931,174



GAS PRESSURE REGULATOR

George Mills, Gordon, near Sydney, New South Wales, Australia

Application December 16, 1932, Serial No. 717,481

In Australia January 4, 1932

5 Claims. (Cl. 14—5)

1. Improvements in gas pressure regulators comprising a control valve operated by a working diaphragm and toggle operating mechanism housed in a body portion, said control valve being also automatically closed on failure of the working diaphragm by an emergency diaphragm concentrically mounted above the working diaphragm.

1,931,175

GRAVE COVERING APPARATUS

Nimian R. Moore, Du Bois, Pa.

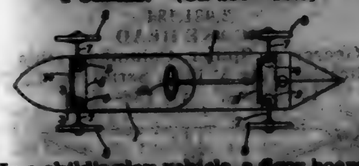
Application February 8, 1934, Serial No. 710,337

10 Claims. (Cl. 27—36)

3. A grave cover applying attachment for a casket lowering mechanism including corner supports and longitudinal side members rotatably mounted therein and connected for simultaneous rotary movement, comprising transverse rails, means for mounting the transverse rails upon said corner supports, longitudinal rails slidable toward or from each other along said transverse rails and adapted to have a pliable mat draped thereover, flexible members extending within said transverse rails and adapted to be thereafter

by rotation of said side members, and means carried by said flexible members and connected

with the opposite ones of said side rails for moving the latter as the side members are rotated.



1,931,176

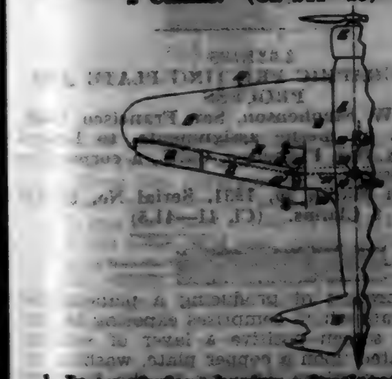
CHILD'S PLAY VEHICLE

Chester P. Nimskirk, Berkeley, Calif.

Application December 7, 1934, Serial No. 756,485

4 Claims. (Cl. 280—87.5)

1. In a child's play vehicle, a floor board, a pair of vertically disposed steering rigidly secured to said board adjacent one end thereof, tubular sleeves slidably mounted on the said respective stems, each sleeve having rotatable spaced angularly disposed arms extended radially therefrom, one arm of each sleeve being projected laterally with respect to said board, wheel spindles extending from the laterally projected arms, rigid means connecting the other arms of the sleeves, and means for maintaining a yieldable downward pressure upon each sleeve.



1,931,177

AIRCRAFT SPEED CONTROL

John K. Northrop, Los Angeles, Calif., assignor to The Northrop Corporation, Inglewood, Calif., a corporation of California

Application March 13, 1935, Serial No. 10,636

2 Claims. (Cl. 244—30)

1. In an airplane having a fuselage and a wing having upper surfaces extending laterally from said fuselage, and a lower surface substantially continuous from tip to tip, a lateral upper surface flap on each wing, an opposing lateral lower surface flap on each wing, and a central lower surface flap between said lateral lower surface flaps, means for rotating all three lower surface flaps simultaneously without moving said upper surface flaps, and means for simultaneously rotating opposing upper and lower surface flaps without rotating said central lower surface flaps.

2,931,178

WASHBOARD

Kurt Peters Oppermann, Saginaw, Mich., assignor to National Washboard Company, Chicago, Ill., a corporation of West Virginia

Application May 7, 1934, Serial No. 724,114

2 Claims. (Cl. 68—29)

1. In a washboard having side frame members and legs, a rubbing surface having a plurality of ribs and channels extending parallel to said frame members and legs lengthwise of the direction of rubbing, said channels being round bottomed and concave, the side walls of said channels presenting parallel alternating wales and indentations lying diagonally of said channels at an angle of less than forty-five degrees thereto.

2,931,179

METHOD OF EVAPORATING AQUEOUS HYDROCHLORIC ACID

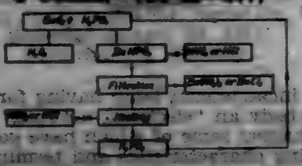
Klaus Raschig, Ludwigshafen-on-the-Rhine, Germany, assignor to Dr. F. Raschig G. m. b. H., Ludwigshafen-on-the-Rhine, Germany

No Drawing. Application November 22, 1934, Serial No. 754,280. In Germany November 27, 1933

2 Claims. (Cl. 23—154)

1. A method of evaporating aqueous hydrochloric acid consisting in carrying out the evaporation in an apparatus made of copper in the presence of phosphoric acid.

2,931,180

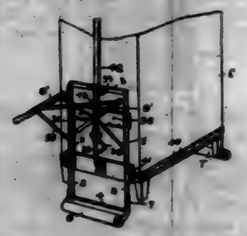


MAKING WATER SOLUBLE BARIUM SALTS AND HYDROGEN PEROXIDE

Friedrich Rüsberg, Berlin-Niederschöneweide, Germany, assignor to Kali-Chemie Aktiengesellschaft, Berlin, Germany

Application April 13, 1933, Serial No. 666,961

In Germany May 7, 1932



5 Claims. (Cl. 23—207)

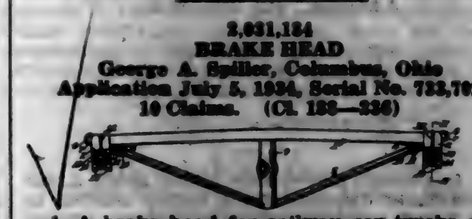
1. A method for making water soluble barium salts and hydrogen peroxide which consists in decomposing barium peroxide with aqueous phosphoric acid, separating the aqueous hydrogen peroxide from the solid dibarium phosphate formed, dissolving said dibarium phosphate in phosphoric acid, separating the undissolved from

the solution of monobarium phosphate obtained, decomposing said monobarium phosphate solution with a volatile acid capable of forming a water soluble barium salt in an amount sufficient to convert substantially all the dibarium phosphate into such barium salt and phosphoric acid, separating the phosphoric acid from the barium salt, both formed by said decomposition, removing the volatile acid present in said phosphoric acid by heating and decomposing fresh barium peroxide with said phosphoric acid.

2,031,181
TRUCK
Francis M. Smith, Ashland, Ohio
Application September 24, 1934, Serial No. 745,317
9 Claims. (Cl. 254—7)

1. A truck for handling heavy objects comprising a main frame having laterally spaced side members, a second frame slidably engaged with the side members of said main frame having padded cross members extended across the front face of said side members, vertically arranged means interconnecting said main frame and said second frame for shifting said second frame with respect to said main frame and vertically spaced load supporting means on said second frame, the upper load supporting means being removably supported on said second frame.

2,031,182
INCANDESCENT LAMP
John Hays Smith, Camp Hill, Pa.
Application May 2, 1931, Serial No. 534,488
23 Claims. (Cl. 176—46)

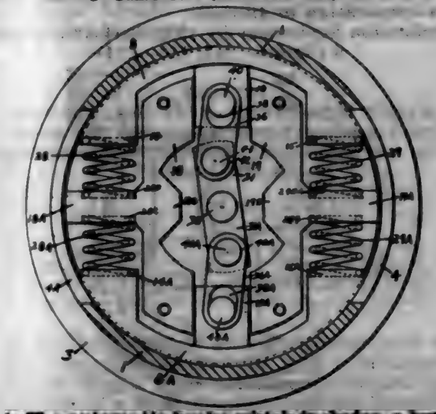


1. An incandescent lamp having for an incandescible body an "electrical network" of electrical conductors some of which have good current conducting characteristics and terminate within the network and some of which have resistive and incandescent characteristics and are arranged between the first named conductors so that they are supplied with electrical energy by group parallel feeding to provide uniform voltage in the resistive part of said network for the uniform generation of light.

2,031,183
PATTY-HOE
Clarence Nelson Sonnenburg, Baltimore, Md.
Application June 21, 1935, Serial No. 27,761
8 Claims. (Cl. 294—7)

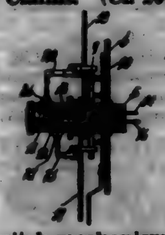
1. As a new article of manufacture, a patty-hoe, comprising an elongated flat plate with an upstruck flange at its rear end, an elongated handle attached to said flange for manipulation by the user, a second flat plate pivoted to the free end of said flange, and adapted to overlie said first plate in spaced relation thereto, a bent lever secured to the pivoted end of said second plate, a sleeve slidable on said handle, finger lugs projecting from said sleeve, and a link interconnecting said sleeve and said lever for swinging said second flat plate.

2,031,184
BRAKE HEAD
George A. Spiller, Columbus, Ohio
Application July 5, 1934, Serial No. 733,702
10 Claims. (Cl. 188—236)



1. A brake head for railway car trucks comprising a body formed to include a substantially arcuate forward wall, the said body having centrally formed therein a dove-tailed groove, a brake shoe attaching section shaped to conform to the curvature of said forward wall, said section being provided with a tongue formed to be slidably received in the groove of said body by movement of said section in a direction substantially parallel to the axle of an associated truck wheel, and spaced lugs integrally formed with and projecting forwardly from said section between which the lug of a cooperative brake shoe is positionable, the said lugs being formed for the reception of a key by which the brake shoe will be detachably connected with said section and said section positively maintained against transverse movement in connection with the body of the brake head.

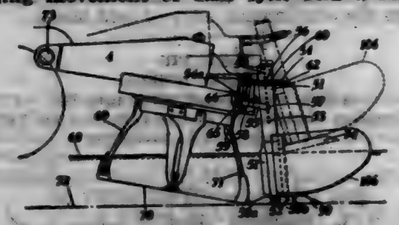
2,031,185
PLANOGRAPHIC PRINTING PLATE AND PROCESS
Arlington W. Stephenson, San Francisco, Calif., assignor, by mesne assignments, to Lemart Company, San Francisco, Calif., a corporation of California
Application March 26, 1931, Serial No. 524,213
6 Claims. (Cl. 41—41.5)



5. The process of producing a planographic printing plate which comprises exposing to light through a screen positive a layer of sensitive enamel coated upon a copper plate, washing out the soluble portions, burning in the hardened areas, electro-depositing a non-amalgamable metal on the copper between the burnt-in areas, cleaning off the burnt-in enamel, silvering the bare copper areas only and building up a protective coating on the silvered areas to a height below the top of the non-amalgamable areas.

2,031,186
AUTOMATIC BRAKE
Andrew L. Sill, Los Angeles, Calif.
Application July 12, 1935, Serial No. 31,647
5 Claims. (Cl. 192—13)

1. The automatic brake which includes, a brake drum secured to a support so that it may not rotate, brake shoes adapted to bear on the brake drum, a brake shoe holder adapted to hold the shoes in place in relation to the brake drum, means for securing the brake shoe holder to machinery adapted to rotate with the brake shoe holder, means for forcing the brake shoes to bear on the brake drum, means for forcing the brake shoes away from the brake drum, means for rotating the brake shoe holder, means for locking the brake shoes so they can not bear on the brake drum, and means for unlocking the brake shoes so that they are free to be forced to bear on the brake drum.

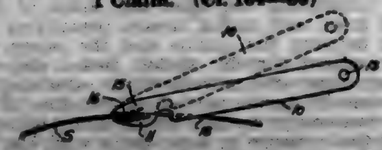


2,031,187
TIME SWITCH MECHANISM
George Stokes, Long Beach, Calif.
Application August 22, 1934, Serial No. 740,353
7 Claims. (Cl. 200—38)

1. A time switch mechanism, a chronometer on which the switch is mounted, cam means, drive means from the chronometer extending to the cam means whereby the cam is continuously rotated in one direction, a pair of arms, a finger on each of the arms, said cam means engaging said fingers, contact rings engageable by said fingers, said cam means being adapted and arranged to move the fingers into and out of engagement with the contact rings.

2,031,188
ROTARY TILLING MACHINE
Norman Cheale Storey and Paul Rudolph Hasson, Hunslet, Leeds, England
Application February 18, 1934, Serial No. 711,364
In Great Britain March 28, 1933
13 Claims. (Cl. 97—45)

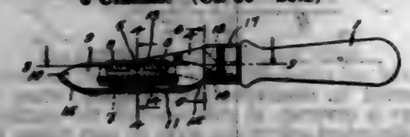
1. In a tilling machine comprising a frame carrying rotatory tilling tools and hinged to the rear of the machine to swing in a vertical plane, the combination with said frame of a tyne hingedly connected to said frame to swing in a substantially horizontal plane, means for limiting the hinging movement of said tyne and a runner



mounted on said tyne and adapted, when said frame is lowered, to ride beneath the surface of the disturbed soil in the wake of said tilling tools and to carry the load of said frame on the surface of the untilled sub-soil.

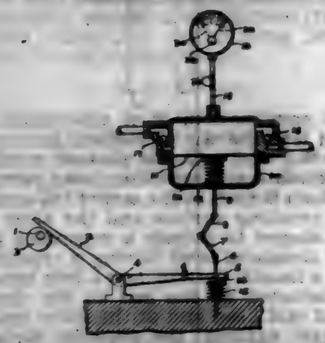
2,031,189
NUTCRACKER
Martin L. Stromberg, Marshfield, Oreg.
Application November 7, 1933, Serial No. 697,013
5 Claims. (Cl. 146—16)

1. The combination, in a nutcracker, of an elongated lever having a crushing surface adjacent one end and a handle portion at the other end, a rigid laterally extending head portion, one end of which is fixed to the end of the lever adjacent the crushing surface and the other end of which is shaped to provide a depending portion, a second elongated lever having a crushing surface and a handle portion, and a link means pivotally connected at one end to the depending portion of said head and at the other end to the second lever adjacent the crushing surface end thereof.



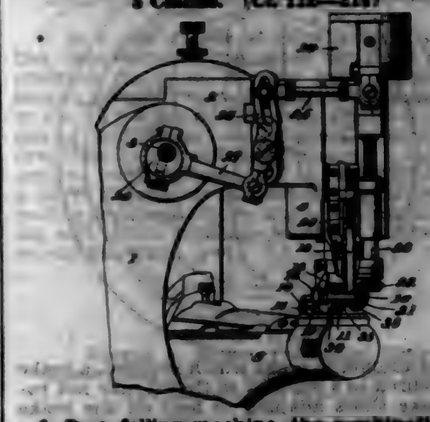
2,031,190
TIN CUTTER
Adolf Swedelund, Toledo, Ohio
Application January 4, 1934, Serial No. 705,887
Renewed August 16, 1935
1 Claim. (Cl. 164—89)

A cutter as set forth comprising an elongated handle substantially rectangular in transverse section, a straight flat cutting blade integral with the forward end of the handle and coplanar therewith, and a pointed flat jaw member integral with the forward end of the handle and



coplanar therewith and disposed in spaced relation to the blade, the line of cutting of the blade being in the line of thrust of the handle, said jaw member having a convex inner edge portion terminating at the rear end thereof in spaced relation to the confronting edge of said blade.

2,031,191
PARING KNIFE
Adolf Swedelund, Chicago, Ill.
Application September 12, 1934, Serial No. 743,901
6 Claims. (Cl. 30—20.1)



1. An implement of the character described, comprising a handle, an elongated transversely arcuate body extending from one end of the handle, said body having a longitudinal slot therethrough, a paring blade disposed against the concave face of said body and having a sharpened edge extending through said slot and its opposite edge lying adjacent a longitudinal edge of the body, and a securing element engaging over said body at one longitudinal edge and having a portion overlying said blade and securing the same against said arcuate face.

2,031,192
METER FOR INDICATING RATIO OF FLUID FUEL CONSUMPTION TO ENGINE SPEED
William F. Sutherland and Griffin G. Waite, Toronto, Ontario, Canada
Application October 27, 1933, Serial No. 695,486
2 Claims. (Cl. 73—51)

1. As a means for indicating the ratio of fuel consumed to distance travelled in fuel engine-propelled vehicles the combination with a pump supplying fuel to said vehicle propulsion engine, said pump having a casing having a pump element operating therein in one direction by said engine at a rate fixed in relation to the engine speed to create a fuel flow to the engine, valve means controlling the inlet and outlet of fluid to and from said casing, means permitting lost motion between the engine and the pump element operated thereby, spring means opposing the engine operated movement for returning the pump element during periods of cessation of the former movement, the said spring means acting to control the pressure in accordance with the engine fuel requirement, of means influentially connected with the pump chamber defined by the operated pump element, the valves, and the pump casing and indicating through the mean pressure therein the ratio between the fuel requirements and distance travelled by the vehicle.

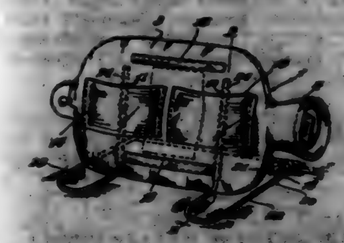
2,031,193
FELLING MACHINE FOR SEAMING FABRIC SECTIONS
Charles S. Thompson, Elmhurst, Ill., assignor to Union Special Machine Company, Chicago, Ill., a corporation of Illinois
Application September 19, 1932, Serial No. 633,900
5 Claims. (Cl. 112—214)

1. In a felling machine, the combination of a work support, a presser foot adapted to receive and direct interfolded fabric sections, stitching devices for uniting the interfolded fabric sections, a feeding means including a feed roller yieldingly contacting with the fabric sections on the work support in rear of the presser foot, and means for intermittently rotating said roller, a feed dog mounted beneath the work support and engaging the material beneath the presser foot, said presser foot and said feed roller having channels in their fabric engaging faces located in alinement and adapted to receive the interfolded portions of the fabric sections, each of said channels being of a greater width than the interfolded fabric sections and of a greater depth than the combined thicknesses of the interfolded fabric sections.

2,031,194
BUILDING BLOCK
Howard E. Thompson, San Francisco, Calif.
Application September 18, 1925, Serial No. 40,797
3 Claims. (Cl. 46—25)

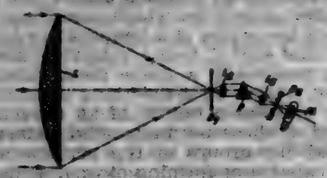
1. A building-block for forming tracks comprising a flat block having its opposite ends beveled in opposite directions to form long and short sides and having a tenon formed integral with one end and a mortise formed in the opposite end whereby a series of said blocks may be connected with their shorter edges adjacent to form an arch, or connected, with each alternate block reversed, to form a straight extension; and similar tracks formed upon opposite flat surfaces of said flat block.

2,031,195
TOY LOCOMOTIVE, TRAIN AND TRACK
Howard E. Thompson, San Francisco, Calif.
Application September 16, 1925, Serial No. 40,796
9 Claims. (Cl. 46—1)



5. The combination with a toy locomotive and track having open crossings with longitudinally disposed central rails radiating from said open crossings, of a shoe mounted upon the bottom of said locomotive and slidable between the rails of said track to retain said locomotive thereon, said shoe being provided with a centrally disposed groove to engage said central rail and guide said shoe through said open crossing.

2,031,196
SHOE SOLE
Francisco Vicente, Habana, Cuba
Application December 17, 1934, Serial No. 757,961
In Cuba January 3, 1934
2 Claims. (Cl. 36—30)



1. A sole for shoes having a base composed of a leather sole and a lower layer of crepe rubber stitched to it, a tread portion composed of straps of sole-leather and straps of crepe rubber arranged parallel and alternately, and rubber cement uniting all said elements.

2,031,197
HOT WATER BAG COVER AND STAND
Harriet E. Weaver, Yonkers, N. Y.
Application April 14, 1934, Serial No. 720,893
4 Claims. (Cl. 128—238)

1. A device of the class described including a cover comprising walls, said cover being adapted to receive a hot water bag, straps carried on one of said walls, casings carried on said walls and disposed at right angles to said straps, a strap carried on the other of said walls, casings carried on the other of said walls and disposed at right angles to said strap, and a stand removably connected with the cover and having upstanding arms selectively engageable with the casings for disposing either said strap or the straps to confront a human limb.

2,031,198
PHOTOPHONE
George Maurice Wright, Chelmsford, and George Fairburn Brett, Leeds, England, assignors to Radio Corporation of America, a corporation of Delaware
Application April 22, 1933, Serial No. 667,476
In Great Britain April 23, 1932
1 Claim. (Cl. 250—7)

A photophone device including a photoelectric means for translating receiving light variations into electrical variations, means in the light path to said photoelectric means for separating out from the total light incident upon the receiver light of a wave length approximately corresponding to the approximately monochromatic light transmitted from a co-operating transmitter so that only this separated light is permitted to reach the translating device, and wherein the receiver comprises a prism interposed in the path of the light to the translating device, a diaphragm being positioned between said prism and said translating device to select from the spectroscopically obtained series of colors given by the prism that light corresponding to the monochromatic or approximately monochromatic light emitted from the co-operating transmitter, and wherein the diaphragm interposed between the prism and the translating device is adjustable.

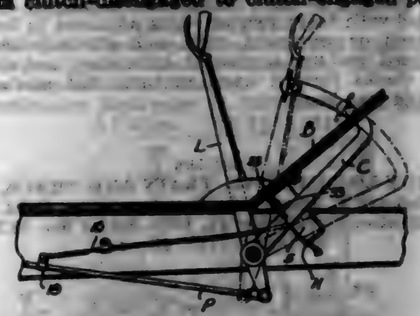
2,031,199
COAL BURNER
Alexandre Adrianoff, Brussels, Belgium
Application February 26, 1935, Serial No. 8,294
In Belgium August 17, 1934
5 Claims. (Cl. 122—368)

1. In a coal burner in combination with a combustion chamber provided with a water jacket, an inclined ledge laterally disposed in the said chamber and leading by a tongue-shaped curve to a surface which through another curve joins again the inner wall of the combustion chamber, whereby a water chamber is obtained between the said surface and the said inclined ledge and a free space is formed under the said surface between the latter and the bottom of the said wall, a slope of coal being formed in the

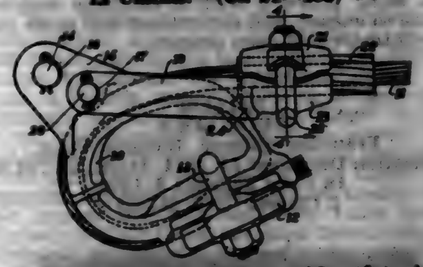
said free space, and means whereby air is blown into the said free space above the said slope of coal.

2,031,200
PROCESS OF MAKING PRODUCTS INCLUDING ALIPHATIC ALDEHYDES
Karl Baur, Ludwigshafen-on-the-Rhine, Germany, assignor, by mesne assignments, to Union Carbide and Carbon Corporation, a corporation of New York
No Drawing. Application January 30, 1930, Serial No. 424,729. In Germany February 5, 1929
16 Claims. (Cl. 260—135)

1. Process for converting 1,2 alkylene oxides containing from 2 to 4 carbon atoms into products including aldehydes which comprises passing vapors of the oxides at a temperature between about 150° and 450° C. over a catalytic substance comprising essentially a stable metal compound which is not volatile at the working temperatures and which contains a radicle of an oxygen-containing acid of those normally solid elements of the 5th and 6th groups of the periodic system which are capable of forming oxygen acids.



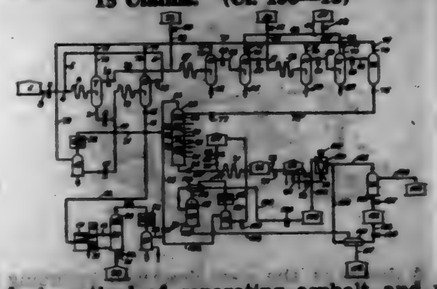
2,031,201
ATTACHMENT FOR COMPARATORS
Robert O. Beardsley, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a corporation of Vermont
Application May 9, 1935, Serial No. 20,564
4 Claims. (Cl. 88—24)



1. In a comparator of the character described having a housing, a horizontal optical instrument projecting through said housing, and a work-supporting table in front of said housing; a hinged bracket mounted on said housing, an arm pivotally mounted on said bracket, a support member adjustably fixed at the free end of said arm, a lamp house and a prism mounted in spaced relation on said support member, and means for adjustably limiting the angle of swing of said arm.

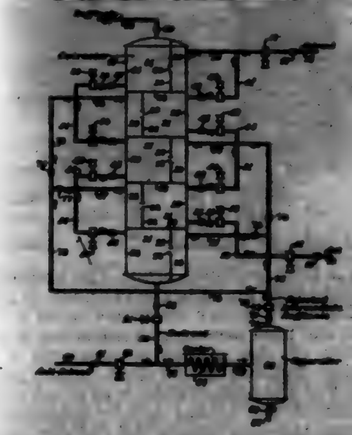
2,031,202
SIGNALING SYSTEM
Leo Edward Blee, Los Angeles, Calif.
Application October 17, 1932, Serial No. 638,068
5 Claims. (Cl. 177—311)

5. In a signaling system of the class described, a signal, a source of current and switching means for connecting the signal and source of current in series, said switching means including means for closing a circuit when the brake of an automobile is on, means for closing a circuit only while the clutch pedal of an automobile is being moved from clutch-disengaged to clutch-engaged position, and means whereby said switching means are in series circuit.



2,031,203
CABLE CLAMP ATTACHMENT
Floyd G. Bevard, Akron, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application November 23, 1934, Serial No. 754,451
11 Claims. (Cl. 24—135)

1. The combination with a cable, of a clamp for supporting said cable, armor rods enclosing said cable adjacent said clamp, a pair of jaws gripping said armor rods and holding said armor rods in place on said cable, and a link rigid with one of said jaws and pivotally connected with said clamp.

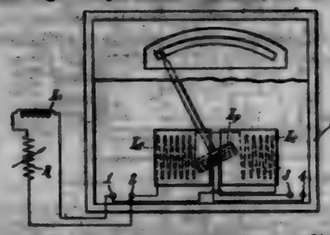


2,031,204
METHOD FOR PRODUCING LUBRICATING OIL
Ulric B. Bray, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application October 6, 1930, Serial No. 486,715
15 Claims. (Cl. 196—13)

1. A method of separating asphalt and wax from oil containing the same which comprises mixing said oil with a liquefied volatile solvent, separating said asphalt from the liquefied solvent, oil and wax, separating substantially all of said solvent from the oil and wax, adding naphtha,

to cause separation of wax from the oil-naphtha solution, removing the wax from the oil and naphtha and subsequently removing the naphtha from the oil.

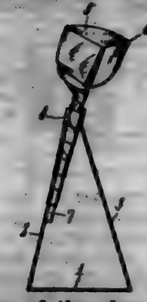
2,031,205
PROCESS FOR SOLVENT EXTRACTION OF OILS
Ulric B. Bray, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application April 3, 1934, Serial No. 718,815
8 Claims. (Cl. 196—13)



1. A process for the separation of oil into paraffinic and non-paraffinic fractions which comprises, commingling said oil with a selective solvent and thereby forming a raffinate phase containing paraffinic oil fractions and an extract phase containing selective solvent and dissolved oil fractions, separating said phases, commingling said extract phase with an anti-solvent, said anti-solvent being more soluble in the extract phase than in the raffinate phase and adapted to cause separation of the extract phase into two layers, one layer containing oil fractions relatively more paraffinic in character than the other of said layers, separating said layers and returning the more paraffinic oil layer to the extraction system, at a point between the points of introduction of the oil and selective solvent into said system.

2,031,206
COMPOUND AND COMPOSITIONS CONTAINING SAME
Bozetech C. Bren, Cedar Grove, N. J., assignor to Du Pont Viscoloid Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 24, 1934, Serial No. 713,375
16 Claims. (Cl. 106—48)

1. Composition comprising a cellulose derivative and a N-alkoxyalkyl aryl sulfonamide as a plasticizer therefor.



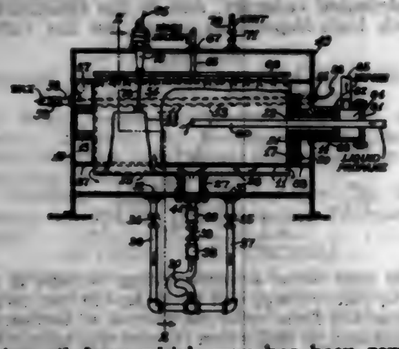
2,031,207
COMPENSATED WATTMETER
Glenn H. Browning, Winchester, Mass., assignor to Dobie Engineering Company, Medford, Mass., a corporation of Massachusetts
Application January 31, 1924, Serial No. 690,152
17 Claims. (Cl. 171—94)

3. In a wattmeter having a deflectable voltage coil, a current circuit, and a deflection indicator, and in which the current circuit has a relatively high impedance, means for nullifying the effects of distributed capacity, due to the construction of such high-impedance circuit, on the voltage

coil, so that when an alternating voltage is applied to said voltage coil with the current circuit disconnected from external sources of excitation, substantially no deflection thereof will take place.

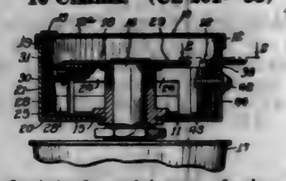
2,031,208
LOLLIPOP FIGURE
Margaret Anna Burgard, South Williamsport, Pa., assignor to C. A. Reed Company, Williamsport, Pa., a corporation of Delaware
Application January 18, 1934, Serial No. 707,146
10 Claims. (Cl. 46—182)

1. In a device of the class described, a sheet material base having relatively narrow spaced portions extending upwardly therefrom, and a lollipop having a stick portion in substantially upright position, secured to said spaced portions.



2,031,209
IMITATION LINEN FABRIC
Harry H. Burton, Webster, Mass., assignor to Slater Mills, Inc., Webster, Mass., a corporation of Massachusetts
No Drawing. Application October 18, 1933, Serial No. 694,648
4 Claims. (Cl. 28—1)

1. An imitation linen fabric woven from a thread made from spun rayon and cotton fibers and having haphazard irregularities similar to those characteristic of natural linen thread.



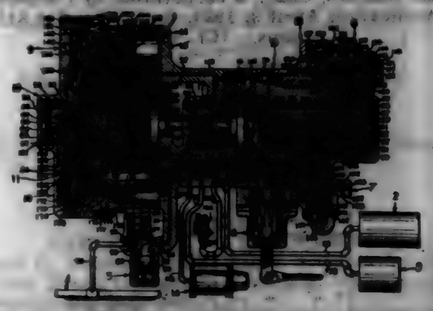
2,031,210
PROCESS AND APPARATUS FOR DEWAXING OIL
Lyle Dillon, Los Angeles, and Claude E. Swift, Glendale, Calif., assignors to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application September 19, 1931, Serial No. 563,994
8 Claims. (Cl. 196—24)

1. A process for the separation of wax from wax-bearing oil which comprises circulating a body of substantially wax-free oil in a continuous path between electrodes charged to a high electric potential difference, introducing a wax-bearing

oil to be dewaxed into said first mentioned oil, depositing wax on one of said electrodes and removing oil from which wax has been removed from said path.

2,031,211
ELECTRICAL RESISTANCE DEVICE
Willy Dumke, Chicago, Ill., assignor to Utah Radio Products Company, Chicago, Ill., a corporation of Illinois
Application July 9, 1932, Serial No. 621,609
10 Claims. (Cl. 201—55)

5. An electrical resistance device having, in combination, a resistor, an element movable across the face of the resistor, and a contact member interposed between said parts including a strip of U-shaped cross section arranged to straddle one side edge of the resistor and having one portion disposed adjacent to the surface of the resistor between said resistor and element and a supporting portion positioned opposite the other face of the resistor for supporting the first mentioned portion in normally spaced relation to said resistor.

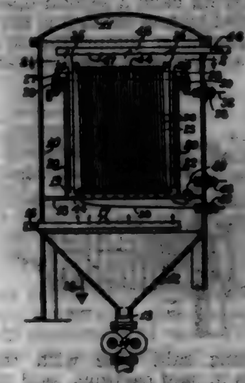


2,031,212
PRINTING PAD
Bernard Dwofsky, New York, N. Y.
Application June 28, 1934, Serial No. 732,766
4 Claims. (Cl. 91—54.5)

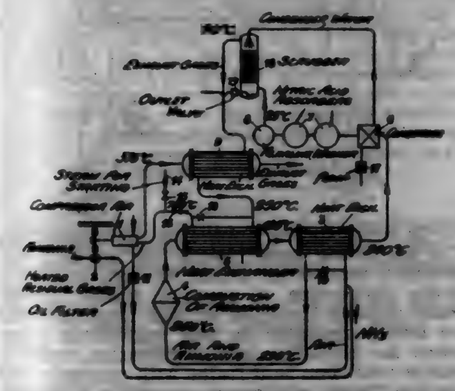
1. An inking pad comprising a casing, an inking surface thereon, an ink paste in the casing, and yieldable means supplying the inking surface with ink.

2,031,213
FLUID PRESSURE BRAKE
Clyde C. Farmer, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application May 20, 1932, Serial No. 612,465
In Mexico January 9, 1931
113 Claims. (Cl. 303—15)

1. In a fluid pressure brake, the combination with a brake pipe and a triple valve device comprising a main valve, a graduating valve having a friction opposed movement relative to the main valve, and a piston operated upon a reduction in brake pipe pressure for operating said valve, of means operative upon movement of said graduating valve from release toward service position relative to the main valve for venting fluid under pressure from the brake pipe, and means for yieldingly opposing movement of said graduating valve by said piston to its brake pipe venting position.



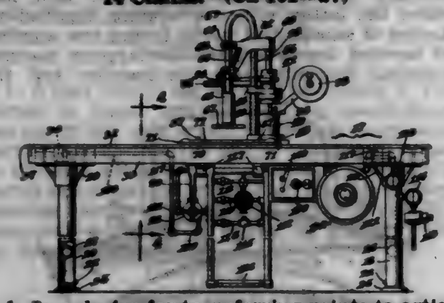
63. In a fluid pressure brake, the combination with a brake pipe and a brake cylinder, of a brake controlling valve device operative upon a reduction in brake pipe pressure in initiating a service application of the brakes to establish a communication through which fluid under pressure is supplied to the brake cylinder to effect a service application of the brakes and to establish communication through which fluid under pressure is locally vented from the brake pipe, and means subject to a light substantially constant pressure and to the opposing pressure of the brake cylinder for permitting a continuance of the local venting of fluid from the brake pipe and operated when the brake cylinder pressure slightly exceeds said light pressure and independently of the operation of the brake cylinder for cutting off and maintaining cut off the local venting of fluid from the brake pipe which is controlled by said means so long as the brake cylinder pressure is at or above said light pressure.



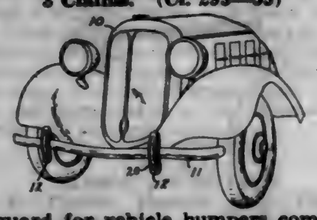
165. In a fluid pressure brake, the combination with a brake pipe, a brake cylinder and an auxiliary reservoir, of an emergency valve device operated upon a sudden reduction in brake pipe pressure for supplying fluid under pressure to the brake cylinder, and operated upon an increase in brake pipe pressure after a sudden reduction in brake pipe pressure for supplying fluid under pressure from the brake cylinder and auxiliary reservoir to the brake pipe, and a ball valve for preventing back flow of fluid from the brake pipe to the brake cylinder and auxiliary reservoir when the brake pipe pressure is higher than the auxiliary reservoir and brake cylinder pressures, and a spring for seating said valve to close off the flow of fluid from the auxiliary reservoir and brake cylinder to the brake pipe before the brake pipe pressure has increased to that of the auxiliary reservoir.

2,031,214
PROCESS AND APPARATUS FOR DEWAXING OIL
Harmon F. Fisher, Los Angeles, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application October 9, 1933, Serial No. 692,722
16 Claims. (Cl. 204—24)

1. A process for dewaxing oil which comprises generating an electric field between electrodes of opposite polarity, passing a wax-containing oil through said field whereby wax is deposited on certain of said electrodes and periodically heating said electrodes upon which wax has been deposited to remove the deposited wax from said electrodes while maintaining a body of wax-containing oil in contact with said electrodes.



2,031,215
PROCESS FOR UTILIZING THE HEAT IN THE OXIDATION OF AMMONIA TO NITRIC ACID UNDER PRESSURE
Thadeus Hebler, Paris, France, assignor to the firm Hydro Nitro S. A., Geneva, Switzerland, a corporation of Switzerland
Application June 19, 1934, Serial No. 731,254
In Germany August 4, 1933
4 Claims. (Cl. 23—162)

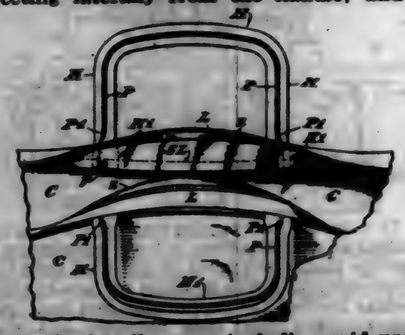


1. In the production of nitric acid under pressure by the oxidation of ammonia by air under pressure, the indirect cooling of the products of combustion by water, absorption of the resulting oxides in water and utilizing the residual gases in an expansion engine to compress air for said combustion, the process which comprises saturating said residual gases from said absorption by direct contact with hot water used in cooling said products of combustion, heating said residual gases after contact with said water first by abstraction of heat from the exhaust gases from said expansion engine and then by abstraction of heat from the products of said oxidation.

2,031,216
TEXTILE WORKING DEVICE
Samuel Edward Kalbach, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application April 24, 1934, Serial No. 722,971
14 Claims. (Cl. 101—27)

1. In a device for transferring prints to articles including in combination, a base member, a reciprocable platen mounted on the base member, a platform having a thin metallic surface beaded at the edges thereof for supporting said base member and platen, said base member and platen having their respective edge portions curved downwardly toward said platform, whereby a smooth graduated descent from the surface of the platen to the surface of the table is provided, thereby protecting the article worked upon from injury incident to sharp edges, and a die unit also mounted on said platform, and means for actuating said die unit.

2,031,217
GUARD FOR AUTOMOTIVE VEHICLE BUMPERS
Otto Kernspecht, Cleveland, Ohio, assignor to Variety Machine & Stamping Company, Cleveland, Ohio, a corporation
Application May 15, 1934, Serial No. 725,701
3 Claims. (Cl. 293—55)



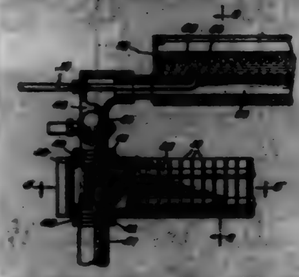
1. A guard for vehicle bumpers comprising a stamped metal member having a continuous, marginal, bumper engaging flange, said member having a centrally disposed laterally offset portion lying within said continuous flange in spaced relation and forming a depression in the face of said member, and a non-metallic member secured to said offset portion and filling said depression, said non-metallic member being of greater depth than said depression, whereby to project outwardly from the face of said stamped metal member.

2,031,218
HANDBAG
Jacob H. Klotz, Bronx, N. Y.
Application March 15, 1933, Serial No. 660,789
2 Claims. (Cl. 150—12)

1. As an article of manufacture for combination with a hand-bag constructed with two flexible members having stitched-together facing-portions in the vicinity of its top opening, an ex-

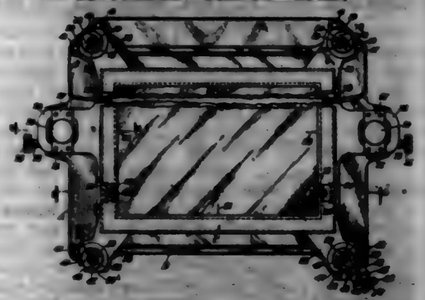
terior two-ended generally U-shaped handle including a flexible generally tubular non-metallic cover and a built-in metallic member therein imparting rigidity thereto, said handle-cover consisting of a long relatively narrow flexible strip substantially wider than the dimension of the periphery of said metallic member and laid around the latter with overlapping longitudinal margins of substantial width facing one another and secured together; said overlapping margins projecting laterally from the handle; and the

ends of the handle-cover including said projections extending beyond the ends of said interior metallic member and said overlapping margins having sufficient width to enable them to be folded over on the main portion of said extending ends of the handle-cover, all whereby said ends and the overlapping margins folded thereover are substantially flat and flexible with four thicknesses of material and adapted for interposition between and securing to the two stitched-together flexible portions of the hand-bag.



2,031,219
VEHICLE WHEEL INCLOSURE
Edwin A. Koch, River Edge, N. J.
Application March 9, 1934, Serial No. 714,772
3 Claims. (Cl. 280—153)

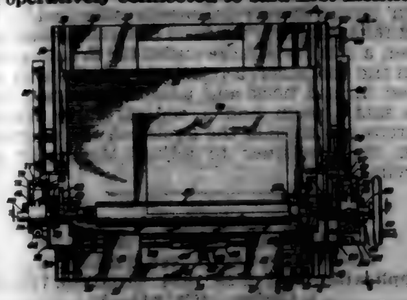
1. In a wheel inclosure of the character described, a body portion extending over the wheel, said body portion having an opening therein adjacent the outer side of the wheel for enabling access to the wheel, a flap for normally fully closing said opening, said flap being hingedly connected at its upper edge by a horizontal hinge to said body portion, and releasable spring means connected at one end to said flap and acting to urge said flap inwardly about its hinged connection for yieldably holding said flap in closed position.



2,031,220
HUMIDIFYING SYSTEM
Charles J. Lohs, Oak Park, Ill.
Application August 15, 1931, Serial No. 557,394
3 Claims. (Cl. 237—73)

1. The combination with a radiator comprising a pair of spaced identical castings forming chambers and having each an opening to receive a connection with a source of fluid heating medium and radiator pipes mounted between the castings and communicating between said chambers, said castings having each a second opening, of a humidifier carried by and extending between said castings, said humidifier comprising an elongated cistern having an open top, a pipe in said cistern,

means connecting said pipe with the second named openings in said castings, said cistern being supported on and carried by said pipe, a feed water pipe extending within the humidifier pipe and connected with a remote water supply, said feed water pipe extending through the side of the humidifier pipe in position to discharge into said cistern.

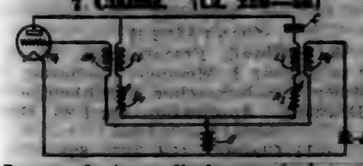


2,031,221
REGISTERING APPARATUS
Dante V. Mimmocca, New York, N. Y., assignor to Eureka Photo Mechanical Equipment, Inc., New York, N. Y., a corporation of New York
Application August 12, 1931, Serial No. 556,710
10 Claims. (Cl. 33—184.5)

1. In a registering apparatus the combination of a supporting table, means for movably supporting a registering frame thereon, means for fixedly supporting a negative frame thereon, means slidably mounted on said negative frame and fixedly mounted on said registering frame, means for adjusting said registration frame to register marks on said frame with marks on said negative frame, said means operating to position said slidable means with respect to said negative frame, and means for clamping said slidable means in adjusted position on said negative frame.

2,031,222
MACHINE FOR TRANSFERRING DESIGNS
Dante V. Mimmocca, New York, N. Y., assignor to Eureka Photo Mechanical Equipment, Inc., New York, N. Y., a corporation of New York
Application August 15, 1931, Serial No. 557,550
16 Claims. (Cl. 101—93)

1. An apparatus for transferring a design from a plane surface to a cylindrical surface, the combination with a cylindrical surface, of a traveling frame for said cylindrical surface, a gear rotatably connected with said cylindrical surface, a gear traveling with said traveling frame and operatively connected to said first mentioned

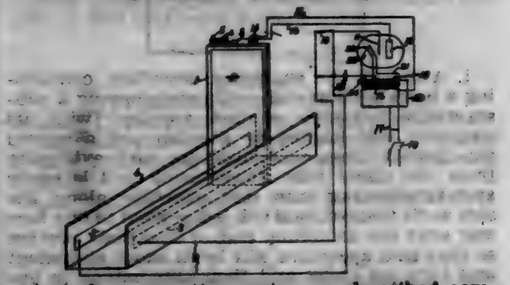


gear, fixed racks with which said second mentioned gear cooperates, and means providing for translatory movement of said cylindrical surface with respect to said traveling frame.

2,031,223
SAFETY RAZOR
Joseph F. Mellen, Providence, R. I.
Application July 2, 1935, Serial No. 29,489
2 Claims. (Cl. 30—44)

1. In a safety razor, a handle, a plate above the handle provided with an opening, an attaching plate fixed intermediate its lengths to the end of the handle and fixed at its ends to the first plate at opposite sides of the opening, a blade carrier slidably mounted on the first plate over the opening, a rock shaft journaled in the handle, a yoke lever fixed to the shaft and bridging the attaching plate pivotally connected with the carrier through the opening, and an operating lever fixed to the shaft.

2,031,224
THERMIONIC OSCILLATION GENERATOR
Eric Baillol Maclin, Oxford, England, assignor to Radio Corporation of America, a corporation of Delaware
Application November 17, 1933, Serial No. 698,150
In Great Britain February 18, 1933
7 Claims. (Cl. 250—36)



6. In an electron discharge device generator wherein feed-back voltage is desired to be exactly opposite in phase to anode voltage, means for generating a feed-back voltage which leads the desired phase by an appreciable amount, means for generating a feed-back voltage which lags the desired phase by an appreciable amount, and means for combining said two voltages to produce resulting feed-back of phase in exact opposition to the anode voltage.

2,031,225
FINISHING STENCIL
Stella A. O'Donnell, Brooklyn, N. Y.
Application October 4, 1934, Serial No. 746,783
5 Claims. (Cl. 132—73)

1. A nail stencil for use in manicuring or pedicuring to cover and protect the moon-shaped section of the nail which comprises a projecting portion at the forward end of the stencil to cover the said moon-shaped section of the nail, integral side pieces for extending over the adjacent member portion for holding the said stencil in place and a rearwardly extending portion whereby the said stencil may be readily removed.

2,031,226
DOOR OPERATOR
Edward G. Parvin, Roselle, N. J., assignor to National Pneumatic Company, Rahway, N. J., a corporation of West Virginia
Application August 3, 1934, Serial No. 738,897
4 Claims. (Cl. 268—1)

1. A door operating system as described comprising a movably supported door, power means connected to the door for moving it and control means for said power means including a pair of elongated electrified metal electrodes having an electric field therebetween mounted in the passage and extending to the door, whereby a person approaching the door and into the electrode field actuates the control means, said electrodes being of sufficient length so that the door is fully open when the person reaches it.

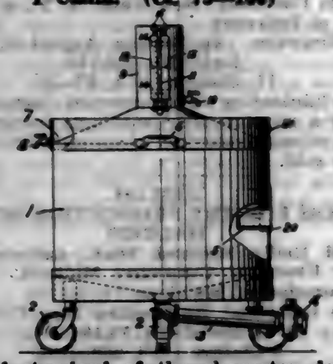
2,031,227
LUBRICATING OILS
Ernest F. Pevere, Beacon, and Clifford G. Ludeman, Fishkill, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application August 21, 1934, Serial No. 740,765
17 Claims. (Cl. 87—9)

1. A lubricating oil of improved character comprising a mixture of a petroleum lubricating oil with a minor proportion of an esterified hydroxy stearic acid.

2,031,228
PROCESS FOR THE PRODUCTION OF ALKYL HALIDES
John H. Kelly, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Michigan
No Drawing. Application May 1, 1935, Serial No. 19,191
9 Claims. (Cl. 260—102)

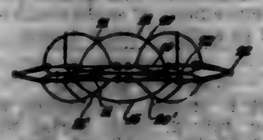
1. In a process for the production of alkyl halides, the step which consists in passing an ole-

fine and a hydrogen halide into an anhydrous liquid medium comprising an alkyl halosulphonate.



8. In a process for the production of ethyl chloride, the step which consists in passing ethylene and hydrogen chloride into an anhydrous liquid bath of ethyl chlorosulphonate containing bismuth chloride and maintained at a temperature between about 40° and about 70° C. at approximately atmospheric pressure, and collecting the ethyl chloride distilling therefrom.

2,031,229
TAG
Herman Roth, Larchmont, N. Y.
Application June 12, 1935, Serial No. 26,152
5 Claims. (Cl. 40—28)



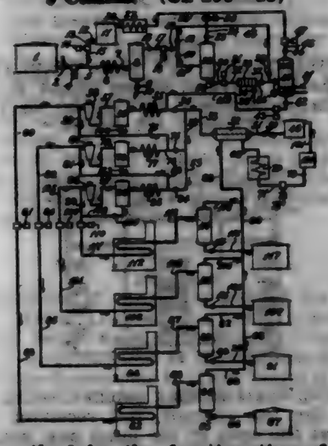
1. A tag of the character described, comprising a body portion and a tab, each having a substantially key-hole shaped aperture with its narrower end located at the top and a curved slit spaced from said aperture and extending from the upper edge downwardly and laterally and terminating into said aperture along the side walls thereof, said tab being fixed to one face and near the attaching end of said body portion so that said apertures will be in exact alignment and form an eyelet and their slits extend in opposite direction and on opposite faces of said body portion and thereby form two resilient flaps or tongues normally closing said eyelet, but which are free to be raised from the closing position by pressure exerted between said tag and the article to which the latter is to be applied, permitting the interlocking of tag and article, and means at the outer end of said slits for guiding the article into the latter.

2,031,230
FIELD STANDARD FOR TESTING LIQUID MEASURING DEVICES
Theophilus A. Seraphin, Philadelphia, Pa.
Application March 8, 1934, Serial No. 714,563
1 Claim. (Cl. 73—166)

A field standard of the character described comprising a container having a neck of relatively small cross-sectional area with respect to the body of the container, a trough about said container below the neck adapted to retain any overflow therefrom, an outlet from said trough to drain liquid therefrom, means attached to said neck for indicating the level of liquid in said container, a relatively large outlet for draining liquid from the container, a relatively small outlet positioned in said neck and adapted to drain liquid into said trough and a control valve therefor, whereby a portion of the liquid may be withdrawn from the container to adjust the liquid level therein.

2,031,231
COLLAPSIBLE WIRE ARTICLE
Manville B. Smith, New York, N. Y.
Application March 22, 1934, Serial No. 717,959
1 Claim. (Cl. 245—1)

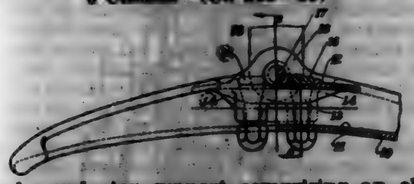
In a collapsible and contortible wire article, a pair of units, a ring for each unit, inner and outer sets of substantially semi-circular members for each unit the ends of each of the members movably connected to the respective ring of its unit, the ends of the wires forming the inner sets overlapping the ends of the wires forming the outer sets at their places of connection with the respective ring, and the adjoining apexes of the inner members of each unit notched, and rings in the notches movably connecting the inner members of each unit to permit a ready contortion of the article into numerous shapes and collapsing of the same.



2,031,232
PROCESS FOR AGING ALCOHOLIC BEVERAGES
Erwin F. Spellmeyer, East Orange, N. J.
No Drawing. Application July 10, 1934, Serial No. 734,608
5 Claims. (Cl. 204—26)

1. The method of rapidly aging alcoholic liquors, which method comprises adding an acid catalyst comprising one of the following acids, namely, acetic, tartaric, malic, succinic, tannic and gallo-tannic to the liquor and passing alternating current through the same for a relatively short period.

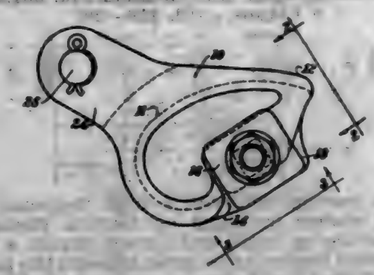
2,031,233
CONTAINER
Charles W. Stillwell, Framingham, Mass., assignor to Arthur J. Messmer, Rochester, N. Y., and Elmer L. Schumacher, Southbridge, Mass.
No Drawing. Application April 25, 1934, Serial No. 722,361
11 Claims. (Cl. 167—82)



1. A chewable container composed of a composition in which predominates paraffin and an inert filler which is wet more readily by paraffin than by water and which will not substantially show out from the paraffin, said composition having a softening point higher than that of paraffin in its pure state and the ratio of the filler to the paraffin being sufficient to substantially increase the chewability of the paraffin but being less than 70 parts of the filler to 30 parts of paraffin.

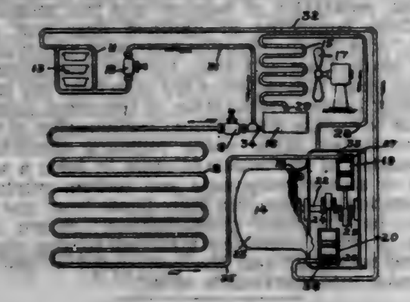
2,031,234
FRACTIONATION OF MINERAL OIL
Claude E. Swift, Glendale, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application May 9, 1932, Serial No. 610,197
9 Claims. (Cl. 196—13)

1. A method for the fractionation of oil containing asphalt which comprises commingling said oil in a light hydrocarbon solvent, separating the light hydrocarbon solvent to separate asphalt solution of oil from the undissolved asphalt, separating the light hydrocarbon solvent from the substantially asphalt-free oil, successively extracting said substantially asphalt free oil with an alcohol to form a plurality of fractions and separating said fractions.



2,031,235
SUPPORT FOR CONDUCTORS
John J. Tayler, Barberton, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application February 8, 1934, Serial No. 710,258
6 Claims. (Cl. 248—63)

1. A conductor support comprising an elongated saddle member having a conductor seat therein, a keeper piece for holding the conductor in said seat and means for clamping said keeper piece against said conductor, the end portions of said keeper piece beyond said clamping means having the longitudinal elements of the contact faces thereof substantially parallel with the longitudinal elements of said seat so that said end portions will engage a conductor on said seat, said end portions being tapered to grade the pressure exerted thereby on the conductor.



2,031,236
CABLE CLAMP
John J. Tayler, Wadsworth, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a corporation of New Jersey
Application July 15, 1933, Serial No. 680,584
12 Claims. (Cl. 24—123)

1. A clamp for holding a loaded cable and for receiving the force of the load thereon so that the portion of the cable extending from said clamp at one side thereof will be drawn taut by the load and the other end of the cable will be slack, said clamp having a seat of gradually increasing curvature from the taut end of the cable toward the slack end thereof, a portion of

said seat being co-planar with the taut end of the cable held thereby while another portion of said seat is curved laterally out of the plane defined by the taut end of the cable and the first mentioned portion of said seat, said laterally curved portion lying in a plane substantially normal to said first named plane.

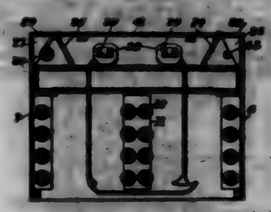
2,031,237
REFRIGERATION APPARATUS
Mateen C. Terry, Detroit, Mich., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 28, 1932, Serial No. 640,104
4 Claims. (Cl. 62—116)

1. In refrigerating apparatus, the combination of a refrigerator cabinet, a relatively low temperature heat absorbing element for making ice, a relatively high temperature heat absorbing element for cooling the cabinet, means for dividing the cabinet into a low temperature compartment and a high temperature compartment wherein said heat absorbing elements are respectively disposed, first and second refrigerant compressor elements for withdrawing refrigerant vapor, respectively, from the low and high temperature heat absorbing elements, a common condensing means for condensing the refrigerant vapor discharged by both compressor elements and for supplying liquefied refrigerant to both of said heat absorbing elements, a prime mover for driving both of said compressor elements at the same speed, said compressor elements having relatively different ratios of compression so as to maintain different refrigerant pressures in the respective heat absorbing elements.

2,031,226
AUTOMATIC VOLUME CONTROL ARRANGEMENT
Leland E. Thompson, Audubon, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 7, 1933, Serial No. 664,568
9 Claims. (Cl. 250—20)

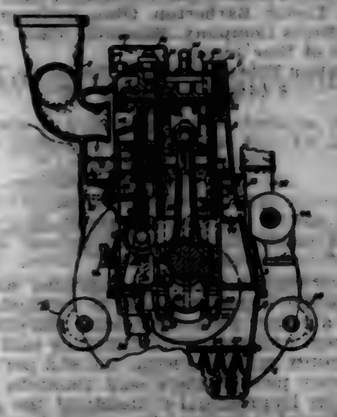
1. In combination with a high frequency receiving system including an electron discharge tube having an input and output circuit, a pair of resistors connected in series between the anode and cathode of said tube, a source of anode voltage connected across one of the resistors, said resistors being so arranged that voltages developed thereacross are of opposing polarity, and a direct current connection from the input circuit of said tube to a point on one of said resistors which is at a positive potential with respect to the point thereon to which the cathode of said tube is connected, said point being so chosen that there is a normal resultant negative biasing potential impressed on an input electrode of said tube.

2,031,239
PROCESS FOR THE UTILIZATION OF SUGARCANE BAGASSE
Alfred M. Thomsen, San Francisco, Calif.
No Drawing. Application September 4, 1934, Serial No. 742,631
3 Claims. (Cl. 92—9)



1. A process for paper pulp making which comprises, separation of bagasse into two respective portions consisting of lignified fiber and pith cells; cooking the lignified fiber with active soda-salt made from salt cake for the production of paper pulp; separation of the pulp from the spent cooking liquor; evaporation of the spent cooking liquor to syrupy consistency; incineration of said concentrated liquor under reducing conditions; lixiviation of the resultant mass to form a solution of sodium carbonate and sodium sulphide; separation of these two ingredients from one another by fractional crystallization; return of a part of such recovered material to the circuit where required; and the conversion of the remainder into marketable form.

2,031,240
TOY
Walter J. Van Deest, Los Angeles, Calif.
Application November 6, 1933, Serial No. 696,842
2 Claims. (Cl. 273—58)

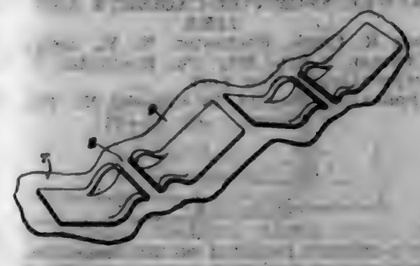


1. A cover for inflatable elastic bodies comprising a plurality of panels of flexible material, each consisting of two parts cut to provide three equi-distantly related dome-shaped projections, the marginal edges of each of which are secured to the corresponding edges of like parts and are co-operable therewith to provide the cover with a plurality of external semi-spherical protuberances.

2,031,241
SHIP CHART CABINET AND DISPLAY CASE
Charles J. Ward, Staten Island, N. Y.
Application March 6, 1934, Serial No. 714,828
4 Claims. (Cl. 40—56)

1. A ship chart holding cabinet having a lamp box at the top thereof, roll receiving pockets located at the ends of the lamp box, bearings in each pocket in which the shaft of a chart holding roll may be mounted for turning, and covers hinged to the cabinet to close the pockets, said covers being of triangular construction so as to remain in closed position by their weight.

2,031,242
ENGINE
Charles A. Winslow, Oakland, Calif.
Application July 21, 1932, Serial No. 623,769
4 Claims. (Cl. 123—73)

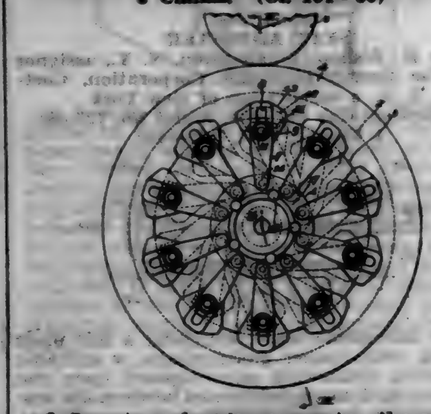


1. In an L-head engine, a cylinder block including a cylinder, a piston, a valve and valve port, a cylinder head containing a combustion chamber covering said valve and overlapping the bore of said cylinder, said combustion chamber being elongated and tangentially disposed with relation to the cylinder and having a cross sectional shape which decreases in area both vertically and horizontally toward the cylinder and forming an open communication between the valve port and cylinder during each opening of the valve, and a fuel injection nozzle positioned above the valve and discharging fuel in a direction longitudinally of the combustion chamber.

2,031,243
TREATMENT OF ORGANIC CELLULAR MATERIALS
Eduard Julius Wolf, Hamburg, Germany
No Drawing. Application July 21, 1933, Serial No. 681,665. In Germany December 27, 1930
12 Claims. (Cl. 99—11)

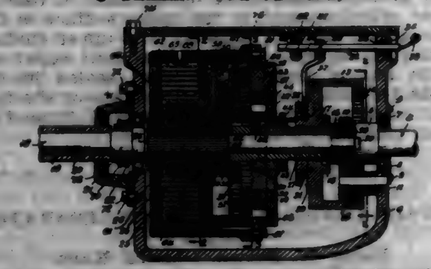
1. In the treatment of organic cellular materials of animal and vegetable character the step of treating said material with a solution of a salt mixture comprising a sodium salt, a salt selected from the group consisting of potassium and rubidium salts, an alkaline earth salt, and a magnesium salt, in which mixture the sodium salt is in an amount several times greater than the sum of the amounts of said other salts, whereby the cellular structure of the material treated remains substantially unaffected.

2,031,244
METHOD OF MAKING HINGE LEAVES
Earl C. Ahln, Longmeadow, Mass., assignor to Moore Drop Forging Company, Springfield, Mass., a corporation of Massachusetts
Application September 15, 1932, Serial No. 633,336
1 Claim. (Cl. 29—11)



The method of forming hinge leaves having a body with ears at one end and a hood extending around the ears, which comprises forging a bar to increase its thickness at a point corresponding to the hooded end, then forging it to increase its width at about the same point, then forging it to form the hinge bodies at a comparatively wide angle to the direction of the forging movement and to form the ears in diverging positions and a shallow hood and trimming the work-pieces to approximate dimensions and, finally, coin-pressing them with the body at a comparatively narrow angle to the direction of the pressing movement so as to bring the ears parallel to each other and to deepen the hood and bring it further around the ears and to smooth the faces and square the edges and bring them accurately to final dimensions.

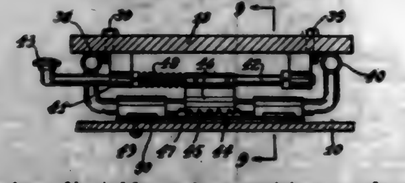
2,031,245
METHOD OF DRESSING FABRICS
Christian Boner, Chur, Switzerland, assignor to Radfumer & Cie. A.-G., Horn, Switzerland
No Drawing. Application May 23, 1933, Serial No. 672,253. In Germany February 17, 1933
11 Claims. (Cl. 8—20)



1. In a method of dressing fabrics, particularly cotton fabrics, the steps of treating the fabric with a compound of the group consisting of gelatin and albumin and chemical hardening means, subjecting the thus dressed fabric to an after-treatment with an alkali, and drying the fabric under conditions adapted to produce the desired definite finish of the fabric.

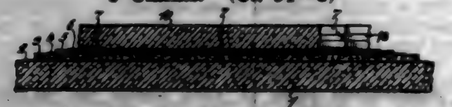
2,031,246
ROTARY SHEAR BLADE CLAMP
Florence C. Biggert, Jr., Crafton, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 19, 1935, Serial No. 50,543
8 Claims. (Cl. 164—69)

6. In rotary shearing apparatus, the combination of a rotatable shaft having a radial flange provided with a seat for an annular blade, an annular blade mounted on said seat, a plurality of clamping fingers disposed radially of said flange with their outer ends overlapping said blade, each of said fingers being provided with a radial slot, a fastening member extending through each of said slots and connecting the adjoining finger to said flange for clamping the blade on the seat, and means pivotally connected to the inner ends of said fingers and rotatable relative to said shaft for simultaneously drawing all of the fingers inwardly relative to said fastening members to free their outer ends from said blade, said flange being provided with means for supporting the outer ends of the fingers when they are withdrawn from the blade whereby the uppermost fastening members are relieved of weight on the adjoining fingers.



2,031,247
TRANSMISSION
Paul Bischof, Bronx, N. Y.
Application June 28, 1935, Serial No. 28,903
6 Claims. (Cl. 74—414)

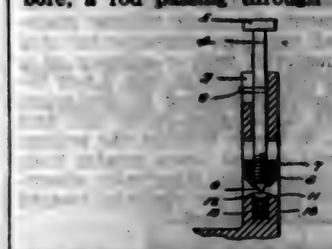
1. In a transmission having a driving shaft and a driven shaft; a casing having a cylindrical sleeve which is slidably mounted upon said driven shaft and is rotatable therewith, a cylindrical outer wall which is concentrical with said sleeve, and a bottom portion interconnecting said sleeve and said outer wall; a spiral spring situated within said casing between said sleeve and said outer wall and having an outer end which is connected with the outer wall of said



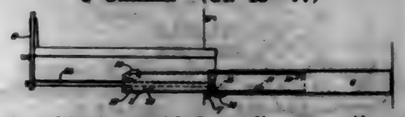
casing, a coupling adapted to be coupled with said casing and to be moved independently thereof, the inner end of said spiral spring being connected with said coupling, and means transmitting the rotation of the driving shaft to said coupling.

2,031,243
SEAT ADJUSTER
Stanley K. Bishop, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a corporation of New York
Application May 26, 1934, Serial No. 727,684
4 Claims. (Cl. 155—14)

3. An adjustable seat comprising a sole plate provided with runner guide means, a shiftable rectangular framework superimposed upon the sole plate, skid means interposed between the sole plate and the framework to include a rectilinear runner section mounted to ride upon the guide means and having a spacer strut section adjoined to each runner end extending upwardly toward the framework and which struts respectively terminate in a brace shank disposed in an axially crosswise relation with respect to the runner length, complementary bracket fixtures attached to the framework in spaced relationship and which fixtures each include a clamping trough that are respectively disposed to grip a different brace shank, and a manipulative latch rod carried by and rotatably mounted between said fixtures.



2,031,249
WATERPROOF AND FIREPROOF FLOOR CONSTRUCTION
Oliver S. Bowman, Colorado Springs, Colo.
Application February 27, 1933, Serial No. 658,523
5 Claims. (Cl. 94—3)

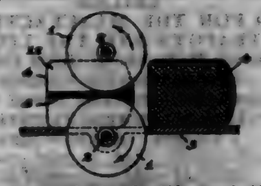


1. A floor construction comprising, a base, a layer of felt secured to the upper surface of the base by an asphalt adhesive, the upper surface of the felt having a coating of asphalt, separator strips having their lower edges sealed in the asphalt coating on the upper surface of the felt, and blocks of cementitious material formed in place between the separator strips.

2,031,250
REPAIR DEVICE FOR CREAM SEPARATOR DISKS
Elmer W. Brown, Oberlin, Kans.
Application February 15, 1934, Serial No. 711,444
1 Claim. (Cl. 153—21)

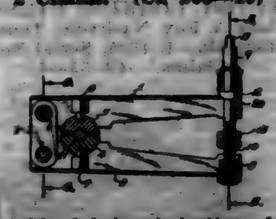
A device for re-forming indentures in cream separator disks comprising a body having an upstanding projection thereon formed with an elongated rounded upper edge, said rounded edge acting to prevent breakage or distortion of the curvature of a disk being operated upon, said projection having a circular bore extending downwardly from the central portion of said rounded edge, a spring pressed plunger in the bore, the upper end of which snugly fits in the top part of the bore, an arm carried by the body and having a vertically arranged part located above the projection, said part having a vertical bore therein in alignment with the first mentioned bore, a rod passing through the second mentioned bore and having its lower end tapered and terminating in a flat part, the lower end of the rod being threaded, a pair of nuts on said threaded end, the lower one having its lower end tapered to prevent breakage of the curvature and said lower nut limiting downward movement of the rod.

2,031,251
DRAWER STOP FOR CABINETS AND THE LIKE
James R. Clark, Rochester, N. Y., assignor to Yawman & Erbe Mfg. Co., Rochester, N. Y., a corporation of New York
Application May 12, 1934, Serial No. 725,302
6 Claims. (Cl. 45—77)



1. A cabinet provided on its respective sides with a pair of opposing drawer supports, a carriage slide slidable on said supports, a drawer slidable on said carriage, a bumper on said drawer, a drawer stop normally causing said bumper to engage a portion of the slide to limit the relative movement between said drawer and said slide, said drawer stop being movable to permit the separation of the drawer from the carriage slide, and stationary means mounted on a side of the cabinet and having a surface engaging said drawer stop on the closure of the drawer after its replacement in the carriage slide for restoring the stop to its drawer retaining position, the uppermost surface of said stop in its normal position being in a plane below the engaging surface of said stationary means.

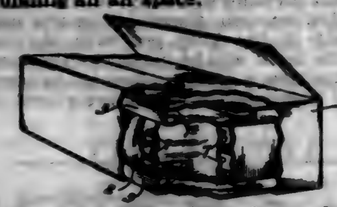
2,031,252
PROCESS OF SLICING BREAD
Harry J. Criner, Davenport, Iowa, assignor, by mesne assignments, to The Micro Corporation, Bettendorf, Iowa, a corporation of Delaware
Application February 18, 1931, Serial No. 516,868
10 Claims. (Cl. 99—14)



7. The method of slicing a loaf of bread which consists in cutting transversely into said loaf from opposite sides and substantially to the central zone thereof and leaving narrow uncut portions extending inwardly from the opposite sides thereof integrally tying adjacent slices together, thereby providing an uncut portion extending from end to end of the loaf throughout the central zone thereof.

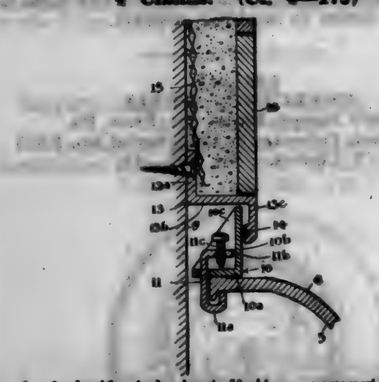
8. A baked loaf of bread having a plurality of opposed slicing cuts extending from opposite sides inwardly to the central zone thereof and having narrow uncut frangible portions between the opposed slicing cuts and extending inwardly from the crusts of the other opposite sides thereof in such position as to hold the cut crustless

surfaces in substantially abutting relation, whereby to hold the cut loaf in loaf form during subsequent handling and whereby the slices may be singly and progressively removed by rupturing the narrow uncut portions without disturbing the relative positions of the other slices.



2,031,253
OIL TESTING DEVICE
Lloyd L. Davis, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
Application November 14, 1935, Serial No. 49,795
2 Claims. (Cl. 265—10)

2. A portable lubricant testing device comprising in combination a pair of elongated members having one pair of respective ends thereof hingedly connected, recesses formed in said members adjacent the points of said connections, means forming a bearing disposed in said recesses, a shaft journaled in said means, a member having screw threaded engagement with the free end of one of said members, said screw threaded member being provided with a collar adapted to engage the other of said members, a graduated sleeve frictionally positioned on said screw threaded member for initially rotating the same to bring said bearing means into contact with said shaft, means for rotating said screw threaded member to clamp said bearing means against said shaft, and a stop positioned on said screw threaded member adapted to engage said elongated member with which said screw threaded member has threaded engagement for preventing overloading and springing of said elongated members.

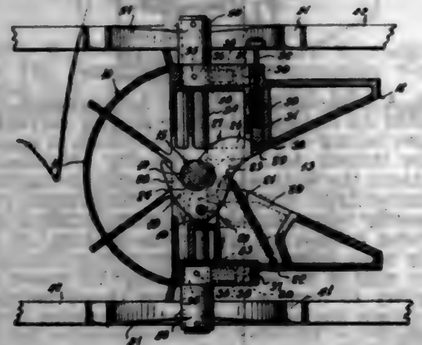


2,031,254
HEAT INSULATED FOOD PACKAGE
Ralph H. Derr, Oakmont, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application July 18, 1931, Serial No. 551,569
4 Claims. (Cl. 229—14)

1. In a paper board carton for transportation of perishable foodstuffs, a heat-insulating liner formed of paper board corrugated on one side and having a sheet of bright pliable metal foil connected to the peaks of the corrugations, said liner shaped to provide a hollow tubular structure of substantially rectangular cross-section with said pliable metal foil forming inner walls surrounding an air space.

3. A heat-insulating liner for packages comprising an elongated unitary strip of corrugated paper having opposed notches formed in opposite sides thereof defining a plurality of connected sections, the material of each section being folded longitudinally upwardly from the opposite edges inwardly and downwardly to form a plurality of divided tubular air spaces, the material of said strip being folded transversely to bring the adjacent ends of the dividing tubular air spaces into registry to form a continuous closed polygonal structure having divided communicating hollow walls.

2,031,255
BATHTUB
Hans S. Doubelbeiss, Montreal, Quebec, Canada
Application March 7, 1934, Serial No. 714,483
In Canada January 11, 1934
4 Claims. (Cl. 4—173)

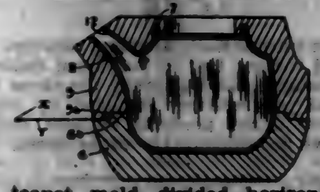


1. A bath tub installation comprising a tub presenting marginal members lying close to and parallel with unfinished side wall surfaces of the room in which the tub is installed, said tub resting directly on the floor of the room free of attachment to the side walls and being thus free to follow settling movements of said floor, a plaster or tile finishing wall on the sides of the room beyond the side wall area concealed by the tub, said finishing wall presenting edge portions lying adjacent to the aforesaid marginal members of the tub, and flange-forming elements projecting beyond the said edges of the finishing wall into overlapping relation with the inner surfaces of the marginal members of the tub to form a slip joint closing the gap between the tub and the finishing wall.

2,031,256
SEMIAUTOMATIC FIFTH WHEEL CONSTRUCTION
Claude E. Dorsey, Jr., Elba, Ala.
Application March 22, 1935, Serial No. 12,569
3 Claims. (Cl. 280—33.1)

1. A fifth wheel structure of the class described having a body provided with a socket to receive

a king pin, a latch to secure the king pin to the body, means pivoting said latch to the body, said latch having an arm disposable in the path of engagement of the king pin with the socket, whereby the latch will be moved by the king pin to closed position, a spring connected to the latch and to the body urging opening movement of the



latch, and a securing means for the latch automatically engageable therewith when the latch is in closed position, comprising a slide, sprung means urging said slide into the path of opening movement of the latch, said latch having a second arm, said second arm having a cam surface engageable with said slide to displace the slide as the latch moves to latching position.

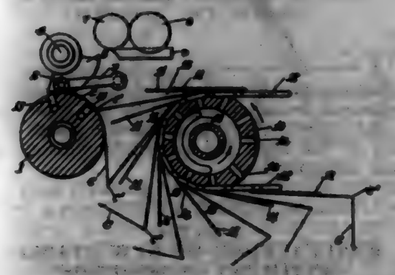
2,031,257
EMERGENCY WHEEL
Henry Joseph Finke, Jr., Etna, Pa.
Application February 8, 1935, Serial No. 5,855
2 Claims. (Cl. 301—49)

1. An emergency wheel and non-skid device for a motor vehicle comprising a wheel body, a tire carried thereby and of less diameter than the tire of the main wheel, means for connecting the hub portion of the emergency wheel to the hub of the main wheel, the rim and tire of the emergency wheel having radial slots therein, a floating ring carried by the emergency wheel, spring means for holding the floating ring in a central position, radial lugs carried by the ring and passing through the slots, and manually operated means for moving the lower portion of the ring downwardly to project the lugs of said portion against the road surface, said means including a sleeve vertically arranged and connected to a part of the vehicle, a shank slidably arranged in the sleeve, a roller at the lower end of the shank engaging the floating ring, a rock shaft, a cam lever pivoted to the sleeve and engaging the upper end of the shank, and means connecting the lever to the rock shaft for moving the lever into engagement with the shank when the shaft is rocked in one direction.

2,031,258
MOLD FOR THE MANUFACTURE OF TEAPOTS AND THE LIKE
Fenwick D. Foley, St. John County, New Brunswick, Canada
Application April 19, 1935, Serial No. 17,294
In Canada April 21, 1934
2 Claims. (Cl. 25—129)

1. A teapot mold divided horizontally into upper and lower sections, the wall of the upper section being pierced by a tubular spout forming cavity bounded by said wall.

2,031,259
ELECTRIC COOKING UTENSIL
Clark A. Fox, Nashville, Tenn.
Application May 1, 1933, Serial No. 19,189
7 Claims. (Cl. 53—5)



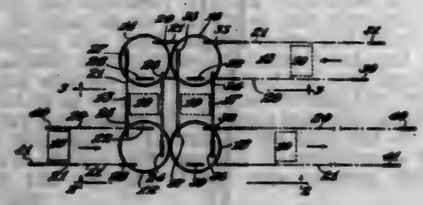
1. An electric cooking utensil, comprising an upper and lower open section hinged together, a toothed plate mounted in the lower section, a movable toothed plate mounted in the upper section, and means connected with the upper section for moving said section with reference to the lower section said means comprising a shaft mounted in the upper hinged section, and an element carried by said shaft and adapted to engage the said movable toothed plate to impart a vertical movement to said plate upon rotation of said shaft.

2,031,260
INFUSIBLE SYNTHETIC RESINS AND PROCESS OF MAKING SAME
Alphonse Gams, Gustave Widmer, and Karl Frey, Basel, Switzerland, assignors, by mesne assignments, to the firm of Ciba Products Corporation, Dover, Del.
No Drawing. Application October 8, 1930, Serial No. 387,260. In Switzerland October 22, 1929
27 Claims. (Cl. 92—21)

26. A method of producing moldable sheet material with which an infusible but thermoplastic reaction product of melline and formaldehyde is incorporated, which comprises forming an acid solution by reacting one mol of melline with more than one mol of formaldehyde in presence of at least approximately one mol of a mineral acid,

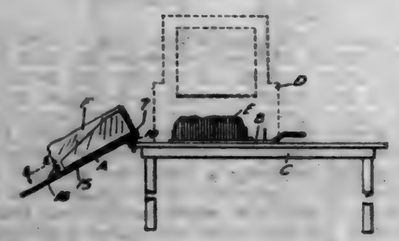
saturating pulp with this solution, precipitating with alkali from the solution the condensation product on and around the fibers of the pulp, and thereafter forming paper therefrom.

2,031,261
SEAL-FLAP GUMMING AND DRYING IN ENVELOPE MACHINES
Max Goder, Neuss, Germany, assignor to United States Envelope Company, Springfield, Mass., a corporation of Maine
Application May 6, 1935, Serial No. 20,944
In Germany May 11, 1934
5 Claims. (Cl. 93—42)



4. In an envelope machine, a gumming mechanism for the seal flaps of successively-presented envelopes, and a drying chain receiving said envelopes from said gumming mechanism, in combination with suction means associated with the gumming mechanism and operable on each seal flap, for maintaining the delivery position of each envelope on the drying chain, and suction means associated with said drying chain, and brought into action substantially coincident with the release of the seal flap by the first suction means for maintaining such delivery position while the chain travel is being reversed.

2,031,262
DISTRIBUTING APPARATUS
George H. Hill, Jr., Parkersburg, W. Va.
Application May 18, 1933, Serial No. 671,725
5 Claims. (Cl. 239—34)



1. Apparatus of the character described comprising a vehicle, a pump mounted on said vehicle and provided with a fluid intake, a distributing pipe forming the outlet of said pump, a by-pass connecting said fluid intake and said distributing pipe, a valve controlling the passage of fluid from said distributing pipe to said intake through said by-pass, control means operatively connected to the vehicle, means actuated by said control, means for progressively opening and closing said valve upon the respective deceleration and acceleration of the vehicle speed, and a source of power for said pump, said last-named means being operatively connected to a means for accelerating and decelerating the speed of said power source upon the respective acceleration and deceleration of the vehicle speed.

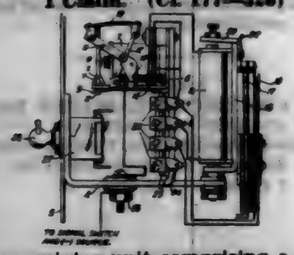
2,031,263
CONVEYER
Chester S. Jennings, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a corporation of Massachusetts
Application March 26, 1934, Serial No. 717,325
5 Claims. (Cl. 198—127)

1. In a conveyer system wherein the conveyer mechanism includes a pair of parallel chains and cars supported thereby, said cars being connected at one corner to one chain and at a diametrically opposite corner to the other chain, a riser unit through which the cars are carried by the chains and by which the cars are turned through an arc during their passage through the unit, said unit including sprockets about which the chains turn upon entering the unit, sprockets about which the chains turn upon leaving the unit and tracks guiding the chains from one set of sprockets to the other set of sprockets.

2,031,264
DEVICE FOR SACKING SLICED BREAD AND THE LIKE
Eugene G. Kennebeck, Denver, Colo.
Application January 16, 1934, Serial No. 706,823
3 Claims. (Cl. 226—18)

1. A sacking device comprising a slab for the support of a series of articles to be sacked, a rotary shaft on the slab, a stop, normally beneath the surface of the slab and movable by rotation of the shaft for engagement with an end of the series, and a follower on the slab to engage the opposite end of the series.

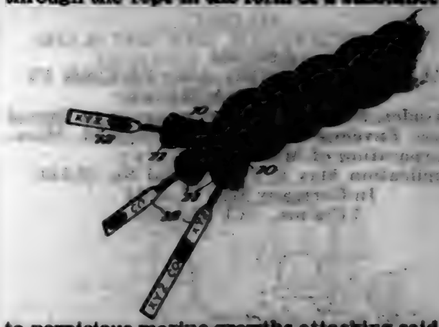
2,031,265
REENFORCEMENT SUPPORTING CHAIR
Herman G. Keesling, Cuero, Tex.
Application January 16, 1933, Serial No. 652,040
1 Claim. (Cl. 94—3)



A supporting chair for reenforcing bars comprising a pointed ground-penetrating stake of channel shape in cross section from end to end and having a segmental recess in the upper end of its web portion forming a concaved seat to snugly receive the lower portion of the reenforcing bar, the flange of the chair at one side of said

recess having an elongated extension at its upper end adapted to be bent downwardly and inwardly

over the exposed upper portion of the reenforcing bar to secure the latter in said seat.

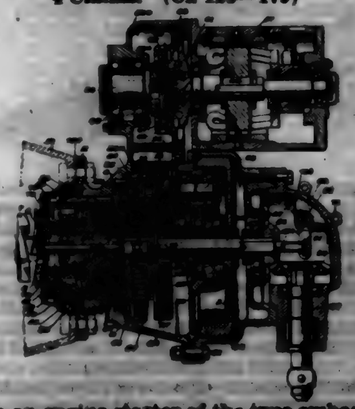


2,031,266
ANNUNCIATOR UNIT
Morris F. Ketay, Brooklyn, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application May 25, 1932, Serial No. 613,586
1 Claim. (Cl. 177—326)

An annunciator unit comprising a cover plate for mounting said unit on a frame with other similar units to form an annunciator panel of a complex annunciator system, a U-shaped mounting bracket having one bar thereof secured flat against the back of the cover plate and a bar projecting perpendicularly therefrom to the rear thereof and carrying a third bar parallel with the first bar, a plurality of U-shaped bus bars mounted on said last named bar of said bracket extending parallel with the panel and spaced rearwardly thereof, terminals for said bus bars, said bus bars projecting from said bracket to slidably contact similar bus bars of an adjacent unit upon insertion of the unit into position with said adjacent unit, and annunciator apparatus located between said panel and said bus bars of a width approaching substantially that of the panel whereby such apparatus remains forward of said slidably contacting bus bars during the insertion of a panel.

2,031,267
PRESERVATIVE MEANS FOR ROPES AND THE LIKE
Archie W. Keon, Auburn, N. Y., assignor to Columbian Rope Company, Auburn, N. Y., a corporation of New York
Application September 13, 1934, Serial No. 743,969
5 Claims. (Cl. 117—2)

1. A vegetable fiber rope, twine or like structure having incorporated therein at a point remote from the surface thereof a linear, non-metallic element containing a copper compound which when immersed in water will be diffused until exhausted by the action of the water through the rope in the form of a substance toxic

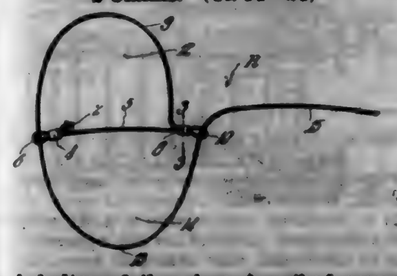


to pernicious marine growths attacking said rope, said element being embedded in the rope remote from the rope surface whereby the fibers at the surface of the rope are originally without stain by said compound.

2,031,268
MANUFACTURE OF NEW STABLE ANTIMONY COMPOUNDS
Walter Kaufmann, Basel, Switzerland, assignor to the firm of Chemical Works formerly Sandoz, Basel, Switzerland
No Drawing. Application June 26, 1931, Serial No. 547,175. In Germany July 8, 1930
6 Claims. (Cl. 260—11)

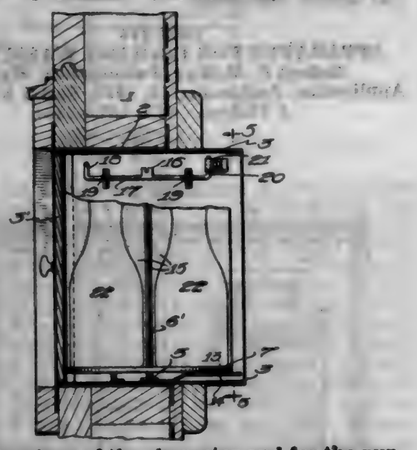
4. A polyvalent metal salt of antimonyl polyhydroxymonocarboxylic acid, which is soluble in water, but insoluble in methanol and which yields, when being treated with hydrogen sulphide, a precipitation of an antimony sulphide.

2,031,269
ENGINE STARTER
Raymond P. Lansing, Montclair, N. J., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a corporation of New York
Original application January 8, 1929, Serial No. 331,082. Divided and this application August 24, 1934, Serial No. 741,369
4 Claims. (Cl. 123—179)



1. In an engine starter of the type embodying a high speed flywheel, a housing having a laterally projecting portion, a shaft rotatably mounted in said projecting portion, a motor secured to the projecting portion of the housing, means for drivably connecting the motor and shaft, and means for drivably connecting the flywheel with said shaft, said last named means including a set of gears all of which are disposed in a common plane parallel to and closely adjacent the end surfaces of both the motor and flywheel.

2,031,270
ANNEALING AND OTHER HEAT-TREATMENT FURNACES
Alfred Glynne Lobley, Erdington, Birmingham, England, assignor of one-half to Birmingham Electric Furnaces Limited, Birmingham, England, a British company
Application December 26, 1933, Serial No. 703,280
In Great Britain December 22, 1932
6 Claims. (Cl. 263—6)



1. A heat treating furnace including a heating chamber, a recuperating chamber adjacent thereto, a pair of work-supporting conveyors extending through the recuperating chamber and spaced from the top and bottom walls of said chamber to provide zones above and below said work-supporting conveyors, means for driving the work-supporting conveyors in opposite directions to move one train of work through the recuperating chamber and into the heating chamber and the other train of work from the heating chamber through the recuperating chamber, and means in the recuperating chamber in one of said zones for forcibly extracting heat at one side of said recuperating chamber from the work leaving the heating chamber and for forcibly discharging the said heat at the opposite side of the recuperating chamber onto the work entering the heating chamber, the zone on that side of the work-supporting conveyors opposite that containing the extracting and discharging means being substantially devoid of obstructions to gas circulation from the discharging to the extracting means.

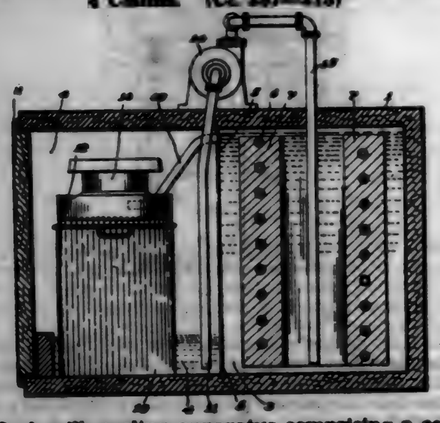
2,031,271
HALTER
August Lombella, Westfield, Mass.; John L. Lombella executor of said August Lombella, deceased
Application February 16, 1935, Serial No. 6,848
2 Claims. (Cl. 54—24)

1. A halter of the class described comprising in combination, a single length of rope having a knot on its one end doubled upon itself adjacent said end and at a distance from said end to provide first and second eye portions with a free end extending from said second eye portion, relatively elongated metal clasps frictionally embracing the doubled rope parts forming the eye portions and co-operating therewith to form constrictable eyes, the rope which extends between said eye portions providing a cross portion adapted for extending over the nose of an animal and the free end portion of the rope adjacent the second eye portion extending upwardly and downwardly through the first-named eye, and then downwardly and upwardly through the second-named eye, forming upper and lower loop portions for extending over the head and under the throat of an animal respectively, all constructed and arranged whereby the free end of the rope may be pulled so as to slide said rope through the clasps to vary the lengths of said cross and loop portions and whereby the pulling of the free end of the rope constricts said eyes and causes them to bite upon the portions of the rope passing therethrough.

2,031,272
MILK BOTTLE RECEPTACLE
George S. Loree, Hornell, N. Y., assignor to Francis J. Loree, Hornell, N. Y.
Application June 12, 1935, Serial No. 26,585
3 Claims. (Cl. 232—41)

1. A structure of the character and for the purpose described, comprising a casing or housing, a shaft rotatably mounted in said casing, a turn table or rotary member mounted on said shaft and adapted to receive articles for delivery, a series of division walls or plates carried by said turn table and providing compartments, a shaft mounted in the casing and having a bifurcated ear to engage the upper edge of said plates to retain the turn table, a flat spring plate in the lower portion of the casing to engage the underside of said turn table, and a spring detent mechanism to engage the edge of the turn table or rotary member and retain the rotary member against improper rotation.

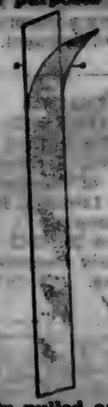
2,031,273
DENTAL INSTRUMENT
Frederick F. Marschalk, Augusta, Ga.
Application November 5, 1934, Serial No. 751,628
3 Claims. (Cl. 32—60)



1. An instrument of the character described comprising a handle, an operating member longitudinally movable therein, said handle having a packing tip, a carriage slidable on said tip and connected to said operating member, said operating member being adapted to be extended to place said carriage along the extremity of said

tip so as to cause said carriage to define with said tip a filling material receptacle, said operating member being arranged to be retracted to

deposit the filling material into a cavity and retract said carriage from said tip so as to leave the tip free for operating upon the filling material within the cavity.

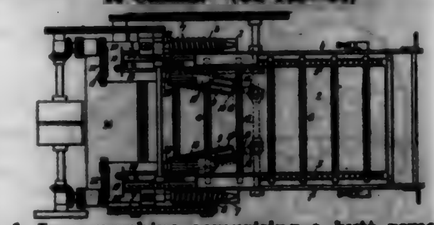


2,031,374
APPARATUS FOR COOLING WARM MILK
Robert C. McKay, Swampscott, Mass.
Application September 16, 1935, Serial No. 40,713
4 Claims. (Cl. 257—215)

2. A milk cooling apparatus comprising a cabinet having two compartments therein, means for maintaining one compartment substantially filled with water and a relatively small quantity of water in the second compartment, said second compartment being adapted to hold a milk container, means for cooling the water in the first compartment sufficiently to produce a cake of ice therein, means for causing the water to flow around said cake of ice and then into contact with the top and down the sides of a milk container placed in the second compartment, and means for returning the water to the ice compartment after it has passed over the milk container.

2,031,375
ADHESIVELY COATED SHEET MATERIAL
William W. McLaurin, deceased, late of Brookfield, Mass., by Old Colony Trust Company, executor, Boston, Mass.
Application May 10, 1933, Serial No. 670,269
5 Claims. (Cl. 154—43)

1. An article of the character described comprising a relatively heavy backing sheet of paper and a tissue sheet combined with said backing sheet by a union which holds them securely together for normal purposes but which permits



them to be readily pulled apart while they are in a dry condition, and a coating of adhesive on the outer face of said tissue sheet.

2,031,376
COMBINATION GRID AND COVER FOR ICE TRAYS
Hugo Mock, New York, N. Y.
Application October 30, 1931, Serial No. 572,013
1 Claim. (Cl. 62—102.5)

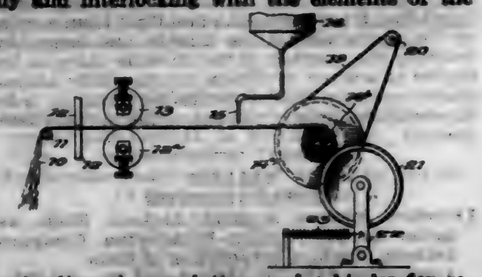
In a combination grid and cover for ice trays, a series of forms for ice cubes connected to each other, a common cover for such forms, and a series of intersecting air channels separating said forms from each other, the sides of said forms for ice cubes being perpendicular, and the edges of the cover extending beyond the edges of the tray in which said ice cubes are formed.

2,031,377
CORN HUSKING MACHINE
Samuel E. Morral and William W. Morral, Morral, Ohio
Application June 26, 1931, Serial No. 547,878
10 Claims. (Cl. 146—94)

1. In a machine comprising a butt removing device, a conveyor to move an ear of corn transversely to its length past said butt removing device, and a gaging device to properly locate the butt of the ear with relation to said butt removing device, a driven roller arranged beneath said conveyor to engage said ear as it is advanced by said conveyor and move the same toward said gaging device, said roller being mounted obliquely to the line of movement of said conveyor with its forward end spaced the greater distance from said gaging device, a supporting member pivotally mounted at one side of said conveyor, extending inward above said conveyor and having bearings at its inner end, shafts journaled in the respective bearings, one of said shafts being substantially parallel with said roller, means to operatively connect said shafts one to the other, a pressure roller carried by the last mentioned shaft, and means for driving the other shaft.

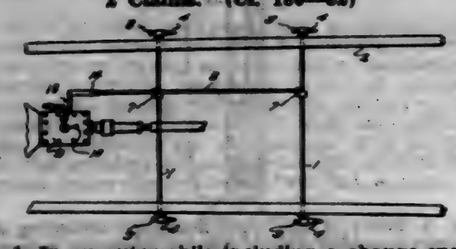
2,031,378
HOSE SUPPORT
Emile Sylvio Mousseau, Ottawa, Ontario, Canada, assignor to George B. Jenkinson, Prescott, Ontario, Canada
Application December 6, 1932, Serial No. 701,197. Renewed January 3, 1936. In Canada December 30, 1931
2 Claims. (Cl. 248—80)

2. In a hose support a curved standard, a clip adapted to embrace the hose, slidably mounted upon said standard, means integral with said support co-operating with said clip for firmly retaining the hose in mounted position upon the standard.



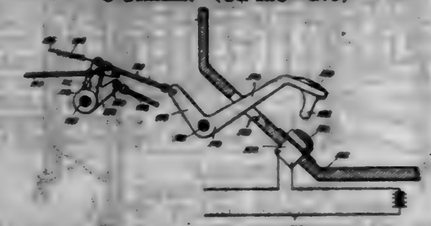
2,031,379
EXCAVATING MACHINE
William J. Newman, Chicago, Ill.
Application April 2, 1934, Serial No. 718,554
13 Claims. (Cl. 37—191)

1. The combination with a pair of chains, of a set of excavating elements comprising leading cutting members and trailing conveying members, each of said members having parallel sides secured to the respective chains, transverse outer portions and open at both ends, said conveying members being arranged sufficiently close to the cutting member and to each other to receive and convey the material excavated by the cutting member.



2,031,380
ABRASIVE SUPPORTING PAD AND METHOD OF MAKING THE SAME
Leslie D. Reed, Auburn, N. Y., assignor to Columbian Rope Company, Auburn, N. Y., a corporation of New York
Application May 21, 1934, Serial No. 726,048
9 Claims. (Cl. 51—195)

1. A disk-like body adapted to carry an abrasive material on one of its side surfaces and to flex when subjected to pressure against said surface, an annular portion of said body adjacent its periphery being formed of a group of substantially parallel fibrous elements laid in convolutions circumferentially of said disk, a portion of the elements of one convolution being offset radially and interlocking with the elements of the



next adjacent convolution, and a binder for securing said fibrous elements together.

2,031,381
AUTOMOBILE DOOR LOCKING MECHANISM
James A. Roberts, Douglas, Ga.
Application February 25, 1935, Serial No. 8,174
2 Claims. (Cl. 180—82)

1. In an automobile including a change speed transmission and a shift lever for actuating said transmission, means for locking the doors of the automobile, said means including rocker shafts journaled transversely on the automobile, locking members mounted on the end portions of said shafts and operatively engageable with the doors, a rod operatively connected to the rocker shafts for actuating said rocker shafts in unison, a shaft journaled vertically in the transmission housing, an arm fixed on the second named shaft and operable in the transmission housing, said arm including a frame in which the gear shift lever is operable, said frame comprising a pocket for the reception of the lever when said lever is moved to high speed position, said pocket constituting means for operatively connecting the arm to the lever for actuation thereby, and an arm fixed on the second-named shaft and pivotally connected to the rod for actuating the rocker shafts.

2,031,382
FUEL FEEDING SYSTEM
Edward A. Rockwell, Chicago, Ill.
Application March 2, 1929, Serial No. 343,743
Renewed June 2, 1933
5 Claims. (Cl. 123—179)

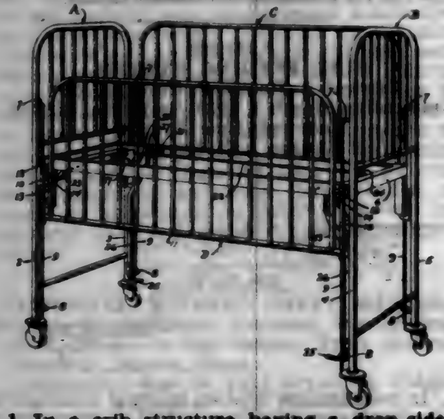
1. In combination with an internal combustion engine having an intake manifold, a down-draft carbureter for delivering fuel downwardly into

said intake manifold, a throttle valve for controlling the mixture flow, means for draining excess liquid fuel from the intake manifold from a point on the engine side of the throttle and means for insuring the opening of the throttle valve as the engine is started to obtain substantially atmospheric pressure in the intake manifold in order to permit draining of the excess liquid fuel therefrom.

2,031,283
REFRIGERATOR

Theodore Johnson Scofield, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a corporation of Ohio

Application May 18, 1931, Serial No. 671,687
3 Claims. (Cl. 62—39)

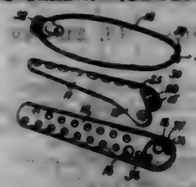


1. A device of the class described including a cabinet provided with a cooling chamber, a door for the chamber hingedly connected to the cabinet, said door having a recess in the inner face thereof, a liquid container having an inlet opening mounted in said recess, a faucet connected with the container whereby the contents of the container may be readily withdrawn when the door is in an open position, and means associated with said door for removably securing the container in the recess, a wall of said recess and said latter means forming a closure for said inlet opening.

2,031,284
ADJUSTABLE DROP-SIDE FOR CRIBS

Arthur M. Smith, Oakland, Calif., assignor to Premier Bed and Spring Company, Inc., San Francisco, Calif., a corporation of California

Application January 17, 1934, Serial No. 706,957
3 Claims. (Cl. 5—100)

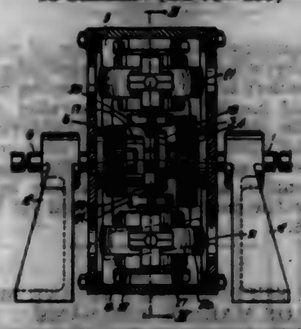


1. In a crib structure having a drop-side, a frame, said drop-side comprising a top rail and a bottom rail and end members connecting the same, a pair of latches slidably mounted on the frame and engageable with the bottom rail to support the drop-side in a fully elevated position, a pair of short rods, one at each end of the drop-side, intermediate the top and bottom rails and engageable with the latches to support the drop-side in a position intermediate fully elevated and fully lowered position, and means for withdrawing the latches to permit lowering of the drop-side whether the latches are in engagement with the short rods or the bottom rail.

2,031,285
HAIR CURLER

Nathan L. Solomon, Brooklyn, N. Y.

Application January 25, 1935, Serial No. 2,482
3 Claims. (Cl. 132—41)

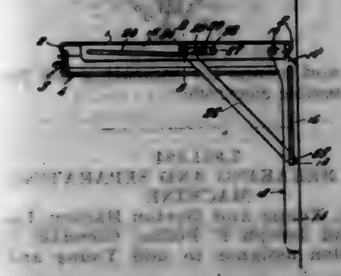


1. In a hair curler, the combination of, a tube, a clamping member having spaced hollow nipples rotatably sustained by said tube, a stay having means adapted to be removably interlocked with one end of said tube, said stay comprising a relatively narrow slot and including a relatively large channel in communication with said slot and a resilient loop adapted to be distended to permit passage of a portion thereof through said slot and retained by the latter in said channel, said tube having means for removably and swingably retaining another portion of said loop.

2,031,286
PLANET WHEEL GEARING

Joel Nicolaus Sigurd Alstam, and Hans Erwin Larsen, Amal, Sweden

Application April 16, 1935, Serial No. 16,708
In Sweden February 13, 1933
15 Claims. (Cl. 74—259)

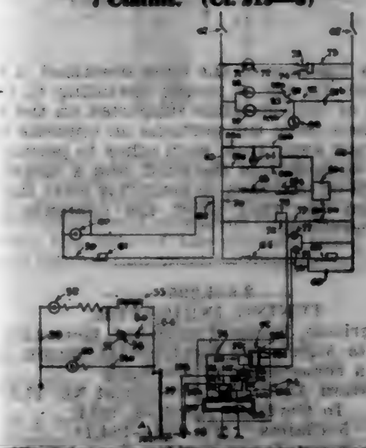


1. A planet wheel gearing comprising coaxial driving and driven shafts each carrying a sun wheel, planet wheel means for transmitting motion between said sun wheels and including a planet wheel carrier rotatable about the axis of said shafts, a gyroscope carried by said planet wheel carrier with the axis thereof at an angle to said shafts, said gyroscope being adapted to be rotated in accordance with the motion of said shafts, means actuated by one of said shafts and independent of said planet wheel means for rotating said gyroscope about its axis, means supporting said gyroscope for rotation about its axis, and means supporting said gyroscope for limited angular movement about a transverse axis arranged at an angle to the axes of the gyroscope and of said shafts.

2,031,287
WALL TABLE

Ralph W. Swanson, Mount Pleasant, Mich.

Application August 3, 1935, Serial No. 34,607
2 Claims. (Cl. 311—19)

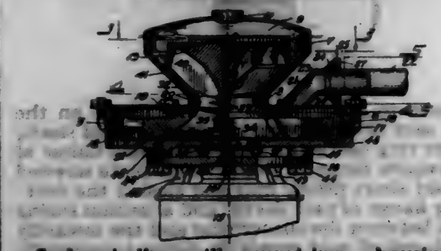


1. A table comprising a top, and brackets for mounting said top for swinging movement on a support, each bracket including a stationary bar mounted on the support and having a slot therein, a swinging bar pivotally mounted on the stationary bar and fixed beneath the top, said swinging bar having a slot therein and further having a pocket therein communicating with the second-named slot at one end, a brace for supporting the swinging bar in raised position, said brace including headed pins operable in the slots, one of said pins being engageable in the pocket, and a plate mounted for sliding and swinging movement on the swinging bar and engageable with said one pin for releasably locking same in the pocket.

2,031,288
ELECTRIC ARC WELDING APPARATUS

John P. Tripp, Montreal, Quebec, Canada

Application June 18, 1934, Serial No. 731,124
7 Claims. (Cl. 219—8)

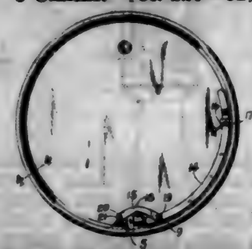


1. Electric arc welding apparatus comprising, in combination, an electrode feed mechanism for feeding the electrode to the work during the welding operation, an arc striking mechanism functioning to withdraw the electrode to an arc striking position following its initial contact with the work, a motor for operating said feed mechanism and means functioning automatically to deenergize said motor when the arc is not successfully established by the arc striking mechanism, said means including a photo-electric relay.

2,031,289
GRINDING MILL

Durbin Van Law, Denver, Colo., assignor, by mesne assignments, to Powderco Inc., Denver, Colo., a corporation of Colorado

Application January 18, 1932, Serial No. 587,485
14 Claims. (Cl. 83—11)



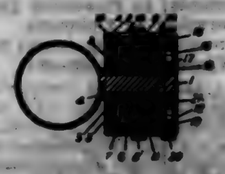
2. A grinding mill comprising a housing, and within the same a rotary body including a grinding-element having an inlet and a fan-element having an outlet, said body having an enclosed continuous passage therethrough connecting the inlet of the grinding-element with the outlet of the fan-element, for the passage of a product of the grinding-element from the inlet to the outlet under the influence of the fan-element.

2,031,290
OPEN HEAD DRUM

Harold Gar Vaughn, Warren, Ohio, assignor, by mesne assignments, to Wilson & Bennett Manufacturing Company, Chicago, Ill.

Application June 26, 1933, Serial No. 677,695
6 Claims. (Cl. 220—61)

1. The combination with a metallic receptacle having a bead rolled about its open end, and a removable cover for said receptacle having a marginal flange fitting over the said bead, of a split contractible channeled clamping ring having walls engageable with the flange and bead for pressing the same together when the ring is contracted, inwardly extending lugs adjacent the ends of said ring, a lever for contracting said ring pivoted to one of said lugs, the other of said lugs having a notch therein, a link pivoted to the lever and carrying a pin at its other end for engagement with said notch, and means carried by said link which engages with the adjacent surface of the side wall of the cover for exerting a lateral pressure outwardly against the side wall of the cover when the ring is contracted.



2,031,291
SCORING DEVICE

Eric W. Wahlin, Magna, Utah

Application February 28, 1932, Serial No. 595,257
1 Claim. (Cl. 235—117)

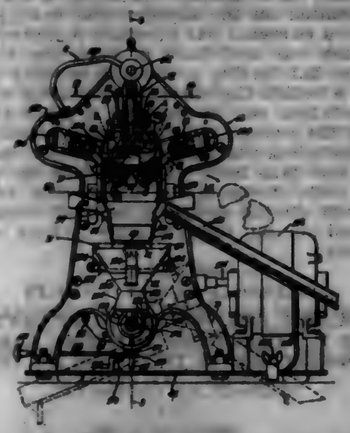
In a scoring device the combination of a center shaft; a fixed cylinder having one end closed and

screwed onto said shaft and having a sight opening through said cylinder; a rotatable sleeve carried nested in said cylinder having numbers formed in the outer face thereof to be viewed through the sight openings and having the abutting end of said sleeve flanged inwardly abutting the closed end of said fixed cylinder and with the outer end flanged outwardly and then parallel to

the sleeve to form an overlapping flange on the end of said sleeve; spacers carried on said shaft; a spacer ring carried in the overlapping flange of the rotatable sleeve; a fixed closure plate screwed onto said shaft fitting into and closing the overlapping flange of said sleeve; and a tension spring carried between the spacer ring and the inwardly flanged end of said rotatable sleeve to normally hold the sleeve from rotation.

2,031,202
LEAD PENCIL POINTER
Herbert H. Walters, Syracuse, N. Y.
Application October 17, 1935, Serial No. 45,372
4 Claims. (Cl. 120—39)

1. In a lead pencil pointer, an oblong body having a plane top lying between a hand-grip and a downwardly facing quarter-bend, a roll of abrading tape disposed in the bight of the bend, its loose end adapted to be unwound and extended around the bend and over said top, the latter constituting the pencil abrading surface, a clip to engage and guard said loose end, a forked spring member rigid to the bottom of the body to rotatably support the roll in frictional engagement with the concave surface of the bend, the tension of the arms of said member acting as a brake to prevent recoil of the roll.

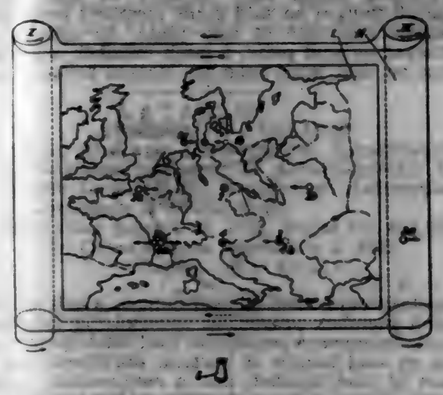


2,031,253
IGNITION DEVICE
Eugene C. Wamelink, Cleveland Heights, Ohio
Application February 13, 1935, Serial No. 7,881
5 Claims. (Cl. 123—169)

1. A sparking device for internal combustion engines comprising a vertical electrode, means for insulating the vertical electrode from the ground connection, a conical contact element secured to the lower end of the vertical electrode, an adjustable electrode presented at an oblique angle to the conical gapping surface of the vertical

electrode, and means for indicating the position of the adjustable electrode.

2,031,294
EGG BREAKING AND SEPARATING MACHINE
William G. Young and Morton Hansen, Los Angeles, and Joseph F. Pellen, Glendale, Calif.; said Pellen assignor to said Young and said Hansen
Application May 2, 1930, Serial No. 449,240
32 Claims. (Cl. 146—2)



1. In a machine of the class described, a rack to support an egg, a means operating to crack the shell of the egg while supported on the rack and to then force the portions on opposite sides of the crack away from each other to permit the contents to flow from the shell, and a means independent of said rack to positively eject the egg shell from the rack after the contents have flowed therefrom.

2,031,295
TUNING INDICATOR
Alfred Agricola, Berlin-Tempelhof, Germany, assignor to Allgemeine Elektricitäts, Berlin, Germany, a corporation of Germany
Application April 25, 1935, Serial No. 17,633
In Germany April 18, 1934
5 Claims. (Cl. 116—124.1)

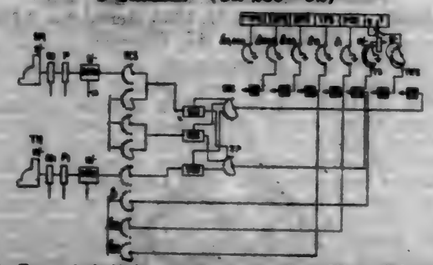
1. In a device for indicating the position of a tuning means the combination of a movable member connected to said tuning means and provided with a plurality of apertures, a stationary member provided with a plurality of apertures and a source of illumination behind said movable member, at least one of the apertures of

said stationary member being in alignment with two apertures of said movable member when

said tuning means is adjusted to a desired frequency.

2,031,296
DISCONNECT PLUG AND RECEPTACLE
Alfred Almaker, Chicago, and Fred H. Cole, Oak Park, Ill., assignors to The Delta-Star Electric Company, Chicago, Ill., a corporation of Illinois
Application July 19, 1933, Serial No. 681,188
17 Claims. (Cl. 173—332)

1. A contact including a circular support defining a groove with said contact adjacent the edge of said support, and contact wires inserted into said groove and extending therefrom to define a socket, the edge of the support being swaged towards the contact wires to hold them in place.

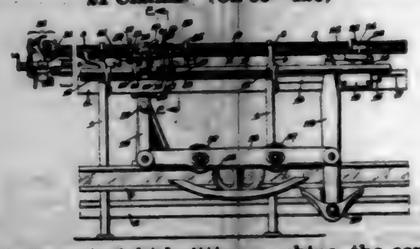


2,031,297
WINDSHIELD WIPER
John W. Anderson, Gary, Ind.
Application June 5, 1931, Serial No. 542,210
8 Claims. (Cl. 15—252)

1. In a wiper of the character described, the combination of a cup having an inner and an outer surface, the inner surface having a form providing a suction cavity, and the outer surface having a form providing a yielding rib; a stud having one end embedded in the wall of the cup, and a shank portion projecting beyond the rib; a washer fitted on the shank and abutting against the rib; a wiper arm having a loop pivotally mounted on the shank of the stud and abutting against the washer; a second washer fitted on the

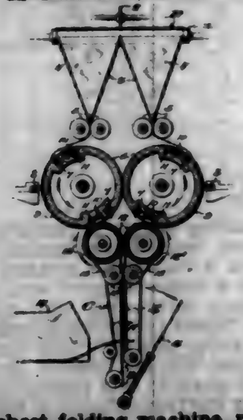
stud and abutting against the loop of the wiper arm; and a wiper blade connected to the arm.

2,031,286
ELECTRIC TOTALIZATOR
Francis Tulloch Belas and John William McClew, Liverpool, England, assignors to Automatic Electric Company Limited, a British company
Application October 17, 1930, Serial No. 489,268
In Great Britain November 12, 1929
6 Claims. (Cl. 235—92)



1. In a totalizing system, a plurality of transmitting stations, each having means for transmitting signals, a register, a rotating collecting switch having a motor magnet and a plurality of wipers, means interacting with said magnet to rotate said wipers to simultaneously collect a plurality of signals, one over each wiper, transmitted from said stations, means for transmitting collected signals to said register, and means effective during the transmission of collected signals to said register and the registration of all signals simultaneously collected to prevent said interaction of said magnet and means to thereby hold said switch until all collected signals have been registered.

2,031,298
TREATING COPPER ANODE MUD
James O. Betterton and George H. Wels, Metuchen, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application January 21, 1934, Serial No. 707,117
8 Claims. (Cl. 75—18)



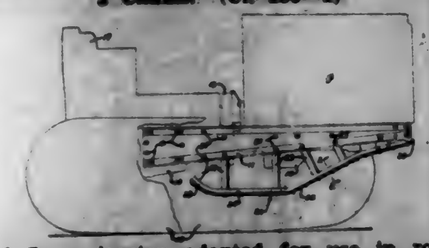
1. The method of treating anode mud produced in the electrolytic refining of copper which comprises agitating said mud in previously untreated condition with copper refining electrolyte in the presence of air and a small quantity of iron sulphate.

2,031,200
KNITTING MACHINE THREAD CARRIER ACTUATING MEANS
Gottlob Bitzer, West Reading, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application February 7, 1934, Serial No. 710,126
21 Claims. (Cl. 66—126)

16. In a straight knitting machine, the combination of a reciprocable thread bar, an actuator, a friction box reciprocable by said actuator, means operating between the thread bar and the friction box to first provide lost motion between the thread bar and the friction box and then cause the box to directly drive the bar, and mechanism for holding the friction box and releasing it after a predetermined movement of the actuator to take up said lost motion and actuate the thread bar through said means.

2,031,201
SHEET-FOLDING MACHINE
Peter J. Christmann, Green Bay, Wis.
Application January 21, 1935, Serial No. 2,729
12 Claims. (Cl. 270—66)

1. In a sheet-folding machine, means for slitting a web of paper longitudinally to provide separate webs, a pair of transversely alined forming plates for longitudinally folding said webs, a pair of pull rolls positioned below each forming plate, carrier cylinders for receiving the longitudinally folded webs from said pull rolls, means for transversely severing the folded webs on the carrier cylinders into sheets, and a folding roll for removing sheets from each carrier cylinder, said folding rolls cooperating with each other to simultaneously crease the folded sheets transversely.



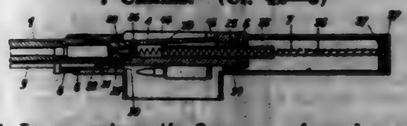
2,031,202
LATCH
Wycliffe L. Clark, Jamestown, N. Y.
Application May 17, 1934, Serial No. 726,026
2 Claims. (Cl. 292—304)

1. A fastening device having a supporting plate, walls defining a central opening in said plate, a guide member, shoulders locating said guide member in said opening, lugs adjacent said shoulders fixing said member to said plate, spaced flanges on said guide members projecting beyond one face of said plate, an upstanding bracket on said plate, a latch member, a projection on said latch member located between and

pivotally supported by said flanges, a bolt on said latch member projecting downwardly into said guide member, a handle on said latch member, a lug on said handle in vertical alignment with a part of said bracket, and a compression spring connecting said bracket with said lug and serving to normally urge a portion of said bolt beyond the confines of said guide member.

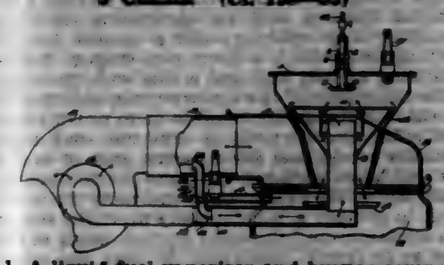
2,031,203
TRACTOR
Harmon S. Eberhard, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application February 7, 1934, Serial No. 710,154
3 Claims. (Cl. 180—1)

1. In a tractor adapted for use in rough country to travel over obstructions such as stumps, rocks, and the like, a guard under said tractor and having an upwardly slanting rear end to provide deflecting means for allowing the tractor to be backed off of an obstruction.



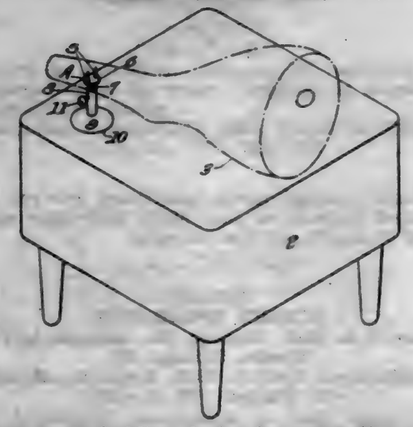
2,031,204
ILLUMINATED FOLDING TABLE
Arthur Louis Eller, Olathe, Kans., assignor to Ruth Eller Latkins, Olathe, Kans.
Application June 16, 1933, Serial No. 675,374
4 Claims. (Cl. 211—163)

1. A folding table of the character described comprising a top; legs swingably mounted on the top; a shelf hingedly attached to the table top adjacent to each leg respectively; and a lighting



fixture having a universal joint affixed to each of the said shelves, said fixtures adapted to overhang one side of the said top when the supporting shelf is in the operative position and to lie against the other side of the top when the shelf is in the inoperative position.

2,031,205
AUTOMATIC FIREARM
Gotthard Enel and Jakob Clarini, Schaffhausen, Switzerland, assignors to Schweizerische Industrie-Gesellschaft, Neuhausen, Switzerland, a corporation of Switzerland
Application August 23, 1933, Serial No. 687,218
In Great Britain September 3, 1932
7 Claims. (Cl. 42—3)



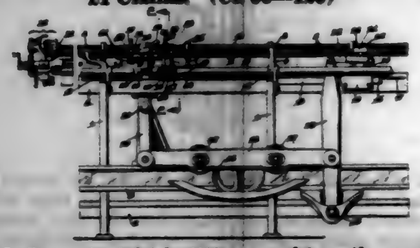
1. In an automatic firearm, a barrel, a magazine at the rear end of the barrel, a breech mechanism including a breech block and a longitudinally movable post carrying said breech block to move it into and from breech closing position, said breech block being also independently movable relatively to said post to a limited extent; a gas cylinder on the barrel and in communication with the bore thereof to receive gas from the fore part of the barrel, a piston movable in said cylinder, a piston rod extending parallel to the barrel and connected with one end to said piston, the other end being free and being adapted to engage the forward end of said post which post is adapted to close and open said magazine, means independent of said post to return said piston to its initial position after having actuated said post, said piston and piston rod being arranged to impart such momentum to the post as to cause it to move the breech block rearwardly into open position and to uncover the magazine so that the next cartridge may be moved into a position for feeding it into the barrel.

2,031,206
LIQUID FUEL VAPORIZER AND BURNER
Charles A. French, Riverside, Ill.
Application June 15, 1933, Serial No. 675,934
5 Claims. (Cl. 158—83)

1. A liquid fuel vaporizer and burner comprising a vaporizing chamber, means to distribute liquid therein, a burner grating, means for delivering hot burned gases from the flame side of the grating to the vaporizing chamber, gas and air mixing and moving means, means for delivering gases from the vaporization chamber to said means, means for conducting gases from the mixing and moving means to the burner grating, igniting means for the burner grating consisting of a conduit positioned to receive gases from the means for delivering gases from the vaporizing chamber to the mixing and moving means and to deliver said gases to the flame side of the grating, a conduit positioned to receive gases from the means for conducting gases to the burner grating and extending into the first named conduit, and an igniting device positioned in said first named conduit.

2,031,207
MEAT HOLDER
John Edward Gloekler, Pittsburgh, Pa.
Application July 24, 1934, Serial No. 736,645
1 Claim. (Cl. 146—216)

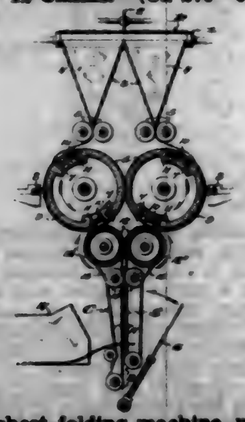
In a meat holding device for supporting meat at various heights and at different locations on the surface of a wooden block, the combination of a hollow circular base having a continuously annular bearing portion terminating in a uniformly level comparatively blunt knife edge, a tubular standard secured in the middle top portion of the base and extending upwardly therefrom, a cylindrical stem vertically and rotatably mounted in the tubular standard having at its upper end a disk provided with a double tined comparatively blunt fork, and a thumb screw mounted in the tubular standard adapted to fixedly engage the stem.



2,031,208
BED MATERIAL FOR FLOWER BULBS
John J. Grailemann, Painesville, Ohio, assignor to The Wayside Gardens Company, Mentor, Ohio, a corporation of Ohio
No Drawing. Application December 30, 1933, Serial No. 704,755
3 Claims. (Cl. 71—8)

2. A material adapted for use as a bed material for stimulated growth of bulbous flowering plants, the material consisting of an intimate mixture of a quantity of finely divided peat, and relatively small quantities of ground calcium carbonate and powdered or granulated charcoal.

2,031,209
VALVE
Otto W. Hahn, San Francisco, Calif.
Application November 27, 1933, Serial No. 699,911
16 Claims. (Cl. 251—24)



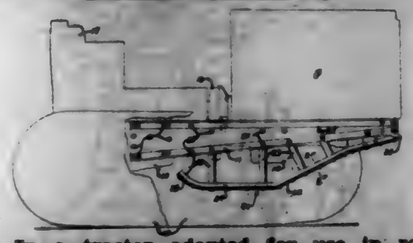
1. A valve provided with a faced surface pierced by spaced ports, a faced block movably positioned adjacent said faced surface provided with a cross port arranged to be aligned over said spaced ports when the block is moved, means

2,031,309
KNITTING MACHINE THREAD CARRIER ACTUATING MEANS
Gottlieb Bitzer, West Reading, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application February 7, 1934, Serial No. 710,126
21 Claims. (Cl. 66—126)

16. In a straight knitting machine, the combination of a reciprocable thread bar, an actuator, a friction box reciprocable by said actuator, means operating between the thread bar and the friction box to first provide lost motion between the thread bar and the friction box and then cause the box to directly drive the bar, and mechanism for holding the friction box and releasing it after a predetermined movement of the actuator to take up said lost motion and actuate the thread bar through said means.

2,031,361
SHEET-FOLDING MACHINE
Peter J. Christmann, Green Bay, Wis.
Application January 21, 1935, Serial No. 2,729
12 Claims. (Cl. 270—66)

1. In a sheet-folding machine, means for slitting a web of paper longitudinally to provide separate webs, a pair of transversely alined forming plates for longitudinally folding said webs, a pair of pull rolls positioned below each forming plate, carrier cylinders for receiving the longitudinally folded webs from said pull rolls, means for transversely severing the folded webs on the carrier cylinders into sheets, and a folding roll for removing sheets from each carrier cylinder, said folding rolls cooperating with each other to simultaneously crease the folded sheets transversely.



2,031,362
LATCH
Wyellis L. Clark, Jamestown, N. Y.
Application May 17, 1934, Serial No. 726,626
1 Claim. (Cl. 292—344)

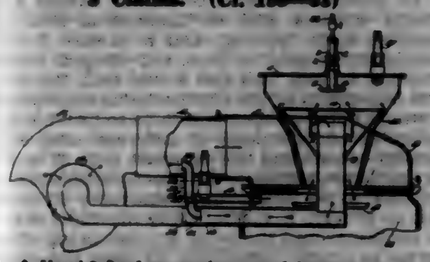
1. A fastening device having a supporting plate, walls defining a central opening in said plate, a guide member, shoulders locating said guide member in said opening, lugs adjacent said shoulders fixing said member to said plate, spaced flanges on said guide members projecting beyond one face of said plate, an upstanding bracket on said plate, a latch member, a projection on said latch member located between and

pivotally supported by said flanges, a bolt on said latch member projecting downwardly into said guide member, a handle on said latch member, a lug on said handle in vertical alignment with a part of said bracket, and a compression spring connecting said bracket with said lug and serving to normally urge a portion of said bolt beyond the confines of said guide member.

2,031,363
TRACTOR
Harmon S. Eberhard, Peoria, Ill., assignor to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California
Application February 7, 1934, Serial No. 710,154
2 Claims. (Cl. 146—1)

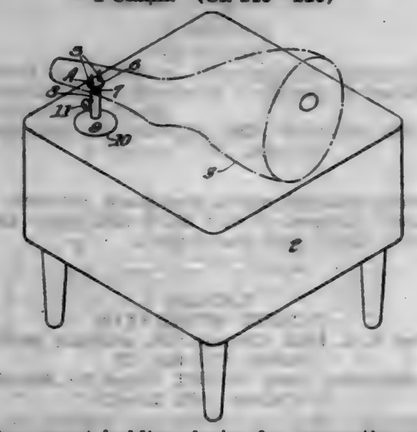
1. In a tractor adapted for use in rough country to travel over obstructions such as stumps, rocks, and the like, a guard under said tractor and having an upwardly slanting rear end to provide deflecting means for allowing the tractor to be backed off of an obstruction.

2,031,364
ILLUMINATED FOLDING TABLE
Arthur Louis Eller, Olathe, Kans., assignor to Ruth Eller Latkins, Olathe, Kans.
Application June 10, 1932, Serial No. 616,374
4 Claims. (Cl. 211—103)



1. A folding table of the character described comprising a top; legs swingably mounted on the top; a shelf hingedly attached to the table top adjacent to each leg respectively; and a lighting fixture having a universal joint affixed to each of the said shelves, said fixtures adapted to overhang one side of the said top when the supporting shelf is in the operative position and to lie against the other side of the top when the shelf is in the inoperative position.

2,031,381
AUTOMATIC FIREARM
Gotthard End and Jakob Gactal, Schaffhausen, Switzerland, assignors to Schweizerische Industrie-Gesellschaft, Neuhausen, Switzerland, a corporation of Switzerland
Application August 28, 1933, Serial No. 687,318
In Great Britain September 2, 1932
7 Claims. (Cl. 42—3)



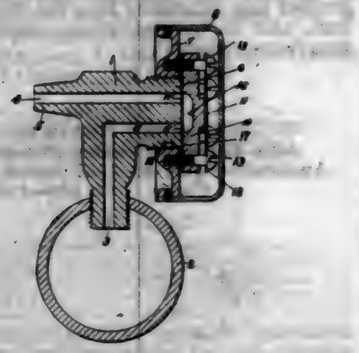
1. In an automatic firearm, a barrel, a magazine at the rear end of the barrel, a breech mechanism including a breech block and a longitudinally movable post carrying said breech block to move it into and from breech closing position, said breech block being also independently movable relatively to said post to a limited extent; a gas cylinder on the barrel and in communication with the bore thereof to receive gas from the fore part of the barrel, a piston movable in said cylinder, a piston rod extending parallel to the barrel and connected with one end to said piston, the other end being free and being adapted to engage the forward end of said post which post is adapted to close and open said magazine, means independent of said post to return said piston to its initial position after having actuated said post, said piston and piston rod being arranged to impart such momentum to the post as to cause it to move the breech block rearwardly into open position and to uncover the magazine so that the next cartridge may be moved into a position for feeding it into the barrel.

2,031,396
LIQUID FUEL VAPORIZER AND BURNER
Charles A. French, Riverside, Ill.
Application June 15, 1933, Serial No. 675,934
5 Claims. (Cl. 158—53)

1. A liquid fuel vaporizer and burner comprising a vaporizing chamber, means to distribute liquid therein, a burner grating, means for delivering hot burned gases from the flame side of the grating to the vaporizing chamber, gas and air mixing and moving means, means for delivering gases from the vaporization chamber to said means, means for conducting gases from the mixing and moving means to the burner grating, igniting means for the burner grating consisting of a conduit positioned to receive gases from the means for delivering gases from the vaporizing chamber to the mixing and moving means and to deliver said gases to the flame side of the grating, a conduit positioned to receive gases from the means for conducting gases to the burner grating and extending into the first named conduit, and an igniting device positioned in said first named conduit.

2,031,397
MEAT HOLDER
John Edward Gloekler, Pittsburgh, Pa.
Application July 24, 1934, Serial No. 736,645
1 Claim. (Cl. 146—216)

In a meat holding device for supporting meat at various heights and at different locations on the surface of a wooden block, the combination of a hollow circular base having a continuously annular bearing portion terminating in a uniformly level comparatively blunt knife edge, a tubular standard secured in the middle top portion of the base and extending upwardly therefrom, a cylindrical stem vertically and rotatably mounted in the tubular standard having at its upper end a disk provided with a double tined comparatively blunt fork, and a thumb screw mounted in the tubular standard adapted to fixedly engage the stem.



2,031,398
BED MATERIAL FOR FLOWER BULBS
John J. Grullemans, Painesville, Ohio, assignor to The Wayside Gardens Company, Mentor, Ohio, a corporation of Ohio
No Drawing. Application December 30, 1933, Serial No. 704,755
3 Claims. (Cl. 71—9)

2. A material adapted for use as a bed material for stimulated growth of bulbous flowering plants, the material consisting of an intimate mixture of a quantity of finely divided peat, and relatively small quantities of ground calcium carbonate and powdered or granulated charcoal.

2,031,399
VALVE
Otto W. Hahn, San Francisco, Calif.
Application November 27, 1933, Serial No. 699,911
16 Claims. (Cl. 251—24)

1. A valve provided with a faced surface pierced by spaced ports, a faced block movably positioned adjacent said faced surface provided with a cross port arranged to be aligned over said spaced ports when the block is moved, means

for resiliently urging the block in the direction of said faced surface, and a thin flat flexible plate

of hard resilient metal positioned between the finished surfaces of said block and valve apertured to match said spaced ports.

2,031,310
FLIGHT APPARATUS
James E. L. Hall, Chicago, Ill., assignor to Cecil Martin, Chicago, Ill.
Application April 18, 1932, Serial No. 605,609
17 Claims. (Cl. 35—12)

1. The combination of a rotatory structure, positioned in a horizontal plane for rotation upon a central axis, an arm pivoted between its ends to the peripheral portion of said structure, an occupant carrier connected to the outer end of said arm, a partial counterweight connected to the inner end of said arm, and means on said structure engaging the inner end of said arm to prevent lateral displacement of said arm with respect to said structure, said arm being pivoted to swing to carry the outer end thereof above the horizontal plane of said structure whereby to permit the occupant carrier to rise higher than it could under centrifugal force due to the rotation of said structure.

2,031,311
CLUTCH
William W. Harris, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application February 9, 1931, Serial No. 514,435
34 Claims. (Cl. 192—68)

1. In a clutch, driving means, driven means, a clutch element secured to the driven means and engageable with the driving means, a pressure plate driven with the driving means and movable axially of the driven means for engagement with the clutch element, and a yielding device anchored to and driven with the driving means and yieldingly effecting clutching engagement of the pressure plate and clutch element, and means engaging said yielding device

for moving same to de-clutch said pressure plate and clutch element.

2,031,312
CONTAINER AND CLOSURE THEREFOR
William Herrick, Jr., Racine, Wis.
Application November 17, 1932, Serial No. 642,597
1 Claim. (Cl. 220—43)

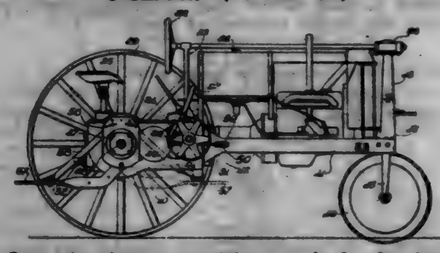
The combination of a container having a dispensing opening and an upstanding neck surrounding such opening, and a closure for said opening comprising a deep, cup-shaped member including an end wall and a side wall, the transverse dimension of the closure being enlarged adjacent its outer or open end so as to provide inner and outer end portions of different sizes and a shoulder connecting the adjacent ends of said inner and outer portions, the inner portion being of such size as to tightly but removably fit in said neck to provide a substantially air-tight seal for the container and the outer portion being of such size as to freely, removably fit over the outside of said neck; said shoulder being of relatively narrow width so that the said wall portion of the cover constituting said enlarged portion is not materially offset laterally from alignment with said upstanding neck when said inner portion is seated in said neck, the depth of said outer portion being greater than the width of said shoulder, whereby the cover is adapted to withstand permanent deformation sufficient to impair its usefulness as a freely removable cover, by prying forces applied to said shoulder to remove the cover from said tightly fitting position.

2,031,313
TUBE BASE AND SOCKET
Alexandre Horowitz and Jean Vissman, Eindhoven, Netherlands, assignors to Radio Corporation of America, a corporation of Delaware
Application February 28, 1935, Serial No. 8,786
In Austria March 1, 1934
4 Claims. (Cl. 249—27.5)

2. In a base for tubes; a hollow cylindrical shaped body of insulating material; closure means for one end of said body; elongated contact members secured to the outer surface of said closure means, the securing means comprising a hollow lug portion of said contact members extending through said closure means, said contact members being arranged to protrude radially outward from the edge of said closure means, and means for electrically and mechanically connecting said members to lead wires through the opening in said lug comprising grooves in said members intersecting the outer ends of the lug openings.

2,031,314
DRAFT HOOD
Louis N. Hunter, Johnstown, Pa., assignor to National Radiator Corporation, Johnstown, Pa., a corporation of Maryland
Application April 17, 1933, Serial No. 666,566
2 Claims. (Cl. 126—307)

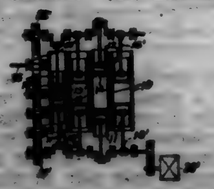
1. A draft hood comprising a collector unit having a flue connection at the top thereof, an opening to atmosphere around its effective lower edge, said collector being of downwardly increasing diameter, means below the effective lower edge of the collector for discharging gases of combustion into the collector, and a back draft baffle over said last means having a diameter less than the diameter of said means and having its upper edge in a plane below the lowermost edge of said collector.



2,031,315
COPPER BASE ALLOY
Herbert C. Jennison, Bridgeport, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
No Drawing. Application August 5, 1933, Serial No. 683,907
3 Claims. (Cl. 75—1)

1. A copper base alloy composed of from 0.1% to 1.5% silicon, from 2.0% to 6.0% nickel, from 0.5% to 6.5% aluminum, from 0.1% to 3.0% iron, and balance copper.

2,031,316
COPPER BASE ALLOY
Herbert C. Jennison, Bridgeport, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
No Drawing. Original application August 5, 1933, Serial No. 683,907. Divided and this application July 30, 1935, Serial No. 33,831
3 Claims. (Cl. 75—1)



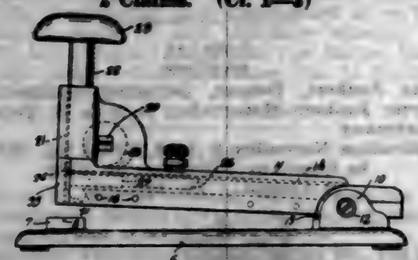
1. A copper base alloy composed of from 0.1% to 1.5% silicon, from 2.0% to 6.0% nickel, from 0.5% to 6.5% aluminum, from 0.1% to 3.0% iron, from 0.1% to 1.5% tin, and balance copper.

2,031,317
TRACTOR
Edward A. Johnston, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application February 23, 1933, Serial No. 658,121
5 Claims. (Cl. 180—18)

2. A tractor comprising a body having a casing at the rear thereof, side sills secured to and extending forwardly from the casing, differentially driven axle shafts and means for applying a brake to each shaft mounted within the casing, a dirigible truck supporting the forward ends of said sills, means on the tractor for steering the truck, a brake link connected to each brake applying means and extending forwardly along the inner side of each side sill, an inwardly extending bracket arm secured to the inner side of each sill near the forward end thereof, a lever pivoted between its ends on each bracket arm to swing in a horizontal plane, a coil spring on the forward end of each link connected to one end of each lever, and vertical abutments on the truck positioned to engage the other ends of the levers alternately after a predetermined steering movement of the truck in each direction to brake the differential shaft on the side towards which the tractor is steered.

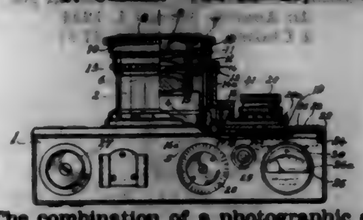
2,031,318
ENGINE
Hugo Junkers, Dessau, Germany, assignor to firm: Junkers-Motorenbau G. m. b. H., Dessau, Germany
Application November 9, 1929, Serial No. 406,890
In Germany November 24, 1923
4 Claims. (Cl. 123—51)

1. In a twin-shaft, two-cycle, internal combustion engine, a plurality of juxtaposed cylinders having intake and exhaust ports, a pair of crank-



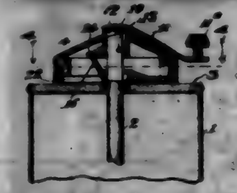
shafts one mounted at each end of said cylinders rotating at the same speed, a pair of pistons mounted to reciprocate in each of said cylinders in opposite directions and operatively connected by means of cranks and crank arms to transmit power to said crank-shafts, one of said pistons being adapted to control said intake ports and the other being adapted to control said exhaust ports, means including leading and lagging cranks producing an unequal distribution of power to said crank-shafts, said leading cranks being connected to the crank-shaft receiving the major amount of power, a driven part coupled to both crank-shafts, and means for synchronizing the operation of said crank-shafts and for transmitting power from the crank-shaft receiving the minor amount of power to said driven part, said synchronizing means being of such weight and strength as to be adapted to transmit less than half of the total power delivered to said driven part, the crank-shaft receiving the major amount of power being more closely coupled to said driven part than said shaft receiving the minor amount of power.

2,031,319
BELT DRIVE
Jacob Kenner Kahn, Chicago, Ill.
Application May 3, 1935, Serial No. 19,543
6 Claims. (Cl. 74—230.5)



1. In a belt drive of the character described comprising in combination, a V-belt, a pulley having a V-groove for the belt, means for tensioning the belt, and means incorporated in the pulley acting in response to tensioning and slackening the belt to shift the belt into and out of tractive engagement with the side walls of the pulley groove.

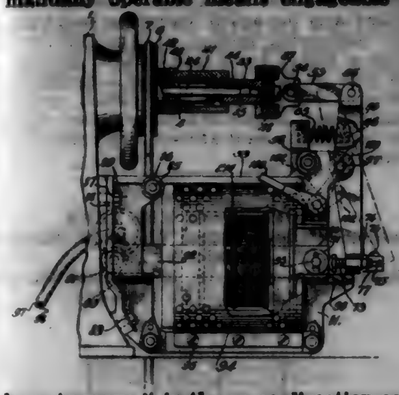
2,031,320
STAPLE DRIVING MACHINE
Charles F. Koch, Jr., Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a corporation of Connecticut
Application June 1, 1931, Serial No. 541,192
2 Claims. (Cl. 1—3)



1. In a staple driving machine, a housing having a raceway, a plunger movable in the raceway to drive a staple therein, a guide bar for guiding staples to the raceway, and an inverted V-shaped lug on the opposite sides of the bar providing knife edges at the rear side of the raceway to cooperate with the plunger to cut off the prongs of the staple in the raceway should they extend backward from the raceway.

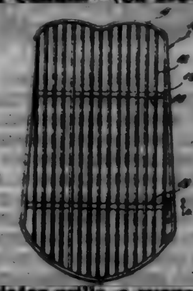
2,031,321
PHOTOGRAPHIC CAMERA
Heinz Kippenhender, Dresden, Germany
Application November 15, 1934, Serial No. 753,604
In Germany December 21, 1933
17 Claims. (Cl. 95—10)

1. The combination of a photographic camera with a photoelectric exposure meter, including an exchangeable lens system, means for adjusting the opening of said lens system, a shutter, means for adjusting the speed of said shutter, a photoelectric cell, a circuit therefor, a resistance on said exchangeable lens system, and means for connecting said resistance in said circuit, said adjusting means for the lens opening and shutter speed respectively being adapted to effect a variation of said resistance, whereby the reading of said photoelectric exposure meter is changed.



2,031,322
SELF-LOCKING MOTOR CONTROL
Herald D. R. Lane, Derby, Va., assignor, by direct and mesne assignments, of one-third to Harvey W. Culbertson, one-third to Kenneth M. Lane, and one-third to Will H. Nichols, all of Gate City, Va.
Application February 11, 1935, Serial No. 6,389
6 Claims. (Cl. 74—545)

1. In a device of the class described, the combination with a control box, of a housing on top of said control box, a shaft extending into said housing, a latch in said housing and loosely mounted on said shaft, said housing provided in its side only with means for receiving part of said latch in a locked position or in an unlocked position, and a handle pivotally mounted on said shaft and engaging said latch for operating the same.



2,031,323
FEED REVERSING MECHANISM FOR SEWING MACHINES
Stephen Lamtocny, Bergenfield, N. J., assignor to Freydberg Bros. Inc., New York, N. Y., a corporation of New York
Application December 27, 1934, Serial No. 759,480
2 Claims. (Cl. 112—216)

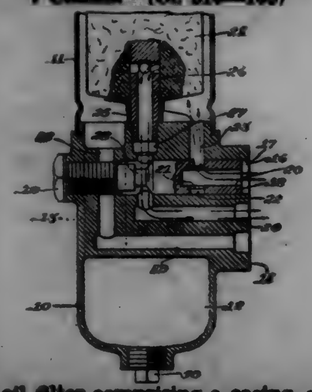
1. Apparatus for quickly reversing the feed mechanism of a sewing machine while the machine is operating comprising a member operatively associated with said mechanism, a lever to move said member, means normally urging said lever in one direction and adapted to maintain said lever and member in a predetermined position establishing operation of said feed mechanism in predetermined direction, an electro-magnet, a core movable by said magnet against said lever to shift the position of said lever and member and reverse the direction of movement of the feed mechanism, and manually operable means engageable with

said lever to move it in the same direction as said core moves it and to maintain said lever in said reversed position independently of said electromagnet and core.

2,031,324
RADIATOR GRILLE
Chester L. Lewellen, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a corporation of New York
Application March 5, 1934, Serial No. 714,397
11 Claims. (Cl. 293—54)

1. In a radiator grille, a supporting bar having a projection extending from one longitudinal edge thereof in the plane of the same, and a louver blade extending transversely of the bar and having portions shaped for snap-on engagement with said projection.

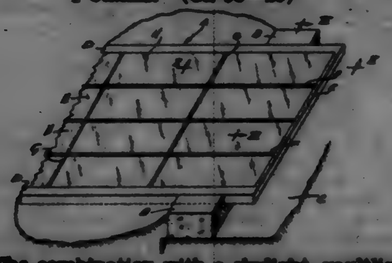
2,031,325
EYELET ASSEMBLY
Carl W. Meyer, New York, N. Y., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application May 20, 1933, Serial No. 671,298
6 Claims. (Cl. 72—365)



5. In combination, a preformed unit of structural material provided with a hole extending partly through the unit, a setting and reenforcing member disposed within the hole, said bushing fitting around the said member, at its lower end penetrating the wall of the hole, and at its upper end flared into a continuous preformed rim portion resting upon the material defining the top of the said hole.

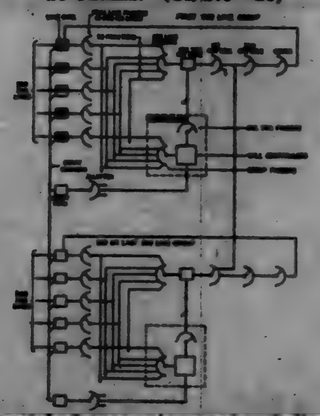
2,031,326
MORTAR MIXER
Durando Miller, Pelham Manor, N. Y.
Application April 15, 1933, Serial No. 667,382
3 Claims. (Cl. 23—73)

1. A material mixing apparatus comprising in combination a mixing chamber, a hopper for bulk material with an outlet discharging into the mixing chamber, a second hopper for bulk material discharging into the mixing chamber, a horizontal feed screw positioned in the bottom of the first hopper having a central tubular shaft, feed means in the bottom of the second hopper for feeding material to the mixing chamber, an agitator for mixing the ingredients of the mixing chamber co-axial with the feed screw of the first hopper and having a shaft extending through the tubular shaft of the feed screw, a driving means connected to the agitator shaft, a clutch and means controlled by said clutch for actuating both the feed screw and the feed means in synchronism to deliver materials to the mixing chamber in predetermined proportions.



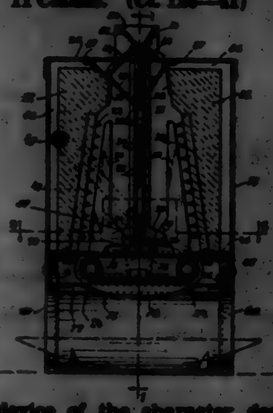
2,031,327
OIL FILTER BASE
William F. Maench, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application July 30, 1934, Serial No. 737,509
7 Claims. (Cl. 210—165)

1. An oil filter comprising a casing, a filtering element in said casing, an inlet conduit leading to the casing outside said element, an outlet conduit leading from the interior of the element, a by-pass conduit between the inlet conduit and the outlet conduit containing a pressure controlled valve, a drain conduit leading from the



casing, a valve element extending through the inlet conduit, the outlet conduit and the drain conduit, said element being formed with channels to provide for liquid flow through the inlet and outlet conduits when the valve element is in one position, and means for moving the valve element axially into another position in which the outlet and inlet controls are closed and the drain conduit is open.

2,031,220
CONCEALED SKYLIGHT VENTILATION
Logan Willard Mulford, Long Island City, N. Y.
Application November 2, 1933, Serial No. 640,206
4 Claims. (Cl. 98—39)



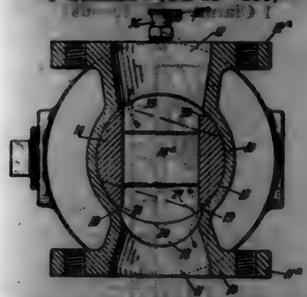
1. The combination with a skylight, vaultlight or the like, and a structural support bordering an opening in a roof or the like, a fabricated load-supporting structure having light apertures with glass or lenses embedded therein, deep load-supporting members in said structure, a portion of said skylight partially overhanging said structural support, whereby deep load-supporting members of said fabricated structure lie across said support providing passage for air between said portion and the support and between the load-carrying members.

2,031,229
AUTOMATIC TELEPHONE SYSTEM
John E. Outline, Berwyn, Ill., assignor to Automatic Electric Company, Limited, Liverpool, England, a British company
Application September 6, 1934, Serial No. 742,867
26 Claims. (Cl. 179—16)

1. In a telephone system, a trunk line terminating in an automatic switch, means for automatically advancing the switch in a hunting movement over its bank contacts after the seizure of said trunk line, a local circuit controlled by said switch for stopping the automatic advance of said switch, means for transmitting a signal from said switch over said trunk line each time the automatic advance of said switch is stopped, means responsive to said signal for counting each said stoppage and for again operating said automatic switch advancing means, and means for transmitting a signal from said last means over said trunk line to said switch after a predetermined number of stoppages of said switch, and means in said switch responsive to said last signal for again advancing said switch in its final hunting movement.

2,031,230
BROILER OR THE LIKE
Lester R. Pahlsford and Walter H. Rudolph, Buffalo, N. Y.
Application November 18, 1931, Serial No. 575,534
11 Claims. (Cl. 126—41)

2. In a device of the character described, a cooking compartment, a pair of grids mounted for translatory and pivotal movement towards and from each other, means for moving said grids into and out of said cooking compartment, means located within said compartment, for producing a translatory movement of said grids towards each other as they are moved towards cooking position to clamp articles of foodstuff placed between the grids, and means for effecting pivotal movement of said grids automatically when the grids are moved out of the cooking compartment, whereby articles of foodstuff may be readily placed between or removed from between said grids.



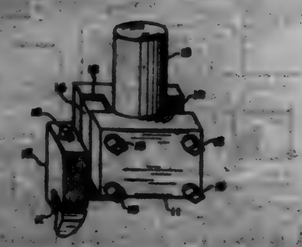
2,031,231
PHOTOELECTRIC TUBE
Frans Michiel Penning, Eindhoven, Netherlands, assignor to Radio Corporation of America, a corporation of Delaware
Application March 12, 1932, Serial No. 598,766
In Germany March 14, 1931
4 Claims. (Cl. 250—27.5)

1. A photo-electric tube comprising an anode, a photo cathode and an auxiliary electrode for

emitting secondary electrons, said auxiliary electrode being connected to the photo cathode through a resistance within the tube.

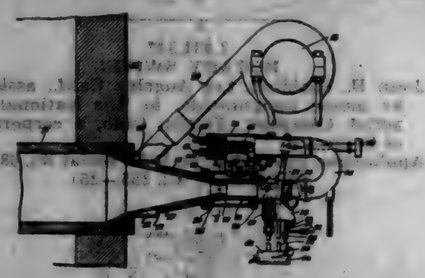
2,031,232
GASEOUS FUEL MIXING VALVE
John Kline, Dayton-on-the-Ohio
Application May 7, 1931, Serial No. 535,635
3 Claims. (Cl. 48—189)

1. In a gaseous fuel mixing valve, a housing having gas and air inlet ports and a gas and air mixture outlet port on the opposite side, said housing having a cylindrical bore extending transversely of said ports, a single valve member slidably and rotatably mounted in said bore and having a transverse opening communicating with all of said ports, means for moving said valve member longitudinally within said bore to vary the effective opening of said gas inlet port only, and means for moving said valve member angularly about its axis to a determinate fixed position to vary in direct proportion the effective openings of said gas and air inlet ports and the mixture outlet port.



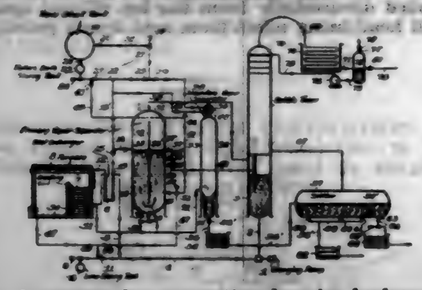
2,031,233
TRACTOR AXLE EXTENSION
Adolph Renning, Minneapolis, Minn., and Andrean G. Renning, deceased, late of Minneapolis, Minn., by Adolph Renning and Jacob A. Renning, executors, Minneapolis, Minn., assignors to International Harvester Company, a corporation of New Jersey
Original application December 19, 1928, Serial No. 327,139, which is turn is a division of Serial No. 65,706, October 29, 1925. Divided and this application January 11, 1932, Serial No. 585,858
5 Claims. (Cl. 180—75)

1. In a tractor, a housing, an axle in the housing, a hub extension on the axle, a spacer, means for securing the spacer to the hub extension, a spindle on said spacer, a wheel having a hub mountable on said spindle, and means for securing the wheel-hub to the spindle.



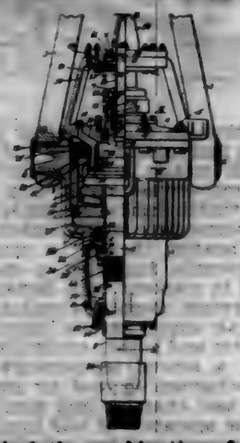
2,031,234
OFFSET SIDE SUPPORTED TOOL HOLDER
Ole Severson, Shelton, Conn., assignor to The Apex Tool & Cutter Company, Inc., a corporation of Connecticut
Application September 19, 1934, Serial No. 743,839
1 Claim. (Cl. 29—99)

A tool holder comprising an elongated rectangular shank adapted to be received within a tool post and having an integrally formed head of a rectangular cross section extending from the front face of the shank and being offset forwardly and to one side with respect to said shank so as to extend beyond the front face and one side wall of said shank, the top of said head being spaced downwardly from the top of said shank, said head being offset from said shank providing



said head with a rear wall parallel to and oppositely facing the plane of said front face thus to form a surface adapted to abut the front face of a tool post within which said shank is secured, the side wall of said shank being adapted to abut a face of the aforementioned tool post, said head further having means for receiving and retaining a tool bit.

2,031,235
CONTROL FOR HEAT GENERATORS
Jerome J. Sloyan, Red Bank, N. J.
Application July 3, 1933, Serial No. 678,503
4 Claims. (Cl. 158—28)

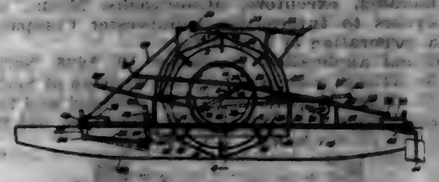


3. In combination with a burner having ignition means, a fuel feeding means and a carbureting air supply means including an air heating chamber operatively associated with said burner to be heated thereby and an auxiliary air heater positioned intermediate said chamber and burner for initially heating the air; a control system comprising circuits including a main control switch closed in response to a demand for heat, a first temperature responsive switching mechanism in said air supply means intermediate said auxiliary heater and burner controlling initiation of fuel feed, a second temperature responsive switching mechanism in said air supply means intermediate said chamber and auxiliary heater controlling the operation of said auxiliary heater and ignition means and the initial operation of said air supply means and cooperating with said first switching mechanism to maintain operation of said blower and fuel feeding means whereby upon a demand for heat, fuel feed is delayed until the temperature of the carbureting air reaches a determined value.

2,031,236
PROCESS FOR THE CRACKING TREATMENT OF HYDROCARBONS
Arthur D. Smith, Park Ridge, Ill.
Application July 2, 1934, Serial No. 733,479
12 Claims. (Cl. 196—55)

1. A process for converting heavier hydrocarbon oil into lighter hydrocarbon which comprises subjecting said oil commingled with finely divided mineral adsorbent towards carbon forming substance to a cracking temperature under superatmospheric pressure, admixing with said oil simultaneously with reduction in temperature thereof to an incipient cracking stage finely divided mineral adsorbent of the same general characteristics but heavier than said first mentioned adsorbent, substantially concurrently with such reduction in temperature releasing the so treated oil to a zone of reduced pressure, and separating therein respectively as vapor and liquid under accelerated sedimentation by such heavier adsorbent said lighter hydrocarbon and a clarified residual fraction employable as fuel oil without further treatment.

2,031,237
ROTARY SWIVEL
John D. Spalding, Los Angeles, Calif., assignor, by mesne assignments, to The National Superior Company, Toledo, Ohio, a corporation of Delaware
Application September 12, 1933, Serial No. 689,074
23 Claims. (Cl. 255—25)



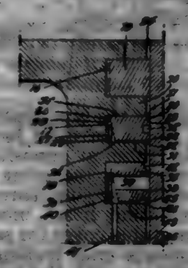
1. In a swivel, the combination of a body, a rotary sleeve mounted to rotate within the body, an anchor plate mounted within the body, an upthrust bearing means between the anchor plate and the rotary sleeve, a downthrust bearing means between the anchor plate and the rotary sleeve, and means for removably supporting the anchor plate within the body against displacement in the direction of the axis of the rotary sleeve.

2,031,332
WINDOW SASH
Louis Stoltenberg, Oakland, Calif.
Application October 20, 1934, Serial No. 750,444
1 Claim. (Cl. 20—68)

In a device of the class described, weather stripping for windows, said weather stripping having transversely arranged guide slots formed therein, pins extending through said slots, additional slots formed in said strips, flat springs mounted in said strips and extending into said last mentioned slots, and fixed counter-sunk headed pins extending from the window casement and engaging said springs whereby said strips are urged tightly against the window sashes.

2,031,339
MEANS FOR PROPELLING PLEASURE BOATS
Sam Stone, Seattle, Wash.
Application October 8, 1934, Serial No. 747,193
2 Claims. (Cl. 115—26)

2. A pleasure boat comprising a pair of floats, a deck connecting said floats, means for propelling the boat, a blade pivoted at its forward end to said boat and arranged below said deck and clear of the water when in horizontal position, and means connected to its rearward end to support said blade at any predetermined position causing the blade to engage the surface of the water and thereby preventing pitching motion of the boat.



2,031,340
CATHODE HEATING ELEMENT FOR THERMIONIC TUBES
Anthony A. Straub, St. Marys, Pa., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application March 20, 1930, Serial No. 437,573
7 Claims. (Cl. 250—27.5)

1. In a thermionic tube, the combination with a cathode sleeve, and a heating filament of U-shape having parallel leg portions mounted within said sleeve, of an insulating and supporting element comprising a portion interposed between the legs of the filament over their operating length, and other portions integral therewith and interposed between the filament and the sleeve at each end of the element and at an intermediate zone and completely surrounding each leg

of the filament, the remainder of the insulating and supporting element being of substantially the same lateral dimension as the spacing of the leg portions of the filament in planes parallel with the filament, whereby material portions of the sleeve are subjected to direct radiation from the filament.

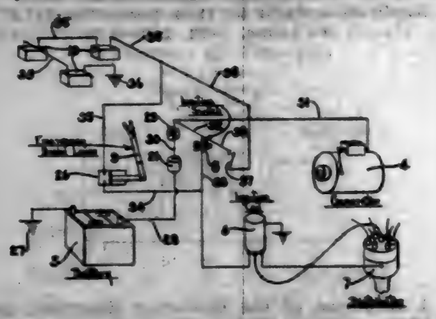
2,031,341
PISTON RING
John H. Stumpf, West Forrest Hills, N. Y., assignor to Wilcox-Rich Manufacturing Company, Philadelphia, Pa., a corporation of Delaware
Application August 15, 1931, Serial No. 557,359
1 Claim. (Cl. 309—45)

The combination with a piston adapted to be mounted for up and down reciprocation in a cylinder, said piston having a ring groove therein, of a ring in said groove having an undercut oil groove in its bottom face, said groove forming an edge of less than 90 degrees for scraping oil from the cylinder surface during the down stroke of the piston, said ring having its face on the side farther from the cylinder engaging surface sloping downwardly and outwardly, and a ribbon expander disposed in said groove behind the said ring for contacting the upper portion of said sloping face to force said ring outwardly and upwardly in the groove, the lower edge of said expander being radially spaced from said ring, and said piston having drain passages therein opening into the space between the expander and the ring for carrying off oil from the groove and arranged to drain the bottom of the groove.

2,031,342
LIGHTING DEVICE FOR AUTOMOBILES
Leslie E. Turbox, North Reading, Mass.
Application April 18, 1934, Serial No. 721,073
9 Claims. (Cl. 240—8.3)

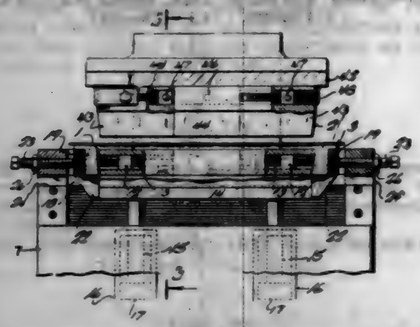
1. A device of the character described comprising a number plate; a light; a non-transparent casing around said light but having an opening; and a reflector within the casing and having two adjacent plane faces each extending upwardly and outwardly transversely of the device and acting to direct substantially all the rays from said light through said opening downwardly along and across the face of said plate.

2,031,343
FOUNTAIN PEN
Ivan D. Tefft, Janesville, Wis., assignor to The Parker Pen Company, Janesville, Wis., a corporation of Wisconsin
Application August 6, 1934, Serial No. 738,623
5 Claims. (Cl. 120—46)



1. In a fountain pen, an ink reservoir barrel, having at one end passages for ink and air, combined with a twist-sac located within, supported at, and vented toward the other end of the barrel, and having an impervious wall extending into the reservoir; and a rotatable element engaging torsionally a deep part of the sac, thereby by twisting the sac to change displacement of the reservoir.

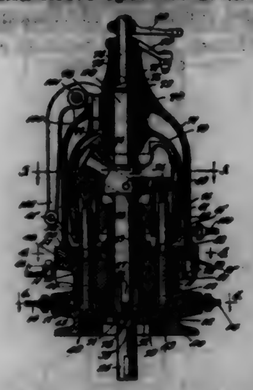
2,031,344
DOORLOCK
Harry Thomasma, Grand Rapids, Mich.
Application March 12, 1934, Serial No. 715,061
Renewed January 14, 1936
6 Claims. (Cl. 180—82)



1. The combination with an automobile having a door and a control member to be moved to one position when the automobile is moving and to another position when the automobile is standing, of a lock for said door, means actuated by

said control member to lock said lock when said control member is adjusted for the automobile to move, said means acting to release said lock when

the control member is adjusted for the automobile to stand and means for rendering the first mentioned means ineffective whenever the automobile is tilted to a predetermined angle.



2,031,345
TRAY MAKING APPARATUS
Guy L. Tinkham, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a corporation of Maine
Original application March 10, 1934, Serial No. 714,906. Divided and this application July 16, 1934, Serial No. 735,362
3 Claims. (Cl. 153—23)

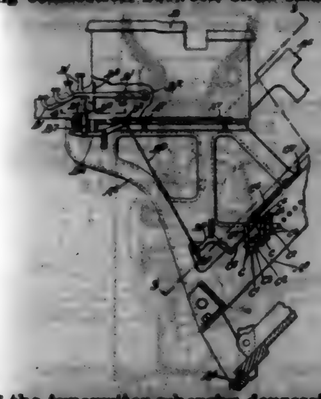
1. An apparatus for folding a substantially flat sheet metal blank into a tray, comprising a co-operating plunger and die, the latter having side and end walls, supports, one for the plunger and the other for the die, the plunger and the side walls of the die each being in sectional form, and means for securing the sections of the plunger and the die to their respective supports, the securing means for certain of the sections of the plunger and the die constituting co-operating fastening means and longitudinal grooves therefor whereby said sections may be adjusted to vary the length of the plunger and the die to produce trays of different lengths.

2,031,346
FUEL INJECTION PUMP
Gunnar A. Wahlmark, Rockford, Ill., assignor of one-half to Charles H. Rystrom, Rockford, Ill.
Application October 17, 1933, Serial No. 693,870
8 Claims. (Cl. 103—38)

3. A pump comprising, in combination, a cylinder block having a plurality of cylinders arranged in a circle, pistons in said cylinders, a drive shaft extending centrally of said cylinders, means for rotatably supporting said drive shaft, a control shaft positioned axially of said drive shaft and in engagement with the upper end thereof, a sleeve surrounding said control shaft, cam means on said shaft and sleeve operable when said control

shaft is rotated to move the control shaft and thereby the drive shaft axially to vary the stroke of the pistons and means for rotating said sleeve independently of the control shaft to vary the stroke of the pistons when the control shaft is in its minimum stroke position.

2,031,347
COIN HEAD FOR COIN CONTROLLED DEVICES
Thomas W. E. Watling, Chicago, Ill., assignor to Watling Scale Company, Chicago, Ill., a corporation of Illinois
Application September 19, 1935, Serial No. 41,211
4 Claims. (Cl. 194—98)



1. In a coin head of the type described, the combination with a frame, of fixed locking members mounted on said frame at opposite ends thereof respectively, mechanism, including a slidable coin holder for conveying a coin through, and discharging it from, said head, mounted on said frame, and a removable cover for said mechanism having at its opposite ends locking members respectively cooperating with the locking members on said frame to lock said cover to said frame, one of the locking members on said cover cooperating with said mechanism through engagement with a coin in said holder to render said mechanism operative.

2,031,348
PATTERN SELECTING MECHANISM
George Herbert White, Hartford, Conn., assignor, by mesne assignments, to Monomelo Corporation, a corporation of Delaware
Application December 30, 1932, Serial No. 649,573
13 Claims. (Cl. 276—15)

1. A pattern forming mechanism for type casting machines and the like comprising an inclined supporting bed, a plurality of pivoted pattern selecting shutters arranged side by side thereon, a horizontal platform associated with the bed, a

standard typewriter mounted thereon and a working connection between each shutter and a

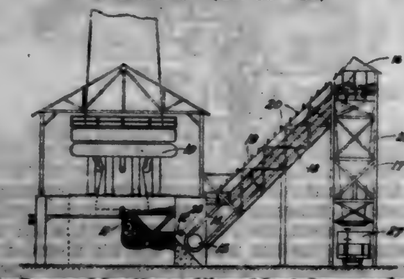
key of the typewriter whereby depression thereof causes rotation of the shutter.

2,031,349
BUMPER
Villor P. Williams, Baltimore, Md., assignor to Estelle Williams Gomberov, Baltimore, Md.
Application January 8, 1935, Serial No. 929
22 Claims. (Cl. 293—55)

1. In a bumper provided with a spring arm member having an end portion movably engaging a supporting element, and means carried by said supporting element and adapted to be engaged by the terminal end of said spring arm end portion, said supporting element having a portion of same for imposing an increasing progressive resistance to the endwise movement thereof in one direction of movement of the arm.

2,031,350
STEEL CONTAINER FITTING
Llewellyn W. Evans, Richmond, Calif., assignor to Rheem Manufacturing Company, Richmond, Calif., a corporation of California
Application August 7, 1934, Serial No. 738,778
8 Claims. (Cl. 292—49)

3. In a device of the character described, the combination with a wall having an opening of a unit extending through said opening and having portions surrounding the same on opposite sides of said wall, said wall being provided with offset portions and each of said portions of said unit being provided with parts interlocked with each other through the medium of said offset wall portions to prevent rotative displacement of said unit in the opening.



2,031,351
CONTAINER FITTING
Richard S. Rheem, Oakland, Calif., assignor to Rheem Manufacturing Company, a corporation of California
Application January 22, 1935, Serial No. 2,522
12 Claims. (Cl. 220—39)

1. In a device of the character described, the combination with a wall having an opening, of an internally threaded bushing member extending through said opening and having an annular portion surrounding said opening and arranged on one side of said wall, a substantially rigid reenforcing backing member surrounding said bushing member and provided with inner and outer portions respectively engaged with and spaced from the other side of said wall said backing member serving with said bushing member to brace said wall on opposite sides thereof and

thereby to prevent the breaking loose of said members under service conditions, means on the bushing member to clamp the backing member and wall against said annular portion of the bushing member, said members and wall having interlocking parts interlocking with each other and the wall to prevent rotational displacement of said members on said wall, and a cap for enclosing said members on said other side of the wall having a portion interposed between the wall and said spaced portion of the backing member.
